DISC,

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, JANUARY 7, 1909

No. 1

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn St., Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES:

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album" Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers,  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

Conditions in the drug trade remind us of that critical moment in a ball game when both teams gather around the home plate to wrangle over some close decision, and just as everybody expects to see a free fight the foghorn voice of the umpire rings out those welcome words—PLAY BALL!—and the players hustle back to their places and the game proceeds.

Hard times are productive of discontent. Poor business, slow collections and small profits are irritating, and the cause for much dissatisfaction. It is the oil of prosperity that makes the wheels of contentment run smoothly. With the outlook for good business growing brighter and brighter it is about time that the drug trade should stop talking, forget its troubles and "get busy," or in the ball players' vernacular it is time to "play ball."

In offering this advice we want to say that the ERA proposes to take it unto itself. If the other fellows want to continue their wranglings and hot air discussions over the N.A.R.D.'s theories, the A.D.S.'s cut prices, the Manufacturers' discounts, the Jobbers' duplicity and the Retailers' ingratitude—they are welcome to the field.

As for ourselves, we have our hands full to carry out our plans for giving the drug trade a live, up-to-date weekly publication, and to help everybody—but particularly the retail druggists—to take advantage of the tide of prosperity which is surely coming in. These are our resolutions for the New Year and we hope that our motives will not be misunderstood, for in our feeble way we are anxious to do what we can to promote peace and prosperity, and to assist every reputable business house in the drug trade to cross the "home plate."

## PLACES OPTOMETRY ON A HIGHER PLANE.

There can be no doubt of the earnestness of the opticians of New York State in their efforts to elevate the standard of their profession if the new rules and regulations, which became effective January 1, can be taken as a criterion. In the educational requirements the qualifying requisites compare favorably with those governing preparation for the practice of medicine or pharmacy, being in one respect, at least, more stringent than the latter, for thirty regents' counts are necessary in order to enter a school of optometry, while only fifteen are needed to gain admission to a school of pharmacy in New York State.

The new law exempts from operation physicians and persons who sell optometrical goods, so that it

will not interfere with the sale of these goods by pharmacists who carry them as a side line, except that they cannot examine the eyes or prescribe glasses without qualifying as optometrists. Druggists doing a certificated business in optical goods will find their trade increased and the public will have more confidence in the opticians who are permitted to hold certificates, for it is notorious that many charlatans have at times masqueraded as opticians to the detriment and suffering of their victims. The law will surely send the quacks to other pastures where they can probably do less harm than they have accomplished in tinkering with the human sight.

#### THE SODA FOUNTAIN'S JANUARY ISSUE.

The January issue of *The Soda Fountain*, now in press, contains over sixty pages of advertising, by far the largest number of trade announcements exclusively for the soda fountain trade, ever carried by a trade publication.

In addition to the large number of these pages the quality of the advertisements is worthy of special mention. The cover of the journal is printed in four colors from process plates, with a grade of workmanship and material equal to that of any of the popular magazines. Inside of the covers the most conspicuous advertisement is the sixteen page section of the Liquid Carbonic Company printed in two colors on India tint, coated paper, making one of the most attractive advertisements ever seen in a trade publication.

Following this in quantity is the eight pages of the L. A. Becker Company; then comes the J. Hungerford Smith Company with three pages, including the back cover. There also are innumerable announcements in pages, half pages and smaller spaces, altogether offering the buyers of the soda fountain trade the greatest collection of wares to select from that has ever been brought together in a single issue.

There are three points in connection with this edition that should interest all manufacturers who supply goods to the drug trade.

For the past year the soda fountain houses have been timid about advertising. The larger houses have their representatives in all parts of the country and they are in a position to forecast business conditions. By coming forward at this time so liberally with their announcements they show, in a most practical and emphatic form, their confidence in the return of prosperity. This should be encouraging to all firms who sell their goods through the drug trade.

Secondly, it is a significant fact that most of the soda fountain manufacturers spend the volume of their advertising appropriation on the dealers. A few of them advertise to the general public, but most of these houses advertise only to reach the dealers. In other words, they depend upon trade advertising for their success and some of them are successful to a remarkable degree. This shows most conclusively that trade advertising pays, and that it pays to advertise to the drug trade. If the soda

fountain supply houses can get such results through the trade journals by advertising, does it not stand to reason that the manufacturers of drugs and chemicals, pharmaceuticals and sundries and all other lines handled by druggists can accomplish the same results, if they but know how to go about it?

The third point to which we desire to direct attention, is the quality and the quantity of trade advertising which these soda fountain firms are doing. It is admitted that the manufacturers of the soda fountain trade are the most liberal, most progressive and most successful of all the business houses who seek the trade of druggists. Some of them have been at it for a great many years and new ones are following their example every day. These soda fountain houses have proven beyond all question of a doubt that it pays to advertise to the drug trade, and if the manufacturers in other lines would follow their example, by using liberal space and spend their money for good copy and attractive designs, they would secure equally large returns.

There never was a period in the history of the drug trade when it was more timely for manufacturers to cultivate the dealers, and there is no way in which these manufacturers can keep in friendly touch with the druggists except by advertising in the drug journals. The wonder is that more manufacturers who have large appropriations for advertising, and who fully appreciate the value of advertising, have not recognized the importance of spending more of their appropriations for cultivating the good-will of the dealers who handle their goods, instead of trying to force these dealers into line by advertising to the general public. This latter reminds us of the old saying, "that you can lead a horse to water, but it is quite another task to make him drink."

#### FIRST CASH AWARD IN ERA COMPETITION.

Interest in the ERA's *Cash Prize Competition* should take on fresh impetus in view of the fact that examination of the articles submitted by the competitors has already begun, with a result that the first award is made in this issue to O. R. Norris, of South Whitley, Ind., as will be seen by reference to page 6. It should be borne in mind that this Cash Prize Competition is open to *everybody*, without restriction except as stated on advertising page 6 of this issue of the ERA. This is a splendid opportunity for druggists and others with ideas to benefit the various branches of the trade and at the same time participate in the cash prize distribution.

In the desire to obtain the most useful suggestions possible the ERA has made the Competition *free to all*, not even limiting participation to our own friends, the feeling being that they would benefit by any acceptable contributions which might emanate from outsiders.

If anyone says that the souvenir post card fad is dying away, either gradually or otherwise, it is only necessary to point to the enormous numbers carried in the holiday mails, some of the post offices having been fairly and literally overwhelmed with them. In the Brooklyn (N. Y.) Post Office the glut of post cards amounted to more than two millions and

the service was seriously hampered. One of the chief causes for the reports of a decline in the popularity of the souvenir cards was the overproduction in Germany and the failure of the demand to increase with the more than phenomenal growth in the fact that over-savagine manufacturers had expected. Souvenir post cards have come to stay and druggists who are handling this line need have no fear of its future.

Some of us who think we are dissatisfied with the drug business are in fact merely dissatisfied with ourselves.

For adulterated drugs and fake goods go to the store of the man who is everlastingly blowing about honesty being the best policy.

Don't wait for opportunity to knock. Leave the door open and have dinner ready.

Occasionally a druggist who has a reputation for being "very deep" and "highly educated" is merely dull.

William J. Mooney, of the Mooney-Miller Drug Company, of Indianapolis, born in Indiana, but as his name would indicate, of Irish parentage, took a trip last summer to the land of his ancestors. Before starting, an Irish porter in his employ asked him if it were possible to visit his old mother and let her know how her lad across the sea was getting on. Mr. Mooney gave his word to do so, and drove across country several miles to the cabin of the old dame, a typical Irish woman, in a typical Irish cabin.

"The heartiness of my welcome," said Mr. Mooney, "is not to be described. When I told her of her boy she overwhelmed me with endearing epithets. I was the dear man, her boy's boss, and she began looking about her scantily furnished place, the poor woman, to make me a present. My son was with me, a dignified young collegian, and the present, she said, should be for him to take with him to America. The place was so bare that I was pretty sure that I should not be burdened with a gift, when just at that moment a sow with nearly a dozen pigs came round the house into the front yard.

"'Tis a pigzie ye'll have,' said the old woman, 'to take to America; a rare Irish pig. Sure there's not the likes of it in your country.'

"She started out to catch a pig. Meanwhile my young man was a picture. He was fancying, doubtless, how he would look walking up Meridian street, Indianapolis, with an Irish pig under his arm. Three or four lads joined the old woman in trying to capture the prize. Round and round the cabin they went. The prospect of capture seemed quite remote. Finally I told her I had to drive down the road a few miles and that when I returned I should stop for the pig. I did not return, and I do not know whether that pig was ever captured or not. It was a fine white pig. The old woman, in the greatness of her heart, with true Irish generosity, was willing to give me a very large part of her possessions."

Field mice destroy crops on hundreds of acres of land every year, and in the centers of population the ravages of rats entail a direct loss of \$20,000,000 annually. In addition, the rat excites grave apprehension because of its agency in distributing the dreaded plague and other diseases. Investigations conducted by the Department of Agriculture and the Marine Hospital Service have prompted the authorities to send out a warning against field mice and house rats.

Although losses by field mice have proved a steady drain on the resources of the American farmers and nurserymen, yet only occasionally and over limited areas has the damage been so great as to attract special attention. The extent of the destruction of crops by mice in the United States has never even approached that in Europe, where they have overrun

whole provinces, leaving ruin in their wake. During the past year, however, a native species infested the alfalfa fields in Humboldt Valley, Nevada, in such multitudes as to destroy nearly the whole crop. Out of the twenty thousand acres of alfalfa in the valley fifteen thousand acres were a total loss, so that the fields had to be replowed and reseeded. During the past year the Biological Survey sent two assistants to Nevada for the purpose of conducting experiments and demonstrating to the ranchmen the best methods of destroying the rodents.

As the result of trials with various poisons it was found that sulphate of strychnine on chopped green alfalfa, or when that is not procurable, on alfalfa hay, is most effective poison. Even on ranches where the number of field mice reaches the astonishing total of twelve thousand to the acre, relief was obtainable by careful and systematic poisoning at the cost of only 70 cents per acre. By means of the combined efforts of the farmers of the valley, using methods devised by the survey, the number of mice was finally so greatly reduced that the hawks and owls, gulls, herons, ravens, skunks, badgers, weasels, foxes and coyotes which had assembled early in the outbreak and killed at least forty-five thousand mice a day, were able to take care of the remainder and prevent them from doing serious damage, thus furnishing an important object lesson as to the usefulness of these destroyers of rodents when

permitted to do the work they are fitted by nature to perform.

The rat continues to cause great losses throughout the United States. During the last year an attempt was made to ascertain the approximate damage done to property by this rodent in the cities of Washington and Baltimore. Many business men were interviewed, including dealers in various kinds of merchandise, feeders of horses, managers of hotels and restaurants, and manufacturers. The inquiries included all sections of the two cities and both the small and large dealers. Data were obtained from some six hundred firms and individuals, from which it was estimated that the annual loss from rats in Washington is about \$400,000; in Baltimore, upward of \$700,000. Assuming, as is probable, that similar conditions obtain in all our cities of more than one hundred thousand inhabitants, the damage by rats in these centers of population entails a direct loss of \$20,000,000 annually. This enormous sum gives an idea of the still greater total loss inflicted by this rodent throughout the length and breadth of the land.

Boards of health and the Marine Hospital Service in several maritime cities have been making active war on the rodents, and large sums have been expended in efforts to effect their extirpation. No one method has proved adequate, and only by concerted, systematic and persistent efforts is it possible to reduce and keep down their numbers. The rat-proof construction of buildings, the constant use of traps and the use of poison wherever possible will go far toward assuring public safety.

Several bacterial cultures for the extermination of rats and mice are on the market, and many experiments have been undertaken with a view to fully testing the claims made for them, especially the degree of communicability. When the culture is fresh and the vitality of the organism is unimpaired a large percentage of the rats eating the infected bait sicken and die. Thus far, however, experiments have not proved that the disease produced by the cultures is contagious. On the contrary, it appears to be limited solely to the individual rodent eating the bait. Hence the cultures appear to possess little or no advantage over mineral or other poisons whose cost is much less and whose certainty of operation is much greater.

Dr. Wiley, in his recent lecture before the New England Society at Orange, N. J., treating pure food matters in a humorous vein, declared that hard cider had a great deal to do with the spiritual uplift of the Pilgrims. Although they

WILLIAM J. MOONEY,  
of Indianapolis.

had no still in the backyard like the Kentuckians and Tennesseans, they learned that when the cider was exposed to air ice was formed, and then developed "the blessed applejack." The inhospitality of a Puritan winter Dr. Wiley ascribed as the cause of death of John Harvard.

"Thought doesn't control digestion," continued the speaker, "but digestion controls thought; but if we keep ourselves right we won't have dyspepsia or indigestion. There is such a thing as eating too much. I thought of that when I looked at your menu. A great many die of starvation, but a great many more die of overeating. If I had my choice I'd die of overeating. I always have had a prejudice against starving to death. There is no such thing as brain food. Some one asked a man if fish was a good brain food and was told yes and advised to eat a couple of quail."

"The New England men had their place, although so far as I know my ancestors never came over in anything. But when we Westerners wanted to go to school we went to New England, and it was that element of education which led the Westerners to go back and found schools and universities."

A good one has just come to light on Gov. Joseph W. Folk, of Missouri. In the windup of the Senatorial primary campaign, when the Governor was making three or four speeches a day in a closely contested county north of the river, and a county, by the way, which is supposed to be as dry as the painted desert of Arizona, his throat became slightly irritated and sore. Arriving at a small town on his route he sought a drug store.

"I want a bottle of witch hazel," he told the proprietor. "It is the best remedy I know for a sore throat."

The bottle was wrapped up and handed over to the Governor. Driving on the next appointment he forgot all about the medicine until that night. As he was about to retire he thought of it and concluded to gargle his throat. A mouthful out of the supposed bottle of witch hazel was like so much liquid fire. The contents of the bottle were just plain whisky of the variety sold by drug stores in local option counties.

And the Governor, in telling the story, protests that he never even winked at the drug store man when he ordered the witch hazel.

Prof. George Hempf, head of the German Philology Department at Stanford University, announces that his study of Etruscan inscriptions proves that the Romans and Etruscans spring from the same Trojan races. From his study of old German ruins he has been able to decipher the Sabellian inscriptions of the Etruscans. Professor Hempf's discovery that the Etruscan language is closely related to Latin proves the old tradition that after the fall of Troy the Trojans migrated to Italy. It demonstrates that "Virgil's Æneid" is a historical document. It is said that this new knowledge will cause a rewriting of most of the books on Latin and general Indo-European philology.

Dr. Don Hughes, of Toledo, Ohio, head physician of the Modern Woodmen, reports that while in Columbus recently he had an X-ray photograph taken of the chest and abdomen of Ira J. Salvage, a United States soldier, who has two hearts and who made an application for admission into the Modern Woodmen. Salvage is young and, so far as outward appearances go, is in perfect physical condition. He has two hearts, only one being in active use. Both are perfectly formed. His appendix is located on the left side, and there is a similar transposition of all other organs.

That there are fortunes in patent foods is shown by the fact that Standen Paine, late managing director of Benger's Food, Ltd., who died recently in England, left an estate of the gross value of nearly two million dollars. Another partner in the business, J. Benger, who died early this year, left an estate of almost equal value.

Of Chinese incense the average price per catty (one and one-third pounds) is about as follows, according to the *Consular Reports*: The Shi Shang (musk), first quality, 9 cents; second quality, 7 cents. The Mong Shang (putchuck), first quality, 10 cents; second quality, 9 cents. The incense is made into sticks about six inches in length, the Shi Shang being black and the Mong Shang yellow. It is of universal

use and is manufactured in almost every city and village throughout the empire. The ingredients forming the composition of the incense, which are principally from the south of China, are as follows: Elm bark, cloves, oilbalm, patcheck, sandalwood dust, garoo, laka, aniseed, musk, orange peel, galanga, dried ginger, sajanwood, rhubarb, myrrh, cassia and camphor.

Dr. Doyen, the famous French surgeon, while insisting that old age is not always desirable, points out a way to increase one's years on this earth. In the course of an interesting essay, he says:

"There is little satisfaction in adding ten or twenty years to one's life when one is old. Man's aim ought to be to add as many years to his youth as he possibly can by hygienic and other methods. Vitality once lost cannot be regained, not to its full extent, at least."

"On the other hand, we should try our utmost to preserve our strength and to remain young. Now that medical science has under control infectious diseases, the physician will enter upon his true mission, that is to prevent disease by forestalling the deterioration of man, physically and mentally."

Many of the "fly" drug clerks who find it impossible to hold a job for any length of time may soon find a fitting occupation as aeroplane aviators—and if they come down with a dull thud, they never will be missed.

Here is an experience reported from Missouri: "Last Monday a man of the county went into a drug store in Liberty and took a bottle of hog medicine, thinking it was a pint of whisky he had ordered on a doctor's prescription a little while before. He was taking five other men to dinner and each took a drink of the bottle and all became seriously sick, and it was all the doctors could do to bring some of them through. The experience is sad for the men, but extremely sad for their families."

"Harry told me he was going to propose to a girl I knew last night."

"Yes, and he'll never do it again."

"Why, who was the girl?"

"I, and I accepted him."—*Trenton Times*.

Europe now has 125 universities, with a total student body of 228,721. Next to Paris and Berlin come in point of attendance Budapest (65,511), Vienna (62,051), Moscow (58,601), Madrid (51,961), Naples (49,181), St. Petersburg (46,521). The cost of maintaining the nine universities of Prussia has increased from 1860 to 1906 from \$9,550,000 to \$40,080,000, or an increase of 313 per cent for running expenses, says the *Independent*. In addition new buildings and the like have cost a further \$24,020,000, Berlin alone requiring nearly \$7,500,000.

Berlin is fast becoming for Germany what Paris is for France, the overwhelming centre of university life. In addition to its \$220 matriculated students, about seven thousand others are permitted to attend lectures, making a total of only a thousand less than the reports claim for Paris. In general the universities in the large centres of population increasingly attract the greatest number of students in Germany. Munich has now 7943 full students, Leipzig 4341, Bonn 3209, while the smaller university towns report no corresponding growth.

Even greater is the growth of the technological institutes. There are ten of these in Germany with a total enrolment of 15,790 matriculated students. Through the influence of the Kaiser these schools have now been placed on an equality with the universities.

The woman contingent is now 2824 in the universities, of whom 320 are matriculated. In 1900 the number was only 664. Naturally Berlin leads with 771, but no Prussian university will matriculate a woman or admit her to examinations. This right she has in all but Rostock, in Mecklenburg.

The number of students in the Italian universities, according to late statistics, is 27,700, while in 1893 it was only 21,870, so that there are now eighty students to every 100,000 inhabitants. The greatest increase is in the law department, from 5,630 in 1894 to 9,424, while rather remarkably the medical department has gone back from 6521 to 4731 during these years.

## Why the "People's Own Pharmacy" Failed.

By Emma Gary Wallace.

It was their first business venture, and bravely the new sign announced that it was "The People's Own Pharmacy." They had hesitated long over the name, until Madge Holworthy pointed gaily to the two certificates which decorated the only available wall space, and declared that

*Whereas*, The fortunes of this enterprise were to be jointly guided by two individuals, one Madge and one John Holworthy, for the benefit and well-being of themselves and the multitude, and

*Whereas*, It was to be a business of the people, for the people and by the people, that

It should be known as "The People's Own Pharmacy."

Young Holworthy had suggested that "The Constitutional Pharmacy" would not be inapt, but Madge feared that some people might war factions and think that tonics and nerve builders and brain foods were hinted at, and at the last-mentioned even the government might take offense. He had laughingly agreed. He generally did agree with most of the ideas of this bright little life partner of his.

He might not be as clever at some things as she, but there had not been a man in college who was acknowledged to have a clearer, more analytical mind or a more retentive memory than Husky Holworthy, as the boys called him. The elusive, scientific problems which puzzled the other students had been as a, b, c to him, and Madge Graham had not been the only Co-ed, who had secretly considered him a marvel. She had graduated in the same class, and when in the course of another year a quiet little wedding had taken place every one agreed that it was entirely compatible.

The People's Own Pharmacy was the result of some saving on the part of both, a small patrimony of a few hundred dollars that belonged to Madge, and a good-sized mortgage on the Holworthy homestead up among the New England hills. Two tired, worn people had talked the matter over and over, and after days and nights of worry had decided that it was their duty "to give John his chance."

It had taken years of toil to clear the debt on the rocky place and they looked forward to an old age of comparative freedom from worry, but in the great city John—their John—would soon make his fortune and then he could pay off the obligation and do much for them besides.

### Establishing Public Confidence.

The store had been open a week and John Holworthy began to realize that it would take time to establish public confidence in his business. The profits so far had been small and he did not like to acknowledge to his wife that the rent, the light, the heat and their living expenses were making alarming inroads into their dwindling bank account. They must be frugal. Next day he was to furnish bondsmen for license and Sub Post-Office, and much as he disliked to ask a favor, he decided to see if Brown would go surety for him. Brown was prosperous and had political aspirations. He would not refuse. In the morning he visited Brown's office and the matter was speedily adjusted.

Business at The People's Own Pharmacy was now in full swing. Little by little the daily sales increased. Women and men liked to make their purchases of the bright-faced young pharmacists. No crowd of smokers loitered about to make women hesitate to enter. Mothers sent their children, assured of extra attention and correct change, and the neighboring doctors began to know that the new drug store was to be relied upon for accurate and high class service.

The letters which went to the anxious old couple in the hill country were full of enthusiasm and cheer. "We did right to give John his chance," they said lovingly, as they proudly studied the samples of his labels which bore his name—the name they had given him.

The People's Own Pharmacy had been open to the public

just five months and the books showed an encouraging condition of affairs. Brown had dropped in for a cigar and to ask his usual question: "How are things coming?"

The proprietor was enthusiastic and so was his wife. Brown went out. It was the third time he had been in that day, and when an hour or so later he appeared again even Holworthy wondered, "What is on your mind?" he inquired, jocularly.

"Is your wife around?" Brown asked abruptly.

"Just gone out," returned the man behind the counter. "Why?"

"Oh, I just wondered, that's all. Women are sometimes a bit fussy, you know, and I wanted to speak to you on a little matter of business. You see, it is this way," he continued, uneasily biting off the end of his cigar and leaning one elbow on the show case, "some time ago I made an investment calling for considerable money. I used all my spare cash at the time, and the money that I expected to keep the matter going is delayed. I find that I am short temporarily. Election uncertainty and general business depression, you know, and unless I can raise a little at once I shall lose all I have put up. Own this place, don't you?"

Holworthy nodded. There was a twinge at the thought of the farm where the old folks waited.

"I thought so. Now as a matter of accommodation if you would sign a note with me I can raise the money, know right where I can put my hand on it. I shall soon be able to release you and take care of the deal independently."

### Yielding to Temptation.

Holworthy looked startled. The idea of signing notes always had been associated in his mind with things to be avoided. What would Madge think? It was a bit flattering, however, to have Brown come to him!

Brown saw and interpreted the look. He lighted his cigar at the swinging gas torch and turned to go.

"Of course, if you do not care to oblige me it is all right," he said stiltedly. "There are plenty who will willingly do it, only I thought you might like the idea of a little reciprocity."

Holworthy winced. "What is the amount you want to raise?" he asked hoarsely.

"Only five thousand, and that for a week or so at the most, to tide me over."

On the other side of the street a slight far-abled figure was coming briskly toward The People's Own Pharmacy. She must not know, and this should be the last time. If Brown should win out in the election it might mean—

"I'll do it," he said hastily. "I'll be over to the office in the morning."

"All right," returned Brown heartily; "much obliged—so long!" and tipping his hat to Mrs. Holworthy as they passed in the doorway through which he hurried out.

It was six months later and the front doors were locked for the night, still the proprietor lingered. How could he tell the wife whose days were so happy with the thought of their prosperity—the whole shameful truth! Tomorrow the business must pass into other hands. *Brown had not made good.*

It was told at last and Madge Holworthy stood there in the cheery prescription room like one who had received a death blow.

"I had thought," she said bitterly, "that we were partners, not because I had a few paltry dollars invested, or because my certificate hangs beside yours, but because I am your wife! Every wife is entitled to her husband's full confidence, and if he withholds it, wittingly or unwittingly, he does her a wrong."

"John, your first error was in lack of frankness. To be sure, your idea was to spare me worry, but it was mistaken kindness. We might better have gone on one meal less a day and paid a regularly incorporated bonding company for our protection than to have asked any man to obligate himself. 'The borrower is servant to the lender,' and so it has proved in your case. Your independence was gone when you placed yourself under that obligation, and when you think of it you had no moral right to ask that favor of Mr. Brown."

### A Lesson in Ruin.

"It was a mistake to sign those notes with him. Your position was an embarrassing one, but, John, it was not honest to the parents who trusted you with their all—and, John, it was not honest to me. Don't you see," she cried in an agony of distress, "that you have thrown away our

opportunity, and that of others as well. My father used to say that it is always fair weather when any person comes to ask a money favor, and too often stormy weather when it is time to pay it. No man is so strong that a weak woman, if she is a good woman—may not make him stronger by her counsel and advice and moral support."

John Holworthy raised a white drawn face.

"You are right, Madge," he said brokenly; "you are right."

Silently they attended to the final duties of closing for the night and then passed out together, and for the last time locked behind them the doors of The People's Own Pharmacy.

## Prize Competition.

**First Award In Contest No. 3 Is Made to O. R. Norris, of South Whitley, Ind.**

The first award of prizes in the ERA Competition is made in Contest No. 3 to O. R. Norris, of South Whitley, Ind. Conditions of these contests, which are open to everybody, will be found on advertising page 6 of this issue of the ERA. Mr. Norris' paper follows:

### Organize an Orchestra of Your Own to Advertise Your Business.

Increasing and advertising your business by having an orchestra of your own is perhaps a little ultra-modern, but nevertheless the scheme has proven a good and profitable one for us.

About a year ago we organized the "Norris Pharmacy Orchestra" for the purpose of advertising and increasing our business. We selected young people in our city who could play, but who had never been brought together in an organization, and secured a leader to drill and instruct them. We furnish them all the music they can use; we give them a suitable lighted and heated room to practice in, and we supply them with anything they need in the way of new instruments or instrument repairing at wholesale price.

Our orchestra is composed of ten members, playing the ten instruments that usually go to make up a ten-part orchestra. We have a fine leather music roll for each one of the members, with our name upon it, also the name of the player to whom it belongs. Each member is given a nice lapel button with the word "Norris" upon it, and these are always worn by the members. We also have printed for each member a bunch of fine calling cards, with his or her name upon it, also the line "Member of Norris Pharmacy Orchestra." These the members are continually giving out to their friends, and even to strangers whom they meet and wish to exchange cards with.

So much for the orchestra and its members; now a few words as to how we make it a profitable advertising venture for the store.

We make a special effort in our soda fountain department during the summer, and make a strong and special effort for the holiday business during November and December, and on each Saturday evening during the soda season and also during the holiday season our orchestra is playing for us in the store from 7:30 to 10 o'clock. People have learned of this and it has become a common expression among the citizens of our city to say, "Don't forget to meet me at Norris' Pharmacy Saturday evening to hear the orchestra." On every occasion our store is crowded with people who come in to hear the orchestra, and nine out of every ten make a purchase before they leave the store. In a great many cases they come in during the following week saying that they wish some article that they saw in the store on Saturday evening while they were in hearing the orchestra play.

We secure dates for the orchestra for church entertainments, commencements, dances and quite frequently it plays at the local theater. We always make it a point to have the name appear upon all advertising matter, programs, etc., as "Norris Pharmacy Orchestra."

Every one of the ten members of the orchestra is a walking, talking advertisement for our store. They are all interested and drop a good word for us whenever the opportunity presents itself. We think we have thoroughly tested the merits of this advertising plan, and we are more than pleased with the increase of trade that it brings to our store.

The plan is very simple and not expensive and almost any druggist could organize a similar orchestra in his home town.

## Timely Publicity Hints.

### Advertising Designs and Plates.

Illustrations used in advertisements are printed from plates or stereotypes of plates prepared in either one of two ways. Illustrations made from photographs or other copy of which it is necessary to reproduce different tones, or what we may call grays, are known as half-tones. The copy is photographed upon a sensitized metal plate and this plate treated with chemicals which eat out the metal between the photographed lines and thus give a printing surface. In the photographic process, however, there is placed between the object to be photographed and the lens a glass screen. This screen is ruled with fine lines which, as may be demanded, run from sixty to two hundred to the inch. These lines are, of course, reproduced upon the metal plate upon which the lens projects the image of the original. It is through their reproduction that the image is split up or "toned" and thus the shades, lights or grays are reproduced in the final printing. In the average newspaper half-tone the lines may be discerned with the naked eye, but in the work of a finer grade, as in magazines, it is necessary to use a glass to distinguish the lines.

### Line-Cuts.

The other class of printing plates, such as those which reproduce drawings or hand lettering are called line-cuts. In these there is no tone, no grays. The advertisements from such plates as finally printed show only dead blacks and clear whites, the same as the original drawing. Line-cut plates are produced the same as half-tones except that the use of the screen is omitted.

### Self-Made Illustrations.

The foregoing explanations are intended to lead up to suggestions whereby the druggist who possesses even a little artistic ability or drafting ingenuity may prepare illustrations or novel lettering for his own advertisements. Should you desire to have a photograph reproduced you have only to send the photograph to the plate-maker and order a half-tone. Greater originality, however, may be secured by making your own drawings or lettering and then having them reproduced in line-cuts.

In making drawings for line-cuts your copy should be at least twice as large as the plate is to be. By the reduction in the making of the plate the imperfections of your drawing become less prominent and better blacks are secured. Drawings should be made on good, dead white paper with charcoal or dull black ink. If wide lines or thick letters are to be filled in, India ink and a bow pen should be used, or the blacks may not be dense and even.

### Drawing Suggestions.

The following suggestions are taken from line-cut advertisements which have been used so successfully as to prove their originality and advertising value.

### An Anatomical Wrinkle.

This line-cut, in its variations, has been used almost continuously by one dealer for years. It has become almost a trade mark for him. He drew a simple outline of the human form, of such general character that the representation was neither that of a male or female. There were no lines indicating any part of the body, except that the head showed facial features. Of this he had a line plate made with the figure ten inches high so that when reduced by half in the second plating it would fit a five-inch, single column space. He always has on hand a number of impressions from this original plate. He also has a line plate of a hand with index finger outstretched. From point of index finger to finishing line at the wrist this hand measures three inches. There are always on hand prints of this plate on thin, but opaque, white paper. To prepare advertising copy from these prints their originator takes one of the hand prints and cuts it out along outside lines. This he pastes over one of the prints of the human form so that the index finger has its tip resting upon the location of any specified organ of the body or feature, as may be desired. The pasting, pressing and drying of the hand in place require considerable care. Upon the white space within the outline of the hand the druggist letters whatever he may choose, but all such lettering has reference to a remedy for afflictions of the physical part at which the finger points. Thus, if the finger points to the throat or lungs the lettering

may relate to a cough remedy or plaster; if to the mouth, a tooth preparation; if to the foot, a corn cure or bunion shield, and so on. When the hand is properly adjusted and lettered a line plate is made from the combined copy. These line plates may be adapted to any space, with or without other matter. "F—'s man," as the figure is known to nearly every one in the county where it is used, is almost as much depended upon for seasonable medical advice as is the weather man for his prophecies.

### Eight Good Things.

This ad. occupied a nine and three-quarter inch, three column space, but a similar one will show up well in half the space. The groundwork of the design is a figure eight made of two rings. The upper ring is five inches in diameter. The outer edge is a black line one-eighth of an inch thick and the inner line one-sixteenth of an inch thick, a clear white space being left between them for lettering. The lower ring is six inches in diameter with both inner and outer lines one-eighth of an inch wide. The outer line of the upper and lower rings is cut out sufficiently to allow the rings to blend into a figure eight whose total height is nine and one-half inches. Upon the clear white circular space enclosed by the inner line of the upper ring are heavy black letters announcing "Eight good things." Within the space enclosed by the inner line of the lower ring letters of the same face, but smaller, say: "You will need no beauty doctor if you use our skin and hair specialties." The druggist's name and address follow. Within the body of the eight, upon the white space between the inner and outer lines, in plain, single stroke letters which stand out vividly from the remaining white space, are the names and prices of the druggist's own cold cream, massage cream, face lotion, hair tonic, scalp cleanser, toilet soap, toilet water and talcum powder.

The above suggestions may be used for any appropriate numeral or letter with any line of goods.

### A Whirligig.

This advertisement has been used in a four and one-half inch, two column space and also in a single column space. It is simply lettering drawn in a scroll or serpentine coil. The diameter of the type face space in the two column ad. is three and one-half inches. To prepare copy proceed as follows: Upon a piece of heavy white paper draw with a soft pencil a heavy line of the "pen-wheel" order. Start at a point one inch from a dot in the centre of the paper and draw so that at any point the line will be three-quarters of an inch from the nearest point of the line above or below it. Continue this scroll line until its farthest point from the central dot is three and one-half inches. Fasten the paper with this scroll upon it beneath the paper upon which the lettering is to be done, so that the lines of the scroll show through as a "black-line" sheet would show beneath unruled letter paper. Commence lettering at the outer end of this scroll line and follow inward until its inner end is reached. Any announcement of proper length may be employed, provided it concludes in such manner that a single prominent letter, street number or simple design may be used in the centre of the scroll. In drawing, the single space letters, such as e, should be one-quarter inch high and the capitals and stem letters three-eighths of an inch. The plate should be made half as large as the drawing for a two column space and one-quarter as large for single column. The reader of this ad. has constantly to revolve the paper from right to left as he reads from left to right. The general design with varied wordings has been used very successfully by a large concern.

### Why Line-Cut Illustrations are Best.

As a general proposition, half-tones are not satisfactory for newspaper advertisements unless the number of the screen, that is to say, the number of lines to the inch, is chosen with particular reference to the mechanical equipment of the printer and the character of the paper on which it is to be used. The stability of the press, its speed, and above all, the grade of paper and ink used upon it, have much to do with the results. The half-tone which will show up beautifully upon a magazine page may leave but a blot upon a news sheet. On the other hand, line-cuts, being in the same mechanical class as type, will stand the same kind of treatment. There are no cleaner, plainer or more artistic advertising news pages in the country than those of the *New York Herald*, and its designs are almost exclusively line-cuts.

## Fakes.

By Joel Blanc.

Whenever I feel so remorsefully that it is hard for me to decide whether my cranial cavity is filled with sawdust or soap, it is my custom to trip it through the tunnel and spend the day with Jack. I sit in his prescription room with my feet on his desk, consuming his smokes (except at noon, when I go with him to sample Mrs. Jack's good lunch) and between prescriptions we talk. Jack is half Irish and half Republican, while I am half Dutch and half Democrat, with a French name. As you are probably aware, two such

thoroughbred United Statesans can fight all day without spluttering any gore on the kalsomine.

Upon my last arrival via the tunnel I found that Jack was in that state of mind which appear to be growing more common with retail druggists. Something he had eaten the night before had pricked his ethical conscience and as a result he started off thuswise: "Glad to see you, Joel. What in thunder did you come over to bother me today for? Just sold a bottle of Zinkneck's Female Regenerator for Corus. Such business makes me ashamed of my profession. I feel that I am losing all my self-respect by being a party to the distribution of such fakes." At this point the conversation was interrupted while Jack filled a prescription for antydwessting with cataspasm carolina and put it up in a cardboard box so that it could be conveniently heated. Jack continued: "The dignity of the profession is being dragged in the mud."

Jack probably meant clay, as he had been referring to cataspasm carolina. "The public no longer believes retail druggists to be men of honor and intelligence, and yet, day after day, we go on handing out package after package of the rankest fakes that were ever put in material form. I feel that we druggists are becoming the modern Pariahs of the world." (Fine word is "Pariahs!") Jack has an extensive vocabulary at his command. "And this fakery runs through the whole business. We are selling second-wash perfumes as imported flower extracts, 'clear Havana' cigars at six for a quarter, and in spite of the pure drugs laws I'll bet the ground elm bark I have in stock is half wheat flour, for it makes fine label paste. Ugh! I feel like throwing off this cloak of hypocrisy and becoming an out-and-out street faker who sells two dollar fountain pens for a dime."

In the midst of the foregoing Dock came in. Dock is one of those fellows that you do not feel inclined to refer to as an "M.D." He is too human and sympathetic. Instead of a black string tie and a coffin-plate seal ring he wears a furlined coat and a cheery smile. He is one of those hearty, humane men whose very presence makes children feel better and whose bill it is a pleasure to promise to pay, some time. Dock likes to sit in Jack's room and help me consume the "clear Havana's" at Jack's expense. Whenever Dock is near I claim to have the pip, just to hear that cheerful man say: "You're all right. You don't need any medicine."

Dock is, however, true to his early and recent training and weeps because the retail druggists have sunken to the obfuscated depths of nostrumism without a prescription for it. It was therefore natural that he should agree with all he heard Jack say of the utter degradation of the drug business. In fact, Dock added: "I am glad that you have at last awakened to the perfidy and fakery of your position. The drug business is a blot on the world commercial, as modern pharmacy is a sore on the body professional."

Did Jack agree? Not for a wink! You don't know us Irish. "They are, hey!" yelled Jack so vehemently that the ether waves he set in motion knocked a graduate from the rack. "There is not a fake in the drug business but that you medical men are at least indirectly responsible for; but we have fought that out before and it's settled. Fakes is it! There are no more fakes in the drug business than in any

other business from Wall street to wall paper, and I'll give it!

"Look at this coat," and Jack lifted from the hook an old coat that he sometimes wears around the store. "I've had it four years and paid forty dollars for the suit. It was satisfactory in every way and it just won't wear out. All wool? Of course! At least so my tailor said. But let's see." Jack carefully removed ten consecutive threads from a frayed edge of the coat and laid them side by side upon the desk. Then he separately held each thread in the flame of a match. "Every fifth thread cotton and I bought it for all wool. How's that for fakery in the clothing business? But wait a bit! I got all I paid for. The suit proved to be worth the money and possibly my tailor believed that it was all wool. At any rate, I would not have paid any more for one that was all wool, and it would have given me no more desired service if I had. But if my tailor had told me there was cotton in this cloth I would not have had the suit at any price and would have accused him of all the crimes in the tailor's manual. And yet I did not get all wool as I believed I was getting, and in reality the suit was a fake."

"There's young Tom Ryan who works in the Erie yards. He is taking a correspondence course and at every meal eating a dish of ground bread crumbs and cheese which is advertised as a brain food. He thinks it is increasing his brain power and helping him in his studies to become an engineer. Fake? Of course it's a fake! But are not the grocery store shelves filled with just such fakes? At the same time, isn't it possible that Tom's faith in the stuff gives him added power to help himself? Did you not send in a prescription the other day for pills made from a simple mass, without a particle of active principle in them and tell me afterwards that all the woman needed was to THINK she was taking medicine? Was not that a fake, pure and simple?"

"Now, I don't know anything about the so-called mental sciences. I am not posted on the modern ideas of the power of mind over matter and all that sort of thing, but even among you physicians there are a whole lot who are delving in mental mysteries and abusing all sorts of medicine. But what I do know is that fakery taken at its general meaning, applies to all the commercial and professional pursuits of the world as much as it does to the drug business. It's true that the rest of the world is yelling 'faker' at the druggists and for that the druggists are themselves most to blame. I believe in the higher ideals for pharmacy, but I don't believe in the pharmaceutical profession going before the world with a wailing and gnashing of teeth, exposing and magnifying all its own shortcomings and seemingly asking for martyrdom at the hands of a lot of humanity who are worse fakers than the druggists and either don't know it or won't acknowledge it."

"Hasn't the average life-insurance policy got wrinkles and creases in it that none but a lawyer can find? Isn't it a fake? Are not cold storage chickens sold as fresh-killed Philadelphia poultry? Haven't your 'triple-coated' dish pans got so little tin on them that you can scratch through it with a thumb nail? Is not 'solid oak' furniture made out of chestnut? Is not your composition sidewalk a mere veneer of cement over a bed of cinders, a veneer that cracks with the first frost? Does anybody or anything come up to specifications? I am not excusing the standard of morals in either trade or profession, although I do believe that as a general thing every man in this world gets just what he pays for, no more, no less, and the fact that all humanity expects to get something for nothing isn't going to give it to them."

"You may say that druggists deal in life and death as no other business men do. Huh! There are a hundred times as many suicides and murders with blades and bullets as there are with poisons. There are more deaths from defects in railroads, elevators, boilers, scaffolds and live wires in a day than there are from fake medicines in a century, and they are defects caused by stinginess and carelessness. But you don't hear the machinists, manufacturers, builders and electricians yawning about the degradation and fakery of their fellows and trying to scare the wits out of humanity in general."

"Oh yes! All the druggists say shows their selfishness and self-respect and high ethical conscience, does it? And the same practices and claims apply to you physicians? From the way we talk about ourselves and each other one might think that all we had to do was to press the button and skoot

up the elevator cable. Reforms don't work that way. We have to wait for the elevator car to come and we get in without considering who the other passengers are. Nor are we going to reach our twenty-sixth story ideals by chucking ourselves down the ash chutes into the third sub-cellar. We of the medical and pharmaceutical professions are getting it in the neck from all the world simply because we punch each other and ourselves in the jaw so persistently that the public feels that the only way to part us and end the fight is to throw bricks at us by the load."

"The dignity of the profession! Bah! It's the first time that I ever heard that dignity was part of a Killikenny cat fight. And as for cleaning our own houses! We seem to be beating the dirty linen instead of the carpets."

"We not only do not desire to, but we can't and can't sell any large amount of really harmful medicine. The man who does soon has the cops after him. Where are all the thousands of our victims that we have killed or injured? There never were any such thousands. Their existence was and is a figment of our own imagination. The drug business is just as harmless, just as honorable, just as free from fakery as any business or profession in the world—and I'll knock your head off if you say it isn't!"

## NEW BOOKS.

- ALLBUTT, SIR T. CLIFFORD, M.D., and Rolleston, Humphry, M.D., eds. *A system of medicine*, by many writers. New ed., rev. with add., v. 4, pt. 2. New York: McMillan, 164-566 p. ll. 8°, cl. 86; hf. mor. 88.

### Preparing for Wisconsin Ph.A. Convention.

MILWAUKEE, Jan. 4.—The semi-annual meeting of the Wisconsin Pharmaceutical Travelers' Association was held in Milwaukee recently and several topics of interest were discussed. One of the leading topics before the meeting was the matter of formulating plans for the coming annual convention to be held at Elkhardt Lake again this year. Out-of-town members present included W. W. Albers, Edmund Wilson, Wausau; W. J. Boulet, H. T. Merriman, Green Bay; F. W. Thiemann, Sheboygan; H. C. Fick, Chicago; J. L. Malec, C. W. Calkins, Madison, and F. W. Palmer, of Minneapolis.

### The New English Poison Law.

LONDON, Dec. 18.—The new poisons and pharmacy bill reached its final stage in the British Parliament today, but in order to give the trade time to comply with the new regulations, the act will not be enforced for three months. One of the immediate effects of the act is likely to be to increase the salaries of qualified assistants, as hitherto numbers of drug stores have been carried on without the aid of qualified men.

### A Parliamentarian.

"All in favor of the motion will please wink," said the astute chairman.

And then he added at once, "The eyes have it."

# Original and Selected

## AMPULS AND THEIR USE IN THE DISPENSING OF HYPODERMIC SOLUTIONS.\*

By Caswell A. Mayo, Ph.G., New York.

It is now about twenty-two years since the ingenious Limousin, the French pharmacist to whom we are indebted for the cacheteur, published a paper in the *Bulletin Générale de thérapeutique* for April 15, 1886 (page 316), describing what he termed "ampoules hypodermique" for the preservation of hypodermic solutions in a sterile condition. The ampoule, or ampul, put forth by Limousin, was a spherical bulb (Fig. 1), having a capacity of a little over 1 Cc. and a finely drawn-out neck about one and one-quarter inches in length.

The use of these ampuls did not become general until within a comparatively recent period. They seem to have been popular in France and among the physicians of South America, many of whom have been educated in France. They have also attracted some attention in Italy and are used there quite generally. The recently issued Swiss Pharmacopœia gives brief instructions for their preparation in connection with a chapter on sterilization. They have never become popular in the United States and only recently have they attained any great degree of popularity in Germany. Of late there have been several references to them in the German journals and in the supplement to Hager's *Handbuch der Pharmazeutischen Praxis* published this month, detailed instructions are given for the filling and sterilization of what he terms "Einschmelz gläser." It will be observed that Hager follows his Kaiser as regards the use of non-Teutonic words and eschewing the Gallic name "ampoule," though he recognizes parenthetically the Teutonized Latin form "ampullen." I have drawn freely from these sources in preparing this note.

Under the name of "ariston ampulla" a line of filled ampuls have already been introduced into the United States by the Kny-Scheerer Company, of New York, to whom I am indebted for the specimens of this brand which I show tonight. These ampuls (I prefer this form of the word) are imported empty and filled in the American laboratories of the Kny-Scheerer Company, who report that they have been well received by the medical profession.

Fougera & Co., of New York, import sterilized tubes of enesol (salicylarsenate of mercury) and sodium cacodylate, which are prepared at the laboratories of Clin & Cie, F. Comar & Fils & Cie., of Paris. Through their courtesy I am enabled to show specimens of both these preparations, one of which contains 1 Cc. and the other 2 Cc. of the solutions in each tube.

I also have pleasure in showing specimens of cornutol put up in this way by H. K. Mulford Company, of Philadelphia, and of "ergot asptic" in sealed ampuls made by Parke, Davis & Co., of Detroit.

The ampul in its most popular form is a vial about three-eighths of an inch in diameter, one inch in height and with a neck drawn out to a capillary tube about one and one-quarter inches long, which is sealed by fusing the end. This is usually of such size as to contain 1.2 Cc., though larger

sizes are on the market. It is essential that the bulb should be made of neutral (non-alkaline) glass, that is, glass which does not contain any soluble alkali, as does most of the glass on the market. If any soluble alkali is present it is apt to precipitate any alkaloid which may be sterilized in it with the result that the patient may not get the full dose of the medicament and with the possibility that the fine crystals of precipitated alkaloids may be drawn up in the hypodermic syringe, injected into the tissues and cause much pain to the patient by the mechanical irritation of the blood vessels. Hager and other German authorities agree that the best glass for this purpose is the Jena Normal 16, 111, which yields no alkali at all on boiling. Ampuls made from this glass may be obtained from C. G. Greiner, of Neuhaus, on the Rennweg, Thuringia, Germany. I have pleasure in showing specimens of these supplied through the courtesy of George P. Forrester, of Darmstadt, Germany, who has had experience in dispensing ampuls and to whom I am also indebted for several of the suggestions contained in this paper.

The form of the ampul is really immaterial, though the

Fig. 2.—Different forms of ampuls.

bottle shape is rather more convenient, as it can be stood upright while the physician has both hands free to use in filling his hypodermic syringe. It will be observed that the French tubes exhibited consist merely of sections of tubing with sealed ends and that no effort is made to form them into bottle shape.

### Neutral Glass Required.

I show here a piece of tubing which illustrates the several steps in the manufacture of the ampul in an amateur way. Any one who is at all expert in glass blowing (and many students soon become so in the course of laboratory work) can easily make ampuls which will prove satisfactory for all practical purposes, provided the glass is free from excess of alkali. This may be determined by boiling a sample bulb filled with a solution of phenolphthalein for half an hour. If this solution turns red the glass should be rejected as having free alkali. If the solution turns pink the bulb should be tried again with a fresh portion of the solution and may be accepted if it does not color the solution. If the solution remains colorless the glass may be accepted as being free from alkali. The suggestion has been made that where alkali is present it may be gotten rid of by rinsing out the ampuls with dilute hydrochloric acid and subsequent rinsing with plain water (Swiss Pharmacopœia), but Hager says that this is unsatisfactory, as the effect is only superficial and in the end the alkaline reaction would again show itself. Care must be taken, of course, to prevent the access of alkali to the test solution of phenolphthalein from some source other than the glass itself.

I made the ampuls which I now show from Jena normal glass tubing 9 Mm. in diameter, purchased from Eimer & Amend. This glass is free from excess of alkali and also has a high tensile strength, which is a decided advantage.

Fischer (*Apotheker Zeitung*, 1906, No. 19) makes an

Fig. 3.—Steps in the process of making ampuls from a tube. x shows ampul connected by a capillary tube b with funnel y, according to Fischer. d shows usual form of commercial ampul.

\*Presented at the December meeting of the New York Branch of the American Pharmaceutical Association.

ampul by drawing out a tube in the manner shown (Fig. 3); cutting so as to leave two portions of the full sized tube connected by means of a capillary tube (Fig. 3, b); sealing one end (Fig. 3, c); and using the other (Fig. 3, g) as a funnel. The hypodermic solution is put into the upper, funnel, end. The lower end is placed in hot water so as to expel the air, and on allowing the bulb to cool the liquid passes down into it.

#### Preliminary Sterilization.

The ampuls having been either purchased or made, the first step to be taken is to sterilize them. Where possible, they should be bought already sealed, as this prevents access of dust or possible contamination. If the pharmacist makes them himself and wishes to keep them on hand he should seal the empty ampuls as made and they will thus be in a sterile condition, having been sterilized in the process of manufacture.

The ampuls should first be opened by breaking off the tip of the neck, which can be done easily by scratching with a sharp file. It is interesting to note that in the packets sent out by the French manufacturers, Clin & Cie, a small file is enclosed for this purpose. The opened ampul should then be placed in a beaker filled two inches deep with water, the water brought to a brisk boil, removed from the heat and cold water poured in. This process creates a vacuum in the ampuls which is filled by water drawn up into the bulb. Pour off a portion of this water, so as to avoid the necessity of heating so large a volume, bring the water to a boil again, thus again expelling the water, and then take out the ampul and either dry over a flame or remove the residue of water by means of a sterilized hypodermic syringe. The ampuls may, if desired, be rinsed by opening the ends, putting in a thick-walled beaker or flask of water connecting with an air pump and exhausting the air, allowing the air pressure to gradually increase when the vacuum created in the bulbs by the pump will be filled with the water. The air then may be again exhausted, which will expel the water from the bulbs; and this process may be repeated several times, until the bulbs are thoroughly rinsed.

The hypodermic solution which is to be used should in the meantime have been prepared and sterilized. This particular phase of the subject is one which of itself would warrant an evening's discussion and will be referred to later.

It is best to make a scratch with a file before sterilization or testing with the methylene blue solution, as directed below, at the point at which the tube is to be broken off by the physician, as a flaw may be developed by the file. In some of the makes no file scratch is made and in the packages sent out by Clin & Cie, of Paris, as is already mentioned, a small file is enclosed to be used by the physician for this purpose. The file scratch, of course, does weaken the bulb and make it more liable to accident, but on the other hand the physician is likely to prefer to have his ampuls furnished him in such form that they can be used immediately without any further preparation. It is well to caution the physician to use a pledget of absorbent cotton around the neck of the ampul when opening it, so as to avoid wounding his fingers by the splinters of glass.

#### Filling the Ampuls.

The ampuls may be filled by means of (1) a pipette; (2) a burette; (3) a hypodermic syringe; (4) a vacuum created by heating the bulb; (5) a vacuum created by means of ether; (6) or by aspiration with the aid of an Auer apparatus. In the first five processes named the bulbs must be sterilized after filling. In the latter process the sterilization takes place before filling.

1. The tip of an ordinary eye pipette is drawn out by the aid of heat to a capillary tube. The rubber bulb and the pipette itself are sterilized by boiling for half an hour or by means of a steam sterilizer. The sterile hypodermic solution is drawn up into the pipette and the tip of this passed down to the bottom or near the bottom of the bulb, previously sterilized, and the bulb filled nearly full. The ampul is then heated to the point of sterilization, ordinarily 100° C., and the tip sealed while the contents are hot. The tip may either be sealed by rotating it in the point of a Bunsen flame, or preferably heating it only long enough to soften it and then squeezing the walls together with pincers. Care must be taken to make the seal perfect. The sealed ampul is then put into a solution of methylene blue, about one grain to

two ounces of water, and sterilized by boiling for half an hour, provided the solution will not be injured by boiling, or in a steam sterilizer. If any flaw or imperfection exists in the ampul its contents will absorb color from the solution of methylene blue; consequently any which are colored should be rejected. The perfect ampuls should be sterilized again after twenty-four hours, either by means of steam or boiling in water. Where the contents of the solution are likely to be decomposed by this temperature, a lower temperature, 60° C., may be used, but to insure sterility sterilization must in this case be repeated daily for from four to seven days.

2. The point of the burette may be drawn out to a capillary tube, or a hypodermic needle, or a fine canula may be fused to the end of the burette (as recommended by one of the German writers on the subject, though I have not undertaken this difficult operation), or a tube, one end of which has been drawn out to a capillary point, may be attached to the burette by means of a rubber tube. This rubber tube has been objected to on account of the difficulty, or alleged impossibility, of sterilizing it. Personally I do not think the objection a valid one, as I believe the subsequent sterilization of the ampuls offers complete protection. This question of sterility of the ampuls filled, according to the method named, is now under investigation. The remainder of the process is carried out exactly as given above for ampuls filled by means of a pipette.

3. The hypodermic syringe offers an excellent means of filling the ampul, save for the amount of time required in its use. The syringe should, of course, be sterilized before use. The process is the same as with the pipette.

4. The clean and sterile ampul may be taken up by pincers, the bulb held in boiling water or over a Bunsen flame, taking care not to get it too hot in the latter case, until a practical vacuum is created by the heat, and the point of the bulb then thrust into the solution, when the liquid will be drawn up into the bulb.

5. A drop of ether may be poured into the ampul, which is then held over a flame until the vaporized ether ignites at the tip. The complete evaporation of the ether will be signaled by the extinction of the flame at the tip, which should then be thrust into the hypodermic solution, which will be drawn up rapidly into the vacuum, so rapidly, in fact, that care must be taken not to fill the ampul too full. This process is particularly useful in dealing with oily liquids, such as are used as a medium for the deep injection of mercury. Then proceed as under paragraph 1.

#### The Final Sterilization.

In all the above methods the process of sterilization must be carried out after the bulbs are filled, and it does not seem to be essential that the process of filling should itself be carried out with strict regard to asepsis, though at least ordinary care should be taken at every stage of the operation to avoid possible infection with the bacteria always floating in the air.

In the next process which, from a bacteriological point of view is much to be preferred, there is fair assurance that when properly carried out the bulbs will be entirely sterile when filled, but even in this case it might be desirable to sterilize the sealed bulbs after the lapse of twenty-four hours. If it is proposed to do this it will be necessary to heat the bulbs before sealing them, as is done in the preceding methods, so as to provide against explosion by the expansion incident to the sterilization after sealing.

#### Filling With an Aspirator.

I show here an apparatus made for me by Elmer & Amend according to the design of Auer, of Zurich, as described by Hager, by means of which the ampuls may be filled without handling. The apparatus consists of a small Chamberland filter fitted to a tube, the constricted end of which passes downward through a rubber stopper into a thick-walled flask or beaker, in which the opened ampuls have been placed standing on their points. A bent tube provided with a bulb filled with sterilized cotton

Fig. 1.—Auer apparatus for filling ampuls by means of an aspirator.

to act as a filter passing out of the beaker provides for connection with an air pump. The apparatus with its contained bulbs are sterilized in an ordinary sterilizer, the hypodermic solution placed in the Chamberland filter, connection made with an air pump or aspirator and the air drawn out until a sufficient quantity of the solution collects in the bottom of the beaker. The pressure is then allowed to return slowly to normal, when the bulbs will be filled by drawing up the liquid. When filled they may be taken out and sealed.

#### Cleansing the Tip.

Where the solutions contain organic matter there is danger that the small residue left in the neck of the ampul may be charred in the process of sealing. This may be obviated as suggested by Dr. Boysen, of Berlin, by wiping out the inside of the tip with boiling water and a sterilized feather trimmed so as to fit into the capillary tube of the ampul. Hager suggests that this trouble may be avoided by making the solution of double the required strength, putting in half the required quantity in each ampul and adding the water required to make the full quantity in such manner as to wash down from the inner walls any adhering organic matter. This latter method requires careful measurement of the amount of solution put in each ampul.

#### Careful Sterilization Essential.

I cannot emphasize too strongly the need for care in obtaining complete sterility in the finished ampul. It will manifestly be difficult, if not impossible, to carry out the filling of the ampuls according to the first five methods named so as to insure sterility. For that reason the filled ampuls are directed to be either boiled or sterilized in a steam sterilizer for half an hour at a time on two successive days. The German writers on this subject seem to be satisfied with boiling for half an hour without repeating the operation. Certainly the product thus obtained will be more nearly sterile if used at once than would the average hypodermic solution as prepared extemporaneously by the physician at the bedside; but as the filled ampuls may be kept for an indefinite length of time before they are used, any viable germs left in them would have time to develop innumerable colonies. I should advise a repetition of the boiling and also the addition of 0.5 per cent phenol to the hypodermic solution. This is added by the New York Board of Health to its vaccines and is not objectionable therapeutically. This phase of the subject is one which requires further investigation and I have enlisted the co-operation of a friend who has undertaken to make a bacteriological study of the ampuls filled by the various methods outlined.

#### Solutions Which Decompose When Heated.

Many solutions may be safely sterilized by heating to a temperature of 100° C. Some others, however, have a tendency to decompose at such high temperatures and must be sterilized by Tyndallization, or intermittent sterilization, that is by heating to 60° C. at repeated intervals for several days. Among the substances which should not be heated to the boiling point of water Hager names atropine, cocaine, hyoscine, scopolamine, dihydroisone, physostigmine, atoxyl, and ergot solutions. Dr. Boysen adds to this list acid hydrochloride of quinine and urea. It is true that cocaine solutions are frequently heated to that temperature, but there is undoubtedly danger in doing so.

#### Labeling.

In the French tubes shown it will be observed that no label appears on the tube itself, the label appearing only on the external wrapper enclosing the tube. In the German and American tubes the label is attached to the tube itself. We think it likely that physicians will prefer the French method, as in some instances they might not wish the patient to know the character of the dose administered. A German pharmacist writes to the *Pharmazeutische Zeitung* that he has put in a set of type so that he can print his own labels.

#### The Commercial Aspect.

A personal friend who looked into the dispensing of ampuls as practiced in Germany, last summer informed me that the manufacturers there sell cards of the filled ampuls at prices which would be lower than the cost of making the empty bulbs here. The French proprietary tubes of *esnel* come in boxes of ten each and these boxes are sold at wholesale at \$11 a dozen. The sodium cacodylate tubes, of *Chin & Cie*,

are sold here at \$12 a dozen boxes, each box containing one dozen tubes. The "artiston ampulla" of *Kuy-Scheerer & Co.* cost from 80 cents to \$2.50 a dozen, according to the character of the contents. These figures may serve as a guide to what the druggist may be expected to pay for the general line of filled ampuls. It will be seen that the prices quoted do not allow a great deal for the work involved in filling and sealing the bulbs, and it is probable that the majority of druggists would prefer to purchase at the prices named rather than undertake to fill the bulbs themselves. The prices at which the "ergot aseptic" and the "cornuol" tubes are sold, 65 cents for a case of six; 35 cents for a case of three, and 45 cents a package containing six ampuls, respectively, are based rather on the cost of the contents than on the cost of dispensing in this particular form. Even if there is "no money in it" it is well for the druggist to know how to prepare these ampuls and to be ready to undertake their preparation if requested, for if such a request is made the probabilities are that he will be allowed to charge at least a fair compensation for the time and labor involved in their preparations, regardless of the ruling commercial prices. Moreover many physicians have their own special formulas and would no doubt like to have their own druggist prepare their ampuls for them.

#### Value of Mental Sunshine.

It is every one's duty to be as happy as possible. Happiness and health go hand-in-hand. The less grumbling an individual does, the fewer illnesses he will have. The more happiness he extracts out of life the more healthy will be his individual condition.

These facts are recognized by psychologists and medical practitioners alike, at the present day. In fact, the medical practitioner of today, to be successful, must be something of a psychologist himself. The time of funeral-faced doctors has gone. It is quite as much the duty of our useful class of citizens to radiate mental sunshine, as it is to stuff a patient with products of the pharmacopoeia.

While this is true of the physician, it is of the utmost importance that the patient, also, be cheerful. Of course, he will be more so, if mental sunshine, instead of funereal gloom, is allowed to permeate the sick room.

But, individual results are not the only ones obtained through a judicious use of mental sunshine. The effect of the cheerfulness of an individual is much more far-reaching. If each individual or a majority in a community, would radiate happiness and good cheer, that community would be healthy—and just in proportion to the community cheerfulness would be the community health.

What is true of the individual and the community, is true of the county, state, nation and world. If the individual is happy and healthy, the community will also be happy and healthy. If communities are cheerful, and their health is good, the happiness and health of the country will be better conserved. And so on, through the state, nation and world at large.

Remember, that, in the crusade of cheerfulness against ill-health, "every little bit helps," and be prepared to do your little bit on every possible occasion. Happiness and contentment are bound to come sooner or later. That is the end to which all mankind is striving. Your happiness and health can hasten this happy millennium. You might just as well get in the happy crowd, for all the "grouchers" are bound to be left behind.

Nothing did so much toward preventing a widespread panic during the recent financial depression, as the general optimism of the vast majority of business men throughout the entire country. Had the people been pessimistic, a panic approaching a calamity would have ensued.

Therefore, smile. Don't "grin and bear it." Smile and drive it away. It's a good motto and its practice would be beneficial. Try radiating mental sunshine; then watch the result.—*Hudson Observer*.

#### One Way of Doing It.

Take the prescription in your hand, hold it up-side-down, scowl at it for ten minutes, while the patron is watching you, tell her to return in two hours and a half, charge double price for it and receive a reputation for being a skilled pharmacist.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Elixir Calisaya.

(H. M.).—"Elixir calisaya" is one of the symptoms given in the National Formulary for "elixir of cinchona." This is an elixir of cinchona from the alkaloids, also known as "compound elixir of quinine," and is the only elixir that may be designated as such without qualification under the Federal Food and Drugs Act and the laws of many of the States. The formula replaces that given for elixir of cinchona in previous editions of the National Formulary, which was directed to be made from tincture of cinchona as follows:

Tincture of cinchona .....	2 1/2 fl. ounces.
Aromatic spirit .....	2 fl. ounces.
Syrup .....	6 fl. ounces.
Purified talcum .....	120 grains.
Water, enough to make .....	16 n. ounces.

Mix the liquids, allow the mixture to stand for twenty-four hours or longer if convenient, then incorporate the purified talcum, and filter through a wetted filter, returning the first portions of the filtrate until it runs through clear.

This preparation is not suitable for combination with preparations of iron and for this reason a formula for detannated elixir of calisaya or cinchona was also given in the first edition of the N.F. The latter preparation was made by using detannated tincture of cinchona. We are not familiar with the other preparations you name.

## Condition Powders for Show Horses.

(W. M.).—"Can you give me a formula for a condition powder suitable to administer to an old plug horse to liven him up, the powder to be given to the horse for several days before the animal is offered for sale? I have tried powder consisting of arsenic, gentian, iron sulphate, ginger, fenugreek, etc., but customers say that it is no good, that they want something more powerful."

We are not skilled in the methods followed by professional jockeys for rejuvenating horses on short notice, although we once knew a horse trader who was willing to stake his reputation on the results to be obtained from the judicious administration of arsenic in feed that largely consisted of buckwheat flour. However, to bring about the best results, artificial feeding and the use of various cordials is resorted to, and in attempting to answer your query we can do no better than to quote the following from the *Chemist's and Druggist's Diary* of 1890:

Everybody admires, while condemning, the cart horse parade and the fat ponies that are shown for prizes, but as long as the public will give premiums for horses unnaturally fat there will be a demand for those agents which help the process. They are: cordials, stimulants, carminatives, digestives, diuretics and diaphoretics; but if you have sufficient time to do your conditioning in begin with a dose of "physic" proportionate to the size of the animal, then any of the following: The basis of nearly all the advertised horse and cattle spices is salt, linlil flour and fenugreek, but these are greatly improved by such agents as sulphur, antimony, potassium nitrate, etc., as they enable the skin and kidneys to get rid of superfluous material that is liable to cause eruptions or blotches as the show week is approaching. There is but one other agent that makes the coat shine like elbow grease and antimony, and that is the sulphuric acid daily in the drinking water, but it is difficult to disguise it or flavor it, and dangerous and unprofitable to sell. Moreover, its long con-

tinued use is decidedly harmful, but we mention it here as the remedy which cunning carters use who would rather buy a pennorth of vitriol than give a fair amount of strapping to their team. For a ball to help show condition the following cannot be beaten:

(1)	
Sulphurated antimony .....	1 dram.
Grains of paradise .....	1 dram.
Ginger, powdered .....	1 dram.
Flowers of sulphur .....	2 drams.
Potassium nitrate .....	1 dram.
Animal charcoal .....	1 dram.
Glycerin or theriac .....	q. s.
To make one bolus.	

(2)	
Powdered resin .....	2 drams.
Castile soap .....	1 dram.
Powdered fenugreek .....	1 dram.
Powdered aniseed .....	1 dram.
Powdered gentian .....	1 dram.
Tartar emetic .....	40 grains.
Powdered caraway .....	1 dram.
Excipient, enough to make one bolus.	

## Separating Oil from Syrup.

(H. H. M.).—"I have a ten-gallon can of rock candy syrup into which I accidentally spilled some kind of oil. I think floor oil. Can you tell me how to get it out without spoiling the syrup?"

It is doubtful if any economical method can be suggested for removing an oil of the kind referred to from so small a quantity of rock candy syrup. It is possible that by heating the syrup very hot the oil may be made to float on the surface of the syrup, the film of oil being removed by skimming. The filtration of the hot syrup through bone black is also suggested, an operation which would also tend to remove any coloring matter the floor oil might contain. But even if these experiments should prove successful, would not the work and bother necessary to carry them out be of greater value than the reclaimed syrup?

## Waterproof Blacking for Shoes.

W. H. H.).—"We are not familiar with the preparation you name. In addition to the formulas given on page 790 of December 24, 1898, *ERA*, here are two more from the "Scientific American (Cyclopedia of Receipts)":

(1)  
Melt together 4 ounces black resin and 6 ounces of beeswax over a slow fire. When thoroughly dissolved add 1 ounce of lampblack and one-quarter pound of finely powdered Prussian blue; stir the mixture well, and add sufficient turpentine to make a thin paste. Apply with a cloth and polish with brush.

(2)  
Take 3 ounces spermaceti and melt it in a pipkin or other earthen vessel, over a slow fire; add 6 drams of India rubber, cut in slices, and allow to dissolve. Then add in order, tallow, 8 ounces; lard, 2 ounces; amber varnish, 4 ounces. Mix and the compound will be ready for use immediately. The boots or other materials to be treated are to receive two or three coats with a common blacking brush and a fine polish is the result.

Of course, some experimenting is necessary on your part.

## Creighton Confers Degrees.

OMAHA, Neb., Jan. 4.—President Eugent Magevney, of Creighton University, conferred degrees upon twenty graduates of the College of Pharmacy recently. The banquet and graduating exercises were held at the Hotel Loyal. Dean Edmund Thorpe presented the class for graduation. The members of the class are:

George L. McKeever, Francis Leo Riley, Ernest J. Jensen, Leonard M. Lull, Thomas Keefe, George Doering, A. W. S. Heissel, Helen Haas, Herman C. Smith, Mary Eva White, Vera Bartholomew, Fred A. Reinecke, William O. Odow, Myron M. Russell, Thomas B. O'Neill, Harry Copeland, August J. Obert, Ernest S. Wegner, Ernest Davis, Lorin McGee.

A straight tongue never needs the protection of a brass check.

# THEORY AND PRACTICE

## Some of the Constituents of Cigar Smoke.

The results of determinations of sulphur, ammonia, nicotine, moisture and ash of various brands of cigars sold in Austria have been determined by J. Habermann and E. Ehrenfeld, and are given as follows: The cigars were smoked by means of an aspirator connected with suitable absorption vessels. It is seen from the results that the amount of sulphur in the smoke of cigars was, on an average, 0.02 per cent. In the case of cigars known as "Specials" the average quantity was 0.015 per cent., but, on the whole, the quantity of sulphur in the smoke yielded by different brands was so small that it could not be used as a criterion of the value of the cigars. On the other hand, the great variations in the amount of ammonia in the various smokes made it impossible to arrive at a general average. The quantity of nicotine found in the cigar-smokes varied from nothing to 0.15 per cent. (referred to the weight of the tobacco). It appeared to be concentrated in the unsmoked stumps of the cigars, which contained from 3.22 to 4.71 per cent., while the cigars themselves contained from 1.02 to 1.53 per cent. of this base. But little difference was found in the quantities of ash and moisture in cheap and better class cigars, that is, in cigars costing from three pence to six-pence each (Jour. Soc. Chem. Ind.).

## Preparation of Pure Cholic Acid.

Pure cholic acid may be prepared as follows:—Evaporate 20 kilograms of bile *in vacuo* until it is reduced to 10 kilograms, add 2.5 kilograms of animal charcoal, and continue the evaporation until the whole mass solidifies on cooling. The mass is treated with 8 litres of alcohol at boiling temperature, filtered and the residue washed with alcohol. The alcoholic liquors filtered, are evaporated until reduced to 3 kilograms; to this is added a solution of 15 kilograms of potassium hydroxide, and the mixture boiled for 24 hours, diluted with water, filtered, cooled and the cholic acid precipitated by neutralizing the liquid with hydrochloric acid. The cholic acid is suspended in water, dissolved with ammonia, and solution of barium chloride is added so long as it causes a precipitate; the precipitate is filtered out, the filtrate treated with hydrochloric acid, which again throws out the cholic acid. The cholic acid thus obtained is converted into potassium cholate thus:—The cholic acid is dissolved in four or five times its weight of absolute alcohol, adding potassium hydroxide dissolved in absolute alcohol until a small quantity taken out no longer becomes turbid on the addition of water. The cooled solution is treated with twice its volume of ether when potassium cholate is precipitated in the form of white needles; these are washed with a mixture of ether and alcohol, dried, dissolved in water, and the cholic acid precipitated by hydrochloric acid. The product is washed and crystallized from methyl alcohol (Apoth. Ztg.).

## Toilet Jelly.

Gelatin .....	2 drams.
Glycerite of starch .....	7 ounces.
Boric acid .....	30 grains.
Distilled witch-hazel extract .....	9 ounces.
Orange flower water .....	1 ounce.
Carbolic acid .....	20 drops.
Oil of neroli .....	25 drops.

Soak the gelatin in one ounce of distilled extract of witch hazel, add the glycerite of starch and the boric acid dissolved in the remainder of the witch-hazel extract, heating until the gelatin is dissolved; finally add the remaining ingredients. Put up in collapsible tubes (Ph. & Dr.).

## Determination of Benzaldehyde in Almond Essences.

The following application of the bisulphite-rosiniline reaction for aldehydes is said to give good results in the colorimetric determination of benzaldehyde. Colorless fuchsine-sulphurous acid reagent is prepared by dissolving 0.5 Gm. of fuchsine in 100 Cc. of water and adding freshly prepared sulphurous acid solution equivalent to 20 Gm. of sulphur dioxide. When the solution is colorless it is made up to

1000 Cc. with water. Aldehyde-free alcohol is prepared by treating commercial alcohol with silver oxide by the method of Dunlap and distilling, then adding 25 Gm. of metaphenylene-diamine hydrochloride to each litre and drawing a current of air through the solution for three hours. The liquid is then distilled, the first 100 Cc. being rejected. The standard solution of benzaldehyde is made by dissolving 1 Gm. of pure benzaldehyde in one litre of this alcohol. The depth of color obtained with dilutions of this are compared in the usual manner with the tint given by solutions of benzaldehyde of unknown strength when mixed with the magenta-sulphurous acid reagent and allowed to stand for the same time at the same temperature. The aldehyde free alcohol must be used for all dilutions (J. Am. Chem. Soc.).

## Keeping Properties of Solanaceous Extracts.

Some very remarkable results have been obtained by H. Ribaut from a series of experiments having the above object in view. The extracts were partly prepared by himself and partly purchased in commerce. In all cases a loss of alkaloid was observed during the four years that the preparations were kept, but the variations in the loss were exceedingly great and irregular as the following figures, giving the loss in percentage of the total alkaloid present, show: Extract of belladonna leaves (a) 3 per cent. (b) 45 per cent. (d) 22 per cent. (e) 3 per cent.; extract of henbane leaves (a) 69 per cent.; extract of stramonium leaves (a) 31 per cent. (b) 8 per cent. (c) 1 per cent. (d) 12 per cent.; extract of henbane seed (a) 19 per cent. (b) 25 per cent. (c) 24 per cent. The loss is attributed to the destructive action of microbes or of molds (Bull. d. Sci. Pharm. Pharm. Journ.).

## Japanese Calomel.

Under the name of "Kanko" ordinary calomel is now largely manufactured by the Japanese, but they appear to have made a peculiarly light feathery product sold as "Keifun" since the tenth century. Keifun appears on the market as light, thin, lustrous scales of a white or cream color; it is four times as bulky as ordinary calomel. For its manufacture a mixture containing three parts of a peculiar red clayey earth (mitsuchi—which when baked yields a very porous ware) and one part of bay-salt is made into balls the size of a chestnut. A battery of sixty iron pots (6 in. deep by 6 in. wide) is arranged on the floor of a furnace covered with mitsuchi earth. Each pot has a wooden chimney fixed by a tamping of earth, a perforated board being placed over them. The furnace is fired by wood, and it is done so skillfully as to avoid the production of smoke. The temperature of the furnace does not approach that of a red heat; forty pounds of wood is sufficient for the charge of sixty pots. When the pots are sufficiently heated the surface of the table is damped, two or three of the balls of clay and salt are dropped into each pot with a small quantity of quicksilver; earthenware cups, 3 in. high by 6 in. wide, are placed over the pots, the firing continued, and the pots are left for about three hours. The sublimed calomel is in the form of feathery, coherent needles. The clay has apparently a mechanical action. The mercury vapor diffuses through its pores, where it meets hydrochloric acid vapor (produced by the decomposition of the magnesium chloride in the bay-salt by heat) and air. The calomel produced is free from mercuric chloride.—National Druggist.

## Camphosal.

Camphosal is the neutral camphoric acid ester of santalol of the chemical formula  $C_{31}H_{44}(CO_2-C_{17}H_{25})_2$ . The preparation forms a yellowish-brown oil of specific gravity 0.987; it is readily soluble in alcohol and ether, has a feebly aromatic smell and a somewhat bitter taste. Unlike sandalwood oil and santalol it is but sparingly soluble in 70 per cent. spirit. Camphosal is intended for the treatment of diseases of the prostate, urethral fever, catarrh of the bladder, etc., in which it appears so far to have given good results. It is said to be free from irritant action and is easily split up into its active components, santalol and camphoric acid. It is issued in capsules containing 0.25 gm. Of these, 2-3 may be given internally 3-4 times a day (E. Merck's Annual Report).

Some men laugh at failure because they fail at other people's expense.

# LETTER BOX

## "What is Happening."

Editor The Pharmaceutical Era:

In a recent number of your valued paper you discuss the question, "What would happen?" Let me tell you that the jobber already has had his innings, and has now, in the way of direct selling. This is a city of 250,000 people, and one block away from me is a veterinary with a small stable who is regularly called upon by the wholesalers' regular city men for orders. That veterinary dispenses his own prescriptions and buys as cheap as I can buy. Also the hospitals are regularly visited by the wholesalers' salesmen and buy their supplies directly. So you see that the jobbers are selling to parties who are not retailers, and who should buy at retail; and retailers think they can just as well do their jobbing and get all the profits, too, and in this case, I believe we, to a great extent, are doing it already, through the great A.D.S. Tilt for tat! Very sincerely,

H. I. SCHERER, PH.G.

Los Angeles, Cal., Dec. 20, 1908.

## "Successful Business Man" Case Resulted in Fines.

Editor The Pharmaceutical Era:

Will you kindly inform me what became of the cases of Rothschild and Kahn who exploited the "Successful Business Man" and cash register scheme in this city last spring?

DRUGGIST.

New York, Jan. 1, 1909.

(M. G. Rothschild and J. H. Kahn, who operated the "Successful Business Man," were arrested by the Post-Office authorities on March 14 last, tried and convicted in June and on June 22 were sentenced to pay fines of \$500 each, which they paid. A further penalty of five years each in the penitentiary was imposed, but operation of this sentence was suspended during good behavior of the defendants and they were released.—Ed.)

## Problems Pharmacists Should Consider.

Editor The Pharmaceutical Era:

Among the always interesting and instructive Joel Blanc articles in the ERA, I want to especially compliment and thank you for the one in the issue of December 10, "What of the Unit?"

It is unquestionably timely and a subject that should command the serious consideration of all pharmacists who would survive these critical times.

We must educate ourselves on this great problem, and be prepared to join in the procession and help form it, but not too hastily jump in the band wagon because it is led by a noisy brass band. This is not necessarily for publication. Yours very truly,

FREDERICK A. RUSSELL.

Tarrytown-on-Hudson, N. Y., Dec. 19, 1908.

## Growing Medicinal Plants in Texas.

Editor The Pharmaceutical Era:

We are having delightful weather down here in Texas, the temperature for the past week running from 50° to 80° every day. I am doing all kinds of outdoor work in my garden, such as planting, transplanting, harvesting, etc., in my shirt-sleeves. I cannot send in my annual report yet as I am not quite through harvesting the 1908 crop, but I can give the results with wormwood. From one-tenth of an acre I harvested seven hundred pounds of dried herb, receiving therefor \$35. Who can beat it? I harvested the first crop on May 20 and the last crop on November 17. Here is where we beat everybody else in that we can furnish fresh goods two and three times a year. All of my perennial and biennial plants are growing nicely. The extent of the venture has entirely outgrown my area of land and my curing capacity. Some of the business men of Sherman who have been watching the work are convinced that the plants will do well here, and have started a movement to form a company which will buy more land and whomp the thing up for all there is in it. I have been hampered all the time for want of means, but if the company is formed and I can spread my wings we will have a garden that will be good to look at. Texas is going

to get there along medicinal plant producing lines. Wish I could send you some of the violets that are in bloom all over the town and in the open. Wishing you a Happy New Year, I remain, yours truly,

Sherman, Tex., Dec. 21, 1908.

## Wholesalers Selling to Doctors.

Editor The Pharmaceutical Era:

ERA article of recent date regarding wholesale druggists selling to physicians and others direct might be answered here in Indiana as follows: A certain well-known pharmaceutical house recently mailed literature to physicians and others showing where they could obtain its products. The list contained fifty-six names. Twelve of these names were particularly marked as selling alone to druggists. The other forty-four (all wholesale druggists), were specified for physicians and others (not druggists) to order from.

We are not A.D.S. members, but from our standpoint it looks like the A.D.S. is giving its supporters a square deal as compared to what these wholesale druggists are giving the retail druggists in the Central West.

RAY S. SISSON.

Hazleton, Ind., Dec. 26, 1908.

## Professor Jackman's New Year Wishes.

Editor The Pharmaceutical Era:

Since more than any other single influence—perhaps more than on all others together—the future of legitimate pharmacy depends on an honest, independent, capable and well supported pharmaceutical press, it is but fitting that our appreciation of this fact, and of its corollaries, should ask of us at this time its formal expression, with a hearty New Year's greeting and God speed. Very sincerely yours,

W. F. JACKMAN,

(Professor of Pharmacy, University of Maine.)

Orono, Me., Jan. 1, 1909.

## ERA COURSE IN PHARMACY.

### Graduates for December, 1908.

Matriculation No.	Examination Grade, p.c.
5493. Simon Mohr, New York City.....	95
5610. H. Alphons Dingens, Red Bud, Ill.....	98
5618. Albert Almquist, Pocatoneo, Ill.....	96
5545. Nellie M. Coblenz, Mansfield, Ohio.....	98
5671. Robert J. McMeans, Philadelphia, Pa.....	98
5752. Clifford O. G. Kampf, Cincinnati, Ohio.....	96
5815. Owen K. Haydon, Conway, Ark.....	85

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for the sum of \$2. Those desiring the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

## For Betterment of Conference of Faculties.

BALTIMORE, Jan. 4.—Dr. Henry P. Hynson, who was elected president of the American Conference of Pharmaceutical Faculties at the Hot Springs meeting, has sent to the faculties holding membership in the conference a circular letter, in which he says:

"Knowledge of the proceedings of the last several meetings of the organization leads plainly to the conclusion that much, or perhaps most, of the effective work done at these meetings has been the result of some suggestion or recommendation made by the respective presidents in their annual addresses. In order that I may not fail in this regard and may be useful to the conference, I earnestly beg the confidence and active co-operation of every faculty holding membership.

"In my opinion, it is especially desirable that each faculty or governing body of the several schools should hold an early special meeting for the purpose of fully and thoroughly discussing the conference—its past, its future, its limitations, its scope, its most useless lines of operation and particularly the control it should have upon its members. If the findings and conclusions are transmitted to me by the different secretaries I will be sincerely grateful and will try to formulate them into a report that, I believe, will be important and suggestive."

## PERSONAL MENTION

—A. W. WESTHOFF, of Denver, was a recent visitor at Los Angeles.

—WARREN SEIDEL, of Philadelphia, passed his holidays pleasantly with his parents at Hamburg, Pa.

—ELIAS SHAKER, with A. T. Pollard & Co., Philadelphia, was in Poughkeepsie, N. Y., during his holiday vacation.

—O. P. ROSS entered the employ of Parke, Davis & Co. on the first of the year as a representative in New York State.

—CHARLES P. CASON, of Starke, Fla., was a recent visitor in Jacksonville, where he combined business with pleasure.

—E. P. SMITH, of Patchogue, Long Island, N. Y., called upon friends in the New York wholesale trade a few days ago.

—JOHN W. GOODWIN, a veteran pharmacist of Pittsburgh, Pa., has returned from an extended visit to his Virginia plantation.

—B. G. KNOTH, who has been with the Dee Drug Company, Ogden, Utah, has gone to Ely, Nev., to take charge of a pharmacy.

—VINCENT REYNOLDS, with Charles Young's Pharmacy in Johnstown, Pa., spent the Christmas holidays at his home in Reynoldsville.

—A. E. HUGH, who represents Bruen, Ritchey & Co. in Pennsylvania, was a caller in the New York drug trade during the holidays.

—HENRY HARWOOD, of Marquette, Mich., is recovering from injuries sustained through falling on a slippery sidewalk just before the holidays.

—S. J. MATTHEW and R. J. Parkell left the employ of Parke, Davis & Co. on the first of the year. Both were detail men in New Jersey.

—J. H. BREHM, a well-known pharmacist of Pittsburgh, Pa., has returned from a successful two weeks' hunting trip to the mountains of Virginia.

—H. A. KAISER has been engaged by Bruen, Ritchey & Co., of New York, and will represent that firm in Northern and Western New York State.

—ROBERT EASTERN, of New Brunswick, N. J., and wife will probably make their home in Arizona after the sale of their property has been completed.

—HARRY D. FOLSCOM, well known in the retail drug trade, has embarked with Bruen, Ritchey & Co., of New York, and will cover the Metropolitan district.

—ROBERT J. FRICK, of Louisville, Ky., is receiving much sympathy from his many friends on account of the death of his wife. Two sons also survive.

—CARL A. IHK, a graduate of the School of Pharmacy of the University of Wisconsin in 1908, and now located at Ashland, Wis., was a recent Madison visitor.

—GEORGE H. HORNING, of Roselle Park, N. J., president of the New Jersey Pharmaceutical Association, was a caller in the New York wholesale trade a few days ago.

—CHARLES E. CULPEPER, assistant manager of the New York offices of the Coca-Cola Company, is spending some time at the home offices of the company at Atlanta, Ga.

—E. S. BLOOM, of Ashland, Pa., a veteran "Knight of the Grip," who looks after the interest of Shoemaker & Busch in Pennsylvania, was a Philadelphia visitor last week.

—R. B. TREYOR, of New Orleans, La., where he looks after the interests of Johnson & Johnson, spent several days recently in Philadelphia, of which city he was formerly a resident.

—B. W. YOUNG, of the Powers-Taylor Drug Company, Richmond, Va., recently returned from a Western trip. On his way home he spent a day in Indianapolis visiting the Lilly laboratories.

—JOSEPH A. McGRATH, formerly at 220 Brushton avenue, Pittsburgh, Pa., has outgrown his old building and is now located in a handsome new structure of his own at Brushton avenue and Alfade street.

—L. C. HOPP, a prominent druggist of Cleveland, Ohio, and a former president of the American Pharmaceutical Association, will address the students of the Pittsburgh College of Pharmacy on February 17.

—CARL W. ZIEPPRECHT, of the Arno Pharmacy Company, Dubuque, Ia., and his bride have returned home from their

wedding trip to Havana. Mr. Ziepprecht has been admitted to partnership in the company.

—A. G. ROSENGARTEN, treasurer of the Powers-Weightman-Rosengarten Company, of Philadelphia, and J. H. Ambler, manager of the company's St. Louis branch, were visitors in the New York drug trade last week.

—MISS ZORA COLEMAN, a graduate pharmacist of Litchfield, is in charge of the prescription department of the pharmacy of H. T. Worthing at Overton, while the latter is serving the people of Nebraska in the State Legislature.

—CHARLES H. MARCY, of Altoona, local secretary of the Pennsylvania Pharmaceutical Association for the 1909 meeting at Bedford Springs, was a Philadelphia visitor last week and took dinner with a party of friends at the Drug Club.

—JOHN F. SPRAGUE, formerly general sales manager for Sharp & Dohme, and stationed in New York until the removal of the department to Baltimore some time in 1908, has connected himself with a North Carolina manufacturing concern.

—C. O. FOX, one of the popular salesmen of the Southern Drug Company, of Jacksonville, Fla., is an optimist of wide renown. He finds that while the people in his territory are mostly well and happy he has no trouble in disposing of his commodities.

—WALTER U. HARVALSON and wife (nee Miss Myrtle Wade), proprietors of the Live Oak Drug Company of Live Oak, Fla., were among the visitors to Jacksonville recently and were entertained at the Southern Drug Manufacturing Company's plant.

—H. M. SALL, president of the Western Wholesale Drug Company, of Los Angeles, Cal., has purchased a new and modern residence in Borendo street, in that city. The house is admirably arranged and the garage has accommodations for two automobiles.

—WALTER H. RIMSNER, formerly head prescription clerk with the Edward Williams Pharmacy at Madison, Wis., has gone to Texas to recuperate. His place is being temporarily filled by A. Link. Mr. Rimsner was married last October to Miss Florence E. Critton.

—J. F. W. MEYER, one of the pioneer druggists of Fort Wayne, Ind., recently celebrated his eighty-fourth birthday with a family dinner at his home. Despite his advanced age he is in excellent health and discharges his daily duties with as great facility as ever.

—J. D. LESLIE, formerly assistant secretary of the Western Pennsylvania Retail Druggists' Association, is blushing to acknowledge the congratulations of his friends, who have recently heard of the dear little baby girl that arrived in the Leslie family just in time for Christmas.

—RAYMOND H. SCHULTZ, an instructor in advanced inorganic and plant chemistry at the University of Wisconsin, is ill with typhoid fever and is at his home in Milwaukee. During his absence his position is being filled by Nellie Wakeman, a graduate student in the School of Pharmacy.

—FRED S. NAZLE, of Wyoming, Pa., is attracting the attention of his patrons with a carefully edited little publication, *The Linelight*, which he issues monthly. Mr. Nazle is a great believer in publicity and his steady booming of the Nazle Pharmacy has brought excellent results.

—JAMES C. A. DALE, a prominent pharmacist of York, is another new member of the Pennsylvania Legislature who will help Messrs. Fahy, Campbell and Honck, the other druggist-Assemblymen, to safeguard the interests of the retail druggists during the session which opens this month at Harrisburg.

—S. H. CARRAGAN, assistant manager of the New York branch of Parke, Davis & Co., entertained a number of the heads of the various departments and travelers connected with the New York office at the Drug and Chemical Club last Thursday. Lunch was served and the party listened to several speeches.

—JAMES C. PERRY, the well-known pharmacist of Philadelphia, has taken his son Fred, R. Perry into partnership and hereafter the pharmacy at 5107 Ridge avenue, Wissahickon, will be conducted under the firm name of Perry & Son. One of the first acts of the new firm was to send out on January 1 its greetings for 1909.

—CHARLES F. GEISSE, of Peter Van Schaack & Sons, sends to the ERA, under date of timely tense at Fond du Lac, Wis., one of the Red Cross stamp greetings which he has sent to all of his other friends. The sunshine sentiment and the

suggestion of mutual success were reasonable and could not have failed to strike responsive chords.

—DR. WILLIAM B. CHRISTINE, one of the crack bowlers of the Drug Club of Philadelphia, has had considerable trouble bowling with his right hand, owing to a slight projection of the bone on his thumb. A surgeon advised him to give up bowling, but instead, Dr. Christine has started to bowl with his left hand and already is scoring 170.

—D. E. BRASSOME, chairman of the famous "Busy Bee" entertainment committee of the Pennsylvania Pharmaceutical Association, is able to be back at his desk in Philadelphia after being confined to the house with symptoms of pneumonia. He has been kept busy receiving the congratulations of his friends who were considerably alarmed as to the outcome of his illness.

—FRANK C. PATTON, treasurer of the Richardson Drug Company, Omaha, Neb., was recently robbed of a \$400 diamond stud while standing on the rear platform of a street car. Mr. Patton does not object so much to the loss as to the unwelcome comments of his friends who seem to think that it was almost a joke for any light-fingered passenger to take the stone from such an astute and watchful business man.

—MAL EISENHART, of Shamokin, Pa., has received two handsome bear rugs from Taxidermist Eldon of Williamsport. Mr. Eisenhart, who in addition to being a pharmacist is a huntsman of renown, slew the animals while on a hunting expedition in the wilds of Lycoming County, and he is justly proud of the rugs. The bears' heads have been preserved intact and impart a realistic appearance to the floor coverings.

—J. H. REIFUSS, president of the Brooklyn College of Pharmacy and a well-known retail druggist of this city, saw the New Year ushered in at the home of his brother, Charles Reifuss, in Philadelphia. He was accompanied by his wife and sister-in-law, Miss Seever, of Stockton, Cal. During his short stay he met several prominent retail druggists who knew "Jack" Reifuss at college or during the short time he was identified with the retail business in Philadelphia.

#### **Pugilist Not Qualified to Conduct Pharmacy.**

BOSTON, Jan. 4.—William J. Melody, better known to the sporting world as "Honey" Melody, the middleweight boxer, who for the past year has been in the drug business with Frank J. McGarry at 437A Columbus avenue, has brought suit in the Superior Civil Court to wind up the affairs of the business.

In the bill "Honey" recites that he and McGarry became partners in June; that he was not then aware of the law passed by the Legislature of 1908 forbidding any one not a registered pharmacist from taking an active part in such a business, and that he is not a registered pharmacist. Because of this discrepancy he alleges that the articles of agreement to enter and carry on the drug business are null and void. He further alleges that McGarry has excluded him from the conduct of the business.

#### **Robber More Scared Than Druggist.**

ST. LOUIS, Jan. 4.—Dr. Gustav Ludwig, Sixteenth street and St. Louis avenue, East St. Louis, was not robbed by a highwayman, because the would-be robber got as scared as did Dr. Ludwig. The robber, a mere boy of seventeen, said afterward that he was starving. Anyway when he went into the Ludwig Pharmacy his demand for money, emphasized by a revolver, was not very convincing and Dr. Ludwig ran for the back door. This so disconcerted the amateur robber that he ran for the front door without investigating the cash register. Dr. Ludwig got to the fresh air first and regained his nerve and gave chase. The robber was captured and in his confession blamed the failure on Dr. Ludwig's informal behavior.

#### **Saleswoman Says Hair Dye Made Her Bald.**

MILWAUKEE, Jan. 4.—A St. Louis drug manufacturing company is a defendant in a suit for \$20,000 begun here by Miss M. L. Bowman, who says she used the hair dye sold by the St. Louis firm through a Fond du Lac retail drug house, and within six hours her hair began to shrivel, lose its life, and soon disappeared entirely. She affirms that she used the hair dye strictly, according to directions, and that she has suffered to the extent of \$20,000 in annoyance, by being forced to wear a wig. She is a traveling saleswoman.

#### **ROMANCE IN DRUG MANAGER'S MARRIAGE.**

**Mr. McVickar Saved Bride-to-Be From Drowning in a Boating Accident Last May in Africa.**

The marriage of Mrs. Daisy Emerson-Horner, step-daughter of Capt. Isaac E. Emerson, of the Emerson Drug Company, of Baltimore, at the Plaza Hotel last Monday to James McVickar, of New York, was the culmination of a romance which began last May at the home of the bride's sister, Mrs. Smith Hollins McKim, at Irvington-on-the-Hudson.

Mr. McVickar was formerly a broker, but is now the Gotham manager of the Emerson Drug Company. He returned last May from Africa, having been on a prospecting trip with several companions, and was a member of a party out boating one afternoon when Mrs. Horner, who recently divorced her first husband, T. M. Horner, formerly Atlanta manager of the Emerson Company, in leaning over the gunwale of the boat lost her balance and fell overboard. Mr. McVickar, without a moment's hesitation, plunged after her and soon had her ashore. The friendship thus cemented soon ripened into love and the engagement followed.

#### **Pharmacy Will Be His Wedding Present.**

ST. LOUIS, Jan. 4.—Edgar V. Bratton, a graduate of St. Louis College of Pharmacy, is to have a drug store as his wedding gift. The wedding occurred last week and the fortunate bride was Miss Grace McDermott. All the bridegroom will have to do is to find a store that suits him and is for sale—his father will do the rest. The elder Bratton approved of his son's choice of pharmacy as a profession and when he was graduated told him to look about for a wife and a store, and when he got the former the latter would be forthcoming.

#### **Dr. Hazeltine's Daughter Weds German Count.**

GRAND RAPIDS, Mich., Jan. 4.—An international romance culminated in the wedding recently of Count Adolf Montgelas, First Secretary of the German Embassy in Tokio, and Miss Fanny Dickinson Hazeltine, daughter of Dr. Charles S. Hazeltine, president of the Hazeltine & Perkins Drug Co., of this city. Count Max Montgelas, of Munich, brother of the bridegroom and a brigadier-general in the Bavarian Army, was best man, and Miss Delia Hazeltine, sister of the bride, was maid of honor. Only relatives and intimate friends were present. Count Montgelas and his bride will sail from San Francisco for Tokio January 23.

#### **Marriage Mentions.**

—PERRY S. CULP, of Tekoa, Wash., is being congratulated by his friends on his marriage to Miss Zaida Brown.

—CARL E. BEATTY, of Mannington, W. Va., was recently married to Miss Charlotte Rieta Devony, a charming young woman of Fairmont. Mr. Beatty is the proprietor of a popular pharmacy.

—DR. J. SHENKIN, a Philadelphia physician and druggist, is blushing receiving the congratulations of his friends who have just heard of his recent wedding. The honeymoon was spent in Washington, D. C.

—ROBERT S. HAYWARD, manager of the Catharine street laboratories in Philadelphia of the H. K. Mulford Company, has assumed the additional responsibilities of matrimony. The bride was Miss Mary S. Goff of Stratford, Conn., where the ceremony took place.

—GEORGE L. KLUMB, an enterprising young Milwaukee druggist, located at National avenue and Twenty-ninth, was married recently to Miss Rose Kaige of that city. Although Mr. Klumb has been engaged in the drug business but a few years, he has built up a most successful trade.

—DR. B. F. MAXEY, one of the best known physicians in Wilkes-Barre, Pa., and proprietor of the Maxey pharmacy in North Main street, was married last month in the Church of the Epiphany in New York City to Miss Mabel Daniels, of Scranton. The announcement was received with a great deal of pleasure by the friends of the happy couple, to whom news of the event came as a holiday surprise.

#### **Lilly and Bruen, Ritchey & Co.'s Teams Bowl Tonight.**

The bowling teams of Eli Lilly & Co. and Bruen, Ritchey & Co., of New York, will roll a match game at Luhrs' Alleys this evening. The last game was won by the Bruen, Ritchey team and the Lilly team hopes to retrieve the honors.

## LOUISIANA'S PURE DRUG LAW IN EFFECT.

**Members of the Health Board Will Act as Inspectors for the Present—Fate of Alum Undecided.**

NEW ORLEANS, Jan. 4.—Druggists in New Orleans and Louisiana are busy studying the new Pure Food and Drug Code which has been adopted by the State Board of Health under authority of the Legislature. The code became effective last Friday.

At a meeting held recently the Board of Health agreed upon the method of enforcing the provisions of the code. It was decided that the members of the board should themselves, for the present at least, act as inspectors in the various districts which they represent. In inspecting drugs they will take three samples. One will be sealed and left in possession of the druggist; another will be sent to the president of the Board of Health, and the third will be sent to the board's chemist. The two samples taken out of the store will be paid for by the board at market prices, but that left in the store will not be paid for. Special seals will be used and the samples will be numbered by the inspectors.

So far as quality is concerned, the code follows the requirements of the U.S.P., making that the standard, so that in this matter the code is easy to understand. There are other provisions, some of which will require explanation, and in the meantime each druggist will have to act upon his own interpretation. The code prohibits the sale of carbolic acid, opium, cocaine and other poisons except on a physician's prescription, and provides for a poison register for other poisons.

The board has not yet come to a final conclusion regarding the use of alum in baking powder. So much objection was made from some quarters against the prohibition of the use of alum that the board decided to defer action. President Dillon, of the board, says that the prohibition will not be adopted unless it is shown that the use of alum in baking powder is hurtful.

It is generally believed that the board will not be severe at first in the enforcement of the code. The disposition of the board to adopt only such provisions as are fair to the drug trade was shown from the time the matter was taken up by the new board, which discussed it thoroughly with representative druggists.

## Murder Ends Quarrel of Druggist's Sons.

DENTER, Mo., Jan. 4.—A pistol duel was fought Christmas Eve in J. W. McCullom's drug store here, in which his son Harry, aged twenty-one years, shot and instantly killed his younger son, Fred. The store was crowded with Christmas shoppers at the time.

The father of the warring bays, having grown old and being possessed of considerable wealth, practically retired from the active management of his affairs three years ago, turning them over to Harry. Fred quarreled with his brother about the property.

## "Better to Be Dead Than Poor," He Said.

ST. LOUIS, Jan. 4.—William F. Gallery, for many years owner of a prosperous drug store at Lawton and Compton avenues, ended his life at 2813 Franklin avenue December 30 by drinking carbolic acid. He told his landlady the day prior to his death that it was better to be dead than poor. After business reverses had compelled Gallery to sell his store, he undertook to make a living as a salesman, but was not very successful.

## Mortgagees Bid in Pharmacy.

BALTIMORE, Jan. 4.—The Peahody Heights Pharmacy, Calvert and Thirtieth streets, which was sold at auction recently on the foreclosure of the mortgage, was bid in by Truitt & Bacon, the mortgagees, who are thus once more in control.

## DR. MUIR CHOSEN PRESIDENT OF B. OF P.

**State Legislative Committee Will Confer With Governor About Reintroducing the Whitney Bill.**

ALBANY, N. Y., Jan. 5.—The State Capitol was thronged with pharmacists yesterday on the occasion of the annual meeting of the New York State Board of Pharmacy and the joint conference which was held with the members of the Legislative Committee of the New York State Pharmaceutical Association. The conference was held in a parlor in the Ten Eyck Hotel and it was attended by more than thirty representative pharmacists. Peter Diamond, of New York City, president of the State association, presided as chairman of the conference. There were representatives present from Buffalo, Rochester, Syracuse, Brooklyn, Manhattan and other localities.

The chief subject of discussion at the conference was the Whitney Pharmacy Bill which was passed in both branches of the last Legislature and was vetoed by Governor Hughes. The consensus of opinion was that before introducing the measure in the new Legislature, which convenes this week, the Governor should be visited and conferred with on the subject. That action will be taken.

Another feature of the day was the meeting of the Executive Committee of the National Syllabus Committee, which was attended by Dr. Willis G. Gregory, Dr. Henry L. Taylor, Dr. H. H. Rusby and Ernst O. Engstrom, there being but one absentee. It was resolved to continue the work and to submit a tentative syllabus to the State Board of Pharmacy as a basis of discussion and experiment.

The annual meeting of the State Board of Pharmacy was well attended and proved decidedly interesting. Dr. William Muir, of Brooklyn, last year's vice-president and a veteran member of the board, was unanimously chosen president. He is a member of the Eastern Branch. The other offices were filled as follows: First vice-president, Herbert M. Groves, of Jamestown, N. Y., representing the Western Branch; second vice-president, John Hurley, of Little Falls, N. Y., representing the Middle Branch; secretary-treasurer, Warren L. Bradt (re-elected), of Albany, N. Y., of the Middle Branch.

The examination report for the year disclosed the fact that the Eastern Branch had examined 230 persons, of whom 168 (including seven women) had been successful, while there were seventy-one rejections. The Middle Branch examined ninety-five persons, of whom seventy-two (including two women) were successful and twenty-three rejected. The Western Branch examined 120, of whom seventy-five (including four women) passed, the rejections during the same time numbering forty-five.

Secretary Bradt's report showed the total number of store certificates issued to be as follows: Pharmacies, 4424; drug stores, 27; permits, 737. The number of apprentices registered was 275, of whom fourteen were females.

The Committee on Inspection, Complaints and Prosecutions reported that during 1908 visits had been made to 4649 pharmacies, 1222 general stores and 473 towns and cities. The Eastern Branch collected 4257 samples, of which 401 were found to be deficient. The Middle Branch collected 377 samples, of which fifty-two were deficient. The Western Branch collected 495 samples, of which thirty-seven were deficient. The total collections numbered 5129, of which 490 failed to stand the test of assay.

Prosecutions for violations of the law show four criminal convictions (three being imprisoned), and four cases pending. Penalties collected: Eastern Branch, \$5102; Middle Branch, \$800; Western Branch, \$550.

The financial statement for the year showed the receipts to have been as follows: Eastern Branch, \$16,844.50; Middle Branch, \$7761.50; Western Branch, \$2701.29. The expendi-

DR. WILLIAM MUIR.  
Elected President N.Y.B. of P.

tures left deficits in each branch, the amounts being as follows: Eastern, \$25,862; Middle, \$792.75; Western, \$2,18.

Dr. George C. Dickman, chairman of the Committee on Adulteration and Substitution, made an interesting report of the work performed by the Eastern Branch. The report says, in part:

"All samples were collected by duly authorized agents of the board from pharmacists and others doing business within the jurisdiction of the branch by which the collection was made.

"Samples thus collected were properly sealed and placed in possession of the chemist of the board, who after subjecting each to an analysis, reported his findings. From these the data comprising the statistical part of the report is obtained.

"The scope of the work in the Eastern Branch has been considerably enlarged by the addition of a number of preparations to the list of those formerly collected. Among these are expressed oil of almond, liniment of soft soap, yellow wax, etc.

"Expressed oil of almond was collected with a view of ascertaining whether or not adulteration of this article was practiced to any extent. The result proved that in some instances at least dealers were furnishing peach or apricot kernel oils in place of almond oil, to the retail pharmacist.

"Liniment of soft soap was collected with a view of determining whether or not the practice of employing methyl alcohol in its manufacture was prevalent. Three hundred and eighty-nine samples were collected and analyzed, and in only nine cases was methyl alcohol found to be present. In several instances the liniment had not been manufactured by the seller but had been obtained by him from dealers. The presence of methyl alcohol in these nine samples is responsible for the increase of 2 per cent shown by this report. Without these samples the total per cent of methyl alcohol samples would have been only .63 or practically the same as in 1907.

"Yellow wax was collected from grocers with a view of determining whether or not the sources from which grocers obtain their supply were furnishing a pure article. Twenty-five samples were collected and analyzed, of which nineteen did not comply with the official requirements, consisting wholly or in part of ceresin, paraffin or rosin.

"A number of the samples collected were in the form of prescriptions. In all, twenty-one of these were compounded, eleven of them showing some deviation from the terms of the written prescription. This large number is accounted for by the fact that prescriptions were only presented for filling, to such persons as were under suspicion of inaccurate or careless compounding.

"In six instances the Eastern Branch deemed it necessary or wise to have samples reanalyzed, with the result that in every case the original analysis was confirmed."

#### New Year Pleasure Combined With Business.

PHILADELPHIA, Jan. 4.—New Year was most appropriately celebrated by the members of the firm of Shoemaker & Busch, their heads of departments and salesmen with a dinner and "round table" discussion at the Drug Club. Profuse decorations of holly and other greens formed a rich background for many little incandescent lights and added to the effect, emphasized the delight of the excellent dinner which was served.

Clayton F. Shoemaker presided and nearly every one of the thirty present responded informally. During the morning and afternoon the salesmen from inside and outside the city listened to descriptions of various lines of goods given by representatives of the manufacturers of those particular lines. Mr. Shoemaker also impressed upon the gathering old and new policies of the house and some of his listeners discussed conditions in the sections of the country they covered.

#### F. A. Fitch Makes New Trade Connections.

F. A. Fitch, who has for the last seven years represented the Meyer Bros. Drug Company in the Middle West, is now connected with Dietrich Brothers and with Heinrich, Hermann & Weiss, both of New York. For those two firms he will travel in the South and West, making Atlanta his headquarters.

#### Employees of Perfumers Get Together.

JACKSON, Mich., Jan. 4. The employees of Foote & Jenks, manufacturers of perfumes, held a convention here last week. Luncheon at the Jackson City Club and a banquet at the Knights of Pythias Hall.

## ESSENTIAL OILS OUT OF INFLAMMABLE CLASS.

### Transportation Committee of N.W.D.A. Issues Report of the Determination of Flash Points.

Dr. William Jay Schieffelin, chairman of the Committee on Regulations for Transportation of Inflammables, of the National Wholesale Druggists' Association, has issued a letter concerning the transportation of inflammables. Reference is especially made in regard to essential oils and the flash points of a number of these and allied products are tabulated.

The determinations for the flash points were made in the laboratories of the Dodge & Oelcott Company, and the results ascertained were secured with a Tagliabue's open cup tester as required by the Committee on Transportation of Explosives of the American Railway Association.

It will be noted that every oil has a flash point above 100° F., which would place these products outside of the class of inflammables.

Exception is also taken in the case of turpentine, which is on the railway regulations as an inflammable, but which was found to have a flash point of about 110° F., either before or after rectification.

It should also be noted that the amyl acetate, referred to in the table, is the refined product, having a flash point above the ordinary commercial, which at present is considered an inflammable liquid.

In regard to the packing required by paragraph 1854 for certain acids, Col. B. W. Dunn, chief inspector of the Bureau of Explosives of the American Railway Association, has given the following interpretation:

"Pieces of rubber hose surrounding the largest circumference of the carboy will meet the requirement for 'elastic incombustible packing.' Whiting, asbestos, fuller's earth, ashes, etc., in quantity sufficient to fill loosely the space between the carboy and its box, will satisfy the requirement for 'incombustible absorbent material' for the packing of nitric acid."

The products examined, with their flash points, are as follows:

Oil Mustard .....	above 100° F.	Oil Clove .....	above 200° F.
Oil Turp. Rectified .....	110°	Oil Sandal .....	above 200°
Oil Fossil Rectified .....	118°	Oil Birch .....	above 200°
Oil Juniper Berry .....	120°	Oil Cam. S.G. 870 .....	above 200°
Oil Lime .....	120°	Oil Cassia .....	above 200°
Oil Pine Needle .....	120°	Oil Copaiba .....	above 200°
Oil Camphor S.G. 880 .....	125°	Oil Cedar .....	above 200°
Oil Lemon .....	131°	Oil Myrtane .....	above 200°
Oil Lavender Flowers .....	132°		
Oil Eucalyptus .....	132°	Terelene .....	115°
Oil Sweet Orange .....	136°	Eucalyptol .....	130°
Oil Caraway .....	135°	Benzaldehyde .....	162°
Oil Bay .....	136°	Ethyl Acetate .....	50°
Oil Citronella .....	165°	Ethyl Formate .....	below 50°
Oil Bitter Almond .....	162°	Ethyl Butyrate .....	85°
Oil Peppermint .....	170°	Amyl Acetate .....	130°
Oil Pennyroyal .....	175°	Amyl Valerianate .....	145°
Oil Sassafras Natural .....	190°	Bay Rum 100° proof .....	95°

Determinations were also made on the alcoholic flavoring compounds, such as the commercial attenuations of the fruit ethers and the cognate lines of the so-called fruit essences, lemon, vanilla and similar flavoring extracts; these have uniformly a flash point under 100° F. and therefore come within the scope of inflammable liquids.

### Druggist Fined \$100—Sold Morphine Without Label.

Daniel M. Priest, who conducts a pharmacy at 200 West Twenty-third street, pleaded guilty on December 30 in the Court of Special Sessions to the charge of selling morphine without properly labeling it and was sentenced to pay a fine of \$100, which he paid. He was arrested on December 6 by inspectors of the State Board of Pharmacy, who said that they had purchased morphine from Priest and that he had failed so to label the package.

### Useful Memorandum Souvenir.

Frederick Stearns & Co., manufacturing chemists, Detroit, Mich., following a custom established by them many years ago, have just issued a pocket memorandum book and calendar for the current year. The book, which can be carried in the vest pocket, is artistically bound in red leather and contains blank pages for memoranda and much statistical and other information that will prove useful to the busy druggist.

The clerk who does his "level best" today is the one who is on the level all the time.

## DINNER TO MR. HAGENOW A BIG SUCCESS.

**Fresh Impetus Given to Movement for Better Pharmacy Laws in Missouri—Mr. Bolm Toastmaster.**

ST. LOUIS, Jan. 4.—The feature of the holidays in local drug circles was the testimonial dinner tendered Theo. F. Hagenow, member-elect of the Missouri Assembly, which served to win better publicity for the plans for pharmacy law amendments than any plan heretofore carried out.

Mr. Hagenow was guest of the retail pharmacists and the allied trades, both local jobbing houses, two pharmaceutical manufacturing houses, several cigar, label, candy and proprietary establishments being represented. The general topic was need of more and better laws. After the eight-course dinner, W. H. Lamont, chairman of the entertainment committee, told of the object and introduced William C. Bolm as toastmaster of the evening. Mr. Bolm outlined the proposed law: the increase of membership of the State board from three to five members, one of whom shall devote his entire attention to the business, biennial registration, recognition of assistants, a registered pharmacist in every store where medicine is sold, elimination of the "medicine wagon" and greater restrictions on sale of poisons.

Col. C. P. Walbridge, of the J. S. Merrell Drug Company, asked to be excused from his place on the toast program because of illness and Sol. Boehm spoke on "Holding an Office." Other toasts were: "The Pharmacist of the Future," Leo. R. A. Suppan; "Student Days," Francis Homm; "The Retail Druggist," Charles R. Judge; "Association Work," Dr. W. D. Auferheide. Additional addresses were made by William K. Illhardt, Ed. H. Wolff, L. A. Seitz, J. M. Good. Each viewed the proposed legislation from his own angle, but reached the conclusion that each request was justifiable.

Mr. Hagenow was called upon after the regular program of toasts and pledged his best efforts to give a good account of his stewardship as spokesman for the pharmacy interests of St. Louis in particular and the State in general. He said that his chief object in aspiring to the legislative position was that he believed that in this field he could better carry on the work that he had always tried to accomplish for the betterment of the profession in his active work in the College of Pharmacy and in the several associations.

The committee in charge was W. H. Lamont, Charles R. Judge, Charles Renner, L. A. Seitz, H. O. A. Huegel, J. C. Thumser, and the place the Marquette Hotel.

### Druggist Finds Auto Victim Is His Own Son.

Leslie Manheimer, six years old, ran into the street in front of his home at 27 Manhattan avenue, New York City, last Saturday afternoon and was run down by an automobile. A wheel passed over his head. The driver stopped his car and ran with the boy to the nearest drug store. The druggist set about attending the child and found it was his own son. He became hysterical.

The father, Maurice Manheimer, carried the boy to the office of Dr. G. A. Blakeslee at 60 West One Hundred and First street, but the child was dead when they got there.

### Beaver Valley Druggists Elect Officers.

BEAVER, Pa., Dec. 31.—The Retail Druggists' Association of the Beaver Valley has elected officers for the ensuing year as follows: President, Ira C. Hoffman, of Monaca; vice-president, E. G. Stucky, of New Brighton; secretary, Walter Kaye, Jr., of Monaca; treasurer, Robert D. Thompson, of Freedom.

## PUBLIC SENTIMENT SUSTAINS DR. WILEY.

**Chief of the Bureau of Chemistry Greatly Pleased With Editorials Ament Rumored Removal.**

WASHINGTON, Jan. 4.—The hold of Dr. Harvey W. Wiley, Chief of the Bureau of Chemistry, on popular favor was put to a significant test recently in the efforts of certain manufacturing interests to have him removed from office. The interests that have carried on a warfare with the government chemist over the use of benzoate of soda apparently gained a temporary advantage by going over Dr. Wiley's head and obtaining from the administration a declaration which practically says that Dr. Wiley's views on benzoate of soda do not constitute the views of the administration until the Board of Referees has passed on the question. At the same time the sugar men, including cane growers and refiners, petitioned the President for the removal of Dr. Wiley because of his rulings in regard to the use of sulphur in the manufacture of the cane products.

### Popular Druggist-Legislator.

PAUL W. HOUCK,  
of Shenandoah, Pa.,

who was elected a member of the State Legislature, is a Republican, and becoming interested in politics at an early age soon established himself as a leader in city and county. He was born in Lebanon, Pa., and after a public school education was graduated from the Philadelphia C. of P. He is owner of one of the leading drug stores of Shenandoah.

The slap at Dr. Wiley in the matter of the benzoate of soda was responsible for the widespread report that the administration had decided on Dr. Wiley's removal, and this report furnished the test of Dr. Wiley's popularity with the public.

On Dr. Wiley's desk there is a pile of newspaper clippings nearly a foot high, representing editorial expressions from every section of the country. "I know some of the people who have sent me these newspaper clippings," said Dr. Wiley to the ERA correspondent, "but the bulk of them come from people I have never heard of."

These clippings were sent by admirers from nearly every State in the Union, and they represent tributes to the work of the chief chemist of the government from hundreds of newspaper editors who have apparently done their best to say bright things in favor of his work and in opposition of the efforts to remove Dr. Wiley from his post.

Dr. Wiley is clearly delighted with this showing of public sentiment in favor of an aggressive enforcement of the Pure Food and Drugs Law and expressed the belief that the result of the effort to obtain his removal has done much to enlighten manufacturers on the temper of the public in regard to the enforcement of the law.

That there is to be no letting up on the aggressive policy for the protection of the public health is shown by the new work upon which Dr. Wiley has embarked. As announced recently in the ERA, he has begun a crusade against absinthe and is engaged on a brief to be presented to Secretary Wilson showing the effect of absinthe, with the view to obtaining from the secretary an order

under the Pure Food and Drugs Act to prevent the importation of absinthe, as smoking opium is now barred from this country. This brief on absinthe is being prepared from official reports from European countries and will be presented to the Secretary of Agriculture within a few weeks.

Dr. Wiley will deliver two addresses this month in Ohio. On January 20 he will speak before a meeting of the Tri-County Medical Association at Canton, and on January 21 he will deliver an address before the Sigma Xi at the University of Ohio at Columbus.

### Paint, Oil and Varnish Club Meeting.

The Paint, Oil and Varnish Club of New York will hold its one hundred and fourteenth meeting and dinner at Reisenweber's, Columbus Circle, next Thursday. The Entertainment Committee has extended greetings to the members and also expresses the hope that members will do their utmost to make the meeting an enjoyable one by their attending same.

## EFFECT OF EARTHQUAKE ON DRUG TRADE.

**Unquestionably Great Damage Has Been Done to Sources of Supply in Italy for Citric Acid, Essential Oils, Olive Oil, Etc., but Details Are Very Meagre and Unsatisfactory.**

To realize even approximately the extent to which trade will be affected by the recent seismic disaster in Sicily and Calabria, is as yet impossible. Cable advices continue with graphic descriptions of the appalling loss of life and property in the cities and other matters really outside of trade interest. There exists, however, the belief that when the business phase of the situation comes to be estimated the devastation will be found to have been enormous. The region which was the world's greatest source of supply for various essential oils, citric acid and a number of products handled in the drug trade has had numerous visitations of a similar nature in the past, but as reports are confirmed it is realized that this latest calamity is without comparison in the completeness of destruction.

Reports from survivors who are deserting the region state that terrible elemental destruction has taken place in the rural districts and even if the growing crop of fruits has not been entirely wiped out, there is only a small possibility of its being gathered owing to the depopulation of the country, so many having been killed and survivors fleeing with the intention never to return.

Reports have it that many groves have been inundated, while the coast for miles inland which were covered with large plantations, were demolished by tidal waves. To restore the orchards will take years and the production will be curtailed for a decade at least, even if the planting could be commenced at once. In the city of Messina, which is reported practically annihilated, a large amount of finished and crude products was destroyed, large stocks being in the hands of producers and dealers at this time of the year in anticipation of the demand likely to result on the signing of new contracts. The trade in oils of lemon and orange has been practically dependent upon this port for its supplies for more than a century and the destruction of the city it is claimed will revolutionize commerce in these articles.

The entire output of oil of bergamot came from Calabria, and as this peninsula has also suffered to an extent almost as bad as Sicily there is almost every possibility that this article will follow the same course as the oils of lemon and orange. Messina ranked fourth in the volume of its commerce among the Italian cities. The total tonnage entered and cleared in a recent year was 2,300,000, with imports valued at \$4,000,000 and exports at \$10,000,000. Silks, wines, cloths, fruits, besides the various essences, oils, arazols, citrate of lime, constitute the chief articles of its commerce.

The prices of cream of tartar may possibly also be affected, if the production in the other European wine producing districts does not reach a high level this year. Manufacturers have already advanced prices on citric acid and its salts, the advance amounting to 5 cents on the acid and 4 cents on the salts. It has been stated that in Messina there was destroyed more than one-fourth of the world's annual consumption of crude citric acid.

Manufacturers and dealers, while slow to consider action at the time of the first reports, are now watching with keen interest all advices having a bearing on the situation, and are endeavoring to secure information as to the future outlook so as to restore quotations which have been withdrawn on all the oils produced in the region.

Recent advices from London are to the effect that while the importers do not refuse to give quotations, they refuse to deliver the goods when the price asked is accepted. This is taken as an indication that they realize the situation and that prices when established will be prohibitive. The same advice states that prices without offer on oils of bergamot, orange and lemon are held at \$7.50, \$5, and \$4 per pound, respectively, an advance of more than 100 per cent. The price of olive oil will without doubt also be affected, as Messina was a shipping port for large quantities of the Italian oil and some stock presumably perished. Coming at a time when the conditions in other producing districts are so critical due to the destruction by the olive worm with crops so small as hardly worth gathering, the loss of only small quantities will certainly be reckoned with.

Local importers state they have had no word from their

representatives in the districts affected and are naturally at a loss to give any information in detail concerning the influence which the earthquake will have, but they expect that all their contracts will be cancelled and those who are short of stock will be bound to go without any.

### Letter From Consul Killed at Messina.

BALTIMORE, Jan. 4.—The cable dispatches from the area in southern Italy devastated by earthquake and fire have contained reports giving meagre accounts of the death of Arthur S. Cheney, the American Consul at Messina, and his wife, who were buried under the ruins of the consulate. By an extraordinary coincidence a letter from Mr. Cheney was received by the wholesale drug house of Math Bros. & Co., of this city, on the very day of the calamity, being delivered only a few hours after the city had fallen in ruins. The communication was dated November 27, having been sent on one of the slow Mediterranean steamers, and related to an inquiry made about a firm of exporters at Messina, with which the Baltimore house had had business relations. The letter also gave a list of other houses of importance, most of them exporters of essential oils and similar goods. A majority of the names given appeared in the dispatches as having suffered the destruction of their warehouses, and which had lost one or more members by death. The list included Fred. Baller, W. Sanderson & Sons, Giovanni Restuccio & Co., and Arthur A. Barrett, all of Messina.

The death of Mr. Cheney will be felt as a serious loss to the drug trade and to importers from Sicily and Calabria generally. He was a most zealous and efficient official and his services had been of great value to American business men. In numerous instances he had been instrumental in securing the collection of claims and the equitable adjustment of differences, which without his aid might have been productive of losses. Mr. Cheney made a close study of conditions in his territory and was well informed about the resources of the region, being able also to give data about the standing of numerous houses. He is generally accounted to have been one of the best and most useful members of the Consular Service.

### Druggist Will Appeal From \$750 Verdict.

JERSEY CITY, Jan. 4.—A jury in the Supreme Court last week awarded St. Clair Alleyne, fourteen years old, a verdict of \$750 damages against Herman J. Lohmann.

Two years ago the boy was given a bottle to deliver to a customer of the druggist. In jumping on the rear end of a truck the bottle was broken and its contents, sulphuric acid, burned young Alleyne on the hands, arms, legs and abdomen. He testified that the druggist failed to tell him what the bottle contained. He sued for \$5000. Mr. Lohmann will appeal from the verdict.

### Narrow Escape of A. J. Horlick.

RACINE, Wis., Dec. 31.—Mayor A. J. Horlick, of Racine, and well-known proprietor of the Horlick Malted Milk Company, recently had a narrow escape from death under the wheels of a street car at Racine. The manufacturer started to cross the street to catch a car, and in so doing fell across the tracks in front of the approaching car. Only the agility of Mr. Horlick and the presence of mind of the motorman prevented a fatality.

### Important Suit Won by Jacobs' Pharmacy.

ATLANTA, Jan. 4.—The second trial of a suit of the Jacobs' pharmacy against the Atlanta & West Point Railroad terminated in Coweta County in a verdict for \$7250 in favor of the pharmacy company, this being a greater amount than was awarded on the first trial. The suit grew out of the destruction by fire of a carload of goods being shipped by the Jacobs' pharmacy to Atlanta from Montgomery.

### Hoagland & Mansfield Reorganized.

Hoagland & Mansfield, wholesale druggists at 94-98 Canal street, Boston, announce that they have dissolved their partnership by mutual consent, and that hereafter the business formerly conducted by them will be carried on at the same address by the Hoagland-Curtis Drug Company, a corporation organized under the laws of Massachusetts.

## THREE OF QUARTETTE OF PHARMACISTS WHO TOOK SEATS IN MASSACHUSETTS LEGISLATURE.

HON. W. G. WHITTEMORE,  
of Ashland, Mass.HON. J. A. WILFRED BOUVIER,  
of Fall River, Mass.HON. JOSIAH S. BONNEY,  
of Wakefield, Mass.

BOSTON, Jan. 6.—Four druggists were inaugurated today as members of the Great and General Court of Massachusetts, and took their seats in the House of Representatives for the year 1909. All four are Republicans, and in the case of each of them this their first service in behalf of the State.

Not a single person connected with the interests of pharmacy who sat in the Legislature last year was returned to the present Legislature, yet their places have been taken by four men of exceptional promise. They are: W. G. Whittemore, of Ashland, a graduate of the Massachusetts College of Pharmacy in the class of 1890; Josiah S. Bonney, of Wakefield, a graduate of the same college in the class of 1892; J. A. Wilfred Bouvier, of Fall River, a graduate of the Chicago College of Pharmacy in the class of 1893, and John F. Thompson, of Somerville.

With the exception of Mr. Bouvier, who on this occasion made his first venture into politics, all of the representatives have had a somewhat lengthy experience in the local politics of the home districts.

W. G. Whittemore, of Ashland, is proprietor of the drug store at 7 Front street, Ashland. He has been in the drug business since 1884. He was born in Ashland September 17, 1867, and with the exception of two years has always lived in that town. He graduated from the Ashland High School in 1884 and then began work in a drug store. Upon his graduation from the Massachusetts College of Pharmacy in 1890 he started in business for himself. He is a member of the Massachusetts State Pharmaceutical Association. He holds a prominent position in town affairs. He is at present town clerk, and he has been both secretary and chairman of the Ashland School Board. He is also assistant engineer of the fire department and a member of the State Firemen's Association. He is high in the Masonic fraternity, being now master of North Star Lodge, F. & A. M.; a member of Concord Royal Arch Chapter, Natick Commandery, K. T., and of Aleppo Temple, Order of the Mystic Shrine.

Josiah S. Bonney won his seat in the Legislature by defeating one of the best-known members of the House, a member who had served nine years there, and who in the last House was the minority leader. Mr. Bonney is the senior member of the firm of Bonney & Dutton, at 435 Main street, Wakefield. He is a native of New Bedford and came to Wakefield in 1885 as a boy of seventeen to enter the employ of Dr. Joseph S. Mansfield, a druggist, who was proprietor of the oldest drug store in the town, which was established in 1847. Mr. Bonney took the regular course at the Massachusetts College of Pharmacy and graduated in 1892, and a few months later he bought out his employer. He continued in business

alone until 1906, when he formed a partnership with Riberot Dutton, a registered pharmacist, which still continues.

Mr. Bonney's public services include two years as a member of the Wakefield Board of Health, three years on the school board and ten years as inspector of milk.

The campaign for the seat in the Legislature was marked by a vote which proved to be the largest ever cast in the town, and Mr. Bonney won by the narrow margin of forty votes. The town is normally Republican, yet for a decade, with but a single exception, the town has elected a Democrat to the House, and the Republicans year after year had trotted out their strongest man only to have him go down to defeat against the wonderful popularity and power of Charles L. Dean.

Mr. Bonney's workers, however, were not daunted by this record of party defeats. They worked early and late, and when the announcement was made of their victory they paraded the town, shouting that "Bonney's pills worked," and singing songs of which the following are some:

Should you ask me, e'er so slyly,

What great thing did nine-year Charlie?

What great thing—ever did—Charlie D?

The answer true you'd then require

Chiefly relates to my Josiah:—

"He brought my Bonney to me."

That was the burden of the song of the jolly revelers who paraded the streets of the town in the wee sma' hours celebrating Mr. Bonney's victory over Mr. Dean.

J. A. Wilfred Bouvier, of Fall River, had a very different experience. It was his first plunge into politics and he was one of eight candidates from his district for the three places to which the district is entitled. He landed high man. How he did it, he said, was a surprise to him. But Mr. Bouvier was a candidate in a city where he has spent most of his life, where he has built up a large and prosperous business and where he is personally known to thousands of the people. Mr. Bouvier was born in St. Agnes, Province of Quebec, December 27, 1868, but came to Fall River when less than a year old. Most of his life, with the exception of college days spent in St. Anne's, Canada, and at the Chicago College of Pharmacy, has been spent in Fall River. He also spent eight months after graduating from St. Anne's College teaching French and English. He passed the examination of the Massachusetts Board of Registration in Pharmacy in 1892 and the following year won his degree from the Chicago College. In 1893 he started in business for himself at 1705 Pleasant street, Fall River. Five years later he moved a few doors

down the street and enlarged the store to more than double its former size. He holds membership in the local, State and National drug associations. He belongs to the Elks, Knights of Pythias, Knights of Columbus and several French societies. For many years he has been a subscriber to the ERA.

John F. Thompson, of Somerville, has served as alderman of Somerville and on the ward and city committee for over ten years. He is a native of Eastport and has lived in Somerville eighteen years and has been in business for himself for fourteen years. His store is at 509 Somerville avenue, Somerville.

### N.W.D.A. COMMITTEES APPOINTED.

List a Long One, Twenty-five in Number—Legislation Committee Largest, as Usual.

President Fred. L. Carter, of the National Wholesale Druggists' Association, has announced his appointments of the various committees for the ensuing year. The more important committees with the chairmen of the committees not given in full, are as follows:

LEGISLATION.—M. N. Kline, chairman, Philadelphia, Smith, Kline & French Co.; J. W. Durr, Jr., Montgomery, Ala., Durr Drug Company; Joseph H. Brown, Little Rock, C. J. Lincoln Company; William Geary, Sacramento, Kirk, Geary & Co.; W. A. Hoyer, Denver, W. A. Hoyer & Co.; C. H. Talcott, Hartford, C. H. Talcott & Co.; N. B. Danforth, Wilmington, Del.; M. W. Stewart, Jacksonville, Groover-Stewart Drug Company; Lamar Rankin, Atlanta, Lamar & Rankin Drug Co.; C. F. Osmer, Lewiston, Idaho, Idaho Drug Company; Francis Keeling, Jr., Chicago, Himmiston, Keeling & Co.; G. Barret Moxley, Indianapolis, A. Kiefer Drug Company; M. E. Sherman, Des Moines, Des Moines Drug Company; Charles E. Potts, Wichita, Kan., C. E. Potts Drug Company; M. Cary Peter, Louisville, Peter-Neat-Richardson Company; A. D. Parker, New Orleans, Parker-Blake Company; Charles Cook, Portland, Me., Cook, Everett & Pennell; G. Frank Baily, Baltimore, Md., James Baily & Son; Charles F. Cutler, Boston, Eastern Drug Company; E. G. Swift, Detroit, Parke, Davis & Co.; F. E. Bogart, Detroit, Farrand, Williams & Clark; C. P. Noyes, St. Paul, Noyes Bros. & Cutler; O. W. Bethae, Meridian, Miss., Hopkins & Bethae; C. P. Walbridge, St. Louis, J. S. Merrell Drug Company; H. M. Parchen, Helena, Parcelen Drug Company; Aaron S. Raymond, Lincoln, Lincoln Drug Company; Charles R. Denning, Concord, C. H. Martin Company; W. O. Kuebler, Newark, N. J., Roeber & Kuebler Co.; Thomas F. Main, New York, The Tarrant Company; Charles Gibson, Albany, N. Y., Walker & Gibson; B. S. Jerman, Raleigh, N. C., W. H. King Drug Company; C. R. Meredith, Fargo, N. D., Meredith Drug Company; George B. Kauffman, Columbus, Ohio, Kauffman-Lattimer Company; E. S. Malone, Oklahoma City, Alexander Drug Company; Louis G. Clarke, Portland, Ore., Clarke, Woodward Drug Company; W. O. Blanding, Providence, Blanding & Blanding; W. J. Murray, Columbia, S. C., Murray Drug Company; R. F. Brown, Sioux Falls, Brown Drug Company; D. D. Phillips, Nashville, Berry, Demoville & Co.; R. N. McNight, Waco, Texas, Behrens Drug Company; W. E. Bailey, Salt Lake City, Smith-Bailey Drug Company; F. C. Harrington, Burlington, Burlington Drug Company; T. W. Purcell, Richmond, Purcell, Ladd & Co.; A. B. Stewart, Seattle, Stewart & Holmes Drug Co.; A. C. Murdoch, Parkersburg, W. Va., J. N. Murdoch Company; L. A. Lange, Milwaukee, Yahr & Lange Drug Co.

COMMERCIAL TRAVELERS.—George R. Merrell, chairman, St. Louis, J. S. Merrell Drug Company; Alfred E. Mealy, Baltimore, Gilbert Bros. & Co.; Alfred Vogeler, Cincinnati, Alfred Vogeler Drug Company; Terry T. Greil, Montgomery, Ala., Greil Brothers Company; John M. Scott, Charlotte, N. C., John M. Scott & Co.; E. J. Huston, Greenville, Miss., The Goyer Company; W. P. Colburn, Peoria, Colburn, Pirks & Co.; A. N. O'Keefe, Jacksonville, Southern Drug Manufacturing Company; Norman H. Masengill, Bristol, Tenn., Masengill Brothers Company; Charles S. Leete, New Haven, Charles S. Leete & Co.; E. C. McKallor, Birmingham, E. C. McKallor Drug Company; C. C. Leadwater, Alexandria, Va., E. S. Leadwater & Sons; W. S. Davis, La Grange, Ga., Bradford Drug Company; Bart. Whiteaker, Dayton, Ohio, Whiteaker-Gwinner Drug Company; B. R. Gilmer, Houston, Southern Drug Company; A. H. Williams, Utica, A. H. Williams

& Co.; S. S. Elliott, Council Bluffs, Harle-Haas Drug Company; Alexander S. Fraser, Fall River, The E. S. Anthony Company; Josiah Vaughan, Richmond, Vaughan-Robertson Drug Company; John Schaap, Fort Smith, Ark., John Schaap & Sons Drug Co.; George Freisheimer, Missoula, Mont.

PHARMACEUTICALS AND PLASTERS.—Charles F. Weller, chairman, Omaha, Neb., Richardson Drug Company; L. A. Lange, Milwaukee, Yahr & Lange Drug Co.; Charles A. Jerman, Clinton, Iowa, Olney & Jerman Co.; Charles S. Martin, Nashville, Spurlock-Neal Company; William J. Mooney, Indianapolis, Mooney-Mueller Drug Company.

STANDARDS AND TESTS OF THE U.S.P. AND N.F.—Thomas F. Main, chairman, New York, The Tarrant Company; William Jay Schieffelin, New York, Schieffelin & Co.; Otto P. Amend, New York, Elmer & Amend; Donald McKesson, New York, McKesson & Robbins; Clarence M. Kline, Philadelphia, Smith, Kline & French Co.

RESEARCH LABORATORY.—M. N. Kline, Philadelphia, Smith, Kline & French Co.; William Jay Schieffelin, New York, Schieffelin & Co.; Charles A. West, Boston, Eastern Drug Company; S. E. Strong, Cleveland, Strong, Cobb & Co.

REGULATIONS FOR TRANSPORTATION OF INFLAMMABLES.—William Jay Schieffelin, chairman, New York, Schieffelin & Co.; George W. Norrell, Houston, Texas, Houston Drug Company; William P. Ritchey, New York, Braen, Ritchey & Co.

SUITS AGAINST MEMBERS.—M. N. Kline, chairman, Philadelphia, Smith, Kline & French Co.; Thomas F. Main, New York, The Tarrant Company; I. S. Coffin, New York, Coffin, Reddington Company.

CUSTOMS COURT.—Charles A. West, chairman, Boston, Eastern Drug Company; Theo. F. Meyer, St. Louis, Meyer Brothers Drug Company; Albert Plant, New York, Lehn & Fink.

ARRANGEMENTS AND ENTERTAINMENT.—Edgar D. Taylor, chairman, Richmond, Powers-Taylor Drug Company.

CREDITS AND COLLECTIONS.—W. C. Shurtleff, chairman, Chicago, Morrisson, Plummer & Co.

DRUG MARKET.—P. E. Anderson, chairman, New York, P. E. Anderson & Co.

FIRE INSURANCE.—George W. Lattimer, chairman, Columbus, Ohio, Kauffman-Lattimer Company.

FRACTERNAL RELATIONS.—L. B. Bridaham, chairman, Denver, Davis-Bridaham Drug Company.

MEMBERSHIP.—A. J. Moore, chairman, Sioux City, Hornick, Hess & More.

MEMORIALS OF DECEASED MEMBERS.—H. J. Schnell, chairman, New York.

PAINTS, OILS AND GLASS.—F. Junkermann, chairman, Cedar Rapids, The Churchill Drug Company.

PASSENGER RATES AND ROUTES.—Thomas P. Cook, chairman, New York, New York Quinine & Chemical Works.

PREVENTION OF ADULTERATIONS.—Clarence M. Kline, chairman, Philadelphia, Smith, Kline & French Co.

PROPRIETARY GOODS.—William Jay Schieffelin, chairman, New York, Schieffelin & Co.

RELATIONS WITH LOCAL ASSOCIATIONS, CITY AND INTER-STATE.—R. H. Bradley, chairman, Toledo, Walding, Kinnan & Marvin Co.

TRADE-MARKS.—George M. Besett, chairman, Burlington, Wells & Richardson Co.

TRANSPORTATION.—George W. Norrell, chairman, Houston, Houston Drug Company.

CENSUS OF 1910.—Albert Plant, chairman, New York, Lehn & Fink.

COMMERCIAL TRAVELERS.—(Special)—S. H. Carragan, chairman, New York, N. Y., Parke, Davis & Co.

PARIS GREEN.—H. B. Fairchild, chairman, Grand Rapids, Hazeltine & Perkins Drug Co.

### First Ball of Drug Clerks' Brotherhood a Success.

The first annual full dress and civic ball of the Drug Clerks' Brotherhood of New York was held at Arlington Hall, St. Mark's Place, Manhattan, New Year's night. A large gathering, including proprietors and a large representation from the general public, spent the evening in merrymaking and dancing. M. A. Feinberg, of the brotherhood, was chairman of the committee on arrangements, which was complimented on the success of the affair. Harry Pinkowitz is secretary of the brotherhood, which lacks ten days in being one year old, its organization dating from January 17, 1908.

## PROMINENT PHILADELPHIA COMPANY OPENS BRANCH HOUSE IN SAN FRANCISCO, CALIFORNIA.

SAN FRANCISCO, Jan. 1.—To meet the increasing demand from this section of the country and to enable the pharmacist and physician to have a supply close at hand of their pharmaceutical and biological products, the H. K. Mulford Company has opened a branch house at Second and Natoma streets, in this city.

Realizing the professional responsibility of the manufacturing chemist to the pharmacist, the physician and the patient, the company spares no efforts to insure the character, quality and accuracy of its pharmaceutical and biological products. That its policy in this respect has been the right one is shown by the cordial reception of its products by the medical and the pharmaceutical professions.

In no section of the country has the awakened interest in ethical prescribing and manufacturing been greater than on the Pacific Coast. This San Francisco house gives the druggists of the Pacific Coast and territory tributary thereto an opportunity of obtaining the Mulford pharmaceutical and biological products with their regular drug orders through their jobber, or enables direct shipments to be made, saving delay that would otherwise attend shipments from the home office.

With branch houses established in Chicago, New York, St. Louis and Minneapolis, and the recent opening of the San Francisco house, the distribution of the products of the Mulford laboratories throughout the United States is assured. While the reputation of the firm has been secured principally from its antitoxins, curative sera, vaccines and biological products during the past five years, the house has been making rapid strides in developing a general pharmaceutical business. It is one of the leading houses in the manufacture of chemically assayed and physiologically standardized pharmaceuticals and the extent of its line of manufactured products can best be appreciated by examining its general catalog.

It is the fixed policy of the firm to conduct its business on ethical lines, and while the products of the house have never been known as low priced, inspection of its catalog will show that when quality is considered full value is given. The Pharmacopeia requires the chemical standardization or forty-eight preparations; the H. K. Mulford Company chemically assays and standardizes one hundred and sixty preparations and physiologically or clinically tests sixty-eight preparations. As the question of standardization is one that affects the health of a community and the reputation of pharmacists and physicians, there can be no doubt as to the importance of specifying the class of products that should be employed.

The well-known business policy of the firm in refusing to sell department stores, mail order houses and aggressive cutters is appreciated by the druggists. In purchasing Mulford's products through his jobber, if preferred, the druggist receives 40 per cent discount on pharmaceuticals without signing a contract. This is a most favorable proposition to save money on his purchase and does not require the investing of capital in a stock line but only as pharmaceutical supplies are needed.

### Conference of Sharp & Dohme's Forces.

BALTIMORE, Jan. 4.—During the last week in the old year many of the field officers of Sharp & Dohme were here to confer with the officers at headquarters, the managers and directors, regarding the business done in 1908 and the prospects for the new year, and daily meetings have been held. Among the officials who came to Baltimore from a distance were Charles E. Matthews, manager of the Chicago branch; R. L. Winchester, manager of the St. Louis house, and J. L. Pryor, of Atlanta.

The conferences had the benefit of the counsel of Louis Dohme, president of the company, who arrived from Europe two days before Christmas, and met the visiting officials in person. Mr. Dohme has been greatly improved by his sojourn abroad during a large part of 1908.

On Wednesday afternoon a large number of the delegates to the annual meeting of the American Chemical Society went to inspect the laboratories of Sharp & Dohme. They were received by Dr. A. R. L. Dohme and others, and shown around the entire establishment, being strongly impressed with what they saw.

### Annual Banquet of J. S. Merrell Drug Company.

ST. LOUIS, Jan. 4.—The "family dinner" of the J. S. Merrell Drug Company last week at the Southern Hotel is pronounced the best of the long series of annual affairs of this kind for that company. Forty men, members of the firm, salesmen and heads of departments, were present and all had a pleasant and profitable time. The dinner follows the annual gathering of all salesmen at the store, where on Monday and

Tuesday afternoons conferences were held in which "new business" and "new methods" were the topic and views exchanged by inside and outside men.

Tuesday night occurred the dinner. On the set program, during which Col. C. P. Walbridge, the president, presided, were the names: Tony Dougherty and W. J. Campbell, representing the country salesmen; M. C. H. Arvidsen and W. C. Ritter, for the city salesmen; Richard Dunn, Ed. Schmeiter and Joseph A. Kleiber, for the heads of departments; H. S. Merrell for the officers and directors, and D. O. Macdonald as the oldest in the firm's service.

Colonel Walbridge, later called Tony Dougherty, the irreplaceable southern Illinois salesman, to the chair and Mr. Dougherty undertook the task of getting every person present to express audibly some thought for the good of the order. Wit and business were intermingled until adjournment.

### Learn How Prescription Bottles Are Made.

CHICAGO, Jan. 4.—Twenty-one students of Northwestern University School of Pharmacy, accompanied by Thomas V. Wooten, administrative officer of the school, went to Chicago Heights recently to witness the making of prescription bottles by the Sheldon-Foster Glass Company. From the mixing of the sand and the chemicals with which it is fused clear to the packing of the culled bottles in cases, the students were shown the methods whereby high-grade prescription ware is made. All present, most of whom live too far away to go home for the holidays were glad of this break in the monotony of protracted study during the absence of their fellows, are enthusiastic over the trip.

The students were particularly interested in the machine-molded bottles (some fine specimens of which they saw turned out) and in the statement that the perfecting of machinery for the making of bottles, which is going on rapidly, is likely to revolutionize the business within a few years.

Nearly all of the party returned to Chicago by trolley through the manufacturing towns of Harvey and Blue Island and the market garden country which is making Northwestern Illinois famous. The day being an exceptionally bright, sunshiny one for the last week in December, the trip was pronounced a most successful one from every point of view.

## BOARD EXAMINATIONS

### Missouri.

ST. JOSEPH, Jan. 4.—The Missouri State Board of Pharmacy has passed twenty-seven of the forty-four applicants who were examined here December 14, and the successful ones will receive certificates of registration. The board will hold its next meeting at Jefferson City, January 11. Following are those who passed:

D. J. Blair, St. Joseph; John A. Boyd, Republic; Newton O. Brannock, Kansas City; B. C. Culp, Kansas City; George H. Cutter, Everton; Joseph B. Campbell, St. Louis; F. Caldwell, Craig; Frank M. Clark, Hannibal; Charles C. Coats, St. Joseph; Clarence E. Gardner, St. Joseph; Ralph E. Gray, Kansas City; C. E. Hardy, St. Louis; Theo. F. Lanza, Kansas City; B. W. McFall, St. Joseph; D. F. Montgomery, St. Joseph; O. M. Owensby, St. Joseph; William H. Post, Kansas City; Chaucey R. Ryan, Kansas City; Oswald I. Roemich, St. Louis; George Edgar Ross, St. Joseph; George W. Spengler, St. Joseph; A. W. Sowden, St. Joseph; Fred. W. Seumann, St. Joseph; Virgil R. Smith, Ames, Iowa; B. G. Smith, Kansas City; Mrs. B. D. Thomas, Kansas City, and George E. Weight, Kansas City.

### Tennessee.

CHATTANOOGA, Jan. 4.—The following twelve out of a class of twenty-six persons passed the last examination of the Tennessee State Board of Pharmacy:

E. L. Beasley, of Lewisburg; Mary E. Foss, of Harriman; L. D. Gilmore, of Scottsville, Ky.; J. L. Hennessee, of Chattanooga; W. J. Latham, of Columbia; J. S. Long, of Blountville; R. C. Minnis, of Newport; D. L. Munpower, of Nashville; J. B. Smith, of Newport; L. E. Taylor, of Tullahoma, and H. G. Watson and P. C. Wray, both of Chattanooga.

Next meeting will be held at Nashville, January 10.

### North Carolina.

RALEIGH, Jan. 4.—Secretary F. W. Hancock, of the North Carolina Board of Pharmacy, announces the following candidates for license to practice pharmacy passed successful examinations on the 15th: Edward C. Adams, Cherryville; Roy R. Bost, Newton; Beverly P. Cosner, Dallas; Charles D. Cushman, Mocksville; E. Lee Dameron, Charlotte; Phifer Fulewider, Monroe; Guy C. Hayes, Greensboro; Dorus O. Hunsar, Maxton; Lawrence W. Jenkins, Stanley; Lumartin J. Lea, Roxboro; Hugh W. Layden, Spray; Thomas T. McGaule, Southern Pines; Leonidas B. Powers, Wake Forest; Ralph H. Triplett, Lenoir; Henry W. Sloan, Jonesboro; Emmett L. Vinson, Halifax; George F. Wright, Elizabeth City; William L. Wetzel, Gastonia; Robert E. Wiley, Southern Pines; Coley R. Yoder, Newton; James A. Henderson (col.), Fayetteville.

The next meeting will be held in Greensboro June 21, at 9 a. m.

### Rhode Island.

PROVIDENCE, Jan. 4.—At the December meeting of the Rhode Island State Board of Pharmacy four candidates presented themselves for examination and all were successful. They are: Registered Assistant Pharmacists: Richard W. Matthews, Newport, R. I.; Joshua Farron, Jr., Woonsocket, R. I.; Ephrem Nadeau, Fall River, Mass.; Arthur L. Emery, Concord, N. H.

### Massachusetts.

BOSTON, Jan. 4.—The State Board of Registration in Pharmacy, as a result of the December examinations, has granted certificates of registration to seven applicants and certificates of assistants to fifteen, as follows:

CERTIFICATES OF REGISTRATION.—Carl Aursloff, Wollaston, Mass.; George A. Emard, South Framingham, Mass.; Frederic E. Huntress, Lynn, Mass.; Etore DeLoe, Boston, Mass.; Martin W. Madden, Worcester, Mass.; Thomas J. McAniff, Haverhill, Mass.; Amos T. Staples, Beverly, Mass.

CERTIFICATES OF ASSISTANTS.—Gay Wadsworth Cole, Bridgewater, Mass.; Frank J. Diamond, Easthampton, Mass.;

Beverly N. MacCreedy, Boston, Mass.; Walter P. Marble, Haverhill, Mass.; Francis G. Miniter, Boston, Mass.; Maurice B. Moore, Cambridge, Mass.; Frank A. Morley, Boston, Mass.; Freeman Phillips, Cambridge, Mass.; Joseph A. Robichand, South Framingham, Mass.; George Henry Boden, Cambridge, Mass.; Frederick T. Eubanks, Lowell, Mass.; Henry F. Grosswich, Fitchburg, Mass.; George W. Grimwood, Haverhill, Mass.; William A. Phillips, Boston, Mass.; William H. Ward, Chelsea, Mass.

### Texas.

GONZALES, Jan. 1.—Secretary R. H. Walker, of the Texas State Board of Pharmacy, announces that the next examination will be held at a three days' session beginning at 9 a. m., January 19, in the Fort Worth Medical College Building. Mr. Walker says: "The Board of Pharmacy is becoming more useful and the druggists are manifesting more interest in its work and the enforcement of the new law."

### OBITUARY.

Alabama Ph.A. Loses Charter Member, E. B. Norton.

Announcement is made of the death of E. B. Norton, charter member of the Alabama Ph.A., and formerly its president, at his home in Birmingham in that State. Mr. Norton had been in ill health, but his death came as a sudden shock to his many friends. He was born in Mobile in 1863 and at the age of thirteen entered the drug business and in early life advanced far enough to own a store. In 1889 he moved to Birmingham, Ala., and connected himself with Anzi Godden. Later he established the Norton Drug Store, which became one of the best patronized in the city. He was a member of several clubs and was a Consistory Mason. His funeral was largely attended and was under the auspices of King Solomon Lodge. A widow and three children survive.

### Obituary Notes.

—THOMAS MOFFAT, of Indianapolis, is dead, aged fifty-two.

—GEORGE H. BRYAN, a well-known druggist of Georgiana, Ala., is dead, aged forty-three. A widow survives.

—ASILEY COOPER, of Maunington, W. Va., is dead, aged forty-two. He was a Mason and leaves a widow and two daughters.

—CLARENCE O. PUSEY, of the Virginia General Supply Company, dealers in dental supplies, Richmond, Va., was recently killed by a train.

—ROBERT W. SACKETT, pioneer resident and veteran druggist of Fort Dodge, Iowa, died recently of apoplexy, aged sixty-three. He was wealthy. His widow survives.

—WILLIAM GORDON HOOPLE, a member of the New York Drug Trade Club, although engaged in the leather business, died recently at his home in Brooklyn, aged sixty-seven. Acute indigestion was the cause.

—JOSEPH D. BROWN, of Irvington, a suburb of Baltimore, died recently of typhoid fever, aged forty-eight. He leaves a father, mother, widow and four children. He was a graduate of Maryland College of Pharmacy.

—HENRY AVERY KENT, a druggist in Elizabeth, N. J., for forty years, died recently in his home, at 322 Jefferson avenue, that city, of pneumonia. He was sixty-eight years old. He left a widow, three sons and two daughters.

—JULIUS S. CLEVELAND, junior member of B. H. Davis & Co., Palmyra, N. Y., is dead, aged forty-seven. He had been active in business and public affairs for a quarter of a century. A widow and two daughters survive him.

—ABRAHAM S. WILEY, who had been engaged in business in Miles City, Mont., since 1892, is dead, aged seventy-five. He was born in Boston and in 1874 opened what is now known as the Harvard Square Drug Store, Cambridge. His widow, who was a daughter of William A. Brewer, a wholesale druggist, a son and two daughters survive him.

—DAVID ALVerson, proprietor of the Alverson Drug Company's store, South Pellingham, Wash., died recently of paralysis. A widow survives him. He was born in Saline, Mich., in 1842, served in the Seventh Iowa Volunteers during the Civil War, settled later in Earlham, Iowa, moving to his late home in 1891. Mr. Alverson was prominent in the Grand Army and other societies. He served on the board of education for nine years.

## PATENTS, TRADE MARKS, ETC.

## PATENTS.

Granted December 29, 1908.

907,808—Fridtjof Jensen, Christiania, Norway. Capsule for bottles and the like.  
 907,912—Henry P. Stock, Waukesha, Wis. Sheet metal bottle case.

907,935—Harry J. Wolslayer, Easton, Pa. Display cabinet.  
 907,941—Otto Zeltschel, Hamburg, Germany. Process for the manufacture of esters of cyclical terpene alcohols.

907,943—Alfred Zucker, Dresden, Germany, assignor to Max Elb, Gesellschaft mit beschränkter Haftung, Dresden, Germany. Carbonated ferruginous bath composition.

907,978—Paul Ehrlich and Alfred Bertheim, Frankfurt-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brüning, Höchst-on-the-Main, Germany. Hydroxyarylsars-noxid.

908,051—Julius Voigt, Schwanheim-on-the-Main, Germany, assignor to Chemische Greisheim Electron, Frankfurt-on-the-Main, Germany. Manufacture of acetylene tetrachloride.

908,059—Henry A. Allwardt, Detroit, Mich., assignor one-half to William J. Stapleton, Detroit, Mich. Crown arranging and presenting device for bottling machines.

908,163—Frank Sonnenfeld and Rubin Fisher, New York, N. Y. Bottle.

908,171—Albert Verley, Paris, and Edouard Urbain and André Feige, Gentilly, France. Process of oxidizing camphor for the making of camphor.

908,193—William Ashbury, New York, N. Y., assignor to the American Safety Appliance Company, a corporation of Maine. Container.

908,214—Jeannie Dickson, New York, N. Y. Non-refillable bottle.

908,289—Herman Lowenstein, Bellevue, Ky. Non-refillable bottle.

908,297—Dan Martini, London, Eng. Apparatus for ionizing petroleum and its distillates.

## TRADE MARKS.

Published December 29, 1908.

32,794—Llewellyn Whiting Estes, Washington, D. C. Class 6. A prepared herbal remedy in tablet and powder form to be used as a blood-purifier and liver regulator.

33,780—George M. Parks, Willows, Cal. Class 6. Remedies for dyspepsia, indigestion, sour stomach, loss of appetite, catarrh of the stomach and bowels, disease of the liver and kidney, constipation and general debility.

35,790—George H. Dietz, Stockton, Cal. Class 6. Camphor toilet cream.

36,784—Albert Radke, Milwaukee, Wis. Class 6. Medicinal tablets to be taken internally as remedies for stomach, blood, kidney, liver and bowel disorders.

36,861—Ephraim S. Wells, Jersey City, N. J. Class 6. Poison for rats, mice, vermin and insects.

36,953—J. C. Eno, Ltd., London, Eng. Class 6. An effervescent fruit salt derivative compound.

37,016—Mound City Paint & Color Co., St. Louis, Mo. Class 6. Castor oil.

37,253—The Cresasapic Company, Philadelphia, Pa. Class 6. A liquid disinfectant and deodorizer.

38,698—The Piso Company, Warren, Pa. Class 6. A cream for the complexion.

38,702—Berta Schweid, New York, N. Y. Class 6. Salve.

38,770—Seraph J. Deal, Philadelphia, Pa. Class 6. Toilet deodorants.

#### Outlook for View Card Business.

Post card dealers everywhere report an exceptionally good holiday trade and the indications are that the demand will continue for the Lincoln's and Washington's Birthday, and the Valentine and Easter lines. Post card dealers should make their selections now, before the jobbers' and manufacturers' stocks are depleted. There is an endless variety of such cards on the market at prices to suit all buyers. A reputable firm in the post card business, the E. C. Kropp Company, whose advertisement appears in this issue of the ERA, advises us that it has a much better line of goods at lower prices than ever before. This firm is well known as a manufacturer of local view cards and it states that 1909 will be a record breaker in the view card business. Information from other sources points the same way, and therefore it will be well for dealers to order supplies early so that they may not be disappointed in delivery.

#### Final Arrangements for Drug Club's Dance.

PHILADELPHIA, Jan. 4.—Every department of the trade is interested in and will be well represented at the second annual entertainment and dance of the Drug Club to be held on the night of January 11 at the Bellevue-Stratford. Final arrangements for the affair were made at the meeting of the entertainment committee on Saturday and it was evident by the demand for tickets that the attendance will surpass by far anything of the kind ever given by drug interests in this city. Placards announcing the event have been placed in the windows of two hundred retail stores in every section of the city and the interest is by no means confined to the club membership. The program is an exceptional one, while to the dancers there could be nothing more alluring than the guarantee of a large orchestra and the finest ballroom in the city.

#### Eckman's Alternative and Its Record.

In the era of reforms through which civilization is now passing, the present crusade against tuberculosis will stand out as one of the great humanitarian movements in history. Sanitariums have been built and medical investigators have devoted their lives to the study of the causation of the disease and in this connection the Eckman Manufacturing Company, Market and Sixth streets, Philadelphia, commends to the drug trade the record of cures claimed to have been effected by Eckman's Alternative. This remedy is handled by the principal jobbing houses and wholesalers at \$16 per dozen. The Eckman Company states that it has a special proposition to make to druggists which affords a large margin of profit, and which will be sent to any pharmacist on application to the home office.

#### Robbers Waited in Drug Store for Street Car.

ST. LOUIS, Dec. 31.—Dr. H. W. Curtin, of 3923 North Grand avenue, was robbed in his store a few days ago by two men who entered during the dinner hour and who, after securing \$6 in the register, \$4 in Dr. Curtin's pockets and his watch, remained in the store until a street car approached, upon which they made their escape. Contrary to the usual rule, no one entered the store for several minutes while the robbers were present.

#### HEINEMAN-EVANS COMPANY TO CONTINUE.

##### Committee of Creditors so Recommend and Suggests Basis of Settlement at Fifty Cents.

BALTIMORE, Jan. 4.—A second meeting of the creditors of the Heineman-Evans Company, wholesale druggists at 18 South Howard street, was held last Wednesday. The committee appointed at the first meeting to investigate the affairs of the corporation reported the results of the inquiry. The company had proposed an extension of three years, the obligations to be paid in cash in several instalments, but the committee was of the opinion that the state of affairs as disclosed by the inquiry afforded no firm basis for the expectation that this arrangement could be carried out, and recommended instead payment of claims at the rate of 50 cents on the dollar, the company to be allowed to continue in business on compliance with this arrangement. This proposition was accepted by the company, and will be carried out if all the creditors agree.

According to the schedule presented by the officers of the company, the assets are about \$66,000, and the liabilities \$35,000, but an examination satisfied the creditors that these estimates are subject to important modifications and that 50 cents on the dollar is about all that can well be realized.

The company was organized about four or five years ago as an off-shoot of Carr, Owens & Heineman, with a capital stock of \$100,000. Of this amount only \$70,000 was issued, \$30,000, it is said, being paid in and the rest being allowed for patent rights, formulas and good will to the president, Charles Heineman. The creditors' committee consists of Charles Fickenscher, of the Baltimore Oil Company, chairman; William Baker, of the Baker Glass Works, and John S. Muth, of Muth Bros. & Co., wholesale druggists. February 1 has been fixed as the date for final action on the compromise proposition.

The embarrassments of the company were increased by the serious illness of Charles Heineman, the directing figure in its affairs. Mr. Heineman was taken suddenly ill with acute indigestion at a smoker of the Baltimore Drug Exchange, held some time ago, and nearly died. Since then his health has been by no means satisfactory and he has been unable to give that close attention to the affairs of the concern which they warranted or demanded.

#### A Food-Drink Now In Universal Use.

People generally are so accustomed to the use of many modern appliances that they fail to thoroughly appreciate the labor, work and genius which produced them. Many workers in the field of food products had eagerly looked forward to the discovery of a method of preserving milk in a dry form, but it was reserved to William Horlick, of Racine, a quarter of a century ago to achieve success. In Horlick's Malted Milk for the first time in history the discoverer succeeded in so combining rich milk with the soluble extracts of malted grain, that it could be preserved indefinitely, so that in any part of the world, at any time, a delicious and invigorating food-drink would be available by simply stirring in water. Today it is to be had in every corner of the globe, even with all the Arctic explorers.

#### Booklet Tells of Legal Trade Marks.

G. Howlett Davis, patent attorney, McGill Building, Washington, D. C., has issued a booklet wherein he defines the characteristics of a legal trade mark, in view of the recent decisions. The application to the goods must be arbitrary. Thus, the trade mark may be any arbitrary combination of letters, figures or other characters. It may also be a picture, symbol or device not illustrative or explanatory of the goods. The name of a person, firm or corporation, written in a distinctive manner, may be registered under the provisions of the present highly effective Trade-Mark Act. Other valuable information is given.

#### United States Chemical Co. Dissolves.

WASHINGTON, Jan. 4.—The United States Chemical Company, incorporated here several years ago, last Saturday filed papers in the District Supreme Court asking that it be allowed to discontinue. In the papers it is stated that because of the severity of the District laws it is impossible for the company to keep on. The patents and patent rights of the company are transferred to the several officers.

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

Supplement to The Era Druggists' Directory.

**ALABAMA**—BIRMINGHAM—Gunn Drug Company has opened a new store at 223-225 North Twentieth street.

## New Drug Firm in Philadelphia.

**PHILADELPHIA**, Dec. 31.—Miller, Lyons & Co. is the name of a new wholesale firm, selling to the retail drug trade, which has opened for business at 38 North Sixth street. It will carry stationery, wrapping paper, rubber goods, druggists' sundries and leather goods. The members of the company have been associated with the sales department of some of the largest manufacturing concerns in the country.

## Dow's Happy New Year Greeting.

Patrons of the Dow drug stores in Cincinnati received neat and timely Merry Christmas and Happy New Year greetings in printed form, in addition to holiday decorations. Father Stewart's prayer wishing "good to all men and all places" is made the text of a homily on the betterment of life and improvement of property in Cincinnati. The subject is treated with sufficient seriousness to do much good.

# THE DRUG MARKETS

## BIG ACTIVITY IN ITALIAN PRODUCTS.

### Extreme to Prohibitive Prices Ruling on Products from the Regions of Recent Devastation.

NEW YORK, Jan. 4.—Due to the holidays, trading in drugs and chemicals has been very limited. With the market practically closed during three days of the week and business in the jobbing district almost suspended, the general market has presented very little in the way of new features or important developments, except for the various Italian products, which have displayed considerable animation. The earthquake in Italy and its ultimate effect upon the market for the products grown in the devastated region is still a topic of interest, and while a sharp advance in prices has taken place on the various essences, oils and citric acid, holders are quoting without offer. It will be some time before any quotations with any degree of stability are established and great caution is being exercised by the trade in accepting orders for these goods. Holders of stocks are awaiting the extreme prices likely to prevail. From London on the 1st instant have come advices that oil of bergamot was \$7.50 per pound, oil of orange \$5.00 and oil of lemon \$4.00 without offer, and for small quantities only, with likelihood of farther sharp advances. Manna has been declining recently owing to competition, but the destruction of a large stock by the Sicilian earthquake has caused a reaction and it is now advancing for the same reason as citric acid, which advanced 5c. per pound immediately upon advices that the devastation was very serious. There will undoubtedly also be a big advance in olive oil. Opium is cabled higher in primary markets with sellers holding off for still higher prices, which are expected to rule as soon as large American consumers enter the Smyrna market. Constantinople is getting low on stock. The botanicals have developed nothing of particular interest. Hungarian chamomile is higher and a cargo of new crop of German lovage root has arrived.

OPIMUM.—The reports from Smyrna show a higher and firmer market with the opinion that much higher prices will prevail as soon as the large American consumers commence to buy in that market. Constantinople is getting low down in stock and the only source of supply for manufacturing descriptions will be Smyrna, with a very strong syndicate holding over three-fourths of the stock. The arrivals in Smyrna for the week ending December 11 amount to 1941 cases, as against 1307 cases for the same period last year. The total arrivals to January 2 amount to 1978 cases. Mail advices from Smyrna fully confirm previous cables of stronger primary markets. One letter, dated December 14, says: "The sales early this week amounted to 15 cases new talequale at 12s. 3d., but since the 9th owing to serious reports of frost damage to the opium plantations all sellers have withdrawn and only a few needy holders are open to sell, but at an advance of 6d. to 8d. per pound. Our opinion is that buyers will pay this advance, and still higher prices will be ruling as soon as large American consumers begin buying on this market."

QUININE SULPHATE.—The situation has developed no features of new interest. Manufacturers report a moderate demand for small lots and the market remains in a steady position on the former basis of 15c. for lots of 100 ounces. The outside market is quiet. Second hands are doing a routine business.

SODIUM BICARBONATE.—This article has been marked up 10c. per 100 pounds by the manufacturers and the revised rate is \$1.35/\$1.45, as to container, the inside figure for barrels.

SANTONIN.—During the week there has existed a rather better supply, some small arrivals having come to hand, but the market shows no abatement of strength and quotations are well sustained at \$4.75 per pound for crystals and \$5 per pound for powdered.

COPAIBA.—Owing to the scarcity, the market is stronger, especially for the South American pure, and there are very few shipments coming forward from producing markets. Quo-

tations have been marked up to 47½¢/50c., as to quantity, and holders are not anxious sellers.

NORWEGIAN COD LIVER OIL.—A fairly good seasonable outlet exists and quotations are steadily maintained at \$22¼/\$26 per barrel, as to brand and quantity. According to advices received yesterday only about 6500 barrels of the last crop are available in Norway and primary markets are reported firm. Cables received are to the effect that extremely rough weather is interfering with the fishing.

SOAP BARK.—This article is in moderate demand and steady with the whole held at 14¼/17c., cut or crushed at 17½/20c. and powdered at 20¼/25c. Stocks are under close control and the tendency of prices is upward.

BEEFWAX.—There is a fair consuming request with values ruling steady at 42¼/48c. per pound for ordinary pure, and 47¼/50c. per pound for selected.

FENNEL.—The German variety was cabled firmer abroad with stocks very light at the sources of supply. Local dealers are disposed to offer cautiously at 16½/20c. per pound, as to grade and quantity. Powdered is held at 20¼/25c. per pound.

CAMPHER.—Higher prices for this product have been cabled from abroad and local dealers are firmer in their views, but domestic refiners are still quoting 50c. for bulk in barrels and 51c. for 4-ounce squares in cases.

SCUTELLARY SEED.—The foreign seed is offered more freely owing to the increased supplies, and the tone of the market is easier with sellers at 31¼/34c. in large quantities.

OXALIC ACID.—The tone of the market is easier in sympathy with lower contract prices for the new year, and spot quotations have been reduced to 63¼/65c., as to quantity, quality and seller.

CASCARA SAGRADA.—The demand for spot remains quiet, but considerable interest has been manifested in the announcement to the effect that the Pacific Cascara Company had been incorporated under the laws of Oregon, with a capital stock of \$250,000, of which more than \$125,000 is said to have been paid in. The business of the company will be "the handling of all kinds of medicinal barks, roots, herbs, etc., found on the Pacific Coast and especially that of cascara sagrada bark."

LOVAGE ROOT.—A shipment of new crop has arrived and is found to be exceedingly good quality for the German variety.

ESGOT.—Reports from the primary sources of supply come very strong and the tendency seems to be for much higher prices for both the Spanish and Russian.

CHAMOMILE FLOWERS.—The market is getting bare of stock of the Hungarian (often sold as German) and prices have been advanced to 40¼/45c. per pound for good quality. Quotations are being made in some quarters at slightly lower figures, but the quality is not good, being dark and full of stalks.

SICILY SCUMAC.—No offers are being accepted either for prompt or forward delivery, and all quotations have been withdrawn.

MANNA.—While this product has been declining lately owing to competition, it is now held at firm prices, with the tone of the market stronger in sympathy with corresponding conditions in Europe and the destruction of a great amount of stock in the recent earthquake. Dealers offer very cautiously at \$0.60/0.65c. per pound for large flake and 53¼/58c. per pound for small flake.

CITRIC ACID.—The advance amounts to 5c. on the pound and the price for crystals is now 41½c. and powdered 42c. per pound in kegs. There is considerable demand, which is undoubtedly stimulated by the uncertain condition of affairs in primary markets for the crude, but manufacturers will sell sparingly and decline to enter contracts for forward delivery. There have been no direct advices from Sicily, as far as can be ascertained, and there is considerable speculation as to the future course of the market. There is an advance on citrates amounting to 4c. a pound in sympathy with the advance on citric acid.

CASTILE SOAP.—The price for Conti's white will probably be 13¼/14c. per pound owing to the great scarcity of olive oil to make the soap and the destruction of many olive groves in the recent earthquake.

### Suspicious.

"What is the outlook for the depositors of the defunct bank?"

"Dark. It has just been announced that the bank will pay in full."

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, JANUARY 14, 1909

No. 2

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era," New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn St., Chicago

Telephone, Central 5888.

## SUBSCRIPTION RATES:

United States, China, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

## THE EARTHQUAKE IN SICILY.

As shown in the ERA prices current the earthquake in Sicily has had a disturbing effect upon quotations for all the Sicilian products, especially lemon oil, citrate of lime and citric acid. It is still too early to predict the ultimate values that will obtain, for news of the effects of the first shocks upon these products has been both slow in coming and extremely meager in character. Moreover, the first upheaval has been followed by several other disturbances, more or less severe, so that the extent of the calamity cannot yet be accurately measured.

Meanwhile general sympathy goes out to the victims of the calamity and everybody will join in the hope that the sufferings of the survivors may be alleviated and their losses recouped as quickly as possible. America's response to the call for aid, which has been generous and prompt, is the best evidence of our practical sympathy for the quake-stricken inhabitants of the earthquake region in the vicinity of the Straits of Messina.

## NOVELTIES IN WINDOW DISPLAYS.

The Era's Cash Prize Competition brings out this week an interesting illustration of a moving window display which sends the cash prize to a Michigan druggist. Materials and electric motors are now so low in price that with a little ingenuity and some patience similar scenes can be installed in almost any drug store window. With the ERA's \$5 cash prize as an additional incentive there ought to be many attractive window displays of this description.

On advertising page 6 of this issue will be found the conditions of the Cash Prize Competition. Druggists who have not yet taken an interest in the Competition should read the offer and prepare to win one of the prizes.

## PRESENT PHARMACY BOARD SATISFACTORY.

One reason, heretofore unsuspected, for Governor Hughes' disapproval of the Whitney-Wainwright act of the last Legislature, is disclosed in the following recommendation which he makes to the Legislature of 1909.

"Associated with the question of public health is the need of improved legislation regarding the sale of drugs. Our present system of supervision is faulty. The State Board of Pharmacy consists of fifteen members elected by licensed pharmacists and druggists. The State has no proper control over the selections and the members of the board are not properly accountable to State authority. Yet to the board so constituted are committed important powers with regard to the enforcement of the laws of the State relating to drugs and the collection of the penalties for infraction of these laws. Without intending to pass the slightest criticism upon the members of the board or the motives which prompted this legislation, it would seem obvious that it is incompatible with a proper theory of State administration. State officers enforcing State laws should either be elected by the people or appointed by officers responsible to the

people. I recommend, therefore, the revision of the laws relating to the State Board of Pharmacy and proper amendments to secure such additional restrictions with regard to the sale of drugs as may be advisable.

The New York State Board of Pharmacy requires no defense. The implied criticisms made by the Governor have no basis for existence beyond the complaints of persons who have suffered through enforcement of the law. The present method of selecting members of the board and its composition have given to the State a highly representative organization. There has been no opportunity for governors to reward friends by appointment to positions on the board and in every way the rights and interests of pharmacists are now recognized and protected, except so far as the Whitney-Wainwright reforms would improve conditions. Somebody evidently has been endeavoring to mislead the Governor. Who is it?

#### PHYSICIAN DISAGREES WITH DR. WILEY.

Much interest has been aroused by the publication in the *Medical Record* of a paper in which Prof. E. E. Smith reviews and dissects the data in one of Dr. Wiley's bulletins regarding the effects of the benzoates upon the human system. On page 36 we print the conclusions reached by Dr. Smith. Briefly, he concludes, upon the facts presented by the Government chemist, that the effects ascribed to the benzoates could be and probably were due to other causes than the use of the preservative.

The question raised is a most interesting one, aside from its commercial importance to many interests. The publication of this phase of the discussion in the *Medical Record* will no doubt arouse other investigators to have their say on the subject and some valuable contributions to preservative literature may be looked for.

#### THE RETENTION OF DR. WILEY.

Despite the strenuous efforts made to displace Dr. Wiley from his position at the head of the Bureau of Chemistry, it is not likely that they will succeed. The more his enemies fight the harder his friends work for him and in addition unexpected sources of strength are developed. In the latter direction the President's friction with Congress has served to give Dr. Wiley increased support by Congressmen and the opportunity to display at once resentment of Mr. Roosevelt's criticisms and approval of Dr. Wiley's enforcement of the Pure Food and Drugs Law is found in making up the annual appropriations for the Department of Agriculture. The committee proposes to give Dr. Wiley a substantial increase in his appropriation for enforcing the law, but at the same time provides that none of the funds shall go to the support of Mr. Roosevelt's Referee Board, the legal existence of which is disputed by the Congressmen.

Resolutions against the removal of Dr. Wiley passed by the Philadelphia Branch of the A.P.A. will no doubt be duplicated by all the pharmaceutical associations in the country if their necessity should become apparent. There can be no disputing the fact that public opinion sustains the chemist. He may not have done everything just as everybody

would like, but the good he has done so far outweighs any lapses that the people generally are disposed to overlook what the few directly affected consider to be detrimental to their interests. Despite any faults he may have, with his sincerity unquestioned even by his enemies, it cannot be disputed that in the main Dr. Wiley has the support of the great majority of the American people.

#### FREE DRUGS FOR NEEDY FAMILIES.

One of the bones of the drug trade is the constant demands made upon retailers to place advertisements in programmes of charitable and other entertainments, for the purchase of tickets for benefits and for the donation of cash prizes to contests of various descriptions, often not even for charitable purposes but money-making affairs for private persons. Many druggists have contributed under mental protest and have often thought of a way to stop or minimize the drain on their profits without giving offense or seeming to be penurious. The Owl Drug Company, having a chain of stores in Pacific Coast cities, has solved the problem to its own satisfaction and in a way that may suggest itself to others who have fretted under demands that often have come close to blackmail.

Believing that it ought to do something toward the public good, the company announces that instead of contributing to the many organizations and persons who have made demands for aid it will hereafter furnish free of charge to the worthy poor any prescription presented at any of its stores, when certified by a note or order signed by any licensed physician or surgeon. All the doctors have been notified and their part is simplified by the fact that the order may be written on the back of one of their cards, no elaborate red tape being used to tie the offer away from popular reach. Confronted with an offer like this of free drugs for all needy families, how can the solicitors of aid for charity or other causes be persistent in their demands? What more could be expected in the way of giving relief of a practical and substantial nature to the poor of a community?

#### HOW LIES ABOUT SODA WATER ARE STARTED.

Newspapers have recently published a story from South Sioux City, Iowa, to the effect that after two young women had partaken of soda water, one of them had been stricken with ptomaine poisoning and was dying. Just why the other young woman escaped did not appear.

Investigation shows that this attack upon soda water was a lie in every respect, except that the victim was stricken with appendicitis. Neither of the two young women had partaken of any fountain beverages, but they had eaten ice cream some time before at a candy store. There were no ptomaines in the ice cream and there was no excuse for the lie, except the desire of some enemy of fountain beverages to try to prejudice the public.

Of the two members so far chosen for President-elect Taft's cabinet druggists are chiefly interested in the selection of Frank H. Hitchcock for the office

of Postmaster General. With an enormous deficit to overcome the new incumbent will have a difficult task, but he has demonstrated his ability as an organizer and as a business man and may be expected to greatly reduce the waste, if he does not entirely eliminate it. In the way of suggestion it may be said that invasion of the field of the freight and express carriers of the country is not one of the ways of reducing the deficit.

Royal assent having been given to the British Poisons and Pharmacy Bill that measure is now a law and no longer will it be possible to operate chemists' shops without having qualified chemists or pharmacists engaged in the business. The new law is a step forward, but there is room for improvement.

Yesterday, January 13, marked the record anniversary of three score years and two of active business in one location held by Z. James Belt, the druggist of 601 Market street, Wilmington, Del. Mr. Belt, after his long tour of public service as a pharmacist, during which he has won the esteem and respect of other business men and citizens, has decided to retire to private life and permit some younger man to carry the burden of conducting what is credited with being the oldest drug store in the State of Delaware.

The pharmacy was first opened on September 30, 1839, by the late Edward Brinhurst. At the time the other business men in Wilmington launched at the founder of the store for erecting such a building out in the country, but after events have told their own story. The first plate glass, the first tile floor and the first gold labels on glass bottles were used on the equipment of this store.

Z. James Belt entered the employ of Edward Brinhurst in the capacity of an apprentice on January 13, 1847, and after being there for twelve years was married. In 1859 Edward Brinhurst retired from active business life and the business was continued under the firm name of E. Brinhurst & Co., the members of the "company" being Ferris Brinhurst and Z. James Belt. Ferris Brinhurst was afterwards injured by the explosion of a retort and died four days later. During the Centennial year the senior Brinhurst retired from the business and since that time it has been conducted by the present owner. The business has been a most prosperous one and it was the active supervision of the work which has occasioned the owner to desire a well-deserved rest and his consequent proposed retirement. The store is now one of the most centrally located in Wilmington, vindicating the judgment of its founder.

Mr. Belt, although seventy-six years old, looks very much younger. He never has missed a day at his pharmacy, but has devoted a part of his time regularly to outdoor life. Fresh air and a methodical well-regulated existence have tended to keep Mr. Belt in good health and to that also he attributes a large measure of his success. Mr. Belt gives to each of his employes two hours off daily for recreation and outdoor exercise in addition to the regular intervals for meals.

The scarcity of woods from which much of the paper has been produced during the last twenty years has caused the attention of paper manufacturers to be directed to the practical value of agricultural products as suitable material for paper making, according to F. P. Weitch, Chief of the Paper Laboratory of the Bureau of Chemistry. Mr. Weitch declares that the scarcity of wood has caused concern to the manufacturers of paper, and there are constant inquiries from them as to the possibility of making paper from new materials. All

kinds of wild and cultivated plants are now being used on a manufacturing scale, because experiments have shown that practically all fibrous vegetable material will make paper, the quality being governed by the percentage of fiber sufficiently resistant to stand the action of the chemicals. The materials suitable for paper making include seed hairs, best fibers, such as flax, hemp, common nettle paper, and mulberry; stems and leaves of straws and grasses, corn, sugar cane, and the various kinds of woods. It is estimated that more than 3,000,000 tons of paper are made annually, 50 per cent of which becomes waste material within three years.

"Here is the badge of the complete Americanizing of a Chinaman," said a drug clerk who was putting up a box of quinine capsules. "Most Chinese are slow about forswearing Oriental drugs and quackery. Many of them live here for years before they can be tempted to sample Occidental medicines, and some of them live and die without making the experiment. In fact, when a Chinaman turns cosmopolitan taking American medicines is his final accomplishment. But when he does get the medicine habit quinine is his long suit. Whether or not it is good for what ails him, every Chinaman who has learned to patronize American drug stores feeds his system with quinine pills."

There is a widespread popular belief in England, and, indeed, throughout Western Europe, that stinging by bees is a cure for rheumatism and allied ailments. Over a year ago Dr. Ainley Walker, of Oxford, asked in the chief medical and scientific journals for trustworthy evidence as to the success or failure of this popular treatment. The poison which the bee injects is formic acid and Dr. Walker's attention had been drawn to the popular belief by certain observations of his own "which seemed to suggest a possible relationship between some of the phenomena of acute rheumatism and abnormal production of formic acid in the body" under the action of a micro-organism. He has now received, says *The Manchester Guardian*, an interesting body of mainly favorable testimony, much of it from medical observers. But the most interesting evidence of all is that of an Austrian, Dr. Tere, who has been using the treatment systematically and, as he claims, successfully, for years, and has dealt with seven hundred cases.

Dr. Tere published an account of his method and results twenty years ago, but his paper was generally ignored. He has found that a rheumatic subject is less susceptible to bee stings than a healthy person; the secondary swelling, which normally lasts a few days, fails to appear. His treatment is to continue the stinging until a stage is reached when even in a rheumatic subject this swelling begins to appear. At this stage there is a marked improvement in the rheumatic symptoms. The stinging is then carried on, and after a further stage is reached when the swelling again fails to appear, however many stings are applied, and this development of immunity to stings is accompanied by a complete cure for rheumatism, the cure enduring as long as the immunity remains. Sometimes a dozen stings complete the whole process; sometimes hundreds are necessary.—*Dundee Advertiser*.

The Presbyterian ministers of Philadelphia are about to apply for a charter for an organization that will be known as the Ministerial Sustentation Fund. It purposes to provide an annuity of \$500, beginning at the age of seventy, for ministers who have served at least thirty years in the church, and an annuity of \$100, beginning at the same age, for those who have served less than thirty years, with \$10 additional for each year of service. An annuity of three-fifths of what would be paid to the minister will be paid to the widow in case of death, and in case of the death of the widow the annuity will be divided among the minor children. Ministers will pay 20 per cent of the amount of the annuity and 50 per cent is ex-

Z. JAMES BELT.  
Veteran Wilmington (Del.) Pharmacist.

pected to be realized by general subscriptions and income of the fund.

Automobile poker has succeeded freight car poker. Freight car poker? It's an old game among travelers, and its successor is played the same way exactly, though under another name. Three or four men in an auto or on a walking trip want some diversion. They agree on automobile poker, get out pencil and paper and wait for machines to pass. The first man sets down the registry number of the first motor that comes in sight, the second does the same with the next "red devil," and so on, until every one in the game has a "hand." Then there is a "show down." Of course there are no face cards, but all the rest of the component parts of a poker deal are to be had; thus: One, ace; two, deuce, and so on up to the zero, which is called a ten.

"You have invented an airship?"

"Yes."

"What advantages has it?"

"Well, for one thing, it is absolutely safe. I cannot even persuade it to take a chance by leaving the earth."—*Washington Star*.

Boston's teachers are making a loud outcry against a new rule of the school authorities fixing seventy years as the age limit for active service. "If this rule goes into effect," says one of the spokesmen for the pedagogues, "one-fifth of the heads of Boston schools will be forced out. How would any large institution or store fare that discharged that number of its heads, simply because they are seventy years of age? According to the School Board, President Eliot, of Harvard, must have been for the last five years a detriment to that institution.

"The Human Monstrosity!" said a young lady attending a fair with her fiancé. "Threepence. Wouldn't you like to have a look at that, Herbert?"

"No, dear," answered Herbert, anxious to bestow a neat compliment; "I am quite content to look at you."—*Tit-Bits*.

The amethyst is the fashionable stone for 1909. It is pronounced by the prophet Zadkiel to be the "lucky stone," says an exchange. If the love and friendship which the amethyst represents are of no account to wearers let them remember that it is also a charm against the evils of intoxication! Anyhow the art jewelers have seized upon this Oriental superstition and set the stone in a myriad of designs which make it peculiarly lovely and attractive.

"Whom would you rather entertain," asks the Philosopher of Folly, "a perfectly stupid bore or a clever fellow who has just been abroad for the first time?"—*Cleveland Leader*.

When a fellow begins to be afraid he can't live without a certain girl he ought to marry her and see.—*Philadelphia Record*.

The University of Vienna, which has received through the Vienna Academy of Sciences an anonymous donation of 500,000 kronen for the establishment of a "radium institute," is rapidly becoming famous among physicists for its experimental work on the wonderful radium emanations. The rarity and great cost of radium necessarily restricts the number of investigators, and Sir William Ramsay, who in his recent experiments has gone far toward proving the suspected transmutation of radium into helium and other elements, was recently specially honored by the Vienna Academy of Sciences by the loan of a fraction of a gram of radium for the purpose of enabling him to continue his valuable investigations. A gram of radium, it has been calculated, has stored up in it energy equal to one horse-power for fifteen days, but it parts with its energy so slowly—it cannot be stayed or hurried—that it takes some 30,000 years to exhaust itself.—*Dundee Advertiser*.

Experiments of an extensive character are about to be made in London with a view of testing Sir Oliver Lodge's system for dispelling fogs by electricity. Writing some time ago, Sir Oliver urged that in order to combat the town fog people should avoid assisting in its formation. He maintained that a

great portion of the coal thrown into furnaces or on open fires is not burned at all but is merely distilled up the chimney, causing not only a waste of fuel but periodic visitations of black fogs in London and other large towns.

To mitigate the evil he recommends the use of improved fireplaces, more careful stoking and special boiler appliances, but he considered that the only thorough remedy would be to prohibit the importation of coal into great towns, and instead of it to convey there by pipes a cheap non-illuminating gas made at mines. But such a scheme hardly seemed practicable.

Now Sir Oliver proposes to act by electricity, and he seems confident that by filling the air with electrical currents he can dissolve the fog and bring the particles which compose it to the ground in the form of black snow. While the result of the experiment will be watched with great interest it must be acknowledged that the fogs have for the last two or three years been much less dense than they used to be, owing no doubt to the use of grates and ranges which emit less smoke. In 1908 nothing that could be described as a really heavy fog was seen, and in fact it is three or four years since the metropolis has been shrouded in what used to be called a "London particular."

When the druggist or clerk passes much of the time "out front" gossiping with passers-by, patrons pass on to the other store where there is "something doing."

In England the drink habit is undoubtedly on the down grade, says a cable dispatch to the *Sun*, brewery shares are dropping, small manufacturers and publicans are being crowded out and the big companies and hotels are less prosperous than formerly, and restaurant keepers are in despair at the lessened consumption of wine. There are many reasons for this besides diminution of spending power. One man is forbidden by his doctor to touch stimulants, another fears to touch port or champagne for fear of gout, and the man of limited means finds that a whisky and soda provides the needful stimulant at a quarter the cost of wine. Drunkards there are in plenty, but they are becoming increasingly the exception. To a great extent the drink habit has been replaced by the tea habit; tea shops have to a large extent killed the public house. Britons may not, however, attribute the change wholly to virtue. Heads are not what they were, and many a man keeps sober because he dare not get drunk.

Knicker—Do you carry complete auto supplies?

Dealer—Yes, even diamonds for bail.—*Sun*.

Reagent bottles holding caustic alkalis, alkaline carbonates, etc., very frequently become fixed and the usual method has been to tap the stopper with a wooden block or the application of heat to the neck, or a combination of both. Results are poor in certain cases and often result in the fracture of the neck.

The inverse process may be used to advantage. In other words, freeze the stopper, thus causing a contraction of the stopper from the neck. The bottles which I used for experiment had failed to open under the beating and tapping, and were bad cases of fixed stoppers. The bottles held sodium carbonate that had formed sodium silicate, and excellent cement, and so were firmly fixed. They were inverted in a mixture of crushed ice and calcium chloride, taking care that the freezing solution did not touch the lips of the bottles.

After standing twenty minutes each stopper was removed without the slightest exertion. This is the neatest and safest way to remove stoppers from bromine bottles and other corrosive chemicals.—*Scientific American*.

It makes no difference whether there is "room at the top" or not, keep climbing. It is a dead sure thing that there is plenty of room at the bottom for "dead ones."

Wife—I saw Mr. Chacer this afternoon, and he looks very bad. What's the matter with him—do you know?

Hubby—Compound fracture.

Wife—What sort of compound fracture?

Hubby—He's broke, and Miss Doughbag, discovering that fact, broke her engagement.—*Pick Me Up*.

If some of our embryo pharmacists were not disillusioned so easily they might develop into fairly good drug clerks.

## Moving Window Display Wins \$5 Cash Prize in the Era Competition.

B. A. Cueny, pharmacist of 403 Main street, North, Cheboygan, Mich., is the winner this week in the ERA's Cash Prize Competitions. Mr. Cueny sent the above photograph for entry in Contest No. 2 and is awarded the cash prize of \$5. Readers who are not familiar with the terms of this contest should see the announcement on page 6 of this issue. Anybody can enter this competition. Mr. Cueny's description of his display follows:

### Moving Window Displays Most Attractive.

"From my experience I have found that moving window displays attract the attention of the general public to a greater extent than stationery displays. The following is a description of a window dressed by Tony Roshek and George Guile, in my employ. The general plan was a lumber camp far back in the woods. Standing out against the dark green of the forest, formed by evergreen trees placed around the

window, the log camp and barn could be seen, while in the clearing four men were hard at work. These men moved as they worked. One man was chopping down a tree, another was splitting wood, and two men were sawing a log. Proof of their industry was evidenced by the numerous stumps formed by placing log ends upright, sticking through the snow, with which the ground was covered. At one side was a team of horses and a logging sleigh loaded with twenty-nine logs awaiting its driver to go to the river or mill. A log skidway and a pile of split wood (for use in the cabin) placed around the window added to the effect. The materials used were as follows: Salt and diamond dust to form the snow; lead to make the axes, cant hooks and to iron the sleighs; tar paper covered the roofs of the camp and barn, and the total expense was 32 cents, viz., salt, 20 cents; lead, 5 cents; tar paper, 7 cents. A one-tenth horse-power electric motor, with a worm gear to reduce the speed, furnished the motive power for the 'BEST WINDOW WE EVER HAD.'"

## SEASONABLE DRUG DISPLAYS.

### Cough Remedy Wrinkles.

Quite an effective and simple display of white pine compound was secured by a New York druggist by merely filling the bottom of his window to a depth of about eight inches with bunches of pine tips, needles and cones, and upon these were scattered bottles of his preparation.

It is suggested that the effectiveness of this display, especially for night view, might be enhanced by sprinkling tufts of white cotton upon the needles, not too many of them, and mica dust upon the cotton.

A small pine tree was decorated with packages of cough drops and the card beneath it said: "Don't stand out there and cough while you are waiting for these cough drops to drop. Drop in and get a package and you will soon drop that cough."

In another window there was a general display of cough drops, syrups and all classes of internal cough remedies.

porous plasters, chest protectors, insoles, chamois and paper vests. The show-card said: "A bad cold affects one from head to foot. The worst of colds may be dispelled by the use of our remedies and protectors. From head to foot, inside and out, we have the needful cold dispellers."

In still another window the sign displayed this announcement: "If you doubt the value of our ready-made cough and cold remedies and yet do not wish to go to a doctor, there are two things you can do, take your choice: Either use some of these old-fashioned simples as they are, or use them to prepare a home-made cough or cold medicine 'Like grandmother used to make.'" The exhibit consisted of licorice, rock-candy, horehound, flaxseed, and such other stock articles as are commonly used in the home preparation of cough and cold remedies.

"The things that are GOOD for a cold make it WORSE. They are snow, ice, water, dampness, draughts, dust and cold itself. We don't sell 'em! We sell things that are BAD for a cold because they make bad colds disappear—and there are no good colds. The things in this window are awfully bad for a cold. We sell 'em; lots of 'em." Needless to say,

the display with this card was a general one of anti-cold goods.

In another window were a number of very knotty pine boards. A number of the knots had been punched out and these lay in front of the boards. The sign card informed people that "Many cough remedies are about as much good to the suffering purchaser as a bushel of knot holes would be, but our Pine Knot Cough Compound really cures coughs."

#### Codliver Oil Ideas.

A window contained a complete display of codliver oil in its various forms and disguises. There was the pure oil, oil in capsules, emulsions and proprietary specialties supposed to contain the active principles of the codliver. The sign advised people thus: "We honestly believe that the best way to use codliver oil is to take the pure Norwegian codliver oil, straight. However, if you are among the many who cannot take it that way, here is the oil in all forms, pleasant as well as unpleasant. Come in and hear us talk about these goods and then make your own selection."

A unique and simple display was made thus: A large mirror was placed back down upon the floor of the window and upon this, made of vari-colored cough drops, was a relief map of Cape Cod. The sign read, "A map of Cape Cod. A good place to catch cold; also a good place to catch cold. Whether it is a Cape Cod cold or any other sort of cold, we have pure codliver oil and pleasanter cough and cold remedies to cure it."

#### Defensive Fences.

To arrange this somewhat elaborate display the floor of the window should be covered with white crepe paper. Upon this scatter mica dust or powdered glass, in imitation of snow. At either side build a cabin of packages of cough drops. Label one "A cough proof dwelling," and the other, "This house keeps out the colds." Along the back stand a number of pine sprigs like miniature trees and with them show the white pine compound. Now run fences irregularly around and over the surface of the white paper. Some of the fences should be of rock-candy, in imitation of a stone fence; others should be of rail formation and constructed of colts-foot candy, horehound sticks, stick licorice and any other stick candy candies that may be in stock. The card should say that, "There are no better defenses against coughs and colds than these fences are."

#### Coughs of All Nations.

In this display the rear of the window was banked with flags of different nations with the stars and stripes in the center. To this stand of colors was attached a card announcing that "All nationalities cough in the same language. No difference what your nationality, we have something to cure that cough and 'Smith's Honey and Horehound' is that 'Something.'" Upon the window floor was arranged packages of the remedy.

With the aid of strips of wood and brown tissue, a Western druggist arranged a miniature banking house partition within his window. To the left was the representation of a window marked "Paying teller," and to the right one marked "Receiving teller." Below the receiving teller's window a card stated that: "Unless you want to pass in your checks you had better use our codliver oil emulsion for that cough and the lung sickness." Below the paying teller's window a sign read: "Don't cash in for eternity. Keep alive and get heavy with our cough elixir. Undertakers do NOT recommend it."

#### One on Santa Claus.

This display attracted much attention and excited comment that resulted in generous advertising returns. The druggist took a suit of underwear and stuffed it with excelsior until it took the human form. Stuffed socks and rubber gloves were made to serve as feet and hands. First, a chambray vest was placed upon the figure. Hot water bottles covered the upper part of the arms and porous plaster were tied around the lower arms. Around the waist was a girdle of packages of cough drops and the hips were wrapped in chest protectors. The legs were encased in an armor of stick licorice and cough candy and the feet stood upon insoles. The final finish was given with a Santa Claus false face and red cap. Beside Santa rested a sack filled with seasonable medicines. A sign informed the viewers that "Santa's last trip to town nearly did him up. We saved his life and sent him back to the North Pole in good shape. He took a stock of our seasonable

medicals with him and prepared for the homeward trip by decking himself out like this. Don't you need a bit of this sort of protection?"

#### Medicines Like Grandmother Used.

In one side of the window was placed a jar filled with a dirty, greasy substance and labeled "Goose grease"; a strip of red flannel and a piece of salt pork labeled "For sore throat"; an old piece of calico with a large quantity of a yellow, sticky mass spread upon it and labeled "Mustard plaster"; a jar of dirty, streaky lard labeled "Dog's lard salve", and an old tin pan filled with dirty water in which fragments of herbs were floating, labeled "Herb tea". A card above these stated that they were "Some of the wonderful and delightful old medicines that grandmother used to use."

At the other side of the window were arranged an assortment of modern articles used for the same winter ills for which the grandmother goods were formerly used. The card in connection with these asked: "Which do you prefer? the old truck like grandmother used or these cleanly, modern medicines and appliances? We have grandmother beaten to a frazzle!"

#### Hot Goods for Cold Weather.

The following display was particularly attractive at night. At either side of the window were made irregular piles of cigar boxes and over these and covering the floor was crimson, crepe tissue. The sides and back of the window half way up were covered with the same kind of paper. The walls of the upper half of the window were covered with white crepe paper upon which were pasted many tufts of mica-dusted cotton. Similar tufts of cotton were fastened to the upper half of the window glass. From the window ceiling hung numerous threads upon which cotton tufts were strung. These threads were of irregular lengths, the longest not reaching the center of the window. In the center of the window floor, below this "snow fall" stood a tripod and kettle. Underneath the kettle there was a pile of sticks. Tufts of red cotton were in the interstices between the sticks and below all a red incandescent globe, whose light shot through between the sticks and thus completed a very natural imitation of a fire. Upon the piles of cigar boxes and otherwise appropriately arranged were hot water bottles, chest protectors, felt-back plasters and similar goods. The contrast between the fire-lit crimson lower half of the window and the snow-white upper half was most striking and pleasing.

#### Realistic Fire Show.

A fire scene even more realistic than the above, and one which may be used with many displays, is arranged as follows: First place an electric fan so that its air current is thrown directly upward. Directly over it, upon wires, place one or more incandescent globes. Take pieces of firewood and dot them with daubs of mucklaze upon which mica dust is thrown. Pile this firewood so as to mask the fan and globes. To a number of the pieces of wood that top the pile tack numerous streamers of thin white, pink and red ribbon. The constant flickering of the ribbons when agitated by the air current from the fan, coupled with the glare of red light from below, gives a remarkably flame-like effect and the glitter of the mica on the wood adds to the deception.

#### Keep Talking.

The skilful salesman does not jabber, but he usually continues the conversation during all the time he is engaged with a customer. While waiting for her to get out her money, while making change or wrapping a package, he has something interesting to say. He points out some new decoration or fixture, indicates a new line just added, or shows his memory and makes a hit by referring to some past purchase, personal matter or public occurrence in which the patron has been concerned. Conversation upon matters personally concerning the buyer establishes a bond of mutual interest between buyer and seller, but the seller should not intrude his own personal affairs, for the simple reason that it will pay him better to have his patrons think of the character of the business as being almost the same as his personality.

#### Excuse for Ignorance.

"What is the difference between haw and gee?"

"Guess you never drove oxen."

"No, and I never held a job as a mule."

# A Driven Nail.

By Joel Blanc.

Why do I work? I, who am but an atom in this world of deception, dishonesty and greed, my every effort producing but a pittance that my loved ones and I may live. Here I labor in a world where the filth of mind makes even the corruption of the flesh seem pure. Predestined to struggle on, to suffer for the sins of my ancestors and to pass that suffering on to those who shall curse their inheritance from me. Onward I struggle, working, working, with no hope held out toward me except a possible reward in some unknown state, vague and far, unrealizable, or the alternative that unless I continue to drudge, drudge on, some awful, merciless power shall make my intangible something called soul, suffer in unending indescribable torments. Such is the philosophy of an Ibsen, a Tolstoy, a Bunyan, a Cotton Mather. Away with it!

See that crude shelf in that corner? How the edges of the boards are frayed where the nails went awry? Yet in one part of the shelf where it cannot be seen, its head set deep and covered with putty and paint, there is a nail. That nail sets straight and true; its rough edges, running through from board to board, hold the separate pieces of wood together; driven so that its sides firmly parted, but did not split, the muscles of the wood. As my mind's eye pierces paint and putty and follows along the length of that nail, I seem to hear the metallic reverberations of the hammer which drove it there and the muscles of my arm vibrate and sing like the strings of a harp, sing of work for work's sake, of the reward that work through working gives.

Ah! that is better, for it exemplifies the philosophy of an Emerson or a Stevenson, the philosophy of light and truth. But the shelf is crude and almost useless! What of that? The labor for labor's sake is there. My novice arm and untrained hand drove and drove and the nails went all awry. But at last, when the brow was moist and the muscles ached, the eye, the ear and arm became attuned, the senses brought distant sound and force into harmony through the glory of work for work's sake, and the nail was driven true!

In one of the drawers of my desk rests a manuscript. It has never known the interpretation of type and probably never shall. At least ten times it has been rewritten, not a word, not a punctuation mark holding the same place it held in the original, yet the mind-picture which I tried to paint remains the same. When the brain is tired of detail, when thought seems dulled, I take that manuscript in hand and read it over. It brings to me a picture of the long ago. As I read I hear the music of Southern pines, I see the glint of Southern waters, the storm gathers—in a human life, the crash of a wrecking, soul-disturbance comes. In my mind the memorized picture is complete. But the fingers have never painted upon the written page the word picture as my mind holds it. Although it is even now, to me, the most perfect production of my pen, it is not the best that I can make of it; indeed, life may be too short to complete the blending of all of its tones. But even though it may never be made perfect, the making of it, the labor expended upon it returns to me a greater reward than all the praise of man could give. An ideal, perhaps, but an ideal made real through a labor of love for the love of labor.

So, though the work may be that of brain and hand or of brain alone, we must, if we would have the work done well, look to the work itself for the greatest and best reward. Look over the performances of the average human life and see to what an insignificant number come many moments of that ephemeral sensation called pleasure, how to a still smaller number comes the fleeting matter called wealth. But look for happiness. Do we find its symbols, the clear eye, the

ruddy cheek, the smile, the mental poise, possessed by many of the rich or pleasure seeking? No! The world's happiness, the world's power is held by those who earn more than they receive in material wage, because they have found the glory, the worship in labor, the worship of the God of men who work.

Is the good storekeeper such because each mote of dust may bar a penny, because each foot of well-ordered shelving may bring an additional dollar? Never! He is not conscious of the material value of cleanliness and order, but his first thought, possibly a sub-conscious thought, is that the labor demanded by cleanliness and order is paid for by the very effort that labor demands. Ask a good storekeeper why he is such, and nine times out of ten he will at first be at a loss for a definite reply. His most direct answer will usually be that he was born orderly and cannot help being orderly, or that he is discontented and unhappy unless the store is clean and orderly. Ask him if system and cleanliness do not demand a greater deal of labor and he may answer at first in the negative. But give him a moment for thought and he will add that they may demand a considerable amount of work, but he likes the work. The same is true whether the man does the work with his own hands or, that which is more often harder work, does the work with his brain and the utilization of the hands of others. And this is so whether the work be for oneself or for others, whether the work be for business, home or care of person. The man or woman who really works does so with the spirit that spells progress, works not primarily for the material reward, but because he or she cannot help but work. Nature demands it, and the gratification of nature's first demands, if they be pure, are sure to bring nature's greatest rewards.

Of course, there is much of the world's work performed in a spirit that finds no pleasure and no reward in the performance of the labor. The position of a majority of such laborers is lower than that of slaves. They not only lack sufficient intelligence, but they refuse to make use of any opportunity to raise their efforts above that of the dog in the treadmill or the oxen in the yoke. Only in unthinking estimate are these brutish ones lower than the utter materialists who labor purely for money and then waste the money so earned. These are they who, with outward semblance of intelligence and culture, show neither real intelligence nor energy in the performance of their tasks; who refuse to give one stroke of the pen, one blow of the tool, that is not to be directly paid for, who are tardy and indolent, vacillating and unreliable, the hirelings who never become hirers.

As I write I look upon the walls above and around my desk. I see many photographs, the pictures of men who stand high in the profession of pharmacy and business of drugs, retailers, wholesalers, manufacturers and college professors. I know them all, and I know them well. I know them best for the hard work each has done. In every instance the work that has carried their names the farthest, for which no material reward was possible, for which even thanks has seldom come and which often received but ingratitude and sneers, was work for the good of their fellowmen. Ah! Let us pause for a moment! Working for our fellowmen! Has that not been, through all ages, the hardest and most poorly rewarded work that the world has ever held? Has not its greatest outward reward been that wraith called fame? From what have men who have worked for their fellowmen received their greatest reward? From the consciousness of righteousness which can be realized only in the happiness that the work itself gives through its own performance.

This spirit of love of work which brings joy and worship through love of labor is not the labor of the whirling dervish or the Buddhist zealot who holds his arm aloft until it shrivels; it is not the effort of him who labors for a foreign ideal while his near and dear ones wait; nor is it the labor of him who studies or designs for the purely selfish joy of knowing or creating. He who finds most joy in work is he who works in the world for the world, with home, as to him, the dearest spot in the world. Success, success in its truest, highest definition, the success which supplies all wants because those wants are clean and moderate, comes most often to those who, in seeking and finding joy in work earn most with least sorrow and enjoy most with least regret.

Joy in work is not an ideal. It is the most beautiful reality in the world. It is the foundation of civilization, the preserver of the home, the power of progress and the culti-

vator of intelligence. It is almost synonymous with health, happiness, honor and love. He who laughs while he labors does not gaze through a veil of tears to a darker curtain that shrouds eternity. For him, when the last sleep draws nigh, when disintegration of the material self is close at hand, he who has worked wisely and well can joyfully and prayerfully look back over an energetic, well spent life. He realizes the glory and honor of his past and that all his struggles were amply rewarded by the fruits of that which he did for the inward happiness he found in doing it. He knows that energy is life and that in the doing of what he did he put forth the best effort of his life. He also knows that the more of that life-energy he put into his work the greater was the amount of energy he held at his command. In accepting the law of the conservation of energy that no effort is ever lost, this cheerful worker faces the unknown future unafraid, believing that as energy goes on forever, he shall live again, live again in the glory of labor for labor's sake.

## IS FOOD CONTAINING BENZOATES INJURIOUS TO HEALTH?

In a recent article published in the *Medical Record* (Jan. 2, 1909, page 16), E. E. Smith, M.D., Ph.D., professor of physiology and organic and biological chemistry, Fordham University, School of Medicine, and Director of Research, Red Cross Hospital, attempts to answer the question: "Is food containing benzoates injurious to health?" his conclusions differing widely from those advanced at various times by Dr. H. W. Wiley. Dr. Smith's article is based on a consideration of the data published in Bulletin No. 84, Bureau of Chemistry, United States Department of Agriculture, "Influence of Food Preservatives and Artificial Colors on Digestion and Health," and particularly the data in Part IV, "Benzoic Acid and the Benzoates." Dr. Smith summarizes his consideration of the data thus:

1. The loss of weight was not evidence of an injurious action of the preservative administered since it was because of a diet sufficient to maintain body weight.

2. The disturbances of metabolic functions, as evidenced by a supposed increased elimination of metabolic products, did not show any injurious action of the preservative administered, since no real increase was produced, excepting only the increase of urinary solids which was largely due to the elimination of benzoic acid and its products.

3. The increase in microscopic bodies of the urine did not allow any general tendency to stimulate the destructive activities of the body, and hence is not indicative of an injurious action of a preservative.

4. The disturbances in digestion cannot be attributed to the action of the preservative, since the subjects were not in a healthy condition, but were suffering from acute coryza and sore throats with the accompanying fever, which conditions are themselves, as is well known, a cause of gastric disturbances.

In conclusion, then, the evidence presented in Bulletin No. 84, Part IV, does not establish any injurious effects of benzoic acid and benzoates, even in the quantities and manner administered.

### The Old Lebanon Academy.

We have received from Joseph L. Lemberger, Ph.M., an ex-president of the American Pharmaceutical Association, a 32-page pamphlet containing a reprint of his paper, "The Old Lebanon Academy," read before the Lebanon County (Pa.) Historical Society June 19, 1908. The institution of which he writes was the pioneer classical school of that part of Pennsylvania and, as Mr. Lemberger says, it was the "educational factor which built for Lebanon of today, the foundation of its excellent system of public schools as well as the superb county organization." The academy was incorporated by Act of Legislature in 1816. The pamphlet contains a half-tone portrait of Mr. Lemberger and other illustrations of early school buildings, as well as a roster of persons known to have been pupils during J. H. Kluge's administration of the academy, among the names being that of the pharmacist-historian.

Did you ever hear of a drug clerk losing his position through indulging in too much water—internally or externally?

## The Point of Contact.

By Emma Gary Wallace.

By some happy chance the Women's Organization decided to call its local associations—Chapters, and the word chapter at once calls to mind a unit which is a necessary part of a larger whole. That is just what each Chapter of the W.O. should be—a related unit in spirit and in aim.

To be worthy of the name, an organization must have definite "Objects" toward the ultimate accomplishment of which its activities, social and serious, distinctly tend. If the spirit of unity or harmonious agreement does not exist, if it is disturbed by disagreements, or by the presence of antagonistic factions, the true objects of the organization are lost sight of and their realization is accordingly delayed.

In a certain part of the country there are two local associations of a well-known order within an hour's ride of each other. The objects and the local conditions are entirely similar, and yet the results are as divergent as the poles. In one, differences of opinion are never yielded gracefully, for as a matter of principle—stubborn principle—the factious never "give in." If overruled they submit as a matter of necessity. There is no point of contact. At first glance a semblance of prosperity is apparent, but closer observation proves it to be disappointingly superficial. The regular meetings are held in an unattractive and inconvenient rented hall, and evenings of real enjoyment or of lasting value are like the currants in the boarding-house bun—far apart.

The other association is a unit. They have no factions to recognize, and they pull together as a matter of principle—wise principle. They own a fine property worth at least ten thousand dollars, and in about four years they have reduced their indebtedness to less than one-fifth that sum. Their roomy, new building is equipped just as they want it for their particular use, with an auditorium having an exceptionally fine floor for dancing, a spacious dining room, and a well-furnished kitchen, etc. It is an organization of business men and their wives, and they have an eye to the helpful as well as to the social. Lectures, practical demonstrations and good times generally, fairly elbow each other for an opportunity to be. One of the maxims of the association is:

"Be loyal to your officers and to each other. You are expected to help, not to criticize. It takes a resourceful person to be helpful; any commonplace individual can be a fault-finder. We are helpers. Be one of us."

The first association is a failure. The second is a success, and the members are achieving the objects which they set out to achieve because they are a unit. There is a definite point of contact.

### Motives for Fraternizing.

The motives for fraternizing will be various, and any one who expects otherwise is very sure to be disappointed. Some will join our organization with characteristic seriousness of purpose; some will come simply because they have been urged to do so; a certain number may be curious; others will desire the sociability to be enjoyed; while still others will have an exaggerated and confused idea of immediate and material benefits.

All these are excellent reasons. Indeed, any reason is a good one which will arouse sufficient interest to induce others to unite with us in promoting so excellent a group of "Objects" as our Constitution shows. Those who understand and appreciate our hopes and aims and have followed the work of the organization, will recognize our earnestness and will join because of that fact. Those who come in response to friendly urging, or from curiosity, will be pleased and thoroughly satisfied when they see the broad field and the pleasure of the work in which they may share. The ones who come for the social part are especially welcome, as by their coming one of our objects is distinctly fulfilled, and the others who expect material benefits will not be disappointed. The rehabilitation of our profession with its proper dignity and its honest prerogatives will mean material benefits of no mean order, not to speak of the immediate benefits of good cheer, encouragement and helpful information to be derived from the regular Chapter meetings as a given point of contact.

### From the Standpoint of the Officers.

The wise presiding officer analyzes all these possible motives and by means of carefully thought-out programs and judicious

committee groupings helps to broaden the vision of those who need such help. Men and women have an inherent longing for the nobler things of life. The appeal of the worth-while is so much stronger than that which is of a transient nature that the officers have a distinct advantage in arousing and maintaining interest.

All the great books of history and fiction which have out-lived momentary favor have been remembered and treasured because of an appeal so strong that somewhere in every heart they found the point of contact of common experience or of a common ideal. It is only as something in common is touched and understood that lasting interest is awakened.

The successful officers help each member, even the most retiring, to feel a glow of pride in the work being done and inspires each one with the thought that she is a part—an important part—of it; that the planning, the decisions, the carrying out of plans and the results are hers to be thought over, worked for, and to be proud of as well.

The business will be so openly and so frankly managed that everybody will recognize the necessity and the wisdom of every move. This is important to insure cheerful support. System and promptness here as elsewhere mean smooth-running machinery and public confidence. Officers must show themselves interested, not only in the work, but in the individual member also. Right here lies the success of many an organization—the personal interest shown for every one. Each is made to feel that she is welcome, that when absent she is missed, and that her joys and sorrows are of real moment, as they should be. This is such a busy, yet withal such a sensitive world, that few have the time or the inclination to be part of an enterprise which lacks enthusiasm, or to be counted simply as an annual due, at so much per head. Reciprocal interest and hearty co-operation are the points of contact between officers and members.

#### From the Standpoint of the Individual.

The individual member has her obligations as well. However skillful the generals in an army may be, it is the men in the ranks who must carry out the plans, and on the faithfulness of their service the results depend. One obligation is regular attendance, as far as circumstances permit. The woman who is irregular in attendance loses interest and frequently complains that she is not given her full share of work and responsibility, forgetting, perhaps, that she cannot be relied upon with any degree of certainty.

Another obligation is that of taking an active part in all open discussions. Women will frequently whisper their opinions to each other or collect in after-meeting groups and freely express their ideas—good ideas, too—who cannot be induced to say a single word "out loud in meeting." This is manifestly unfair to themselves and to their officers who are most anxious to obtain the different viewpoints that they may be guided by them.

Still another obligation is that of a correct mental attitude. A sweet-faced woman—a true lady—recently said: "Before I go to our Chapter meeting I always send up from my heart a petition that I may not do or say anything which may be unkind; that I may not, even by a glance, a smile, or a frown, sanction an unkind thought expressed in my hearing, or take credit to myself, perhaps by silence, for that which justly belongs to another."

"If I hear a criticism I always ask, first—Is it true? Second—If it is true, will it do any good to repeat it? If not, I keep still, even though tempted to speak. You know we meet human nature everywhere—even in ourselves. When I come home I have no regrets to bother me, and my memory of the meeting is always one of joy."

That is the correct mental attitude, for it makes for harmony and good results. What a mellowing influence such a contact is sure to exert.

#### The Compensations.

There are compensations—wayside compensations, aside from the advancement of loftier motives. The officers gain in contact, in the ability to discover true worth everywhere, and in the thousand and one sweet experiences which enrich the lives of those who freely give a portion of their time in the service of others.

Officers and members see the advantage of strictly business methods and parliamentary dispatch, which after all is but applied common sense that gives equal opportunities to all. They learn to listen with respect to the opinions of others no

matter how much they may differ from their own, and often through this contact with the opinions of others they are convinced of error or narrowness on their own part. They learn that while people may honestly differ in their views, yet all may still work loyally together for the same great end.

They learn that true and lasting harmony can only be maintained through absolute justice to all, and an intolerance of anything underhand or of a nature approaching gossip. They learn what is perhaps best of all, the broad-minded policy of being able to advance the good of the many instead of the few, even if that means self-effacement.

That is not all, although it is a great deal. Women learn to think and to speak on their feet, and to reason and still reach conclusions quickly. They learn that their ideas are as likely to have weight as those of more ready speakers. How often we have all seen the sentiment of an entire meeting changed by a few quiet, well-chosen words which shed a new light on the matter under discussion.

Many a man and many a woman have found themselves through the inspiring contact of organization work. A man so bashful that when he arose in a small society of twenty or thirty people as to become painfully embarrassed and to fail again and again to make himself understood, became a famous lecturer, and that in less than five years. Many a woman who has felt her heart fluttering in her throat and her ideas taking unceremonious flight, has awakened a little later to the knowledge that she could marshal her thoughts in intelligent and convincing array, and "Knowledge is power."

The good old days of the chimney corner and the spinning wheel are past, not because we scorn them, but because times have changed. Our women are none the less womanly for the wish to keep step with the march of events, and to do their part in the world's work. They are broader, kindlier, stronger because of a part in organization work and its many helpful points of contact.

### THE WORLD ALMANAC FOR 1909.

The World Almanac for 1909 is now on sale. It contains over 800 pages and seems to be thoroughly and accurately up to date.

It presents New Thought readers with details of the Emmanuel mind-cure movement, and on nearly-by pages is the official statement as to Mr. Roosevelt's contemplated descent on Africa. The Prohibition wave is carefully followed in its rolling across the States. The Pope's encyclical on Modernism is given in full, as is the Lambeth encyclical on marriage, divorce and the family, adopted by the Episcopal Conference in 1908.

The story of the Panama Canal is amplified. There are notes on the prosecutions of trusts and rebates. Attention is paid to the Hudson-Fulton tercentennial and to the expositions planned for 1909. Walter Wellman writes of Polar Expeditions, and there is the very latest word about airships.

A new feature of the Almanac is a summary by States of all the laws relating to the administration of the estates of persons deceased, compiled by an experienced lawyer, and is perhaps the first complete publication of such matter in popular form. It represents really a small library of law just as it stands.

These things which have been mentioned incidentally are in addition, of course, to the year-by-year features of the Almanac—to the political platforms, summaries and election tables; to the official lists and statistics of governments, of labor, of the churches and of the schools; to details of the world's armies and navies; to the census counts; to the wonderfully full pages of sports; to the figures of the crops and the manufactures; to the list of American millionaires; to the statistics of the railroads; to the outlines of new legislation by States; to the past year's chronology, and to the thousand and one things or more that go to make every new issue of the Almanac a volume to be cherished in an encyclopedic library. Not forgetting such a gossipy detail as a list of the real names, birthplaces and birth years of popular stage people.

The World Almanac is the offering of painstaking labor; it will reward unceasingly the search of the student, the statesman, the sporting man, the man of affairs, the casual reader—and the druggist who wants to be recognized as "the authority" of his neighborhood should have a copy of this work to support his statements and decisions.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Tasteless Syrup of Quinine.

(T. S. S.)—We know of no better preparation for disguising the taste of quinine than those offered by the National Formulary. See aromatic elixir of yerba santa and aromatic syrup of yerba santa in that work. Other syrups have been used. In reality it is impossible to produce a "tasteless syrup." All vehicles are characterized by some kind of taste and while it may be possible to mask the bitter taste of quinine, the word "tasteless" as applied to a mixture of this kind is a misnomer, which under the Food and Drugs Act is not permissible. However, the nearest to a tasteless salt of quinine is not the sulphate, but the tannate, and this because it is most insoluble. The formula given in the Dutch Pharmacopoeia for "tasteless quinine tannate" is as follows: quinine, 7 parts, is dissolved in alcohol (95 per cent), 14 parts, by warming on a water bath. To the solution a similar alcoholic solution of anhydrous tannin, 24 parts, is added, with stirring. The mixture is heated in a covered vessel, until homogeneous, then poured into water, 200 parts, with agitation until the precipitate becomes pulverulent. It is then collected, pressed, and allowed to drain and dry at normal temperature, being finally powdered and dried at a heat not exceeding 30° C. It should contain at least 9.5 per cent of quinine.

Various preparations put on the market as febrifuges containing quinine have been reported to be simply alkaloidal quinine in crystals, reduced to powder and then triturated with the desired vehicle. Here are two formulas which appeared in the ERA seven or eight years ago:

(1)

Mix one dram of saccharin with 4 ounces of water; add two drams of sodium bicarbonate and dissolve. Rub  $\frac{1}{2}$  dram oil of lemon and  $\frac{1}{2}$  dram of potassium carbonate together in water, and add the saccharin solution gradually with constant stirring. Now weigh out 4 ounces and 298 grains (avoirdupois) of quinine alkaloid, place in a glass bottle and pour on the other ingredients and enough simple syrup to make the whole measure 128 fluid ounces. (This, it will be noted, does not contain quinine, hence the name "Tasteless syrup of quinine" is a misnomer, and it would be illegal to sell the preparation under the title.)

(2)

Quinine sulphate, 128 grains; potassium carbonate, 110 grains; solution of potassium arsenite, 2 fluid drams; soluble essence of lemon, 4 fluid drams; water, 1 fluid ounce; syrup enough to make 16 fluid ounces.

## Disguising the Taste of Aloes.

(S. A. G.)—"We manufacture a preparation which contains sodium bicarbonate, Barbadoes aloes, oil of peppermint and several other ingredients which do not effect the taste. To some people the taste of the preparation is very nauseating and disagreeable, and while we have done some little experimenting we do not seem to be able to disguise the long after taste of the aloes. We have tried wintergreen, also salt. Would the taste be improved by using in its place the proper proportion of aloin so that the preparation would have the same cathartic effect as in the present case."

In the first place aloin will produce the catharsis of aloes in about one-third as large a dose and it is said to be freer from irritant effects. It is somewhat difficult to mask the taste of aloes and it is extremely doubtful if any adjuvant

can be devised that will completely disguise it. However, extract of glycyrrhiza and aromatics are employed in the standard liquid preparations of aloes and it is suggested that you try them. Tincture of cardamom is particularly recommended on account of its flavoring and cordial properties. Vanilla and orange flower water may also prove of service, these substances along with cinnamon, nutmeg, etc., being used as adjuvants in the old-time "elixir of garus," which contained aloes. At the same time it is quite unlikely that any satisfactory masking agents can be suggested without having the complete formula of your present preparation to guide us.

## Coloring Electric Light Globes.

(P. G. W.)—Various methods for coloring electric light globes have been printed in the ERA during the past year. To this may be added the statement recently published in the *Chemist and Druggist*—that the varnish best adapted to this kind of work is photographers' negative-varnish, which dries very hard. The resins in this varnish are sandarac and mastic, and the ground glass varnish may be used where a frosted appearance is required. The following are two representative formulas, the first one to produce a clear varnish and the second one a matt product. Any suitable aniline dye can be added to the finished varnish—aurantia, malachite green, erythrosin, etc.

(1)

White hard spirit-varnish ..... 15 ounces.  
Rectified spirit ..... 20 ounces.

(2)

Sandarac ..... 90 grains.  
Mastic ..... 20 grains.  
Ether ..... 2 ounces.  
Benzole ..... 2 drams to 1½ ounces.

The second varnish is applied to the cold globes, but the first is best used on the lamps when the latter are hot. The varnish is placed in a tumbler, the globes, previously freed from grease, are dipped in and then the lamps are taken out and allowed to dry.

## Breath Perfume.

(Todd)—Try one of the following:

(1)

Powdered orris root ..... 5 ounces.  
Musk ..... 5 grains.  
Coumarin ..... 12 grains.  
Vanillin ..... 20 grains.  
Oil of rose ..... 10 drops.  
Oil of neroli ..... 20 drops.  
Oil of peppermint ..... 20 drops.  
Oil of spearmint ..... 20 drops.  
Oil of claus ylang ..... 5 drops.  
Purified extract of licorice, sufficient.

Mix the orris root with the remaining ingredients, add enough extract to form a mass; divide into pellets or roll out flat and cut into pieces.

(2)

Sugar ..... 3 ounces.  
Licorice ..... 3 ounces.  
Oil of anise ..... 20 drops.  
Oil of fennel ..... 5 drops.  
Purified extract of licorice, sufficient.

(3)

Hager gives this one:  
Extract of licorice,  
Distilled water, of each ..... 100 parts.  
Powdered catechu ..... 30 parts.  
Powdered gum arabic ..... 15 parts.

Mix and by the heat of a water bath evaporate to the consistency of a thick extract; while still warm incorporate the following reduced to fine powder:

Florentine orris root,  
Cascarilla bark,  
Mastic, of each ..... 2 parts.  
After the mass has partially cooled, thoroughly incorporate;  
Oil of peppermint ..... 2 parts.  
Tincture of ambergris,  
Tincture of musk, of each ..... 1-5 part.  
Form into small pastilles or pellets.

# Original and Selected

## SOME GRAFTERS I HAVE KNOWN.\*

By Walter H. Cousins, Munday, Texas.

It was with a great deal of pardonable pride that I point to my profound knowledge of what the everyday American is pleased to denigrate a grafter, owing of course to the fact that I have bought experience in quantity lots.

I am not exaggerating when I say that I have met them all from the youthful specimen from the home office in Iowa City, who has a line of toilet specialties and perfumes with a showcase free, a deal that has put more retail druggists in John D. Rockefeller's class than booze ever put in jail, up to the fatherly old gentleman who is doing a philanthropic stunt with old Dr. Jaggerman's old reliable line of family remedies with an advertising scheme that would absolutely force customers into your place and likewise coin into your pocket.

From the star-bedecked fields of reminiscence comes a variety and elegant assortment of grafters that in the matter of numbers makes the sands of the seas pale with insignificance and the stars of the great blue dome look as seldom as old maids at a mothers' congress.

Nineteen hundred years after the advent of our Savior into this vale of tears yours truly embarked in a very small boat on the choppy seas of pharmacy, and it seemed that in twenty-four hours afterward every experience factory on the North American continent had gotten a line of information on me and sent a man on the first train to make me an elegant spiel embellished with the choicest adjectives, slap me on the shoulder and show me where to sign. In this gang of artistic commercial porch climbers were some of the most thorough, best educated, high grade gentlemen cut-throats that ever carried a sample case in Texas.

During those palmy days yours respectfully was passing through that innocent age of youth when he stood ever ready to give two tens for a five, to loan money to tramps, and could pull more badgers in a given time than any amateur in the State.

I have met the man with mining stock that paid four sixty per cent dividends annually and bought enough stock to paper my room. I have been up against the man with the exclusive deal on a line of dope that worked the cash register overtime; I have formed the acquaintance of the guy who let me in on the ground floor of a scheme and I worked in the fourteenth story with no elevator. I have met the lad who owns a gold brick plant with a capacity of one hundred cars daily and bought the output of the factory for a year, but as I gaze down the well-trodden aisles of the long past methinks I can see the intelligent face of the king of grafters, the real artist, the finished product, the only man living who could rob a National cash register with the proprietor looking at him or whipsaw a Burroughs adding machine into telling a lie about a total. He was master of his craft, and if he had been allowed to run at large for two more years would have been the possessor of a roll of the filthy lucre that would have made August Belmont look like a slick dime rolling around a bunch of United States bonds. As well as I can remember, this wholesale short-change artist was an elegant looking young specimen wearing about two hundred dollars' worth of clothes, with a shiner in his shirt front that looked like an arc light on the dark of the moon. He wore a rimless glass front and talked well, I should smile and smirk to twitter. In the matter of a linguistic elucidation he had that ancient and time-

honored purveyor of lightning rods backed into a siding to wait nine weeks for sanatorium treatment for loss of speech. He made Ananias look like a white sided Texas steer at a Boston banquet.

He was discoursing elaborately on reason No. 64 when I began to succumb, a rose-colored cloud floating before my eyes, a summer home in Atlantic City and to Palm Beach when the northers came, chasing themselves through the fleeting mind; I dreamed of a bank roll as big as a coca cola barrel, of doing free library stunts and being the owner of a flock of gasoline cars.

It seemed from the trend of the polished narrative he handed me that he had always felt it was his duty, decreed from the foundation of the world, to come to Texas and free the retail druggists of the great Lone Star State from the galling chains of the jewelry trust. It was here that I burned my John Henry into the bottom line of a sheet of pink parchment containing whereases and why forces. Handing me a yellow duplicate, he gave my hand a gentle squeeze and hoped I could stand the prosperity that would naturally come from the great investment I had just made.

Somehow I felt like a millionaire. I had an inherent hankering to be seen down at the buzz wagon department store buying a dozen benzine buggies of assorted sizes and handing them around to my friends. I went over to the First National Bank and it seemed that I could hear the yellow boys say "Papa."

After perusing the herein before-mentioned yellow duplicate I soaked up the intelligence that I was to receive by express, prepaid, two thousand dollars' worth of jewelry more or less solid gold, and the one thousand dollar shares of stock in the Banco Skinnem Jewelry Company, Limited. I read no further, I simply had to go out and celebrate in my firm belief in the old adage that fortune knocks once at every man's door, and it seemed that this time she had loosened the hinges on mine. During lucid intervals I perused my duplicate to get information on the shining shekels that I was soon to possess, and last but not least of all, I absorbed the information that I was to pay the Banco Skinnem Jewelry Company, Limited, the paltry sum of 1800 plunks in twelve installments of one hundred and fifty dull thuds each.

Time passed as usual and the goods came and opened up to my entire distraction. A more ordinary looking bunch of tinsel was never gotten together. Imagine my feelings, that is if you ever had delirium tremens and hydrophobia at the same time, otherwise save your imagination until next spring and make it into poetry. One thousand collar buttons to retail at ten cents each! This is where

I dropped the invoice and grabbed my hair, bursted my belt and collar fell in a fit, the kind usually used in epilepsy. When I recovered consciousness the atmosphere smelled strongly of brimstone and I found that I had made the English vocabulary of descriptive adjectives look like thirty cents in the coin of the realm of Mexico. I threw the entire shipment into the corner of the back room and afterward sold the whole consignment to a street faker for twenty-five dollars on the installment plan, for which I received one instalment and the plan.

During the halcyon days of the youthful end of my career as dope disher to the millions, I fostered slum-ring ambition to fin the heated brow of the goddess of fame with a turkey wing and to have the world look on me as champion accumulator of the long green, but after having taken an invoice of my mental capabilities and having gone down in miserable defeat before a tribe of grafters, I made the astounding discovery that as an investment specialist I am about the most consummate bluff since the passing of Don Quixote.

I have fed enough of the bank lithographs into the mill of experience to pay the national debt, and my collection of gold bricks would make the Galveston sea wall green with envy. I have bought well advertised patents in carlots to get two per cent and six months dating, only to find that they were entirely unknown, save to the people who made them.

WALTER H. COUSINS,  
of Munday, Tex.

\*Proceedings Texas Pharmaceutical Association, 1908.

I have purchased expensive space in newspapers which were guaranteed to be printed in six different languages and to reach every quarter of the earth, and afterwards have found that you could walk out of their circulation in two hours on crutches.

And cigars, the drug man's nightmare, the short rope wrapped in the guile leaf Queen of Porto Rico! I have bought them in large juicy bunches that were supposed to be the very sunshine of the smoker's life, and later discovered that they were filled with rubber comb teeth and wrapped in a painted rag; to smoke one on the street was considered a misdemeanor by connoisseurs of the weed.

And stock food! My last general inventory shows quantity lots of forty-three different brands, and to offer a dollar package as a prize with a ten-cent purchase is considered a joke by the man with the hoe. And that well ridden hobby, "my own preparations." I remember well "Cousin's aqua vite," guaranteed to cure every disease from eczema to disappointed affections. I had a customer for it. An old lady took two bottles and had to send for the doctor.

Casting a retrospective glance over my career as reception committee for Texas to the grafters, it seems to me that the bunch of business buccaners I have met have Mayor Schmidt, of San Francisco, beat to a batter, and they make Sam Bass and Jesse James look like amateurs. I learned long ago that a Spanish dagger in the hands of a masked highwayman is as harmless as a white winged butterfly compared with a fountain pen in the hand of a modern business promoter. You may think you are the wise guy of all creation, with a corner on the information market, but your hook is on the bottom when you are fostering any such erroneous ideas. Remember your knowledge is general, but the man who grabs a grip packed with phony samples of an experience factory is a specialist. And any time you win from one of these collectors of cuticle you will be retired on full pay with a pension.

Now for a short line of advice to my fraternal brothers assembled today in the Island City. Take my advice and thereby get wise to the commercial dermatologist and hand him the compliments of the citrus union. Remember that his system of business has supplanted the methods of the old-time Texas hold up who stopped the stage and examined the color of your eyes through the sights of a horse pistol, while his pal turned you upside down and counted what fell out, never taking more than you had. On the other hand, the daylight burglar takes all you have and your note for the balance.

Do not think for a moment that I mean to dispute the time-honored adage that experience is worth whatever you pay for it, but I merely wish to enlighten you to the effect that it is my unchangeable belief that if you bull the experience market that you will overstock, and believe me, the poor farms are inhabited with would-have-been millionaires who got short on coin in getting long on experience.

## SOME POINTS IN THE ASSAY OF LAUDANUM FOR BEGINNERS.\*

By George D. Beal, Scio, Ohio.

Although one of the most frequently used of official galenicals, laudanum is the most often found deficient in alkaloidal strength. The average morphine content of twenty-three samples examined by the writer during the past year being 0.848 grams in 100 cc., while the U.S.P. requirement is 1.2 to 1.25 grams in 100 cc.

Owing to the importance of this preparation, and the simplicity of the official process of examination, it is the one most frequently attempted by beginners in the assaying of alkaloidal drugs.

The official process is, in brief, as follows:

1. Evaporate 100 cc. to 20 cc., dilute with water to precipitate resinous matter, filter, and wash the residue on the filter.

2. Evaporate the filtrate and washing to the weight of 14 grams, transfer to a flask with the aid of a little water, add the required amount of alcohol, ether and ammonia water and shake for ten minutes.

3. After standing for six hours, filter, wash the morphine

successively with water, alcohol solution of morphine and ether, dry and weigh.

4. The impure morphine is then dissolved in lime water, filtered through counterpoised filters, dried and the residue weighed. Subtracting the weight of the residue from that of the original precipitate gives the weight of pure morphine.

The process outlined above presents no especial difficulties to the beginner, nevertheless, there are several points of manipulation that must be observed if accurate results are to be obtained.

The first is in the evaporation of the sample. The Pharmacopeia directs the first concentration to be conducted upon a water bath, but all subsequent evaporations are to be made at a "gentle heat," without specifying the temperature or the manner of applying the heat.

In the writer's opinion this should always be done on the water or steam bath. If evaporated upon a sand bath or upon a metal plate there will almost invariably be some decomposition of morphine.

Three samples of the same tincture evaporated respectively upon a water bath, sand bath and wire gauze gave the following results:

No. 1. Evaporated on water bath, 1.105 gm. morphine.

No. 2. Evaporated on sand bath, 1.023 gm. morphine.

No. 3. Evaporated on wire gauze, 0.995 gm. morphine.

When evaporated at the proper temperature, the residue presents a glossy, varnish-like appearance. If the temperature is allowed to rise too high the upper rim of the extract presents a dull appearance and is full of cracks.

The second evaporation must be done with as much care capsule. For this purpose the water should be added gradually and the stirring should be so thorough as to completely disintegrate the flakes. For this purpose the top of the little finger is better than a stirring rod. If the disintegration is not complete, too much water will be required for the washing.

The second evaporation must be done with as much care as the first.

The third particular point in the manipulation is in the precipitation. When the ammonia water is added, the pharmacopeial injunction to shake well for ten minutes must be carefully obeyed. The shaking should be vigorous and continuous for the full ten minutes. Insufficient shaking causes the morphine to form large, dark colored crystals which retain impurities with great persistence.

When the shaking is sufficient the morphine forms light colored, almost white crystals, like fine sand and easily washed and dried.

The fourth point in manipulation which needs to be considered is in the use of the lime water.

This should be as little exposed to the air as possible. Exposure causes the formation of calcium carbonate, which remains on the filter and is weighed as impurity and is perhaps the most serious objection to the use of lime water in dissolving the morphine. With care, however, keeping the flask well-stoppered while dissolving and covering the funnel while filtering the amount of carbonate formed will be too small to be appreciable.

If the alcoholic strength of the tincture is to be determined, or if the presence of wood alcohol is to be tested for, this should be done at the beginning of the assay.

The 100 cc. is diluted to 150 cc. with distilled water, transferred to a flask and 100 cc. of distillate collected.

The distillate has its specific gravity taken and is tested for wood alcohol in the usual manner and the morphine is determined in the residue.

## "Not Afraid to Speak the Truth."

"The oldest drug store in Philadelphia—sends check and hearty greetings to the ERA and wishes it a long life—a useful one and a prosperous one—all praise to a journal not afraid to speak the truth." CAMPBELL & BRO., per Clarence Campbell.

## Stole Telephone, Cigars and Perfumery.

BALTIMORE, Jan. 11.—The front door of the drug store of Dr. Miller Shore, 1901 West Fayette street, was forced open Friday night and ransacked. Two telephone instruments were stolen and the burglars helped themselves to cigars and perfumery. No traces were left.

\*Read before the Ohio Pharmaceutical Association, Cedar Point, 1908.

## PERSONAL MENTION

—ADAM DARLING, of Denver, is touring California.  
 —ARTHUR KIRSCHNER, Dayton, Ohio, is touring California.  
 —R. L. SANFORD and wife, of Marshall, Okla., were recent visitors to the latter's parents at Ponca.

—EABLE COOK, of St. Louis, representing Johnson & Johnson, was a visitor in New York City last week.

—CHARLES E. MATTHEWS, manager of Sharp & Dohme's Chicago house, was a recent visitor in New York.

—J. L. BUELL, representative of Parke, Davis & Co. in Massachusetts, will sail shortly for Trinidad, W. I.

—W. B. LONG, president of Lee-Osgood Company, of Norwich, Conn., was a visitor in New York City last week.

—F. N. JENKINS, of Jenkins & Meeker, of Washington, N. J., was a caller in the New York wholesale trade last week.

—C. R. MOTT, Syracuse representative for Eli Lilly & Co., has returned from a week's visit to the home office in Indianapolis.

—N. NICOLAE, of the New York branch of Parke, Davis & Co., recently returned from Buenos Ayres, Argentine Republic.

—C. R. COSEY, manager of the New York branch of Eli Lilly & Co., made a trip to Philadelphia in the early part of the week.

—THOMAS STROUSE and Clarence Purnell, young druggists of Pottstown, Pa., will go on one of the Red Cross ships to stricken Italy.

—O. E. DAHLY and G. C. Barnes, of the Lilly Minnesota sales force, were in the home office in Indianapolis the last week of December.

—A. B. PHILLIPS, of Turret, Colo., is the fortunate possessor of a granite quarry which will supply stone for building operations in Denver.

—WILLIAM BODENBENDER, representative in the South for J. L. Hopkins & Co., returned home last Friday after spending a few days in New York.

—HENRY M. TOCH, of Toch Brothers, New York, and Mrs. Toch, have sailed for an extended tour abroad, which will include Egypt and the Orient.

—MR. ZECHEL, the purchaser of the C. N. Cameron Drug Store at Pewaukee, Wis., will soon take possession and is now moving his family to Pewaukee.

—F. H. ARCULABUS, of Colorado Springs, Colo., was a recent visitor at Victor, where he looked after his mining interests and called on drug trade friends.

—MISS EVANS MONTGOMERY, for some time with Philip & Philip, of Fruitvale, has gone to Highland, Cal., where she has taken charge of the Callan Pharmacy.

—WALLACE WILSON, of Wichita, Kan., who has been in the drug business in that city, has moved with his family to Denver, where they will reside in the future.

—GEORGE W. HARRIS, of the Crescent Pharmacy Company, owning several drug stores in Idaho and Washington, has been on a tour of inspection. Mrs. Harris accompanied him.

—JOHN L. BUTLER, a well-known druggist of Colfax, Cal., has been indorsed by the Republican County Central Committee of Placer County for the office of Postmaster of Colfax.

—JULIUS FOERSTER, Sharp & Dohme's general representative in New England, was a recent visitor in New York, calling upon Mr. Stauffen, general business manager of the firm.

—CLINTON SMITH, formerly of West Branch, now of Lansing, Mich., where he is a druggist, was recently the guest of Mr. and Mrs. George H. Randall, of Bay City, for a few days.

—A. C. HIGGINS, who has been a special detail man for Sharp & Dohme in Colorado, Louisiana and Mississippi, has been appointed general representative for Arkansas and Oklahoma.

—CHARLES E. KING, a well-known Philadelphia pharmacist, had the misfortune last week to fall and break his wrist. His many friends in the organization missed him at the annual meeting of the P.A.R.D.

—HENRY BORDEAUX, of Bordeaux Brothers Drug Company, Little Rock, Ark., spent a day in Indianapolis last week visiting the Red Lilly laboratories. Mr. Bordeaux is vice-presi-

dent of the Arkansas State Pharmaceutical Association and will soon open a handsome new store in a prominent location in Little Rock.

—JOHN H. SERRATT, Jr., of Baltimore, has succeeded H. E. Deitz in connection with the Corner Drug Store, Elkins, W. Va., the latter having resigned to engage in business at Clarksburg in that State.

—EUGENE SYKES is now manager of the Sykes Drug Company, Greensboro, N. C., and J. L. Howerton has become attached to the store as registered pharmacist. A. J. Sykes has gone into other business.

—CHARLES P. MITCH, of Muth Bros. & Co., wholesale druggists, Baltimore, is mourning the loss of his mother-in-law, Mrs. Isabelle Ellinger, who passed away suddenly last Friday. She was fifty-three years old.

—MR. AND MRS. JAMES MALONEY, of Ilion, N. Y., will leave this month for Oklahoma, where they will make their home in the future. Mrs. Maloney, nee Carney, had been with the Carney Drug Store for seventeen years until its recent sale to George M. Carney.

—HARRY L. STILES, who has just been re-elected third vice-president of the Philadelphia Association of Retail Druggists, is confined to his home with what threatens to result in congestion of the lungs. He was unable to attend the annual meeting of the association.

—RECENT visitors at the Groover-Stewart Drug Company's store in Jacksonville, Fla., included H. D. Palmer, of Inverness; H. Clay Glover, proprietor of Glover's dog remedies; J. W. Videll, of Gainesville; J. D. Juham, of Crystal River, and W. M. Hawkins, of Daytona.

—DR. JAMES G. MENSCH, of Pottsville, Pa., Montgomery County druggist, banker and one of Perkiomen Valley's most active physicians, celebrated his seventy-ninth birthday anniversary recently, apparently in the enjoyment of excellent health, yet his pulse beats only twenty-six times in a minute.

—COL. JOHN W. LOWE, Boston representative for Eli Lilly & Co., returned home last week from a visit to the Lilly laboratories in Indianapolis. After a week's sojourn at the home of the Red Lilly, Colonel Lowe is more enthusiastic than ever, if such were possible, on the subject of the Lilly policy and products.

—E. V. CLARK, manager at Minneapolis for the H. K. Mulford Company, gave a "get-together" dinner to the sales staff of that city at the Kaiserhoff. C. B. McClelland acted as toastmaster and those who responded were E. J. Schouberg, S. V. Justus, L. H. Norwood, Phil. Kirsch, Arnold Sivertson, A. L. Eger, G. A. Engbretson and Charles Korofofsky.

—AMONG the out-of-town representatives of Sharp & Dohme who recently visited the general offices in New York were W. Abercrombie, of Georgia; C. H. Bulkey, of South Carolina; M. B. Craig, of Florida; C. C. Tunison, of Georgia, and W. W. Curtis, general representative, and J. L. Prior, manager of the Atlanta branch, of Atlanta, Ga.

—HAROLD W. DEARBORN, who has been assistant manager and advertising manager of the Green Drug Store at Holyoke, Mass., has been promoted to the general manager, succeeding M. H. Plummer, who takes charge of a large Springfield store. Mr. Dearborn went to Holyoke from the Green Drug Store in Worcester, where he was assistant manager for five years.

—S. T. DOUGLAS, Martin H. Kleine and A. M. Hopper, of the New York City sales force of Eli Lilly & Co., have returned here after a week in Indianapolis visiting the home office. Lilly salesmen from many parts of the country visit Indianapolis for instruction during the holidays, so that these annual gatherings have become prominent events and full of interesting features.

—AMBROSE HUNSBERGER, secretary of the Philadelphia Branch of the American Pharmaceutical Association and a member of the faculty of the Medico-Chirurgical College, proved himself a veritable "Hawshaw, the detective" a few days ago, when he looked out to the front of his store in time to see a negro slip out of the door with what appeared to be a bundle under his arm. A glance showed that one of the automatic telephone boxes was missing from a table. When the negro stopped in a nearby alley to break open the box and secure the week's deposit of nickels and dimes, he turned to confront the tall form of the athletic pharmacist. In his most severe manner, Professor Hunsberger demanded his property and the fellow promptly turned it over. An investigation showed that he had cut the wires while another man, supposed to have been a confederate, engaged the clerk in conversation.

## DEATH TAKES MORE VETERAN DRUGGISTS.

Wisconsin Loses John Robinson, Her "Grand Old Man" in Pharmacy, and Other Pioneers Are Called.

KENOSHA, Wis., Jan. 11.—John Robinson, of Green Bay, retired wholesale druggist of that city and one of the best of the pioneer business men of northern Wisconsin, died suddenly in the Bijou Theater in this city Tuesday. Death is supposed to have resulted from an attack of apoplexy. Mr. Robinson had been in the best of health during the day and in the evening had suggested that he be one of a theater party. With M. H. Pettit and Fred Pettit he had just taken a seat. A moving picture was being presented when his head fell back and he gasped as if for breath. An ambulance was summoned, but Mr. Robinson was dead before he could be taken from the theater. Mrs. Robinson, the widow and sole surviving member of the family, was at the Pettit home, where they were visiting.

John Robinson was considered one of the grand old men of pharmacy in Wisconsin. He was a native of England, but came to Wisconsin with other members of the Robinson family more than fifty years ago, and since that time had resided at Green Bay. He was about seventy-five years of age. He was a pioneer druggist at Green Bay and later went into the wholesale drug business. He was one of the first members of the Board of Pharmacy in Wisconsin and aided in the compilation of the laws governing the drug business in Wisconsin. About three years ago he retired from active work.

## Obituary Notes.

—Dwight L. Aldrich, of Cuyahoga, Ohio, is dead, aged fifty-one. He was a Mason and belonged to other societies.

—JOHN McBRIDE HORTON, of 209 East Utica street, Buffalo, N. Y., died recently, leaving a widow. He was forty.

—MRS. GEORGE O. SEXTON, wife of a former proprietor of the Columbian Drug Store in La Crosse, died recently at Morrison, Ill. She was buried at La Crosse.

—JOHN C. GARNAX, a partner in the Geigy Aniline & Extract Co., 69 Barclay street, Manhattan, New York City, is dead at his home in Brooklyn Borough, aged fifty-one.

—MRS. JOHN L. RIKKE, wife of the druggist, died recently in her home in this city in her seventy-fourth year. She was married in 1857 and leaves three sons and four daughters.

—H. L. BUCHINAL, a special detail man with Sharp & Dohme in Colorado and Arizona, died from heart failure, superinduced by an acute attack of asthma, at Denver, Colo., on January 5.

—ROBERT R. RUGGLES, of Cleveland, Ohio, who has been engaged in the drug business for forty years, died recently at his home in that city, aged fifty-nine. A widow, two sons and a daughter survive.

—FRANK N. PIKE, for many years a general representative with Sharp & Dohme in Ohio and Kentucky, died from double pneumonia following mastoiditis at Christ Hospital, Cincinnati, Ohio, on January 5.

—MRS. MAX R. ZAGEL, wife of the manufacturer of Zagel's Swedish Essence, recently died in Sheboygan of typhoid fever. She was forty-six years of age and is survived by her husband and four children.

—R. B. POWERS, aged seventy, of Richmond, Ind., for many years a druggist in that city and afterwards a traveling salesman for a wholesale drug firm, died recently at the home of his son. He retired a year ago.

—JOHN B. ABRAIT, a druggist, died of Bright's disease recently in his home, at 873 St. John's place, Brooklyn. He was thirty-nine years old and a graduate of the Brooklyn College of Pharmacy. He left a widow.

—STEPHEN J. CLARKE, of Amity, Ore., died recently of asthma and complications in Portland while going to a hospital. He had been formerly with the Clarke-Woodward Drug Company, in Portland, but had gone to Amity to engage in the drug business. He was secretary of Amity Lodge of Free Masons and was forty years old.

—WALTER A. TAYLOR, Atlanta, Ga., one of the city's best known pioneers in medicines and drugs and otherwise, died recently and the local papers paid eloquent tribute to his worth in double-column editorials. From these articles only one conclusion can be drawn, that he was in every way a model and public-spirited citizen and business man.

## CONGRESSMEN TAKE DR. WILEY'S PART.

Will Increase His Appropriation and Exclude President's Referee Board From Sharing It.

WASHINGTON, Jan. 11.—The House Committee on Agriculture, according to members of the committee, has practically decided to jump into the controversy between Dr. W. H. Wiley, Chief Chemist of the Department of Agriculture, and the Board of Referees created by President Roosevelt for hearing appeals from Dr. Wiley's rulings.

Since the trouble between the President and Congress the committee has manifested a great interest in Dr. Wiley's work, and the plan is not only to give him about \$160,000 additional for his inspectors next year, but also to kill off the Board of Referees by the insertion of a provision in the next Agricultural bill that no part of the appropriation is to be used toward maintaining the Board of Referees. The board now is being maintained out of the contingent fund of the department.

## Resolutions Adopted Sustaining Dr. Wiley.

PHILADELPHIA, Jan. 11.—At its last meeting the Philadelphia Branch of the A.P.A. passed unanimously the following resolutions opposing the removal of Dr. Wiley:

Whereas, The Pure Food and Drugs Act of June 30, 1906, is designed to restrict adulteration, sophistication and fraud, and Whereas, A strict and impartial enforcement of this law is necessary to secure for the American people the protection that they are rightfully entitled to, and

Whereas, The removal of Dr. Wiley from his present position would tend to nullify the good work thus far accomplished by him for the benefit of the people of the entire community; therefore, be it

Resolved, By the members of Philadelphia Branch of the American Association, in meeting assembled, That we heartily endorse the letter as well as the spirit of the Pure Food and Drugs Act of June 30, 1906, and that we believe that the efforts that are being made by Dr. Wiley, the Chief of the Bureau of Chemistry of the United States Department of Agriculture, to enforce this law and to protect the health and the lives of American people, are worthy of commendation and support; and, be it further

Resolved, That the Philadelphia Branch of the American Pharmaceutical Association put itself on record as being unanimously opposed to the removal of Dr. Wiley.

## Awaiting the Referee Board's Decision.

MILWAUKEE, Jan. 11.—In the petition recently made to the Federal court in Wisconsin for an injunction to restrain J. Q. Emery, Dairy and Food Commissioner of Wisconsin, from prosecuting grocers for selling certain catsups in violation of the Wisconsin Pure Food Laws, some of the manufacturers alleged that the War Department required benzoate of soda to be used in the catsup that it buys for the Army and Navy. Declaring that this allegation was incorrect, Henry G. Sharp, of the War Department, has written to Commissioner Emery. Mr. Sharp also said that the specifications for bids for catsup for the Army and Navy require the product to comply with the Pure Food Laws of the United States. Under a stipulation, Commissioner Emery will not institute prosecutions until after the Federal Pure Food Referee Board has decided whether or not benzoate of soda is deleterious.

## Federal Court Refuses to Stop Health Board.

INDIANAPOLIS, Jan. 11.—Federal Judge Anderson last week declined to issue a temporary injunction against Commissioner Barnard and the State Board of Health, that had been asked for by the Williams Brothers Company, picklers and preservers, of Detroit, and the Curtice Brothers Company, of Rochester, N. Y.

The complainants sought injunction to restrain the defendants from enforcing an order forbidding the use of benzoate of soda in canned goods.

## Wholesale Grocers Indorse Dr. Wiley.

At the annual business meeting of the New York Wholesale Grocers' Association this week resolutions were adopted indorsing Dr. Wiley. The resolutions say that while the grocers do not altogether agree with some of the positions taken by Dr. Wiley they "recognize in him a man of unassailable honesty and integrity, of unflinching tenacity of purpose for the public good and one of the chief champions of the cause of pure and unadulterated food."

## SUCCESSFUL YEAR OF PHILADELPHIA A.R.D.—OFFICERS CHOSEN—TIMELY TOPICS ARE DISCUSSED.

CARL W. SHULL,  
Financial Secretary P.A.R.D.

FRANK W. FLUCK,  
President-elect of the P.A.R.D.

NATHAN A. COZENS,  
Recording Secretary P.A.R.D.

PHILADELPHIA, Jan. 11.—Members of the Philadelphia Association of Retail Druggists to the number of more than a hundred Friday evening assembled in annual meeting at the Drug Club. Bursts of applause greeted the reports of the retiring president, Samuel C. Henry; of the recording secretary, N. A. Cozens; of Ambrose Hunsberger, chairman of the Executive Committee for 1908, all of which showed that the past twelve months have been the most successful in the history of the association. During the year seventy-eight new members were elected and but four resigned.

In his report, Mr. Henry recommended that during the coming year benefits secured by the association be designed wherever possible for members alone. He suggested that an attorney be retained regularly by the association, that the finance committee have supervision over all expenditures and urged the holding of regular meeting by the district organizations.

Unlike the meeting last year, there was not the semblance of a contest and Secretary Cozens cast the ballot for the entire ticket which had been placed in nomination. W. L. Cliffe, in reporting for the Committee on Legislation, discussed the proposed act to prevent the manufacture and sale of adulterated or misbranded drugs which is the product of the efforts of representatives of every pharmaceutical organization in the State, and will be presented to the State Legislature during the present session. He urged the members to use their influence in having it passed. He said that in all probability there would be some legislation also upon the cocaine situation as the public generally was aroused to the necessity of restricting the indiscriminate use of such drugs and that there was a general uniformity of opinion in pharmaceutical circles as to the character of the legislation needed.

A most interesting report was that of R. H. Lackey and other members of the Commercial Interests Committee. The earthquake conditions in the south of Italy and their effect upon the products of the peninsula and adjacent islands was discussed. Particular reference was made to the spectacular rise in the prices of Messina oils, which industry was said to be in a precarious condition, owing to the fact that the first of the new crop supplies were about to be shipped when the industry was paralyzed by the terrible disaster. The price of citric acid had advanced. It was said, from 37½ to 41½ cents by the cask, and castile soap had advanced 1¼ cents a pound. The latest quotation for oil of bergamot, it was said, was \$10; oil of lemon, 83. The members were advised to exercise care in the filling and pricing of prescriptions containing these Mediterranean products, which had jumped so quickly in cost. No change was reported in the opium situation, but the low price of camphor was regarded as rock bottom and the

members were advised to lay in enough to last them over the summer.

For the Sales and Exchange Bureau, G. W. Fehr announced that in addition to the regular line of offerings, the committee in charge had the entire stock and fixtures of a first-class drug store on sale, as well as a soda fountain.

In his report as chairman of the Ethical Preparations Committee, Christopher Koch declared that that work was just beginning. He said that the man who was not getting results on his prescription files had no one to blame but himself. He discussed the factors in the campaign, viz., the booklets and other literature issued monthly, the exhibits at various National and State conventions, the recent banquet of physicians and druggists and the get-together meetings that have been held from time to time in various sections of the city. He strongly recommended the payment of a salary to the chairman of the incoming committee for, he declared, the work was exacting, that it required fifty or sixty hours a month and that it was too much for any member to do for nothing and still do well. In this connection it was reported that certain proprietaries which corresponded to U.S.P. formulas were now being put up in larger quantities and were being sold cheaper in proportion and it was suggested that the propaganda was largely responsible. Advertising matter sent out by the manufacturers of a headache and grip remedy was denounced and the members were asked to save such printed matters for future reference.

Rumors to the effect that certain of the newspapers were about to break away from the present agreement with the druggists acting as their branch agents which provides for a minimum rate of 12 cents on classified ads, were promptly met. By a rising vote, practically the entire meeting indicated its intention of doing away with the agencies for those papers which broke away from the present contract. Another item of the report of Chairman W. T. Burke, of the Telephone and Press Committee, was as to the limitation on 'phone calls. One member said he had been told that one of the telephone companies had a rule that all calls from pay stations should be limited to fifteen minutes for 5 cents. Cases were reported where unimportant conversations had been kept up for more than an hour and it was the consensus of opinion that the company should rigidly enforce this rule of limiting conversations and if possible make that limit ten minutes for 5 cents. The matter will be taken up by the new Telephone and Press Committee.

A vote of thanks was given the Bromo-Lithia Company after a letter had been read in which it was explained that the entire stock of the company's product in a certain retail store that had not lived up to its contract and was cutting, had been

purchased and arrangements made for preventing the recurrence of such a condition.

R. H. Lackey, who had been nominated for the second vice-presidency, was given permission to withdraw his name and this left but one candidate for each office. Secretary Cozens was instructed to cast the ballot and the following were elected: President, Frank W. Fluck; first vice-president, William E. Lee; second vice-president, D. J. Reese; third vice-president, Harry L. Stiles; recording secretary, Nathan A. Cozens; financial secretary, Carl W. Shull; treasurer, George W. Fehr; chairman of the Executive Committee, William T. Burke; members, one from each of the districts in the order named: Samuel B. Davis, W. H. Ricker, H. C. Blair, J. E. Marsden, W. H. Umstead, S. E. Betts, W. E. Supplee, Charles Leedom, W. L. Cliffe, W. H. F. Vandegrift, W. H. Sutton, J. N. G. Long, Nathan S. Steltzer and C. F. Schmickie.

One of the features of Secretary Cozens' report was his discussion of the underpricing of prescriptions. He mentioned instances of prescriptions containing ingredients of a very costly nature but which were sold as low as 25 cents. This meant either selling at a loss or failing to incorporate the ingredients called for, either course to be discredited and not conducive to the best interests of every pharmacist, the profession or the public.

The reports of Treasurer Fehr, who told of the expenditures in the Loder suit, which has been settled, and the compromise expenses liquidated, and of Financial Secretary Shull were also of interest and showed what a considerable amount of money was being spent by the association in the general cause of improvement for the retail druggist and its members in particular. On motion the salaries of Messrs. Cozens and Shull were advanced, but Mr. Fehr declared that as long as he was treasurer there would be no salary for that office.

"The duties are not so arduous," he explained, "as one might imagine and the only expense is some postage. My stamp drawer is always short anyhow, so I never miss that." He was given a special vote of thanks for his faithful and efficient services.

#### Philadelphia Branch A.Ph.A. Indorses Proposed Law.

PHILADELPHIA, Jan. 11.—The desirability of establishing a pharmaceutical chemical section was a fruitful subject of the evening's discussion at the January meeting of Philadelphia Branch of the A.Ph.A. and while it was evident that the proposition was a most popular one, the manner of conducting it as an affiliation of the A.Ph.A., and in entire harmony as to time and place of meeting, membership and its field developed so many views that the entire matter was placed in the hands of a committee consisting of Joseph W. England, chairman; Charles E. Vanderkleed and John K. Thum. They will report at the February meeting.

A report was made by Chairman Henry Kramer, of the Committee on Pharmacy Laws, recommending that the branch endorse the draft of the proposed drug law for the State of Pennsylvania as drafted by a conjoint committee representing the pharmaceutical and medical associations of Pennsylvania and as approved by the Legislative Committee of the Pennsylvania Ph.A. It was adopted.

The other subjects were introduced as follows: "Recent Developments in Alkaloidal Assaying," Joseph L. Turner; "Comparative Results in Alkaloidal Assay," Charles H. LaWall; "Some Laboratory Notes on Assay Work," L. Henry Brinegan; "The Determination of Alcohol in Galenical Preparations," Charles E. Vanderkleed; "Practical Suggestions for Improvement of the U.S.P. Assay Methods," J. G. Roberts.

#### Druggist Must Find New Location.

MILWAUKEE, Jan. 11.—Fire recently gutted the drug store of A. F. Ketter, 3001 North avenue, and caused extensive damage to stock and furnishings. The loss is fully covered by insurance and Mr. Ketter will reopen for business as soon as he secures a new and suitable location.

#### Exports From Detroit, Three-Quarters of a Million.

DETROIT, Mich., Jan. 11.—The Board of Commerce's compilation of exports for 1908 shows the following from the Detroit district: Chemicals, drugs and medicines, \$721,221, of which sum \$178,634 was in proprietary medicines.

### DRUG CLUB BALL A GREAT SOCIAL SUCCESS.

#### Annual Entertainment at Popular Philadelphia Organization Includes Vaudeville of Superior Merit and a Reception by the Women's Organization—Guests From Other Cities.

PHILADELPHIA, Jan. 12.—The drug trade of Philadelphia added another to its long list of social successes last evening when the Drug Club held its second annual vaudeville and dance at the Bellevue-Stratford. The successful features were not confined to the social side of the evening, for it is believed that a most substantial balance will be turned into the treasury.

The ballroom of the hotel, famous for the noted men that have assembled about the banquet board and for the events that have helped to make Quaker City history, particularly along social lines, never held a more brilliant assemblage. A noticeable feature was the fact that the great majority seemed to be acquainted and the comparatively few strangers were early taken in hand either by the members of the committee or by other new-made friends and made to feel at home.

The evening's entertainment opened with nine vaudeville numbers of exceptional variety and merit. The miniature stage with every accessory, at one end of the ballroom, made it exceedingly easy to combine the pleasures of the theater with those of dancing. Then while the guests strolled about the foyer or called on friends in the boxes above, the floor was cleared and fifteen minutes later Chairman Charles Rehffuss of the Entertainment Committee, with Mrs. Rehffuss, glided out on the floor to the dreamy music of the Genee Waltz and the dancing had commenced. Until 1 o'clock it continued, the orchestra most generously responding to encore after encore. A Paul Jones or two was rather a diversion in this part of the programme, but a popular one, for everyone had a chance to become acquainted, the men, if active, could dance with nearly every girl on the floor, while to the spectators in the boxes the Paul Jones was the most interesting dance of the evening.

The box parties were no unimportant feature of the evening's entertainment. One of them had been placed at the disposal of the Women's Organization of the National Association of Retail Druggists, and the president, Mrs. William E. Lee, with the fourth vice-president, Miss B. Areta Johnson, of Penns Grove, N. J., with officers of the local chapter, were kept busy receiving. First Vice-President Walter V. Smith, of the N.W.D.A., with Mrs. Smith and a party, occupied another. W. L. Cliffe, president of the club, and Secretary F. W. Smith both entertained parties, while in the other boxes that encircled the spacious auditorium and extended over the dance floor, were other representative retailers, wholesalers and manufacturers identified with the drug trade, with parties numbering from four to ten in their boxes.

Many of these guests were from New York, Baltimore and other places and several little supper parties in the Palm Room marked the close of the evening. The committee that made the affair a success was composed as follows: Charles Rehffuss, chairman; O. W. Osterlund, secretary and treasurer; A. R. Reburn, Joseph H. Jolley, Charles Willis, H. A. Nolte, S. L. Willard, L. H. Davis, F. W. Smith, John Duffy, S. C. Henry, R. H. Lackey, W. A. Johnson and Clayton French.

#### Expect to Reach 300 Mark in Membership.

PHILADELPHIA, Jan. 11.—An idea of the interest that is being taken in the affairs of the Drug Club was given Friday when at a meeting of the Board of Governors thirty-six applications for membership were approved. It broke all records in the club's history. Since the meeting twelve more applications have been filed and it is expected that by the time of the annual meeting, January 15, the desired number—three hundred—will have been reached and the roll of members will be declared closed.

#### Salesmen of Milwaukee Drug Company Banqueted.

MILWAUKEE, Jan. 11.—The Milwaukee Drug Company recently gave its annual dinner to its salesmen at the rooms of the Milwaukee Athletic Club. Sixteen were in attendance with the officers of the company, including Howard Greene, president; William B. Strong, vice-president, and George A. Moehle, secretary.

## DRUG TRADE SECTION, BOARD OF TRADE, ELECTS NEW OFFICERS—ACTS ON IMPORTANT MATTERS.

THOMAS F. COOK.  
Chairman Legislative Committee.

GEORGE W. KEMP.  
Chairman-elect.

EDWIN H. BURR.  
Retiring Chairman.

The annual meeting of the Drug Trade Section of the Board of Trade and Transportation, of New York, held January 6, at the Drug and Chemical Club, was one of unusual interest, with a representative attendance. A number of important matters were acted upon, and new officers, as well as new members of the executive committee, were elected. An informal luncheon preceded the business session, and over thirty-five members were seated at the tables. The retiring chairman, Edwin H. Burr, presided at the business session.

Thomas F. Main, chairman of the Committee on Nominations, presented the following names for new officers and for the Executive Committee, all were elected by unanimous vote:

Chairman, George W. Kemp, of Lauman & Kemp; vice-chairman, Oscar W. Smith, of Parke, Davis & Co.; treasurer, William A. Hamann, of Roessler & Hasselacher Chemical Co.; secretary, William F. McConnell, Executive Committee; Clarence G. Stone, of Lambert Pharmaceutical Company; C. R. Cosby, of Eli Lilly & Co.; Charles S. Littell, of C. S. Littell & Co.; Dr. H. C. Lovis, of Seabury & Johnson; F. E. Watermeyer, of Fritzsche Brothers.

Thomas F. Cook, chairman of the Legislative Committee, presented the following report:

Your Committee on Legislation would respectfully report that at present there are no State bills pending of direct interest to the trade. In Congress, no doubt, the Mann Bill will be considered. This bill is so manifestly unjust and unnecessary that we believe it will ultimately fail of passage and should receive the condemnation of this section. We believe that the present National and State laws are sufficient to regulate the handling of dangerous substances and give ample protection to the general public.

The Pure Food and Drugs Act is very strict in its requirements and the cheerful and thorough manner in which the drug trade have complied with it should make them immune from further annoyance by spasmodic bits of special legislation.

Later in the session, by unanimous vote, the following resolution introduced by Irving McKesson was adopted:

Resolved, That the Drug Trade Section of the New York Board of Trade and Transportation earnestly protests against the passage by Congress of section 2 of the bill introduced by Mr. Mann, entitled "A bill relating to the transportation of habit-forming and poisonous drugs in interstate and foreign commerce, and for other purposes." Such section is unfair and discriminative and entirely impracticable. It includes in the list of drugs enumerated many articles that never have been and never will be in the class of habit-forming drugs, and its enactment could result only in creating an unjustifiable prejudice and alarm against many articles of daily and necessary use. It could not accomplish any good, while, on the other hand, it would do irreparable injury to business interests which are controlled generally by men of the highest professional character and probity.

Resolved, That the Committee on Legislation be directed to use every honorable means to secure the defeat of this section

of the measure if any serious effort is made to secure its passage by Congress.

Members expressed their appreciation upon learning that advices from Washington indicated that the Mann Bill would probably not be passed by the present Congress, owing to the short session, with urgent appropriation bills and governmental legislation, precluding its consideration.

It was also stated that the Lodge Bill, introduced in Congress by Senator Lodge and Congressman Denby, prohibiting the importation of opium except for medicinal purposes, would undoubtedly be pushed to enactment before Congress adjourned.

The Special Committee on the Law of 1848 presented its report as follows:

When your committee first took up the consideration of the subject it was with the idea of simply securing the repeal of the objectionable features of the Law of 1848, but it developed that if this was arbitrarily accomplished and the provisions of the existing Pure Food and Drugs Act were made to apply to importations, the right to appeal to arbitration enjoyed by the importer under the Act of 1848 would be entirely abrogated. This situation gave rise to serious consideration, and members of your committee had a conference with Senator Burroughs, of the United States Senate Committee on Finance, with a view to initiating immediate legislation. It was then discovered that Congress would only consider questions relating to revenue law in connection with general revenue legislation.

Subsequently your committee got into close touch with the N.W.P.A. and with the Philadelphia Drug Exchange, both of which organizations were also considering this subject. It seems to be the consensus of opinion that it is undesirable to disturb existing conditions until some new law is prepared and passed by Congress as a substitute for the present statutes controlling the importation of drugs and chemicals. With this purpose in view and in co-operation with other organizations your committee has under consideration the draft of a tentative bill suggested by George M. Berlinger, of Camden, N. J., and which would undoubtedly be a very desirable improvement. The committee has arranged for a conference of representatives of organizations from other cities, to be held in the near future, to consider this subject in all its ramifications and to discuss the features of a bill to be introduced into Congress and energetically urged for passage, which will establish regulations governing the importation of drugs and chemicals and which will be just and equitable to the Government, to the importer and to the general public.

William P. Ritchey, chairman of the Committee of Jobbing Druggists, made comment in his report upon the splendid feeling of harmony and confidence that was prevalent among the jobbing interests.

Charles A. Loring, chairman of the Committee of Manufacturing Chemists, stated in his report that the improvements in general business were plainly reflected in the chemical line of trade, which was recovering rapidly from last year's depression.

## THOUSAND EXPECTED AT CHICAGO DINNER.

Physicians and Pharmacists Plan One of the Most Notable Get-together Dinners Ever Held—Chicago Chapter's Ball a Big Success—Jacob Baur and Bride Escaped Earthquake.

CHICAGO, Jan. 11.—Isam M. Light, secretary of the Chicago Retail Druggists' Association, says there will be over a thousand doctors and druggists in attendance at the joint meeting next Tuesday evening, January 19, of the Chicago Medical Society and the C.R.D.A. Prominent members of both professions will make speeches and a special feature of the discussions will be the relation of the nostrum to the doctor and druggist. The meeting will be held in the Auditorium Hotel and will be followed by a buffet lunch.

It is expected that the meeting will be the greatest of the kind ever held, for the doctors are equally enthusiastic with the druggists in stirring up interest. The date is a particularly good one, for the members of the Executive Committee of the N.A.R.D. will be in Chicago at the time and will be available for speeches. A full attendance is expected at the Executive Committee's meeting, so that the Chicago doctors will have an opportunity to listen to some good orators.

### Drug Man in a Wedding Romance.

The announcement of the marriage of Harry H. Vollmer, an employee of the Chicago branch of Parke, Davis & Co., to Miss Marion Harris, of Marshalltown, Iowa, is the conclusion of a pleasing romance. When Mr. Vollmer gave up an inch of his flesh to save the life of his friend, Robert Eitel, last August in the North Chicago Hospital, he also gave up his heart to Miss Harris, who is a nurse and assisted in the operation. The wedding will take place at Marshalltown in the early spring. Mr. Vollmer lives at 677 North Wells street and was one of the fifteen friends of Mr. Eitel who gave up a portion of their cuticle to save his life.

### Jacob Baur and Bride Safe.

Considerable anxiety was felt in Chicago recently for the safety of Jacob Baur, president of the Liquid Carbonic Company, and wife, who left for Naples December 16 and were due several days later at Messina, which was the scene of the terrible earthquake disaster. A cablegram announced that they were safe, as they had not yet left Naples.

### Annual Ball of Chicago Chapter.

There was a larger attendance than before at the third annual ball of the Chicago Chapter of the W.O.N.A.R.D., which is now considered the greatest social event of the year for women interested in the drug trade. The ball was held in the drill room of the Masonic Temple on Friday evening last.

### Chicago Druggist to Work in New York.

C. P. Gitten, formerly a supervisor for the C.R.D.A., was recently appointed organizer for the N.A.R.D. and will work in the State of New York. He left for that State immediately after appointment. He has been engaged in the drug business in Chicago for eighteen years and is a graduate of the Northwestern University School of Pharmacy.

### Pharmacy Starting Place for Golfers.

Midwinter golf on a cross-country course has become popular in Oak Park, a Chicago suburb, as the result of a contest won by A. J. Musselman, who completed the course from the inside of Suydam's drug store, without breaking anything, to the Westward Ho Golf Club and back, two miles, in ninety strokes. The game was of great interest to golfers and a great crowd followed the players. It is considered quite a creditable performance to tee from the store without breakage.

### Sues for Damages for Loss of Leg.

George Zoeller, who has a drug store at 465 West Chicago avenue, seeks \$200,000 damages from Henry Schmitz, who has an office at 484 West Chicago avenue, for the loss of a leg as a result of a hunting trip taken in 1905. The druggist and the physician, according to the declaration, went on a hunting trip in Grundy County in December, 1905. While sitting on

the edge of a ditch a shotgun which was across the doctor's knee was discharged. The shot struck Zoeller's foot and the amputation was necessary. The case is in the Circuit Court.

### Chicago Notes.

—G. Ronga has sold his store at 115 Ewing avenue to E. L. Beck.

—B. F. Jusajins sold his store at 557 West Twenty-sixth street last week to R. Westphal.

—Secretary Potts, of the N.A.R.D., has returned from Philadelphia, where he spent the holidays with his family.

—G. B. Kinney, of the crude drug department of Parke, Davis & Co., spent the greater portion of last week in New York.

—A meeting of the National Executive Committee of the N.A.R.D. will be held on Monday next. The place of meeting will probably be the Grand Pacific Hotel.

—The show window in George H. Mahr's drug store at Washington and LaSalle streets was replaced twice last week, having been broken by operations used in the wrecking of the old City Hall, which was just opposite the store.

—The fifth annual reception and ball of the Social Drug Club of Chicago will be held in the Masonic Temple drill hall on February 4. Elaborate preparations are being made to please the four hundred of the drug elite who will attend.

—Otto Hottitzer, the genial druggist who was formerly president and is now a director of the American Druggists' Syndicate, is also a life member of the Chicago Press Club, and was elected a director of the club at a stormy election on January 7.

—The sale of Red Cross stamps in Chicago drug stores brought out many sides of human nature. Many stories have been received at the Tuberculosis Institute concerning the purchase of them by different classes of people. The druggists report a very large sale of the stamps.

## EIGHT NEW CORPORATIONS IN DRUG LINE.

The following corporations were incorporated last week in New York State, with privileges to manufacture and deal in drugs, chemicals, toilet articles, medicines, etc.

Amelie Ritz Manufacturing Company, Queens; drugs and medicines; capital, \$150,000. Incorporators: Lester M. Hyman, 125 West One Hundred and Forty-second street; Cash A. Harris, 1 Madison avenue; Mack H. Roth, 154 Nassau street, all of New York.

Anglo-American Drug Company, New York; drugs and medicines; capital, \$252,000. Incorporators: Atherton Curtis, Paris, France; George W. Curtis, Southampton, N. Y.; Harold C. Bullard, 111 Broadway, New York.

Lipset Pharmacy, New York; to manufacture drugs, toilet articles and medicines; capital, \$5000. Incorporators: Alter M. Brody, 4 East Forty-second street; Herman Mishkin, 457 Fifth avenue, both of New York; Ignatz Miller, 59 North Bath avenue, Long Branch, N. J.

W. B. McVickers Company, New York; chemicals and pharmaceutical business; capital, \$250,000. Incorporators: William B. McVickers, 168 Riverside drive; Frank J. Zink, 52 Macombs place, both of New York; John F. Jacobs, 406 Ditmars avenue, Brooklyn.

N. C. Polson Company of America, New York; drugs and chemicals; capital, \$200,000. Incorporators: Edgar A. Lessels, 165 West One Hundred and Sixth street; Frederick W. Brown, 981 East One Hundred and Seventieth street; Walter R. Donel, 44 West Twelfth street, all of New York.

Risical Company, New York; to manufacture drugs and medicines; capital, \$500,000. Incorporators: Thomas W. Pelham, 18 Tremont street, Boston; Horation S. Shennard, Moran Cornermarket, Richard Miller, 27 William street; P. L. Carty, 401 Times Building, all of New York.

Trinity Drug Company, New York; drugs and medicines; capital, \$10,000. Incorporators: William Feinberg, Samuel Feinberg, 84 West One Hundred and Thirteenth street; Abraham Weiss, 54 Lenox avenue; M. Henry Wurtzel, 132 Nassau street, all of New York.

John H. Woodbury, New York; to manufacture toilet preparations; capital, \$1000. Incorporators: John H. Woodbury, Seagate, N. Y.; David Patterson, 1064 Jefferson avenue, Brooklyn; Payton R. McCargo, 633 West One Hundred and Thirty-fifth street, New York.

## JACOB DINER IS ELECTED PRESIDENT.

**New York Branch of the A.Ph.A. Listens to Paper by J. Leon Lascoff on "Chemical Changes in Dispensing"—Meeting of Doctors and Drug Men to Be Held in the Near Future.**

The election of officers and the presentation of the annual reports of the various committees were the chief features of interest at the meeting of the New York Branch of the American Pharmaceutical Association held last Monday evening.

The new officers and the various committee chairmen are as follows: President, Jacob Diner; vice-president, Otto Raubenheimer; treasurer, Joseph Weinstein; secretary, Hugh Craig; chairman Committee on Education and Legislation, Thomas P. Cook; chairman Committee on Fraternal and Professional Relations, George A. Ferguson; chairman Committee on Membership, C. A. Mayo; chairman Committee on Pharmacy, George C. Dickman; member of the council, George H. Hitchcock.

Dr. Dickman, chairman of the Committee on Pharmacy, recommended in his report that the branch take action to have comparisons of the U.S.P. with recent editions of foreign pharmacopœias made by the proper parties, with a view to secure improvement and a greater degree of perfection, which naturally such comparisons ought to produce. Meetings with students of the various colleges of pharmacy, with a view to secure the students as members after their graduation was also recommended in Dr. Dickman's report.

Otto Raubenheimer, chairman of the Committee on Fraternal and Professional Relations, commented upon the propaganda and joint meeting of the physicians and pharmacists as the chief feature of the year's work in pharmacy. He pointed out that the tendency of the times was for the elimination of the patent nostrum and gave credit to the Department of Health for its efforts to educate the public that these medicines were not cures for consumption.

This committee also presented a list from which members could choose subjects for papers to present at the next annual convention of the parent body. Subjects were selected by members as follows: "Elixir Gentian Glycyrrhizin," Jacob Diner; "Liquid Antiseptic Alkalins," "Tinct. Larkspur Seed," J. Leon Lascoff; "Fluidglycerates," George M. Beringer; "Petroleum Saponat," "Liq. Carbolis Deodorans," "Milk of Bismuth," Otto Raubenheimer; "Barrow's Sulphur," Prof. George C. Dickman; "Liq. Glycyrrhizos, Co.," H. A. B. Dunning.

The subjects remaining unselected are: "General Suggestions for the Improvement of the N.F.," "Criticism of N.F. Formulas," "Improvement of N.F. Formulas," "Syr. Hydrochlorophosphatum," "Ting. Resorcin Comp.," "Additions to N.F.," "Elixir Formatis," "Extract Malt and Cod Liver Oil," "Honey and Borax," "Mel Rosæ cum Boracis."

Thomas P. Cook, chairman of the Committee on Education and Legislation, reported that of the various pharmaceutical bills pending in the Legislature or Congress at the present time only the Mann Bill was objectionable. A resolution introduced by Mr. Cook protesting against its adoption by Congress was passed by a unanimous vote.

George H. Hitchcock, chairman of the Special Committee on Propaganda, stated that at the next meeting of the branch he would probably have definite plans in order for a joint meeting with the physicians, provided the physicians acted favorably on his request to consider the matter. Mr. Hitchcock said that the physicians were considering the matter at a meeting which was being held simultaneously with the one he was addressing and he felt confident that another joint meeting would be held shortly.

Thomas H. McElhenie introduced a resolution that the section adopt measures to secure the omission of morphine from syrup of white pine. Mr. McElhenie based his resolution upon the tendency in pharmacy for the elimination of all narcotics in popular remedies. Upon discussion of the matter, however, the opinion of the members showed there was strong sentiment against such a procedure and that the medicinal value of the preparation would be lost. Mr. McElhenie withdrew his resolution.

Dr. William Muir addressed the members upon the commercial aspects of pharmacy as applied to the small druggist in the larger cities. He described in detail the pitiable condition of the smaller pharmacists in England who had been almost

entirely submerged by the gigantic drug corporations. Dr. Muir saw a danger in present conditions in New York, which, if not offset by the profession in some manner, would mean the elimination of the professional element from pharmacy.

Jacob Diner spoke along the same lines as Dr. Muir and suggested that a committee on commercial interests be appointed. No definite action was taken, but matter left for the consideration of the incoming president.

Joseph Weinstein, treasurer, reported expenses amounting to \$21.24 and a balance on hand of \$36.25.

J. Leon Lascoff read a paper on "Chemical Changes in Dispensing, Causing Complaint." There was an interesting discussion on this paper, which will be published in the ERA at an early date.

## KINGS COUNTY INDORSES DR. TUTHILL.

**Society Recommends Him for Reappointment on the New York State Board of Pharmacy—Doctors**

**Take Kindly to Propaganda Work—Valuable Papers Read at Tuesday's Meeting.**

Dr. Frederic C. Tuthill, of Brooklyn, was unanimously indorsed to succeed himself as a member on the New York State Board of Pharmacy by the Kings County Pharmaceutical Society at a meeting of the latter body last Tuesday. He was placed in nomination by Dr. Albert H. Brundage, who reviewed Dr. Tuthill's record in pharmacy for a number of years back and also stated that the trustees of the Brooklyn College of Pharmacy had previously indorsed Dr. Tuthill. Over one hundred and fifty pharmacists rose and made the indorsement by acclamation.

Dr. William Muir, in remarking upon trade matters, advised the small retailer to consolidate with his fellows, as far as his buying was concerned, stating that the time was here when something of this nature was essential, for his preservation hinged upon meeting the prices of the larger drug corporations.

"The jobber," said Dr. Muir, "was only carrying the retailer because the latter was a good investment and not out of any sentiment nor sympathy. The jobber could make a good profit on the retailer just on the discounts which the jobber received from the manufacturer. The time had come when the retailer must resent the right of the manufacturer not to sell him goods direct, even if such manufacturer was threatened by the jobber, that his products would be blacklisted if they were sold without the medium of the middleman."

John G. Wischertzhoff continuing the propaganda work, saying that this work was the only salvation left the small druggist in competing in a measure with the large combined concerns. As chairman of the Trade Matters Committee he reported that he had interviewed over forty physicians in regard to the propaganda work, and with the exception of two all had given the work attention and were prescribing U.S.P. and N.F. preparations in preference to proprietaries.

George R. Christ announced that \$112 had been collected from the druggists since the last meeting for propaganda work.

Dr. Van Horn, employed by the society to canvass the physicians, reported that he was welcome at nearly every place he called. The physicians no longer had much difficulty in getting the preparations they wanted and there was not so much stress laid upon slight variations in color and taste on renewals as previously, showing that the work had gained the favor of the physicians.

President Jacob H. Rehfuess announced that over 1700 copies of the manual and one hundred and fifty gallons of samples in two-ounce bottles had been distributed among the physicians.

Mayer H. Tounser was elected a member and applications for membership were received from Walter S. Dean, Fred J. Zimmerman, Adolph W. Moos, Herman W. Dillberger, Perry Pick, Laurence Zink, August Baum, Alfred Hammer, Nicholas Grosedon.

Treasurer Oscar C. Klein reported a balance in the society's account of \$284.81 and a balance in the college treasury of \$6862.40.

Thomas J. Keenan read a paper, "A Study of Some Difficult Prescriptions," and J. Leon Lascoff followed Mr. Keenan with a paper entitled "Chemical Changes in Dispensing, Causing Complaints." Both were illustrated with exhibits and discussed.

## GOVERNOR'S ATTITUDE DISCUSSED BY G.A.S.

President Hirseman Advises That Strong Support be Given to State Board of Pharmacy in Fight

Against it at Albany—First Time Board Has Been Mentioned in Annual Message.

One of the chief topics under discussion at the meeting of the German Apothecaries' Society, held last Thursday evening was the position of Governor Hughes on the question of pharmacy legislation. President Felix Hirseman thought that the Governor was influenced too much by individuals outside of pharmacy, who were unfamiliar with conditions and requirements, and remarked that it was the first time in the history of the State that a Governor had mentioned the Board of Pharmacy in an annual message. President Hirseman recommended that the society come out strongly in favor of the Board of Pharmacy, and he also bestowed praise upon Dr. William Muir, of Brooklyn, for his activity in matters pertaining to the welfare of pharmacists in general.

Dr. William C. Alpers and E. C. Goetting were both in favor of having a definite plan prepared by the Legislative Committee, which could be submitted to the State Legislature in order to offset any legislation which would be injurious and also to refute charges which undoubtedly would be made that the pharmacists did not know what they wanted.

In introducing the subject President Hirseman gave an exhaustive report of the doings of the board at the last annual meeting held at Albany on January 4, and he was of the opinion that several bills would be introduced into the Legislature during the coming session, whose object would be to transfer the powers of the Board of Pharmacy to the Board of Health.

The question of eligibility to membership was precipitated by H. L. Rehse, of 1093 Hancock street, Brooklyn, who in proposing eight new candidates, said he had been particular in not selecting any Hebrews, for he wished it to be known that he was a rabid anti-semiter. Dr. Alpers suggested that the list of eligible candidates as prepared by Hugo Kantrowitz be allowed to stand. He was certain that Mr. Kantrowitz was cognizant of the feeling in the society on this matter and he could be depended upon to omit the names of individuals likely to prove objectionable to the society.

S. Ketchum was elected a member and thirteen candidates were proposed for membership. The resignation of George Mariamson, H. Krehbiel and L. G. B. Erb were accepted. William Wendel, whose present address was unknown, was dropped from membership.

President Hirseman, who was compelled by illness to seek recuperation and was thus absent at the annual meeting held a month ago, occupied the chair. He expressed thanks to the society for the honor of being re-elected, but stated that his acceptance was only upon the condition that this would be considered his last term.

A communication from Wilhelm Bodemann, of Chicago, an honorary member of the society, was read by the secretary, Ed. F. Pfaff. Mr. Bodemann stated he was with the members in spirit, and also made some humorous references to past events.

Otto P. Gilbert, chairman of the Entertainment Committee, presented his annual report, which contained special references to the Bodemann Kommers and other important events of the past year.

Emil Roller, chairman of the Scientific Committee, made requests in his report that arrangements be made to secure a larger attendance at lectures. He announced that in the near future the original paper of Dr. Hermann Schelenz on "Medicinal Earths and Cataplasms" would be presented by Otto Raubenheimer. A lecture on explosives by Dr. Charles W. Volney is also scheduled. The usual lunch was served at midnight.

## Good Outlook for Wood Alcohol.

The managers of the Cummer-Diggins Company, of Cadillac, Mich., which manufactures large quantities of wood alcohol, charcoal and acetate of lime, at the annual meeting of the manufacturers of these products, held in Buffalo, N. Y., awarded a large number of contracts. W. L. Saunders, general manager, reports that the outlook for business for the year is excellent, especially with regard to alcohol.

## LETTER BOX

Quotes History in Answer to Joel Blanc.

Editor The Pharmaceutical Era:

Competition is the quintessence of anarchy, for competition means planless production. Competition leads to monopoly and monopoly leads to competition until monopoly triumphs. What will happen then? The same old thing. The old Romans had to emigrate or burst. Under the Senatorship of the Mark Hanna of Rome, Julius Caesar, they marched over the decadent civilization of Gaul into the heart of Germany. The Romans in Germany were absorbed by the Franks. The Franks were up against the food question and they turned upon the decadent civilization of Rome, forcing their civilization upon the then Western world. Next came the discovery of America, and driven by the question of food supply, there came the early settlers from France, Spain, Holland, Germany and England, doing unto the Indians as the Romans did unto the Franks and Normans. Here they established the civilization of capitalization. What next? Up again the food supply comes from Europe, a new invasion. The European hordes to which the writer of this belongs are dumped upon these shores. They come here with working-class aspirations. There is no room for them at the top of the old. They in their turn will turn down our decadent capitalist civilization and establish the civilization of co-operative labor. This will mean a civilization of art like the Greek, but unmarred by slavery. An answer to Joel Blanc.

KARL C. VON CROLLY.

Pleasantville, N. Y., January 8, 1909.

Merits of Hog Cholera Vaccine.

Editor The Pharmaceutical Era:

Referring to your note in regard to a government test of Bruschettini's Hog Cholera Vaccine, we would point out that one test on a small scale is of no value in any respect. Practical experience with this vaccine in Europe covers about 800,000 animals, and the practical experience last year in this country covered about 100,000 head. This practical experience shows that about 94 per cent of the applications have been successful.

As a matter of information, it is convenient to state that the Department of Agriculture recently brought out a method that it called its own for immunizing hogs against hog cholera, and this apparently has been patented by one of the government bacteriologists. It is proposed that this method be exploited by the experiment stations. At the present time it is only an experiment, and it remains to be seen whether this competitive method will prove successful in practice.

Criticisms made by competitors are always tinged with the suspicion of biased judgment.

THE SORBY VACCINE COMPANY.

Chicago.

HAROLD SORBY, Manager.

Wants Congress to Pass More Stringent Narcotic Law.

WASHINGTON, Jan. 11.—Major Sylvester, chief of the Washington police force, reports to the District government that unless Congress passes a law making it an offense for any one, except druggists, physicians, dentists and veterinarians to have narcotics in his possession, he will never be able to put down the harmful drug habit in Washington.

The police department has a detective specially detailed to the work of running down infractions of the drug law. This official made 1876 inspections of drug stores, investigated 128 cases of illegal purchases of drugs and conducted thirty-five prosecutions in the past year. Of the investigations, six covered suicidal intent in which the victims recovered, and twenty-one in which the users of the drugs died.

His Safety.

"I understand Jenks has failed in business."

"Yes; all is lost but honor."

"He couldn't very well lose that."

"Why not?"

"Can't lose a thing you haven't got."

## PATENTS, TRADE MARKS, ETC.

908.689

909.093

908.718

908.446

909.017

908.823

## PATENTS.

Granted January 5, 1909.

908.446—Edward Court, Milwaukee, Wis. Bottle-rinsing machine.

908.573—Heinrich A. Kaysan, Cassel, Germany. Nozzle for syringes and the like.

908.688—Marten H. Mulkey, Seattle, Wash. Attachment for bottle-stoppering machines.

908.718—Milton V. Whiting, Albert, Colo. Non-refillable bottle.

908.822—Frelen C. Turner, Birmingham, Ala. Bottle.

908.909—Emil Tugendreich, Jersey City, N. J. Cork.

909.017—David E. Parker, Niagara Falls, N. Y. Apparatus for preparing oxone.

909.093—Heinrich A. Kaysan, Cassel, Germany. Nozzle for syringes and the like.

## TRADE MARKS.

Published January 5, 1909.

13,063—Andreas Saxlehner, Budapest, Hungary. Class 6.

Bitter salts obtained from natural mineral water.

13,064—Andreas Saxlehner, Budapest, Hungary. Class 6.

Natural aperient salt.

13,066—Andreas Saxlehner, Budapest, Hungary. Class 6.

Bitter salts obtained from natural mineral water.

29,774—Leopold Sarason, Hirschgarten, near Berlin, Germany. Class 6. A chemical preparation for producing effervescing baths.

34,907—Knoll &amp; Co., Ludwigshafen-on-the-Rhine, Germany. Class 6. A medicine for all kinds of heart diseases, especially dilatatio cordis, myocarditis, angina pectoris, congestional pressure, insufficiency of action, and compensational disturbances.

35,324—Schimmel &amp; Co., Miltitz-Leipzig, Germany. Class 6. Violet perfumes.

36,171 and 36,173—Same as preceding.

36,370—The H. B. Claflin Company, New York, N. Y. Class 6. Oleate of veratrine, tincture of aconite, aromatic elixir extract of aconite, and other pharmaceutical and proprietary preparations.

37,599—John B. Haden, Galveston, Texas. Class 6. A liquid remedy for diseases of the eye.

37,858—Charles E. Keeler, Atlantic City, N. J. Class 6. Cold-cream.

38,428—Addie L. Worthing, Camden, Me. Class 6. A hair tonic.

38,568—Charles J. Britton, San Diego, Cal. Class 6. An ointment for external application.

38,755—Superior Laboratory, Watertown, Wis. Class 6. Whooping cough remedy.

38,765—Frederick N. Thimble, New York, N. Y. Class 6. An insect and rodent destroyer.

## Reparation.

"I would like to murder that man."

"Suppose you did and afterward—"

"Oh, afterward I would apologize."

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

**Supplement to The Era Druggists' Directory.**

- ALABAMA**—BIRMINGHAM—E. G. Egger, Avenue B and Twenty-fourth street; out of business.
- FLORALA**—Charles Roehlig has sold his store in Hartford, Ala., and opened a new store here.
- ARIZONA**—ROOSEVELT—Dr. J. W. Smith has succeeded R. F. Palmer and F. C. Pennell.
- ARKANSAS**—BETHESDA—Evans Drug Company has been succeeded by Compton & McSpadden.
- DERMOTT**—Henry Bordenaux has been succeeded by Caster & Roddy. Bordenaux Brothers will open a new store in Little Rock about January 20.
- CALIFORNIA**—SAN JOSE—Kennedy Drug Company, Second and Clara streets, has been succeeded by Stephenson Drug Company.
- VOLCANO**—M. E. Smith, M.D., has succeeded G. C. Nichols in the drug business here.
- COLORADO**—FORT MORGAN—Nickson Drug Company, it is reported, has been succeeded by the Fort Morgan Drug Company.
- FLORIDA**—KISSIMMEE—Kissimmee Drug Company, Jarrell & Jackson, proprietors, have dissolved partnership. A. B. Jarrell, buying his partner's interest, will continue the business alone.
- WINTER PARK**—Dr. J. A. Trovillion has succeeded E. L. Maxson, lately deceased.
- GEORGIA**—ATLANTA—A. D. Jones, 165 Frazier street; out of business.
- AGUSTA**—W. D. Jennings, 177S Broad street; out of business.
- ILLINOIS**—HENRY—J. W. Neice, it is reported, has been succeeded by T. J. Scragaves.
- LANSARK**—W. R. McDaniel, it is reported, has succeeded J. L. Biblack in the drug business here.
- PEORIA**—F. J. Meyer has succeeded L. B. Campen at 2629 South Adams street.
- INDIANA**—INDIANAPOLIS—Cut Price Drug Company is the style of the new drug store at 222 East Washington street. J. D. Pearson is the proprietor.
- IOWA**—COUNCIL BLUFF—Schott Drug Company, 511 South Main street, has been succeeded by the Owl Drug Store. J. A. Chapman & Co., proprietors.
- DUBUQUE**—Arno Drug Company, incorporated; capital stock, \$10,000; wholesale and retail.
- WATERLOO**—D. M. Munzer & Co., 207 East Fourth street, has been succeeded by Halden & Floyd.
- KANSAS**—ANSERIA—R. C. Knox & Co.; store destroyed by fire.
- CAWKER CITY**—P. H. Klinkenberg, it is reported, has been succeeded by Bert Hockett.
- MAINE**—KNOXWEGAN—City Drug Store, 24 Water street; store destroyed by fire.
- MASSACHUSETTS**—NEWBURTPORT—John T. Collins, it is reported, has changed the style of his firm to Collins Drug Company, Inc.; capital stock, \$10,000.
- PALMER**—The Quimby Pharmacy, Main street, has been succeeded by Fred C. Lovis.
- WEYMOUTH**—Reidy Drug Company, it is reported, has been incorporated with a capital of \$10,000.
- MICHIGAN**—GREENVILLE—J. H. C. Van Deinsse has been succeeded by Peter Van Deinsse.
- PLYMOUTH**—J. G. Meiler, deceased. O. F. Beyer has taken the store and will continue the business.
- MINNESOTA**—HIBBING—Stewart's Pharmacy is the style of the new drug store here.
- MANKATO**—L. Siddle Drug Company, 411 North Front street, has moved his stock of drugs to 107 South Front street.
- WASACA**—Preston & Stucky; store destroyed by fire.
- MISSISSIPPI**—COMO—C. C. Hay; store destroyed by fire.
- MISSOURI**—SEDALIA—Scotten Drug Company, Ohio and Second streets, incorporated, is the style of the new drug store here.
- NEBRASKA**—JACKSON—D. J. McDonald, it is reported, has opened a new drug store here; style to be Opheum Pharmacy.
- NEW JERSEY**—MILFORD—W. H. H. Harbison will open a new drug store here February 1.
- TRENTON**—J. L. Mathis, 27 Center street, has purchased the Washington Market Pharmacy, at 111 Broad street, from Mrs. Schwartz.
- NEW YORK**—CANDOR—J. H. Jennings has been succeeded by L. L. Reed.
- ONEONTA**—George S. Slade; store damaged by fire.
- NORTH CAROLINA**—PINE LEVEL—Godwin Brothers have been incorporated as Godwin Brothers Company; capital stock, \$5,000.
- OHIO**—BELLARE—A new drug store, styled Kane's Pharmacy, has been opened here. R. A. Kane is the proprietor.
- OKLAHOMA**—TAFT—C. T. Rogers & Co.; store destroyed by fire.
- TULSA**—Gny Harper has opened a new drug store at 212 South Boston street.
- PENNSYLVANIA**—SHEPARDSTOWN—B. F. Jones has opened his new drug store in North Main street.
- PHILADELPHIA**—An item in this department in the last Era was capable of misconstruction. Gardner Drug Company has not been sold, but has moved from its old location at Kensington avenue and Westmoreland street to a new store at 957 East Westmoreland street, near Kensington avenue.
- SOUTH CAROLINA**—SUMTER—Birnie's Drug Store; damaged by fire.
- TENNESSEE**—ATHENS—M. H. Patterson; store damaged by fire.
- MEMPHIS**—Harnett & Locke are the new proprietors of the Idlewild Pharmacy, at 3 North McLean avenue.
- TENNESSEE**—HOLLAND—E. R. Nunnels & Co.; store damaged by fire.
- ROYAL WALKER BROTHERS Drug Company**; store destroyed by fire; stock valued at \$5,000; insurance, \$3,000.
- UTAH**—CORTX—Dee Drug Company, 2403 Washington avenue; out of business.
- VIRGINIA**—FAIRMVILLE—Anderson Drug Company; store damaged by fire.
- Richmond**—Tarrant, Grant & Co., 626 East Broad street, have opened a new drug store here.
- WASHINGTON**—CHEHALIS—J. Y. Coffman has been succeeded by George D. Prigmore.
- WEST VIRGINIA**—FAYETTEVILLE—Dr. H. C. Skaggs, it is reported, has become proprietor of the Fayetteville Pharmacy.
- WISCONSIN**—GREEN BAY—Hector Francar, it is reported, will open a new drug store at 1249 Main street.
- MONTY HOBBS**—Charles Bancroft, it is reported, has succeeded Dr. G. M. Holland.
- Schenck**—Charles De Fehn, it is reported, will open a new drug store at 1112 Tower avenue.

## Eczematol Ointment Comes in Two Sizes.

Eczematol ointment, manufactured by the Eczematol Chemical Company, New York, is claimed by the manufacturers to be a reliable remedy for the treatment of eczema. It is guaranteed under the Food and Drugs Act and pays the druggist who handles it a good profit. It comes in two sizes which wholesale for \$4 and \$8 per dozen, respectively. See advertisement of the Eczematol Chemical Company, and write for literature.

## Matrimonial Mention.

IRVING SMITH, of the drug firm of H. M. Cole & Co., 1418 Canby avenue, Scanton, Pa., has returned home with his bride after a delightful honeymoon trip to New York, Philadelphia and Washington.

JOSEPH BENNETT, of Mount Vernon, Iowa, has returned home from Pierce, Neb., where he married Miss Belle Turner, a former Cornell student. A warm welcome was given the happy couple.

# THE DRUG MARKETS

## EXPECTS MATERIAL INCREASE IN DEMAND.

**Dealers Show No Anxiety Regarding Future—Predict Return of Normal Conditions Before Month's End.**

NEW YORK, Jan. 11.—Conditions throughout the general drug and chemical market are practically the same as those noted last week, the regular consuming demand continuing somewhat light and unimportant with a slight improvement noted at the close of the week. The steady undertone noted in the previous reports is still in evidence and dealers show no anxiety regarding the future. As yet the normal volume of business has not been reached, but a material increase in demand is confidently expected shortly after the middle of the current month. Messina essences are attracting most attention, but it is impossible to give actual quotations, as there are no firm offers to sell. Some business is reported between dealers, at extreme prices, oil of bergamot naturally showing the greater advance. All kindred and allied materials are strongly affected by the upward movement and quotations for lime oil are again higher. Citric acid and all citrates have been further advanced by manufacturers. Anise oil is also a shade firmer, and a better inquiry exists for Carthagenia lpecan. Opium is without important change either in the primary or local market, and quinine remains quiet.

OPUM.—There is still a lack of important inquiry and the market shows nothing of new interest, nor is there any improvement in the demand. Cables from Smyrna, however, reported a firmer market with an advance of 6d. expected. Spot values remain unchanged at \$4.35 to \$4.40 for case lots, with sales of a few cases reported. The market for powdered has been rather unsettled, owing to competition, but a gradual return of a steadier undertone is noted. At the close of last month there was a sale of old crop opium amounting to 50 cases for an American account, at 13s. 10d. per pound, for 11.25 per cent morphine. The arrivals in Smyrna for the week ending December 18 amount to 1906 cases, as against 1311 cases for the same period last year. The arrivals to January 8 amount to 1985 cases.

QUININE SULPHATE.—Quinine is moving in only a limited routine way, with the business done by manufacturers who continue to maintain steady views on the basis of 15c. for bulk in lots of 100 ozs. Cinchona bark shipments during December amounted to 1,560,000 Dutch pounds. With the exception of August, this was the heaviest monthly shipment during the year. The total shipments in 1908 were 15,393,000 Dutch pounds, as against 17,212,000 during 1907 and 13,516,000 during 1906. The shipments of the year 1907 were the largest of any year on record. At the Amsterdam auction last Friday 1400 kilos of quinine were sold at 11.06 florins, against 11.00 florins at the previous sale.

CITRIC ACID.—The demand for this article is unusually heavy even with the price at 53¢/60c. per pound. Prices were marked up recently 2c. per pound above the revised prices which took place following the news of the Italian disaster. Manufacturers are finding difficulty in procuring raw material and have advanced prices to 50¢/c. per pound in kegs. No contracts are being made as practically all orders are refused, and deliveries are being made on old contracts only. In consequence of this the prices in the outside market are in advance of manufacturers' prices. It is not improbable that this article will be still higher, and while there is a desire on the part of holders to supply the actual wants of customers at ruling quotations, speculative orders cannot be entertained, and orders in excess of single kegs are carefully scrutinized.

ESSENTIAL OILS.—The market for bergamot, lemon and orange is excited, and it is almost impossible to give reliable quotations, and all quotations are given without offer. At the time of the occurrence of the earthquake importers were negotiating contracts for the year's supply, and practically all houses were without stock of any proportion at the close of the year, expecting arrivals of new crop oil, the shipments of which, on contract generally commencing about the last part of December. There has been considerable inquiry between houses on accommodation orders, but few have more than a

few pounds on hand, which they require for their own use. A sale of 10 cans of 25 gallons each has been reported at \$4.00 per gallon, and \$1000 being paid for the lot.

OLIVE OIL.—The price on Lucrea cream olive oil has been advanced to \$3.00 per gallon, in gallon cans, and \$3.10 in half-gallon cans. Six and three gallon cans are held at \$2.65 @ \$2.75 per gallon. The advance in the price of this article is not altogether due to the Italian disaster, although the market has been influenced thereby. The principal reason is due to the failure of the olive crop. The prices of all grades have been steadily advanced and oil for manufacturing purposes is almost wholly out of the market. Holders of the small available spot stock have advanced prices to \$1.50 @ \$1.55 for yellow and \$1.30 for green. Our late Consul Arthur S. Cheney, who was killed in the Messina catastrophe, in a letter under date of November 1, said: "Never in the memory of the proverbial oldest inhabitant has there been such absolute lack of production of this necessary fruit as now prevails in this district; which becomes nothing less than a national misfortune. It is a question whether existing stocks of oil (although last season's production was plentiful as well of very good quality) will be sufficient to supply home consumption. The present prices for edible oil are the highest for ten years."

CASTILE SOAP.—Attention was recently called to the advance which would probably be made in Conti's white castile soap after the first of the year. The white is now held at 13¢/14c.; genuine mottled at 10¢/14c., and the green at 10¢/14c. These quotations are based upon prices made by Conti & Co.

MANNA.—The stock of this article in our market is now very much reduced, and it appears that the amount available of small flake is much less than had been supposed. Prices for small flake have been advanced to 60¢/65c. per pound, with the outlook favorable for still higher prices. Shipments from Palermo are liable to be very much delayed and advices from that port are now being awaited and upon receipt of same some additional revision in prices may be expected.

QUINCE SEED.—Sellers at former prices of 90c. per pound in large quantities have advanced their figures to 94c. The market is still low in available supplies.

GLYCERIN.—There exists a fair demand for the C.P. article with large consumers showing more disposition to make contracts. In sympathy with the position of the crude, the market is firm and quotations are still maintained at 16½¢/16¢/c. for drums, and 17½¢/17¢/c. for casks, as to size of order.

NUX VOMICA.—Quotations are well sustained at 10¢/14c. per pound and powdered at 32¢/37c. per pound, as to grades and quantity, and the existence of an improved inquiry. Higher prices are expected, as supplies are only moderate and very little stock is offered from primary markets.

ALCOHOL.—Due to conditions in the West, the quotations on grain alcohol have been reduced 2c. Quotations on U.S.P. in large quantities are now \$2.61 @ \$2.62 per gallon.

MENTHOL.—Increased attention is being shown this article and the tone of the market is becoming stronger. Most holders are quoting \$2.20 @ \$2.25 in large quantities, although it is claimed that some supplies were obtained at \$2.10 and latter at \$2.15 per pound. However, only limited quantities were offered at the last named figures.

CAMPBELL.—Quotations have been revised and the market is easier to the extent that manufacturers have reduced prices 2c. per pound. Prices are now as follows: Refined in barrels, 48c.; less, 51¢/50c.; quarter-pound squares, cases, 49c.; less, 52¢/50c.; Japanese, ounces, per pound, 53¢/60c.; Monobromated camphor, per pound, \$1.65; ounce, 15¢/18c.

CITRATES.—Manufacturers have made an additional advance of 2c. per pound on all the citrates since our last report. Contracts for over four months will be entertained as usual by large manufacturers, while the entry of contracts for citric acid have been discontinued.

CANADA BALSAM OF FIR.—There are some sellers of barrels at \$5.25, but others are holding to the price of \$5.50 @ \$5.75 and claim sales at those figures.

### Change in Ownership in Grabill, Ind.

Oscar S. Rhoads, a prominent and well-known druggist of Fort Wayne, Ind., has purchased the stock and fixtures of the J. D. Campbell Drug Store at Grabill, Ind. The store will be under the management of E. L. Garrett, druggist of Fort Wayne.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, JANUARY 21, 1909

No. 3

D. O. HAYNES & CO. - Publishers  
90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:  
Room 500, Dickey Building, 49 Dearborn, Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the  
Philippines, and Mexico . . . . . \$2.50 a Year  
To Canada, postpaid . . . . . 3.00 a Year  
To Foreign Countries in Postal Union . . . . . 4.00 a Year  
Single Copies . . . . . 10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation, President and Treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers,  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the Gown uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

## SWINDLERS READ THE ERA—SOME OF THEIR VICTIMS THOUGHTLESS IN THAT RESPECT.

Off and on for more than twenty years the ERA has been exposing drug swindlers, but in the last five or six years more than ever has this journal given early notice to the trade concerning the operations of these parasites. That there has been more publicity given to the frauds lately has not been due to any increase in their number, but rather to the persistency with which the ERA has watched and followed up the offenders. Unfortunately drug merchants who are so careless as to fail to read the portion of the ERA which is devoted to exposing the swindlers are unwilling, except in rare instances, to disclose their carelessness by prosecuting the criminals. A year or two is the most that can be given these culprits on one complaint. They are soon out of prison.

If all the jobbers and manufacturers would read the ERA as carefully for news of drug trade swindlers as they do in other respects there would be a distinct diminution of supplies that would be more effective than the short sentences given by the Federal courts. The swindlers read the ERA. How they obtain it we do not know, but the moment the ERA exposes one of them he goes out of business under the old name and starts with a new name elsewhere, operating under the usual methods until an ERA reporter runs him to earth. The extermination of this pest is now practically "up to" the victims. A more careful perusal of the ERA, or if in doubt a telephone message to 2457 John, would save losses to many merchants and cut off the source of supplies that keep the crooks alive.

## NEW YORK PHARMACISTS SHOULD GET BUSY.

Publication in the ERA of the position taken by Governor Hughes in regard to the reorganization of the State Board of Pharmacy and changes in the pharmacy law of the State was the first information that many pharmacists had on the subject, for the daily papers did not consider it of enough importance to mention. Fred S. Rogers, former president and chairman of the membership committee of the New York State Pharmaceutical Association, sees more in the message than there is in the text. No doubt he could preach a sermon on the subject and he almost does so in a letter which he has sent to the members of his committee.

"Do you realize that this is the entering wedge for further legislation which threatens the entire profession of pharmacy?" he asks. That point alone in the letter, considered in connection with the Governor's message and his veto of the Whitney-Wain-

wright Act of 1908, is enough to set pharmacists thinking and if they want to preserve their own power of participation in the selection of the members of the New York State Board of Pharmacy they will have to exhibit much greater activity than they ever have before displayed in supporting the efforts of the representatives of pharmacy at Albany in the next two or three months. No bill to destroy the State Board of Pharmacy has yet been introduced, but it seldom occurs that a Governor makes a recommendation without being reasonably sure that legislative activity will follow.

#### PROUD YEAR'S RECORD OF CHICAGO R.D.A.

President Yeomans, in his annual address to the Chicago Retail Druggists' Association, calls attention to the ease with which hold-up and blackmailing suits can be prosecuted against druggists and shows the benefit of organization in coping with this evil, especially in a large city like Chicago. No fewer than forty-six cases of this description were brought to the attention of the association during the year and every one was successfully defended, or satisfactorily adjusted.

Considering the difficulties of meeting accusations of this nature—no other profession is placed at such great disadvantage before the law—this record of the Chicago R.D.A. is one to be proud of. In fact this one of the many features of its work more than justifies the united support of the druggists within its territory of operation.

#### WHO WILL WIN THE ERA'S \$10 PRIZE?

Are you going to win one of the ERA's \$10 prizes for the best article on any business subject of value to retail druggists? The drug business offers an enormous variety of fruitful topics for discussion and regarding which every druggist likes to read the experiences of his fellows in pharmacy. It is not fair for any druggist to do all the reading and none of the writing; particularly as he is quite likely to have a fund of information that could well be drawn upon to win the \$10 prize and at the same time benefit his profession.

The ERA's Prize Competition was started to give an *extra incentive to readers to get them also to write*. There are other prizes, but just turn over to advertising page 6 and find out all about the Competition. Druggists, clerks and fountain dispensers, as well as window designers, all are eligible.

#### CAMPAIGN OF MISREPRESENTATION.

While druggists are not directly interested in the scheme to establish postal savings banks this is sort of a companion to the parcels post machination which is expected to increase the postal revenues by augmenting the expense of operation and opening the mails to the transportation of merchandise in larger bulk than at present and at low rates. As to the savings bank plan Postmaster General Meyer has been called to account for innocent ignorance of the savings deposit facilities by Charles E. Sprague, president of one of the largest repositories of that descrip-

tion in the world. Mr. Meyer, in his argument, said that there were "only 1453 savings banks in the country." Mr. Sprague, whose long experience and extended observation entitle him to rank as the dean of savings bank presidents, declares that there are 15,000 incorporated institutions situated in all the States that are in effect savings banks.

It appears therefore upon creditable information that the campaign of parcels post and postal savings banks is more allied in point of misrepresentation, probably unintentionally, than has heretofore been thought to be the case, for the banking scheme has not been of such vital moment to druggists as the parcels post plan to wipe out or reduce to a starvation basis all of the pharmacists outside of the big cities. As the interests favoring the two measures are closely allied and the arguments in their support seem to be equally fallacious and misleading, perhaps it would be just as well for the druggists of the country to hit both with the same stone. And the more stones thrown the better it will be for the retail druggists of the United States.

#### FUTURE OF EDUCATION IN PHARMACY.

Activity on the part of Dr. Henry Weimar, of Hot Springs, and others in endeavoring to establish a chair of pharmacy in the State University of Arkansas directs attention to the growing tendency of incorporating pharmaceutical education in the curriculums of the colleges and universities of the country. This is especially true of State institutions, which is an indication that our official educators are awakening to the necessity of providing for specialization in the higher training of the young men and women of the country.

The drift of education in pharmacy has for some time been in the direction of making it a university subject, as is borne out by the amalgamation of several colleges with universities, the affiliation of the New York College of Pharmacy with Columbia University being a conspicuous example. There are some very strong colleges of pharmacy that are conducted under private auspices or under the direction of pharmaceutical societies, but in the further enlargement of the facilities for teaching pharmacy the conclusion must inevitably be drawn that an important if not the preponderating element will be in the establishment of chairs of pharmacy in the State and other universities which are not now so provided.

"Does-paid" druggists are not the only ones who may benefit by reading the ERA and in the publication of news or other articles, as well as photographs, or of contributions to the ERA's Prize Competition, the question of "does-paid" or "subscription-paid" never enters into the editor's calculation. The ERA simply stands for the best interests of pharmacy and pharmacists, regardless of any price of subscription or other consideration. It is a policy that has won success and will continue to do so.

Judging by the reported experiences of Capt. George H. Wright, of Orlando, Fla., the camphor industry is no longer an experiment in Florida. The captain has grown thousands of camphor trees and reports better results than have been obtained in the Island of Formosa. In the foreign camphor growing districts, he declares, the trees are not treated to the best advantage and the natural result will be an eventual diminution of the supply. He believes, however, that the

growth of the industry in this country is assured and that Florida will in time be able to furnish the domestic market with all of the camphor required.

A druggist was crossing a busy street in New York one afternoon in 1910 when he stopped when half way over. In front of him was an automobile, noisily tooting; behind him a taxicab, coming up the avenue on his right hand side was a motor truck clanging its bell, and on his left a motor cycle, all bearing down on him at full speed. He happened to glance up and saw an airship rapidly descending to the spot where he was standing, and he saw he had one chance left. He was standing on a manhole cover. He quickly pulled it up and jumped in, just in time to be run over by a subway train.—*Farm and Fireside*.

A prohibition town cannot be called the abode of departed spirits so long as the druggist is in that sort of medium business which materializes spirit jags from a cabinet full of spirit jugs.

One of the most interesting personalities among the self-made men in the wholesale drug trade of the country is Charles J. Lynn, of Indianapolis, who has an experience and personal acquaintance in the trade that is not exceeded by many veterans. Mr. Lynn for periods resided in Chicago and New York, but his home has chiefly been in the city of his nativity, where he is now located as the general manager of the house of Eli Lilly & Co. It is said of this genial and obliging drug man that despite his urbanity there is no busier man west of the Hudson river, nor one who is more even-tempered in caring for the never-ending details of his office.

Mr. Lynn was born in Indianapolis in 1874. His first employment was with the Daniel Stewart Drug Company, with which he remained five years. He started in that house as an errand boy and worked through various positions up to billing clerk and general utility man on the road. He then went to Lord, Owen & Co., wholesale druggists, of Chicago, now out of business, and was with that house for two years, first representing the concern in the Rocky Mountain States and then in northern Indiana and southern Michigan. From there in May, 1895, he went to Eli Lilly & Co. He first represented the house in New York City among the retail trade for two years and was then transferred to western Pennsylvania for a year, after which he was taken back to help J. K. Lilly by taking the active management of the sales department of the business. Mr. Lynn remained in that position until the fall of 1901, when he was sent east to open the New York branch and develop the eastern business. He remained here until July, 1906, when he returned to Indianapolis and assumed the position of sales manager. In January, 1907, he was made general manager of the business, retaining the position of sales manager, with W. A. Caperton, formerly manager of the New Orleans branch of the house, in charge of the traveling service. In the laboratory and on the road, including the branch houses, Mr. Lynn has under his direction more than 800 persons.

"Pa."  
"Well, what now?"  
"What's 'atavism'?"

"Atavism is why a descendant of an old family robs a bank."—*Cleveland Leader*.

Herbert Copeland, who has been making a study of Boston newshyos, writes of them in the *Transcript*. "The ordinary newshyos," he says, "does not earn so much as you think—25 cents a day being, I should say, the average, though of course some of the smarter ones make a good deal more. There are in Boston about five thousand newshyos, and of these three

thousand at least are under fourteen, the average age being twelve. No child under ten is allowed to sell at all. Yes, many of those little fellows that you see are ten years old and more, but circumstances and environment have stunted their growth—and then the Jewish is naturally a small statured race, also the Italian; and most of the newshyos are of these races."

The trouble with some troubled druggists is that if they have no troubles they will go to a great deal of trouble to make trouble for themselves by making trouble for other people.

The Maryland Workshop for the Blind, which was incorporated by an act of the last Legislature, has been opened in Baltimore. The object of the workshop is to give employment to the adult blind of the city who otherwise would be either beggars or live in despondent idleness. Certain industries which, it has been found, can be engaged in with profit by the blind, such as broom making, mattress making and chair caning, will be taken up.

T. W. Stanford, brother of the founder of the University of that name and a noted Australian spiritualist, has discovered that the Australian customs house will not recognize spook smugglers officially. Mr. Stanford, who is the head of the Spiritualists of Australia, a few years ago discovered and engaged a medium who claims that when in a trance she can cause matter to pass through matter by law of which only Spiritualists are cognizant. Recently a Melbourne Spiritualist newspaper printed a list of articles which Mr. Stanford's medium had materialized at a local seance. The customs officials read the list of articles and thereby discovering what dutiable materials had been delivered into Australia without paying duty levied on them under the tariff.

The officials applied to Mr. Stanford for payment of the duties, but Mr. Stanford claimed the articles were not dutiable, as they had not been imported in the ordinary sense of the word, but had been transported with the instantaneousness of thought from India. The customs officials were skeptical and reported the facts to their superiors, and all Australia is now anxiously awaiting the verdict. Among the wonderful things claimed to have been materialized and which are now exhibited at Mr. Stanford's spiritualistic museum are Assyrian and Babylonian manuscripts, live birds, snakes and certain other commercial articles which Australia does not permit

anybody to import without the payment of the prescribed tariff duties.

The North German Lloyd steamship Prinz Friedrich Wilhelm, in last week from Bremen, brought the first German mail that has been shipped under the reduced two cent rate to America. In all there were 1675 sacks, which for the season is a record-breaker. Usually at this period not more than half that quantity came over when the rate was five cents.

Rifle bullets that go through five inches of wood do not penetrate three inches of pasteboard. That is the result of some interesting firing tests by the Swedish naval authorities at the fortress of Karlskrona. The target used was prepared of millboard, against which fire from revolvers, rifles, carbines and machine guns was directed. The pasteboard, which was three inches in thickness, resisted completely the bullets fired from the small arms, but was perforated by the projectiles from the machine guns.

Pope Pius has nearly become a convert to automobilism—that is, he owns an auto, and is promising himself to take a ride in it "some day." Two automobiles have arrived at the Vatican as Jubilee gifts from foreign firms. Cardinal Merry

CHARLES J. LYNN,  
of Indianapolis, Ind.

del Val, the Papal Secretary of State, uses one of them every day, and the other is reserved for the use of his Holiness within the Vatican grounds.

But his Holiness hesitates to trust himself to a petrol-propelled vehicle. He had it brought around to his garden with the intention of taking a trial spin, but after examining the machine his Holiness smilingly said he would try it "another day," and took his constitutional airing on foot.

"Doctor," said the convalescent, smiling weakly, "you may send in your bill any day now."

"Tut, tut!" replied the M.D., silencing his patient with a wave of his hand. "You're not strong enough yet."—*Leslie's Weekly*.

A Calcutta firm buys drugs in foreign markets which are used in the preparation of a patent medicine which has an extensive sale in India. The firm has a department which converts the wooden cases in which the drugs are received from the United States and the United Kingdom into penholders. They have succeeded in making a penholder of such quality that the British Indian Government and the municipality have placed orders for this product.—*Daily Consular and Trade Reports*.

The holidays had been dry and bright and from daylight till dark the links had been covered with bareheaded youths and maids.

"All this sunshine," said a girl, "has changed the nature of my hair. It is straight, oily, heavy hair, but the sun has made it dry and crisp and slightly curly. Strange!"

"I returned from Africa with crisp, curly hair," said an engineer. "I went bareheaded there all winter in the brilliant sunshine. And as I watched my lank greasy locks dry and kink up I began to understand why the hatless natives working around me had such peculiar dry, tightly curled hair. The sun was the cause of course."—*Philadelphia Bulletin*.

It will soon be possible to take sight-seeing trips over Paris in a regular line of dirigible balloons. These balloons will be driven by 200 horse-power motors and carry cars of aluminum fitted after the style of a pleasure yacht. Fifteen passengers will be carried besides the crew of captain and two engineers. Two balloon sheds have already been erected by the company, one at Sarronville and another at Meaux. Others will soon be erected at Nancy, Orleans, Bordeaux, Toulouse and Pau. The first trips of the new balloon line will be around Paris to Versailles, Fontainebleau, Saint Germain, and will commence in May.

"Of course," said the economist, "there are good corporations and bad ones."

"Of course," answered Mr. Dustin Stax.

"Now, what is your idea of a bad corporation?"

"One that pays less than a 20 per cent dividend."—*Washington Star*.

The future of your business depends largely upon where you are going. There will be no prescriptions in heaven, but there may be a lively demand for ice-cold soda in the other place.

The *British Medical Journal* has taken the holiday season as a fitting time to warn the world of yet another danger which daily threatens flies. This time it is the toothbrush which is a menace. Its bristles have an unpleasant way of locating themselves in the appendix, which means trouble.

The *Medical Record* records that when a boy of two and a half years old came in a operation for appendicitis the other day in New York, and hours from a toothbrush were found in the diseased appendix. At St. Bartholomew's Hospital the physician in charge stated that bristles and hairs from toothbrushes are often found in the appendix of patients operated upon for appendicitis.

"But," he added, "there are other foreign substances which are more common, such as small orange pits or grape seeds. We not infrequently find tiny fragments of porcelain-like enamel. These are undoubtedly tiny chips from the enamel pots and pans which are used for cooking purposes in so many homes."

"The habit of inserting a lead pencil with the tongue

before writing is another dangerous practice, which may produce trouble, because fragments of the hard lead may be broken off unwittingly and swallowed."

Some druggists would be happier if they gave more thought to preserving a good figure in their wives and less to preserving a good figure in the bank.

The man who is always quarreling with his clerk would spat with the cat if he had neither clerk nor wife.

The danger of "meeting a friend" while on the way to a drug store is shown by the experience of a New York man as chronicled in the *Herald*. It appears that Miss Alfred Alston, wife of a civil engineer, who lives at 120 Simpson street, the Bronx, sent her husband to a drug store Friday night for a sponge and a bottle of vichy. Here is what he bought: Five pairs of inner soles, a bag of sea salt, five bottles of patent medicine, ten packages of pills, five packages of writing paper, three sponges, one hundred packages of breath perfume, a pair of scissors, two bottles of vichy and some other odds and ends.

In Harlem police court Alston explained to Magistrate Crane that he had met a friend on his way to the drug store. "But I got my wife the sponge and the vichy all right," he added.

"Well, take them right home to her, then," concluded the Court.

A whiskers strike is threatened at the Elysee in Paris, the official residence of President Fallieres, of France. Clean shaven faces are the rule for all male servants employed there, but the official bluejeans are rebelling against it. They wish to have the same privileges as the ordinary café waiter enjoys, and have petitioned the President for permission to grow mustaches, at least. If his reply is unfavorable there may be a strike—the method by which the café waiters forced the abolition of the shaving rule.

GUESS AGAIN.—As the debonair drug clerk stepped forward to wait on her she trained her guileless blue eyes upon him and said: "I wish you would give me a sponge bath, please."

The clerk was for a moment nonplussed, but at last he managed to say: "Do you prefer hot or cold water, Miss?"—*New York Herald*.

The arrival of the first postal automobile at Bagdad recently filled the minds of the natives with wonder and awe. The car carried the mails, hitherto borne on camels' backs, from Aleppo, a distance of 625 miles, in sixty hours. This can hardly be called a speed record, but when it is remembered that the roads are rough camel tracks leading through the deep sands of the Syrian desert and the stony plains of Mesopotamia the journey at the rate of little more than ten miles an hour appears quite a creditable performance.

Nothing is more remarkable than the spreading of the spirit of Turkish modern progress. The Moslems of those regions, hitherto steeped in the deepest fanaticism, now gladly entrust parcels and mixtures to this new ship of the desert.

A sign hung in a conspicuous place in a store in Lawrence: "Man is made of dust. Dust settles. Are you a man?"

As an instance of how thoroughly British law protects the interests of the public against powerful corporations, the decision of a London judge on an apparently trivial point in a railroad case is significant.

Fredrick Davis, a lawyer, sued the Great Western Railway Company for damage to his baggage. The railroad had conveyed his valise, containing a dress suit, a bottle of hair wash and two bottles of medicine. In transit the bottles were smashed and the suit damaged by their contents.

The railroad company's lawyer argued that such goods as hair wash and medicines could not be classed as a passenger's personal baggage. But the judge held that the articles came within the definition of passengers' baggage, remarking that railway travelers would be very astonished if told that such things did not come within that category. He awarded Mr. Davis 825 damages against the railroad company.

The mistakes of other people are generally funny—unless the "other people" happen to be our clerks.

## A black and white photograph of a large, ornate, domed structure, possibly a church or a large hall, with a large '190' visible on its facade. The structure is surrounded by a crowd of people, and there are various signs and structures in the foreground, including one that reads 'START THE NEW YEAR RIGHT TRADE AT THE WEST END PHARMACY'. The scene appears to be a public event or a fair.

The background was painted with distemper colors on joint paper and tacked to a Christmas display frame and netting. The hills and snow banks were made by filling the steps of shelving with excelsior and covering them with cheese cloth and book paper, the whole sprinkled with diamond dust to give the sparkling appearance of snow. The snow and frost clinging to the upright posts and to the trees and church spire were made by brushing on a solution of gum and starch. The sun was made by cutting a half circle in the background and covering it with orange-cream paper with the figures 1922 pasted on it.

Gold lettering of the size and located on the window as

suggested may also be used advantageously to give the name of any high grade specialty manufactured or sold by the druggist. For instance, "Opal Cream." To correct facial faults."

#### Daily Change Signs.

Upon a window of each of the stores of a prominent retail drug corporation has recently been painted in the center of the window glass the words: "Today's special." This is in two inch, dark green, block letters on one line. These words are surrounded by a scroll frame of lighter green and shaded. Below the lettering and yet framed within the general design is a clear glass space 18 x 6 inches. Each day there is pasted over this clear glass space a paper of corresponding size upon which is lettered in crimson the name and price of the day's specialty. Another druggist, who receives daily reports from the weather bureau, has a sign similar to the above, except that it carries the phrase "The weather today," and the space is so proportioned that it will permit of the daily mail card of the weather bureau being pasted within it.

#### Lettering for Window Signs.

All the lettering suggested in the foregoing may be done with the druggist's own hands if he will purchase and adjust the brilliant, concave, metallic sign letters that are in common use. In adjusting such letters it is well to bear in mind that they are held in place by suction, or, to be more exact, air pressure, as much as they are by the cement upon their edges. Care should therefore be taken to see that the cement is so distributed as to exclude all air, and in adjusting the letters sufficient pressure should be placed upon the back of each to expel a portion of the air from beneath.

#### A Changeable Letter Sign.

The sign hereinafter described has many uses and is peculiarly adapted for daily announcements or bulletins. Take a strong picture frame of proper size, say an inside measurement of 18 x 24 inches. Make a strong, well cleated back of smooth half-inch boards to fit loosely within the back of the frame. Cover the face of this board with two thicknesses of cotton flannel and in turn cover the cotton flannel with a dark, dull fabric, black velvet being preferable. In the back of the frame insert a number of strong screw hooks having flat, right-angled heads. Place these so that when they are turned their heads will come over the edge of the board and clamp the covered side close to the glass. Now purchase a goodly supply of one inch white enameled letters, such as are commonly used to fasten to window glass. You should have at least five each of the following letters: H, I, A, E, T, N, S, O, R; four each of D, W, F, L, C, M and V; three each of P, G and J, and two each of K, Q, B, Y, X and Z. Unless you are willing to make a pretty liberal investment it is well to purchase only capital letters.

Place the covered board upon the counter, back down. Upon the padded surface arrange the letters in such wording and position as may be desired. Next, carefully place the glass upon the arranged letters and then adjust the frame over that. Slightly raise each edge of the board so that the clamp hooks may be turned until the letters are pressed by the glass into the padded background sufficiently to permit the handling of the frame without the letters slipping. You now have an attractive portable sign. It is easily read because the white letters stand out in distinct relief, and at the same time the sign permits simple changes and endless combinations. While the initial cost may seem considerable, consideration of permanence and lack of waste prove that the sign is really inexpensive.

#### Changeable Cartoons.

A variation of the foregoing may be arranged so as to produce something which will cause much merriment and at the same time prove to be a good advertisement. Make the frame the same as that just described, but cover the board with dull white instead of black. Or the black pad may be covered temporarily with a sheet of white paper. Now comes the turn of your wife, daughter or son. From the comic supplements of the Sunday papers cut out a large number of the figures, such as Little Nemo, Flip, Buster, Tige, the Katzenjammer family, and so on. Arrange these upon the padded board in the most outlandish combinations that can be thought of. Or, of these can be made a border within which a card can be used to give the desired business announcement, in any order which strikes the fancy. You will be amused to

find the funny combinations that almost seem to arrange themselves.

#### Combination Case and Sign.

Another variation of the foregoing has been made thus: The frame and board were as described, except that a hole was cut through the center of the board, proportioned to the size and shape of the frame. For a frame in which the opening is 18 x 24 inches, the opening in the board should be about 9 x 12 inches. Take a light wooden box with inside dimensions of about 9 x 12 x 8 inches. Line it with brilliant red fabric which so fasten to the back of the frame that the opening in the box meets and matches the opening in the board, thus forming an alcove or recess. In using this outfit the letters are placed as previously described and within the lined box is shown the article or articles to which the lettering refers.

#### Paper and Whiting.

Attractive temporary signs for the window glass may be made according to the following suggestions: Suppose you wish to advertise a perfume. Cut from some woman's magazine a finely lithographed fashion plate of a female figure in costume. Trim closely to the outlines of the gown. Paste this picture to the inside window glass. Make a paint of whiting, water and dry color of such a consistency that will permit of the paint being spread evenly upon the glass without running. At first make the paint of a contrasting color to that of the predominating tone of the lithograph. If the woman's gown is light green make the paint pink. Spread the paint around and upon the back of the lithograph so as to make a suitable background. To one side of this paint upon the glass or fasten paper with the desired lettering. Around and back of this lettering also spread the pink paint, but as the painting extends away from the lithograph keep adding color until a deep tone is produced. All the paint should be spread in circles and swirls so as to give a cloud-like effect. A reversal of this color scheme may be used by starting with a deep tone and shading out through pink into white.

The artist may gradually thin down the paint so that the finishing strokes of the brush will leave it almost invisible against the glass, or a striking effect may be secured by giving a decided edge to the general design, as a broad stripe of vividly contrasting color, purple against pink, or orange against green. If the lettering is to be done with the water paint it is well to first outline the letters with a point of soap and then fill in, taking care to let each coat dry thoroughly before going over it or touching it with another coat.

Although work of this nature may be crude when viewed within the store, the view from without may be most pleasing, because, when seen through the glass, an opaline, blending effect is given.

### WILL ASK EVERY DRUGGIST IN STATE TO JOIN.

#### Traveling Men Will Conduct Organized Campaign to Increase Membership of Pennsylvania Ph.A.

PHILADELPHIA, Jan. 18.—The Traveling Men's Auxiliary of the Pennsylvania Pharmaceutical Association will soon begin a thorough campaign in the interest of increased membership of the parent organization. A list of the towns and cities of the State, wherever there is a drug store, will be sent to the salesmen who are members of the Auxiliary with the request that they specify the localities which they cover. Upon the receipt of this reply, a list of the druggists in these towns and cities who are not members will be sent them with the request that the salesmen solicit their membership. It has been declared that this method of personal solicitation will bring the issues of the association directly before practically every one of the 3300 retailers of the State and they will either join or give their reasons for not doing so. The latter will be tabulated and from time to time the question of joining will be laid before them.

With more than a thousand members in good standing, the Pennsylvania Ph.A. is probably the equal in strength of any in the United States. Since the forming of the Auxiliary in June of last year a marked impetus has been given to the membership and the interest, and President L. L. Walton and Secretary E. F. Heffner, of the State association, both declare that they expect the 1909 meeting in June at Bedford Springs to be a record-breaking one in every respect.

## Embalmed Advertising.

By Joel Blanc.

If you want to know what a drug club is good for, you should happen in at our Philadelphia club about teetotal and smoke time, after the midday feast and see some of the bunches that gather there.

One day there was a bunch of fellows distributed languorously over the reading room. There were Charlie, Tom, Billy and Harry, retailers; Jim, Walter and Dave, wholesalers, and Frank, Sam, Herman and Steve, manufacturers. Being a little of everything and not much of anything, I was the congregation, vox populi or anything you might choose to call me.

Frank, the manufacturer, took a trade journal from the round table, turned to an advertisement of his own and said: "This is an utter waste of money. You retailers never read the trade journal ads."

Of course Charlie was due to refute such a statement and, as you are probably aware, Charlie's fireworks generally sail low and hit something. He took a copy of the ERA from the table and running the leaves through his fingers, started the bombardment thus: "We retailers do read the advertisements. Look at these pages of high art and good meat, look at these ads, of soda fountains, drugs, chemicals, postals, store fixtures and dozens of other things. Have you the nerve to tell me that these advertisers, among them many of the largest and most successful concerns in the trade, are a lot of easy marks who let the publishers shake them down? Not never nor howsoever! These ads, pay the advertisers or they would not be here. Each division of the trade is posing as philanthropic soft goods for all the other divisions and it's time for all such Skibo Andy chatter to stop."

"But," retorted Frank, "my salesmen tell me that they know druggists who throw their journals into the waste box without even tearing off the wrapper."

"Huh!" ejaculated Charlie. "There are some fellows who go to church regularly and sleep all the time they are there. We retailers are not chosen from any particular grade of humanity and what your salesmen tell you is true, but you can bet a bolus that the 'never-have-time-to-read' retailers are getting beautifully few. I'll tell you why: While most druggists have awakened to the fact that they should be pharmacists, it has also been constantly dinned into them that they must be business men or petrified flounders. While the N.E. propaganda is a good thing and we are going to push it along, there are a few who are daffy enough to believe that ethics and business won't mix; but they are dead ones and all the ethics in the world won't resurrect them. For more than ten years the live druggists have listened to an alarm clock every minute of the day. They know that if they want to live in the same world with department stores, cutters and mail-order houses they must keep their snuff-boxes open every minute. They have learned that they must have what the public demands, ethics or no ethics. Their opened eyes show them that their trade journals, in both news and advertising pages, afford the only general means of keeping posted on what their rivals are doing. The progressive druggists of the country are reading their journals, ads. and all."

"I believe," said Harry, "that what Charlie says is true. At the same time, I am willing to concede that there may be considerable trade journal advertising that does not pay, but for this the advertiser is alone to blame. As I see it, the advertisers have not kept pace with the retailers in the advancement of ideas and practices. I know of nothing in the drug world which shows so little progress as the preparation of advertising copy for trade journals. How can you expect advertisements to pay if they do not tell us what we want to know; if they do not interest us? Some trade advertisers use almost the same copy in the drug journals that they use in the daily lay press. All this 'specdy cure', 'pleasant to take', 'small dose' and other business which you tell the public, does not interest us. You seem to assume that we are consumers of all the things that we sell. Aside from the materials actually used in prescription compounding and counter drugs, nearly all that the live druggist sells is, in the concrete, to him, merely merchandise. The enterprising druggist has no time to think of it otherwise. If the advertisement is that of a well-known house we assume that the goods are straight. If the house is unknown to us we have to take some risk, but with

the present stringent laws and the open forum of our journals it is dangerous to fool us even once. As merchants buying and selling merchandise the things that chiefly interest us are cost, profit and demand. Is it any wonder that space filled with battered newspaper plates does not pay? Use the space to tell us about list prices and discounts, gratis goods, advertising offers, return privileges and other sale guarantees and the worse than wasted space will become a true advertisement."

Charlie butted in again. "There is another thing that kills some ads. and makes us retailers hot. I'll tell you why. We are tired of being told that certain things are 'necessities', that we 'must have them', that 'doctors will demand them', or that we must accept an offer to keep a competitor from getting it. Jumping Jimble-ute! Haven't the manufacturers found out that we are running our stores ourselves for ourselves? Do they suppose that these veiled threats are going to scare us into buying things that the public never heard of and never may hear of, or that we can be bulldozed into buying a pound of a new prescription specialty and then keep fifteen ounces of it on our shelves until the crack of doom? As Harry says, 'It's cost and profit that counts.' And say—do you suppose that I am going to go on buying goods by the dozen at list price after they commence to look good to me in gross lots? If you don't tell me about quantity discounts I assume that you have none, and I go to church with the fellow who has and put my money in his plate. Do you suppose that a page of therapeutic six-lined words about a new prescription specialty or a picture of a pretty tin box with the legend \$2.50 per dozen. All 'bull's', is going to induce us to tie up our good 'mum' in the stuff? Talk about retailers being daffy on ethics! why some pharmaceutical advertisers are ethical lunatics."

"And something equally worthless is the practical dead copy that fills some spaces in the journals," said Billy. "I have several advertisements of that class in mind. When the copy was new it was good, it described the goods, gave prices and so on. But the copy has stood in some journals for more than a year without so much as a change of a single letter. To the retailers such ads. have become mere optical illusions, and their space might as well be left clear white or made solid black. These ads. remind me of the small boy who came into the house with what he called a 'perfectly good' dead cat. Haven't these houses had a new article or a new piece of display matter, new price, new discount, new offer or a new thought of any sort for one solid year? The retailer who thinks of these embalmed ads. at all can only think of them as being evidence of shiftlessness, degeneracy and irresponsibility."

"But," said Steve, "there are many of us manufacturers who are not in a position to employ advertising experts and fill display space."

Herman quickly rejoined: "I am one of that class, but I make journal advertising pay. Thousands of druggists use the journals as trade directories or catalogues. I use the classified column only, but I change copy frequently and make offers that prompt retailers to write to me so that I can prove advertising results. I have made small ads. pay and they are placing me in a position which will enable me to shortly buy and use display space and I'll bet I will make that pay also."

"What of us? Is it possible that we poor wholesalers are going to escape the criticisms of you retailers for once?" asked Dave.

"Why, you jobbers are the worst of the whole caboodle," said Charlie. "Your ads. in any form are as rare as chilblains on Old Nick. Once, however, I read the following: 'Deadwood & Stoneage, Wholesale Druggists, Philadelphia, Ill. Established 1826.' No, it was not a tombstone. Those words and figures, nothing more, occupied a half page in a drug journal. Whush! Druggists are not interested in the obituaries of unburied numskis. Say, Dave, I suppose you think you advertise? Whenever your house mails me a statement or letter you enclose about forty-seven rainbow slips of paper that fly all over the store when the envelope is opened and accomplish nothing except to scare the cat and make the boy who picks them up shatter the anti-cuss commandment. Suppose you had a regular page in the ERA and used it as a weekly bulletin to announce job lots, changes in prices, new discounts, combination offers, arrival of new goods and real store news in general? Say, we fellows would soon forget that it was an ad. because it would become, for us, an eagerly

read news page. "You can bet your thin model time-box that it would pay you."

Sam arose, threw the remnant of his cigar in the urn and said: "Boys, I have learned much from this little experience meeting. I am going back to give my advertising man a lecture; he needs it. I wish there were more drug clubs. What all the trade most needs is more get-togetherness."

"If the advertising men would get their journal copy from the same brain bottle that the copy for the laity comes from, and all hands, wholesale, retail and manufacturing, would read the papers, every trade journal would become a continental drug club and profitable get-togetherness would be an accomplished fact," was Charlie's parting shot.

#### "Dental Pharmacy" Discussed at Prescott Club.

ANN ARBOR, Mich., Jan. 9.—Dean Hoff, of the Dental Department of the University of Michigan, delivered an address on the subject of "Dental Pharmacy" at the last regular meeting of the Prescott Club. Special attention was paid to the care of the teeth and gums and Dean Hoff made the statement that "if the pharmacist could obtain some wash which would prevent dental caries the dentists would be driven out of business." He asserted, moreover, that the teeth were ruined by many of the dentrifices and brushes on the market and it was the druggists' problem and duty to not only supply and manufacture good dental materials but to educate the people in their use. A very interesting demonstration was given the members of the club of the proper method of brushing the teeth: a rotary method being preferable as the interstices between the teeth were thus more readily reached.

Refreshments followed Dean Hoff's address, after which two papers were read, one on "Current Events," by E. J. Kennedy, Jr., and one on "Scientific Progress," by Emil Schraegenheim. The two subjects above are intended to cover all the news of a pharmaceutical nature of the past month and will be presented each meeting by two different members of the organization. Dr. Schlottbeek, in connection with the topics developed during the evening, discussed the British Pharmacy Law and the probability of a law being passed in Michigan to the effect that every proprietor of a drug store be a graduate of a reputable college of pharmacy and a registered pharmacist. The next meeting will be held on February 12, when Prof. Walter H. Blome, of Detroit, will deliver an address. Preceding the regular programme of the evening, a short business session will be held, at which officers will be elected for the next semester.

#### Colorado Ph.A. to Meet At Estes Park.

The next annual meeting of The Colorado Pharmaceutical Association will be held in Estes Park, June 23-25, arrangements having been made for a special train out of Denver on Tuesday morning, June 22, to Loveland, and there automobiles will be in waiting to transport the entire delegation to the Park in time for lunch. The following committee appointed for 1909 by President Shaw have been announced by Secretary Anderson:

Education, S. B. Sturtevant, Grand Junction; L. T. Boutwell, Denver; W. L. Shockey, Cripple Creek. Trade interests, George W. Card, Denver; George Fonda, Boulder; A. H. Seeley, Canon City. Papers and Queries, Charles M. Ford, Denver; A. W. Scott, Fort Collins; H. B. Se Cheverell, Denver. Deceased Members, John Anglum, S. T. Kostich, Arthur Wallbrach, Denver. Advertisers, C. D. Barnes, Glenwood Springs; C. J. Clayton, Willbur F. Cannon, Denver. Legislation, S. L. Bresler, C. M. Ford, Robert McKenzie, H. P. McCrea, Frank J. Lord, Denver. Membership, A. J. Ward, L. C. Robertson, W. J. Walters, L. N. De Payne, R. Y. Chedister, Walter Clarke, Frank Austin, Boyd Campbell, A. O. Taylor, A. Lamb, Ed. Hellstrom, George Tiffany, C. D. Smith, Charles Donnan, J. C. James, L. Seefeld, Dr. Smith Charles Bieser. Entertainment, F. M. Hall, W. A. Hoover, George Elliott, W. Brown, Jr., John Thebus, Chris Dix, Sol. Arkush, H. C. Stapleton, J. H. Milner, Archie Austin, Charles Bieser, L. B. Bridgman, Robert Davis, Harry Aller, Carl Richter, W. L. Davis, T. J. Shiel, Dodge Jewaway, William Thebus, Transportation, A. W. Clark, Denver; Fred Ewing, Glenwood Springs; Frank B. Angell, Denver.

An alcoholic breath is indubitably poor capital for a perfume salesman.

## How the Stationery Department Grew.

By Emma Gary Wallace.

Two brand new silent salesmen had just been moved into place, and the Apothecary thrust his hands deep into his pockets and stood back against the cigar case to admire them. They were beauties, there was no mistake about it.

"What shall we fill them with first?" he inquired somewhat thoughtfully of Madam Apothecary, who likewise stood admiringly by.

Madam laughed, and it was as if somewhere near, golden sunshine had glinted on rippling waters. "Why," she replied energetically, "I should not have any first, second or third about it.

I should choose one as the permanent location of one class of goods and teach customers to expect to find an assortment of those goods there, and the other case should be the resting place of a different class of articles which should likewise be constantly 'At Home.' Of course if experience or the development of the business proves that a change is necessary, or a mistake has been made in the original arrangement, that is different."

"But how about variety, and attracting attention to new goods, and not getting into ruts?" inquired the Apothecary, with an indignant smile.

"The easiest thing in the world," Madam returned airily; "get your variety by means of special arrangements in each department and by window advertising. Now I got that tip from Snow and Frost's department store. Today their hosiery department may be in the front basement and a week from today it may be fourth-floor back. When one is seeking a much needed supply of foot coverings in a great hurry it is annoying to be confronted by a counter of tin dippers, or an enticing assortment of mousetraps. Their departments circulate like a traveling library. At Greetum's across the way there is a fixed system, and law and order reign. One can run in there in the dark, so to speak, and put their hand on just what is wanted without chasing here and there according to the misdirections of those who should know. It is such a comfort to shop at a place like Greetum's. If there is a change, the reason and the improvement are at once apparent."

The Apothecary began to look interested. "There may be something in that," he acknowledged, "although we do business in a much more limited space, still the same reasoning seems to apply. Now suppose you take one of these cases and assume full charge of its arrangement, stock and advertising, and I will take the other, and we will make ten fixtures that folks will look for and be able to place in mind instantly, when a want of that kind comes up."

"Good," declared Madam, "we will each take account of our original stock and at the end of three months compare net and percentage profits. It may sound vainglorious, yet notwithstanding, I humbly petition the court to let me have for my stock in trade whatever you decide to be your least paying line of goods at the present time."

The Apothecary laughed doubtfully. "Relieve in toning up the system of the feeble, do you? All right, just as you say, but it does seem a pity to give up that handsome case to stationery. For some reason or other our trade on that is unprofitably light. The packages get soiled and have to be sold below cost to get rid of them. Aside from a most uncertain holiday spark, it is very uninteresting stock."

Madam's eyes sparkled. "To your scientific mind, no doubt that is so, but to my benighted one it is a branch capable of great commercial possibilities. Why it is simply fine."

Madam's enthusiasm was kindled. The Apothecary sighed. Maybe he had been rash, yet she usually made good. For days she was busy and happy. The paper stock on hand was all taken into a side room, sorted out, and freshened up where

possible. The old method of storing had been effective in two particulars, first in keeping the goods carefully out of sight and second in permitting them to become dusty and soiled. Carefully selected reinforcements of all salable lines were purchased, and some new ones added as well. Arrangements were made with an engraving house to have monograms, crests, cards, invitations or announcements executed with skill and despatch. Hitherto the local jeweler had taken a few orders for visiting cards, and a none-too-convenient printing office had done part of the invitation work in an indifferent manner, and the crest and monogram work had gone begging.

#### Preserving the Freshness of the Samples.

Samples of the different styles of work, type, and script were neatly done in passepartout to preserve their freshness. Madam volunteered no information and the Apothecary began to sit up and take notice. On one of the nicest grades of box-paper, the store trade-mark—a mortar and pestle enclosed in a broken laurel wreath—was embossed in gold and beneath it ran this legend:

"Dear Friend: In the past you have been discriminating in your selection of stationery, realizing that style and quality were of importance.

"Unconsciously, we judge the persons whom we see by their appearance and speech, and we are still more deeply impressed concerning those whom we do not see by the appearance and style of their communications. This latter impression depends in no small degree upon the tone and finish of the stationery used.

"You are constantly using desk supplies and it will not be long before you will have occasion to replenish your stock. May we have the pleasure of showing you what we have to offer in this line? We do not ask you to buy, but having taken such pains with the department and the completeness of every detail, we feel a pardonable pride in having you see it.

"Each lady calling upon us during the first week in February will be presented with a dainty souvenir. All are welcome. Yours for satisfactory service in every department, "The Wakem Drug Company."

These letters were mailed in envelopes to match and timed to reach their destination on the first mail of the first Monday in February.

Wakem's had two show windows. One was always kept for regular drug store advertising, while the other was frequently used to advertise side lines. On the morning in question that window was a work of art. It attracted crowds and people passing in the cars craned their necks to see what the attraction was.

The cold marble base of the window was covered with a rug of soft, rich tones. This was temporarily purloined from the Apothecary's Den at home. A mahogany desk with spindle legs was equipped with everything to make a writer happy. On the top of the desk a crystal clock ticked minutes away, and in a tall, slender-stemmed vase a few Beauty roses nodded. Madam had hesitated between the desk and a small library table, but she had the desk, so she used that.

#### Fair Damsel Only Wax. But Very Attractive.

From a downtown firm which dealt in wax figures a fair damsel had been rented. She was a pink-cheeked lady with melting blue eyes and wavy auburn hair, and Madam had dressed her in the kimono Brother Jim had sent her from Tokio for Christmas. A kimono was so convenient as to fit, and admirably adapted to conceal any joint defects in the waxen lady's anatomy. This particular kimono was cherry-red taffeta, heavily embroidered with pinky-white cherry blossoms. It opened courtly in front to reveal tiny pink stockinged feet, slipped in open straw sandals. Madam said that a Persian pattern cheesecloth kimono trimmed with blue sateen bands and beaded slipper would have given just as good an effect, but she felt that she was fortunate in having the real Japanese outfit.

My lady sat at her desk utterly oblivious of the fact that the letter she held in each hand could be plainly read by the curious public which thronged in front of the plate glass.

One letter was written in a large, heavy manish hand on a white plated paper. It read:

"Dearest Lucia: I have tried to ask you to be my wife for months, but not until I purchased this beautiful paper at

Wakem's could I put my courage to the test. Will you be mine? Yours in anxiety, Jim."

The other letter was evidently the answer. It was on pearl gray paper, and showed the lady in question to be one capable of making terms. It was short and to the point:

"My Dear Jim: I will gladly consent to be your wife, on condition that we shall always deal at Wakem's. Lucia."

On the other side of the window and supposedly in the distance, by means of a liberal use of Home Sweet Home box-paper, a small cottage was built, and enclosed with a fence of ink bottles, two tall bottles forming the pillars of the open gateway. Above the gateway a horseshoe magnet was placed, which was covered with all sorts of pen points. Some hung by the merest point and others hugged the magnet closely. On the window base next to the glass a narrow band of blotting paper bore the words: "All are welcome. Come in." The letters were formed out of fountain pens and broad elastic bands.

The window space was not crowded. It bore no amateurish marks. It attracted and held attention and told its story of stationery supplies. The home and the stock yielded all the fittings except the fair Lucia herself, who was obtained at a nominal rental.

#### Sale of Candles Covers Cost of Candlestick.

Many accepted the invitation and to each lady was presented a small aluminum desk candlestick, free of any advertising. They were purchased in quantities and the cost was trifling. Little colored candles and boxes of sealing wax were on sale and as the candlestick was of no practical use without them, enough of these were sold to cover the cost of the gifts, the candles and the wax, and leave a profit besides. This, too, in spite of the fact that many took the little candlestick for a mantle ornament only.

Madam herself was constantly in charge and her enthusiasm was contagious. She seemed to know intuitively what suited each, and it was rare indeed when a sale of some kind was not made.

The elderly lady with the rich furs was fitted out with mourning stationery that exactly suited her. The bachelor girl was supplied with a quantity of pound paper bearing her name and address in neatly printed, raised dark-blue letters. The doctors found right at hand the business forms which they had always been troubled to find. The society woman and the society bud came in for rich or dainty stationery, and it was generally embossed. An exclusive trade was established with women who desire always to use a certain style or shade of paper.

#### Cherry Smiles and Bits of Good Advice.

The purchasers of less expensive findings were not forgotten, for ruled and unruled papers of inexpensive but attractive finish were in stock, and these customers received just as courteous attention as the more favored ones of fortune. There was the same cherry smile and interested service for each. The case was kept constantly in order and it was never crowded or confused. Handsome packages were not marked on the bottom of the box but tagged.

Madam was surprised at the number of birth and death announcement card orders that seemed to come naturally from customers who were in the store for sick room supplies. She wondered the idea had not occurred to her before.

Madam was happy. Why shouldn't she be? And when the Apothecary himself praised her efforts and the results so unequivocally, declaring he had seen more strangers in his store in the week than he had seen in two years, and asked her to take charge of the other silent salesman, too, she laughed another one of those happy, rippling laughs—although her eyes did look suspiciously moist—and—but there, that is another story.

#### Troy Pharmacists Elect Officers.

TROY, N. Y., Jan. 18.—The Pharmaceutical Association of Troy and vicinity has elected the following officers: President, John J. Healy; first vice-president, Dr. E. L. Shaw; second vice-president, William E. Gray; secretary and treasurer, Lorenzo E. Strecker. A committee consisting of Ezra Stillman, Charles G. Straub, Robert Mouchief, Lorenzo E. Strecker and John J. Healy was appointed to arrange for the annual banquet to be held in February.

## Original and Selected

### WHAT PERCENTAGE OF PHARMACEUTICAL GRADUATES SHOULD FAIL BEFORE OUR STATE EXAMINING BOARDS?

By M. Clayton Thrush, Ph.M., M.D., Philadelphia.

Before the new era in pharmaceutical legislation which requires an applicant to be a graduate of a reputable college of pharmacy before he is eligible to take the examination for registered pharmacist, it was not surprising to see a large percentage of failures.

All the leading colleges of pharmacy at present require a certain preliminary education, usually equivalent to at least one year in a high school of the first grade, before a student can proceed with a pharmaceutical course, and it is an open question as to whether these requirements are sufficiently high, for how else can we account for the large percentage of failures before our State examining boards?

Up until the new law went into effect in certain States, any person who was twenty-one years of age and had four years' practical drug store experience, was eligible for an examination; and a large percentage, probably 50 per cent of the candidates, were not college graduates; in fact, the majority never attended any pharmaceutical lectures, but simply studied some good text-book on the practice of pharmacy, and often a quiz compend also, and then took the examination. If they failed, they would continue their studies, and then try again at the next meeting of the board, repeating the trials in this manner until they were successful. Probably at times the board became tired of seeing them appear and let them through to get rid of them.

I know of a student who spent seven years in the senior class at a reputable college of pharmacy, and at last he was allowed to graduate. Several members of the faculty remarked that they strained a few points in his rating to pass him, as they were tired of seeing him around.

Some States until recently, did not even require four years' experience, nor did they require a certain age limit, so that an applicant was eligible at any time. Most States at present do not require an applicant to be a college graduate, nor do they require a standard of preliminary education, merely four years' experience and that the applicant shall be twenty-one years of age. The author passed the West Virginia board as a registered pharmacist when seventeen years of age, having had but little over two years' drug store experience and before entering a college of pharmacy.

To illustrate this point, let us estimate the percentage of failures before the present standard of requiring applicants to be pharmaceutical graduates to be about 60 per cent. This new requirement, then, should certainly reduce the percentage of failures to at least 10 per cent, as we should remember that before with 60 per cent of failures about one-half of the applicants were non-graduates, hence we would naturally suppose that nine-tenths of the failures were from this source. Let us investigate and see:

The following figures represent the percentage of failures before the Pennsylvania State Board for the grade of registered pharmacist at several respective examinations (college graduates only being eligible) held recently: August, 1907, 78 per cent failed; November, 1907, 79 per cent failed; February, 1908, 73 per cent failed; November, 1908, 55 per cent failed. A similar percentage applies to the failures for qualified assistants.

These figures prove conclusively two things. 1. That the

percentage of failures is much larger than it should be, especially when it is considered that all applicants are graduates of reputable colleges of pharmacy. 2. The great variation in the percentage of failures at different examinations. This latter condition is partly due to the character of the questions, as some question sheets are decidedly more difficult than others.

Now let us compare these results with those of the Pennsylvania State Medical Board covering the same period of time, and note the difference. June, 1907, failures, 10.7 per cent; June, 1908, failures, 8.37 per cent. It is a matter of no little pride to know that but 3.8 per cent of these failures in this last examination are credited to the graduates of the colleges in Pennsylvania, representing 321 candidates, while 4.57 per cent of the failures occurred among the remaining seventy-four candidates who represent various colleges throughout the United States and foreign countries. When we consider that medicine is a far more complex and intricate subject, covering a wider field of study, this disparity in favor of medicine is still more remarkable.

Surely these figures prove convincingly that there is a cause somewhere for this condition and what applies here in Pennsylvania holds equally good in the other States, as an investigation has proven. It proves that either the colleges of pharmacy do not give their students a satisfactory course or the State Board is deficient either in its methods of examining candidates for licensure or in the character of the questions asked. Such a large percentage of failures reflects upon the pharmaceutical colleges which furnish these candidates, and I know that the schools do not deserve this criticism, at least not all of them.

However, to prove this point, an investigation was made of one of these examination reports and the number of candidates from each Pennsylvania school was noted with the failure percentages of each, with the following result: The three Pennsylvania schools each furnished approximately the same number of candidates, differing only in one, but the failure percentage from two was exactly the same, 43 per cent, showing that their courses are about equal, while that from the third showed 70½ per cent. This was a decided variation and it proves that the course in this school was rather inadequate and should be improved. Since this report, a new pharmaceutical school has become more prominent, but this was not considered in this investigation.

If any one investigates the curriculum of any of our schools of pharmacy located in Pennsylvania he will soon be convinced that the course is systematic and thorough, and it is presented by an excellent faculty of capable instructors, so that I do not feel that the fault lies entirely at the doors of the schools. When we consider that a medical course represents a more difficult and wider scope of study, and the failures are only from one-fifth to one-eighth as many, surely there must be some other reason for this disparity other than a comparison of the mental capacity of the students pursuing courses in medicine and pharmacy. It is true that the preliminary educational standard in medicine is higher than in pharmacy, but the course is more difficult, hence this would counterbalance any tendency towards deviation in results. I would suggest that the colleges of pharmacy raise their preliminary educational standard a little nearer to that of medicine, as no one can make much success in either science, if his preliminary education has been deficient. Therefore the fault must lie largely with the State board, and there are several factors that have considerable bearing here. One of these is that too many questions are asked for the average student to answer in the time allotted, as only a few can write and think sufficiently rapid. Another is the character of the questions. Some of the questions asked are not only impracticable but of no value in determining a candidate's fitness for licensure. State board questions should be plain, practical, and common sense questions relating to the important principles which constitute the science of pharmacy, and not irrele-

M. CLAYTON THRUSH, M.D., Ph.M.,  
of Philadelphia.

is complete (use a wooden spoon or a piece of thin pine). The end comes suddenly, a thick, jelly-like mass forming; have ready to use at this point the potassium carbonate dissolved in four fluid ounces of water, add it to the soap, continue a gentle heat, stir until the paste of jelly is uniformly smooth and creamy, incorporate the oils and allow to cool, when it is ready for use. White of eggs may be incorporated, if desired, or a tar shampoo may be made by adding one fluid dram of oil of tar instead of the perfume.

#### Greaseless Massage Cream.

(A. L. B.)—Here are three formulas which have been published under the above title:

(1)

Stearic acid, pure	240 grains.
Sodium carbonate	155 grains.
Powdered borax	30 grains.
Glycerin	1 fl. ounce.
Water	8 fl. ounces.

Mix all the ingredients together and heat them on a water bath until effervescence ceases. Remove the mixture from the heat and stir at intervals until it begins to stiffen. Then add 20 drops of oil of ylang ylang, 5 grains of heliotropin and 4 to 5 drops of oil of rose dissolved in one fluid ounce of alcohol. Beat this up two or three times in volumes. Sometimes on solidifying it becomes rather hard and does not seem smooth, but a second vigorous beating renders it fluffy and creamy. It is stated that several modifications of the formula may be made. Thus, an ounce of glycerite of starch may be used in place of the glycerin or there may be added cacao butter, mucilage of quince seed, tragacanth, or agar-agar. An emulsifying machine can be used to advantage in making the cream, since everything depends upon the beating.

(2)

Casein, dried	2 ounces.
Water	4 fl. ounces.
Glycerin	1 fl. ounce.
Powdered borax	2 drams.
Linoline	1½ ounces.
Oil of bergamot	2 fl. drams.
Oil of bitter almond	20 drops.
Solution of carbamide	q. s.

Mix the casein, water, glycerin and borax on a water bath until a uniform, non-gritty, jelly-like mass is obtained; allow to cool, until it begins to stiffen, place in the mortar with lanolin, heat and work until uniformly smooth and thoroughly mixed, and then incorporate the oils and tint to a flesh color.

(2)

Powdered borax	2 ounces.
Powdered boric acid	3 ounces.
Witch hazel, distilled extract	1 fl. ounce.
Powdered alum	3 ounces.
Milk	1 gallon.
Carbolic acid	1 dram.
Red color	1 dram.

Rub the powders together until lumps form, add the milk, together with the witch hazel, carbolic acid and color; mix thoroughly, place all in a suitable vessel and heat over a slow fire until the milk is curdled (do not scold or boil); transfer to a cheese-cloth strainer and allow to drain for several hours and then add the perfume. It sometimes requires more than three ounces of alum to separate all the casein.

#### Sodium Benzoate.

(H. B. A.)—"Kindly inform me through the columns of the Era if sodium benzoate is a coal tar product. If so, how is it obtained?"

Strictly speaking, sodium benzoate is not a coal tar product in the sense that the latter phrase is usually employed. Some explanation is necessary to make this statement clear. Sodium benzoate, as is well known, is a sodium salt of benzoic acid and is usually made by the interaction of sodium carbonate or sodium bicarbonate and benzoic acid. The latter substance is defined by the U. S. Pharmacopoeia as "an organic acid, obtained from benzoin by sublimation, or prepared artificially." As "prepared artificially" it is manufactured chiefly from toluol; but also from hippuric acid and from naphthalin. This artificial benzoic acid is generally pure, chemically, but differs from pure natural benzoic acid by being more compact and odorless. Natural benzoic acid obtained

from benzoin by sublimation is very soft and bulky and is fragrant. Benzoic acid prepared from benzoin by the wet process is, however, scarcely fragrant. The agreeable odor of sublimed benzoic acid seems to be due to ethyl benzoate, or to some volatile oil, or both, existing in the resin, and accompanying the acid when sublimed. The fragrant benzoic acid prepared from benzoin by sublimation is the only kind prescribed in several pharmacopoeias. In the trade natural benzoic acid is styled as "English" and the artificial as "German benzoic acid."

Toluol, referred to above, and also known as toluene,  $C_6H_5CH_3$ , forms the principal portion of coal tar from which it is obtained by careful distillation. Toluol is also obtained by careful distillation. Toluol is also obtained by the dry distillation of tolu balsam. It is quite similar in its properties to benzene and is employed for the production of nitrotoluene, toluidine, benzyl chloride, benzal chloride and benzaldehyde, the base of a valuable series of green colors. Toluol may be directly oxidized to benzoic acid. Thus:

Toluol, Oxygen. Benzoic acid, Water.

Having the benzoic acid, the sodium salt may be manufactured as follows:

Benzoic acid	40 parts.
Sodium bicarbonate	28 parts.
Boiling water	80 parts.

Mix the benzoic acid with the hot water, stir well, neutralize perfectly by adding the sodium bicarbonate, being careful to observe the reaction on litmus paper after effervescence has ceased. Filter. Evaporate 55 parts; remove from it the source of heat and stir until cold. During the evaporation it is necessary to scrape down the benzoate from the sides of the capsule. The following is the equation for the reaction:

For further particulars we must refer you to the dispensaries and other works of reference.

#### Cheap Bay Rum.

(R. S.)—The formulas for bay rum are as numerous and varied as the compilers of formularies could possibly make them. The imported article coming from the West Indies is made by dissolving freshly made oil of bay in white rum, while the product known under the same name in the U. S. Pharmacopoeia of 1890 and which now appears in the appendix of the present edition of the National Formulary, is a solution of three oils in alcohol and water as follows:

Oil of Myrcia	½ fl. ounce.
Oil of orange peel	15 minims.
Oil of pimento	15 minims.
Alcohol	50 fl. ounces.
Water, a sufficient quantity to make	64 fl. ounces.

Mix the oils with the alcohol and gradually add water until the solution measures 64 fluid ounces. Set the mixture aside in a well-stoppered bottle for eight days and then filter through paper in a well-covered funnel.

Here are three formulas from the Era Formulary:

(1)

Oil of bay	4 fl. drams.
Jamaica rum	8 fl. ounces.
Water	4½ pints.
Stronger alcohol	3 pints.
Filter through magnesia and charcoal, if necessary.	

(2)

Alcohol	5 ounces.
Oil of bay	40 drops.
Oil of mace	1 grain.
Oil of orange	20 drops.
Jamaica rum	1 ounce.
Water enough to make	16 ounces.
Digest two or three weeks and filter through magnesia.	

(3)

Oil of bay	6 fl. drams.
Oil of pimento	1 fl. dram.
Oil of orange peel	1 fl. dram.
Tincture of orange peel	½ ounce.
White castile soap, U.S.P.	4 drams.
Cologne spirit	12 pints.
Water	9 pints.
Formula 3 has been published as "Barber's Bay Rum."	

## PERSONAL MENTION

—A. B. CARTER, of Valley Falls, Kan., visited old friends recently in Lawrence.

—M. T. VAN RENSSLAER, of Mechanicsville, N. Y., was in Saratoga Springs recently on a business trip.

—MARION CRAIG, representing Sharp & Dohme, was a recent visitor to the drug trade in Jacksonville, Fla.

—DE WITT QUINN, of Shelby, N. C., has become the pharmacist for the Cleveland Drug Company, of that town.

—HIRSH MERRITT, of Theodore Merritt's Sons, Newburg, N. Y., visited several friends in New York a few days ago.

—WILLIAM POWELL, formerly employed at the Elisha Pharmacy at Fort Atkinson, Wis., is now located in Milwaukee.

—A. T. VAN NATTA, of the Van Natta Drug Company, St. Joseph, Mo., has returned from a visit to friends in Holton, Kan.

—E. C. HUNTER, of the Lilly Kansas City (Mo.) sales force, visited the Lilly laboratories in Indianapolis holiday week.

—CHARLES GIBSON, president of Walker & Gibson, Albany, N. Y., called upon friends in the New York wholesale trade a week ago.

—E. O. NORTE, Red Lilly representative for Cleveland, spent a week recently in Indianapolis visiting the home office of his house.

—HARRY THORNTON, of the Boston branch of Parke, Davis & Co., called upon friends in the New York branch of the firm last Tuesday.

—JAMES E. BARTLETT, manager of the Chicago branch of Parke, Davis & Co., was a caller in New York City in the early part of the week.

—A. T. MITTEN, of Henry Adams & Co., Amherst, Mass., while on a recent pleasure trip to Virginia succeeded in shooting some wild turkeys.

—D. ROBARAVI has been assigned to cover several sections in Massachusetts for Parke, Davis & Co. and will enter upon his new duties on January 25.

—E. W. HUGHES, who has been with Duncan & Co., has resigned to take charge of the J. E. Hughes drug store at Grenada, Miss., for his father.

—DAN ANDERSON, of Saskatchewan, Canada, was a recent visitor to W. W. Hatch, of Goshen, Ind., where he was formerly engaged in the drug business.

—R. E. MILLER, head of the Owl Drug Company, of San Francisco, has returned from a business trip to Los Angeles, where the company has a branch.

—C. G. MAYNARD will start traveling for Parke, Davis & Co. the latter part of this month. His territory will be in central and northern New York State.

—W. B. YOUNG, president of the Lee & Osgood Co., Norwich, Conn., was a visitor in New York a few days ago, calling upon friends in the wholesale trade.

—CHARLES W. SNOW, president of C. W. Snow & Co., Syracuse, N. Y., was a visitor in New York City a week ago, calling upon friends in the wholesale trade.

—JULIUS LINDBERG was in Canton, S. D., recently on his return from Jackson, Minn., where he visited relatives, to Belydvere, where he conducts a pharmacy.

—J. ELMER CUNNINGHAM, until recently of Maplewood, Mass., where he conducted a retail pharmacy for over ten years, is now traveling for Sharp & Dohme in Maine.

—C. E. RANSOM, who sells the Red Lilly pharmaceutical line in Fort Smith and adjacent territory, is back at work after a week spent in Indianapolis visiting the home office.

—JOHN MERCER, for several years pharmacist with the D. B. Perry Pharmacy, Bay City, Mich., has resigned his position and gone to Flint. Frank Harris has succeeded him.

—JEDSON B. TODD, of Ithaca, retiring president of the New York State Board of Pharmacy, and wife have gone to Florida to remain until April to rest and recuperate from recent illness.

—WALTER L. GRIFFIN, of Beaumont, Texas, is back on his territory more enthusiastic than ever for the Red Lilly line, after a week's visit to the laboratories and home office at Indianapolis.

—RALPH R. ZANE, of San Francisco, general western representative for Eli Lilly & Co., has returned to his desk from

an extended trip through the West. Mr. Zane spent holiday week visiting the home office and laboratories in Indianapolis, where he met a number of Lilly salesmen from various parts of the United States.

—HERMAN W. RIESS, sergeant of the first class Hospital Corps, U. S. Army, and a well-known pharmaceutical writer, has been assigned to duty at Fort Sheridan, Ill. For several years Mr. Rieiss has been on service in the Philippines.

—J. P. CHERRINGTON, until recently identified with Miss Day's drug store at Fourth street and Central avenue, Cincinnati, is now manager of the Randolph Pharmacy, in Norwood, which is owned by Frank Workman, a Norwood newspaper editor.

—J. C. DUNT, one of the best-known druggists in Ohio, who recently retired after being twenty-eight years in business in Bridgeport, intends to spend the early summer at Molebemps, Mo., the early fall at Oxford, N. C., and the winter at Los Angeles.

—DR. A. L. LINGFIELD, of San Francisco, Cal., accompanied by his wife, are planning a trip to Europe. The Doctor is one of the vice-presidents of the pharmaceutical convention and proprietor of the pharmacy at 1804 Fillmore street, San Francisco.

—C. R. COSBY, the New York manager for Eli Lilly & Co., and H. R. Klein, a member of the sales force, were pleasantly entertained by the Philadelphia manager, Frank W. Smith, in the Quaker City last week and attended the entertainment and dance given by the Drug Club.

—FRANK G. RYAN, president of Parke, Davis & Co., has been appointed a member of the subcommittee on working plans of the committee on the beautification of Detroit, the members being appointed by Detroit architects, the Board of Commerce and the Common Council.

—JOSEPH M. SCHILLING, who represents the J. Hungerford Smith Company in Philadelphia and is one of the active members and promising bowlers of the Drug Club, is temporarily out of the game owing to an injury to his thumb. He reports business prospects exceptionally promising.

—HARRY B. FRENCH, vice-president of the Smith, Kline & French Co., of Philadelphia, has returned from a hurried visit to Europe, where he was summoned by cablegram, announcing the serious illness of his daughter, who is studying abroad. Marked improvement in the condition of Miss French permitted the return of her father.

—J. W. TRAVIS, whose friends are legion in the territory from Rockport, Mo., to Chicago, which he covers for Carleton & Hubby, is spending a few days at the home offices at Lowell, Mass. Mr. Travis, while in the neighborhood of Philadelphia, never fails to drop in to see the boys at the Drug Club, of which he is a non-resident member.

—FREDERICK K. STEARNS, of Frederick Stearns & Co., pharmacists, acting on the advice of his father, who counseled him to travel before he became too fatigued by business, starts this week for a tour of the world, which will include visits to the Azores, Madeira, Gibraltar, Italy, Egypt, Burma, Ceylon, Malay, China, the Philippines, Japan and Hawaii.

—WALTER ROTHWELL, of Hathboro, Pa.; Charles M. Butcher, the New Jersey manager for the American Druggists' Fire Insurance Company; M. S. Kahn, the Maryland manager, and Dr. William C. Anderson, of New York, who with Mr. Rothwell is a director of the company, formed a joll party of well-known figures in retail drug circles which journeyed to Cincinnati to attend the annual meeting of the insurance company.

—W. W. ALBERS, well known druggist at Wausau, Wis., and president of the Wisconsin Pharmaceutical Association; Dr. L. M. Faucher of the Faucher Drug Company, of Racine, Wis.; Mr. Strassburger, of the McDonald & Strassburger Drug Company, of Green Bay, Wis.; Joseph Lefebvre, with C. Le Conte, of Green Bay, Wis., and C. W. Helbing, of Beaver Dam, Wis., were among the visitors of the past week at the Milwaukee Drug Company.

—JOHN C. WALLACE, a prominent druggist of New Castle, Pa., and chairman of the legislative committee of the Pennsylvania Pharmaceutical Association, was a welcome visitor last week in Philadelphia, where a meeting of the committee was held. He also attended the annual meeting of the Drug Club, of which he is a member, and when called upon by President W. L. Cliffe made a happy address to the members, which was unfortunately cut short by the close proximity of the time of departure of Mr. Wallace's train for home.

## J. C. DAVIS KILLED IN RAILROAD ACCIDENT.

Prominent Wholesale Druggist of Denver One of the Victims of a Serious Collision.

In a collision between a fast passenger train and a freight train near Glenwood Springs, Colo., last Friday night, J. C. Davis, of Denver, was instantly killed. Mr. Davis was the president of the Davis-Bridgman Drug Company, of Denver, and was one of the best-known wholesale drug merchants west of the Mississippi River.

The wreck occurred on the Denver & Rio Grande Railroad and was one of the worst in the history of the road. Twenty persons were killed and thirty injured, some of them fatally.

## J. H. Day, President of the J. H. Day Co., is Dead.

Advices from Cincinnati announce the death recently of J. H. Day, president of the J. H. Day Company, manufacturers of laboratory apparatus and special machinery used by pharmaceutical and chemical manufacturers. Paralysis was the cause. He was fifty-eight.

Mr. Day was educated at the University of Illinois and for a short time was engaged in the drug business at Minneapolis. He also conducted a general store at Nokomis, Ill. He went to Cincinnati and became secretary of the Hunter Sifter Company. After that he came to New York City and conducted a machinery brokerage business. In 1887 Mr. Day returned to Cincinnati and bought the machinery department of the Hunter company and organized the firm of J. H. Day & Co.

In 1901 he organized the J. H. Day Company, with his nephew, M. E. Lyons, and F. M. Dudley. The company is one of the biggest of its kind in the country, employing between 400 and 500 men. Mr. Day leaves no family.

## Charles H. Landell Dies of Paralysis.

RAYONNE, N. J., Jan. 18.—Charles H. Landell, prominent South Hudson druggist, who was stricken with paralysis, is dead from the effects of the stroke, which was the second by which he was afflicted within a year.

Worried over his affliction and grief over the death of his wife, from an attack of hasty consumption about three months ago, but Mr. Landell determined to dispose of his prosperous business at Broadway and West Thirty-second street, and on the day he received the fatal stroke he had entered into negotiations for that purpose. He had planned to live quietly with relatives of his wife in Orange and to occasionally travel, having acquired a competency. It is believed that his property and investments will realize about \$50,000.

Mr. Landell was forty-four years of age. During his career in Rayonne he gained a host of friends, being of a genial and sympathetic nature. Six years ago he was the Republican nominee for the office of Recorder of the local police court. He was affiliated with the Masonic fraternity and was also identified with Rayonne Council 117, Junior Order of American Mechanics. In his professional business he was highly respected, having served as president of the Rayonne Druggists' Association and having repeatedly held offices in the New Jersey State Pharmaceutical Association.

C. H. LANDELL.

## No Reason Known for Suicide.

MARION, Iowa, Jan. 18.—James B. Wilson, a prominent druggist, recently ended his life by firing a bullet into his brain. He was a popular business man and no reason is known for the fatal act, which was committed in a hotel.

## David G. Evans, of Baltimore.

BALTIMORE, Jan. 16.—David G. Evans, a retail druggist, who for many years conducted a pharmacy in East Baltimore, died last Tuesday night at his home, 721 North Calvert street, after an hour's illness of acute indigestion. He was

born sixty-eight years ago in Talbot County and never married. Up to the time of his fatal seizure he was in his usual health. His store was in Ann and Albemarle streets.

## John H. Woodbury a Suicide by Shooting.

John H. Woodbury, of New York City, the one-time head of the John H. Woodbury Dermatological Institute, which manufactured the various skin lotions and soaps bearing his name, committed suicide last Monday. He was fifty-eight years old.

Woodbury during the last few years was in a number of suits, and sold out his business when pressed by the County Medical Society for practicing medicine without being a registered physician. His last venture, a new institute, similar to the first he established, went into the hands of a receiver only a few weeks ago. He was wealthy and held considerable real estate on Long Island.

## War Veteran Druggist a Suicide.

ALBANY, N. Y., Jan. 18.—Henry W. Wells, aged 34, a Spanish-American war veteran and a prominent young druggist of Saratoga, committed suicide. He was found dead in bed with a bullet through his heart. Wells had been in poor health for some time. He was a graduate of the Albany College of Pharmacy.

## Obituary Notes.

—L. S. TIBBALS, Somerset, Ky., is dead, aged sixty-four.  
—EUGENE B. RUNCYAN, of Columbia, Mo., is dead, aged forty-seven.

—GEORGE W. ROBERTS, who conducted a pharmacy from 1893 to 1895 in Washington, Pa., is dead, aged sixty-eight.

—DR. JOSEPH A. MCNEICH, of Jefferson, Wis., father of Frank C. Mcneich, enterprising druggist at Argyle, Wis., recently passed away at the age of sixty-five years.

—JAMES BASSETT, a prominent resident of Ypsilanti, Mich., and for many years connected with T. H. Hinckman Sons & Co., wholesale druggists, of Detroit, is dead, aged fifty-seven years.

—ARTHUR HEATH, treasurer of F. S. Heath & Co., Cuyahoga Falls, Ohio, died recently of heart disease while on a train going to Columbus to attend a meeting of druggists. A widow and daughter, mother, brother and sister survive.

—LOUIS BAUER, president of Bauer & Black, manufacturers of surgical dressings, Chicago, is dead of organic heart trouble. Mr. Bauer was a native of Germany and was seventy years old. He lived in Chicago for forty-two years.

—ISAAC WELLINGTON JACQUES, aged fifty-nine, died recently at his home in Elizabeth, N. J. He had been engaged in the drug business in Newark, Trenton and Elizabeth. A second wife, whom he married three years ago, and a daughter survive him. He belonged to several organizations, including the Masons and Elks.

—MRS. JOHN S. WHITE, wife of a well-known traveler for a Philadelphia concern, died recently of valvular disease of the heart in a hospital at Manchester, N. H., aged thirty-eight. During the past eleven years she had traveled a great deal with her husband through New Hampshire and Vermont and her estimable qualities made many friends for her among those with whom she came in contact.

—CHARLES L. KEPPLER, JR., one of the best known druggists of New Orleans, died recently of general breakdown in health, which first showed itself last April. He was the son of Charles L. Keppler, veteran druggist of Dryades and Enterprise streets, and had been associated with his father for eighteen years. Twenty years ago Mr. Keppler married Miss Anna Hardee Roames, who, with a little daughter, survives.

## Mr. Strong to Be Head of Merchants' Association.

MILWAUKEE, Wis., Jan. 18.—William B. Strong, vice-president and treasurer of the Milwaukee Drug Company and one of the best-known wholesale druggists in the West, has been nominated to the vice-presidency of the Merchants' and Manufacturers' Association, the leading civic and commercial organization in Milwaukee. Only one set of officers has been nominated, so the election of Mr. Strong is assured. He has always been one of the most active members of the association and many of the great public undertakings which have been in charge of the association have been made successful by his energy and efforts.

# Gang of Drug Trade Swindlers Has Many Secret Ramifications.

**Goods Stolen From New York Merchants Brought Back to This City to Be Sold to Others—Beckett Company Had a Nest in Elizabeth, N. J., But Its Occupant Has Disappeared—Hudson Now Is Tyner Cronin Packs and Moves.**

Recent developments verify the existence in New York City and vicinity of a systematic swindling combination which is preying upon and menacing the drug trade throughout the whole country.

The system is operated by means of offices, usually located in the drug jobbing district, from which are sent orders for goods; the letter head stating that the firm or individual is a dealer and jobber in proprietary medicines, drugs etc.

The method of securing goods is to send an inquiry requesting a price list and asking specific quotations on an article manufactured by the firm addressed. Upon receipt of the information an order for a few cross, or frequently a good sized jobbing quantity, is at once dispatched by letter or telegram. All goods are ordered shipped by express.

The outlet for these goods also seems to be in New York City, for at least some of the goods obtained by the Beckett Supply Company (members of which are under arrest), of Wilmington, Del., were shipped to this city. Supposed confederates who have their offices in this city never have any supplies on hand, although express packages are constantly arriving, a fact which also indicates that the outlet is within easy reach and that goods are taken there without delay.

## New Swindlers Crop Up Like Mushrooms.

This chain of swindlers seems to have been especially active of late and expanded its business by operating more than one office. Hardly a week passes without an apparently new swindling concern entering the field, although in some cases it is simply a change in name and location.

The case of William D. Hudson may be cited as an example of the latter class. Hudson first located at 60 Beekman street, New York, under that name about October 1. On December 15 he moved his outfit, an old desk and two chairs, to 258 Washington street, Jersey City, establishing himself under the name of W. V. Assheton & Co. He left this place about January 3, after the exposure in the ERA on December 31. He is probably now back in New York again operating under the name of George L. Tyner, 35 and 37 Frankfort street. An effort to see him has so far been unsuccessful. When the letter heads of Hudson and Tyner are compared there is a striking resemblance. They are printed with the same type upon the same kind of paper. Tyner is located in a room formerly occupied by the "Ashton Press," note the similarity to "Assheton" which was Hudson's Jersey City name. There is no furniture whatsoever in the office.

Hudson, when he operated in Beekman street, was exposed in the ERA under date of October 15, 1908. Hudson bears a striking resemblance to a certain William Annear, alias Paul R. Hudson, whose concern was the Mount Vernon Chemical Company. Annear's picture was published in the ERA February 21, 1901. Both Annear and Hudson have a noticeable defect in their eyes. Annear served a sentence in a Jersey penitentiary.

## Assheton Forced to Admit He is Hudson.

An interesting story was told the ERA reporter in connection with Hudson when he was operating as W. V. Assheton & Co. A New York concern having sent him about \$60 worth of goods, could get no money, nor any reply to its letters. Upon being informed by an ERA reporter of facts relating to Assheton & Co., a member of the firm went to the office in Jersey City, waiting two hours before any one entered the office. The New York gentleman then knocked on the door, but received no response. The silence of the man inside continued even with a severe battering of the door. Finally Hudson admitted the caller, upon being informed that he could be discerned sitting at his desk, through the large, worn key-hole.

At first he stated he was Assheton, but when informed that his caller knew better he owned up to his identity as Hudson, stating the query was misunderstood, and that

Mr. Assheton was a visitor to the filthy, unswept office only twice a week, coming up from Lakewood, N. J. No money was secured, and the firm has taken no action, charging the account to advertising.

## Trading Companies Bear Similar Names.

The Union Trading Company, which is practically identical with the Union Sales Company, the National Loan & Realty Co., Jacobson & Co., are all located at present in a dirty office containing only a desk at 78-80 Cortlandt street, and claim William Jacobson as the head. Notices of these concerns have appeared in the ERA under dates of August 1, 1907; June 18, 1908, and July 23, 1908.

Jacobson first located in the offices of the Risley Drug Company, at 62 Dry street, under the name of the Union Trading Company. Jacobson then had no bank account and the late Charles Risley used to cash his checks for him at the bank.

There is evidence supplied by shipping bills that the Union Sales Company received some of the loot secured by the Beckett Supply Company, and secured an outlet for the goods.

The Beckett Supply Company extended its field beyond drugs, as is made clear by its printed letter head. J. F. Beckett and Edgar Johnson, alias Edgar J. Sellers, alias Charles Veasey. The operators of the Beckett concern are now awaiting action by the United States Grand Jury, having been held in default of \$1000 bail each. The case is scheduled for January 25. The warning to the trade regarding this concern appeared in the ERA on December 10, 1908, and the photographs of Beckett and Johnson on December 17, 1908.

## Used Name of a Reputable Well-Rated Druggist.

The Beckett company appears to have been linked with a concern in Elizabeth, N. J., by the name of W. J. Reibel which claimed to be a wholesale drug house. The similarity of the name to that of W. H. Reibel, who is a well-rated retail druggist in that city should be noted. W. J. Reibel discontinued business at the time of the capture of Beckett & Johnson. The connection is taken from the references used by the two concerns. When Beckett was arrested in Philadelphia there was found upon him a letter addressed to Edward Davis, written upon the stationery of M. H. Stein, a cigar manufacturer at 39 Vesey street, New York. The contents of the letter made it appear that M. H. Stein was an intimate friend of this Davis, whom he wished success in a business venture in which the latter was to engage. W. J. Reibel, when pressed for references, used the name of M. H. Stein.

Mr. Stein, when interviewed, stated that he never knew any person by the name of Edward Davis, nor had he ever seen Beckett. In regard to Reibel, this party, he said, had attempted to purchase goods from him and also requested references, but none was given. There is a well-rated cigar manufacturer in Broadway, New York, by the name of M. H. Stein.

## Notorious John J. Cronin Has Disappeared.

John J. Cronin, who was a "wholesale dealer in druggists' specialties and grocers' sundries," located until two weeks ago at 269 Pearl street, New York, is to all appearances the most clever of the flock. His letter head states he is the "Sole Manufacturer of Rattle Root Remedy for Rheumatism, Como Tablets for Impotency, Como Essential Oils and Extracts, Como Baking Powder." On his first stationery there was printed the following: "All goods of our manufacture are in compliance with the U. S. Government Pure Food and Drugs Act of June 25, 1906." Note the misspelling in the word Government, which also appeared on his second lot of

(Continued on Page 74 of This Issue.)

## LIVELY ELECTION OF MICHIGAN DRUG CLERKS.

President Barwell Re-elected Unanimously, But Other Offices Are Contested For—Preparing for Ball.

DETROIT, Jan. 18.—Several spirited contests marked the recent annual election of the Drug Clerks' Association of Michigan. It was, in fact, one of the liveliest held in years, interest in the organization having increased since its officers took steps towards the organization of a national association of drug clerks. The contests, however, did not involve the presidency. President George T. Barwell has been the leading spirit in the movement for a national organization, and the members of the local body showed their confidence in him by making his re-election unanimous.

Recording Secretary Ulysses R. Bailey was also re-elected by acclamation, and A. E. Mallard was the unanimous choice for treasurer, to succeed Emil B. Kolbe, who has just gone into business for himself. John Webster defeated W. H. Henderson for the office of financial secretary after an unusually exciting contest. Three or four members sought the place and several ballots were necessary.

Nearly all of the committee chairmanships were contested. The following were chosen, each chairman to select his own committeemen: Executive, Mark D. Mithkun; entertainment, Benjamin Goldberg; house, Frank Perrault; membership, George A. Mahlmesiter; employment, William Maltos; legal, William H. Henderson.

Wilbur R. Twiss was re-elected first vice-president and J. M. Grazaedie succeeds Benjamin Goldberg as second vice-president.

Mr. Kolbe, the retiring treasurer, who, as stated in a recent article, was the only charter member actively connected with the association, has purchased the drug business of Martin J. Schneider at Dix and Junction avenues, and is converting it into one of the most up-to-date stores on the West Side. As a token of appreciation, the association will present him with a framed group picture of the officers for 1908, with the signature of each inscribed thereon.

Arrangements were made for the association's annual ball January 28. Handsome souvenir programs have been ordered. The association is considering the advisability of establishing a free employment bureau.

## Plan Sick and Death Benefits for Drug Clerks.

NEW ORLEANS, Jan. 18.—That now life has been taken on by the Retail Drug Clerks' Association is the conviction of members who attended the recent annual meeting. Carrying out his announced intention, Secretary H. M. Ricketts proposed that a benevolent feature be made part of the organic law of the association, and it was decided to get the opinion of the members. Accordingly circulars have been sent out outlining the proposed plan and members have been asked to signify their approval or disapproval on enclosed postal cards. Already Secretary Ricketts has received a large number of replies favorable to the plan.

The plan proposed is to tax the members 50 cents additional each month for this benefit fund. Each member incapacitated by illness will receive \$5 a week as long as he is ill, and a death benefit of \$100 is to be paid.

Nominations were made for officers to serve during 1909 and the election and inauguration will take place January 29. Following the business meeting on that evening the association will give its annual stag. Arrangements have been in the hands of A. Troxler, chairman; W. J. Gagne and M. J. Paul, and it will be the social affair of the season, so far as the drug clerks are concerned.

## Druggists at Clarksburg Organize.

CLARKSBURG, W. Va., Jan. 18. At a meeting held at the Waldo Hotel recently retail druggists of the city organized the Clarksburg Association of Retail Druggists. It is a successor of the old Harrison County Druggists' Association which flourished here several years ago. The objects are the mutual betterment of their trade conditions and the exchange of helpful ideas among the members.

Officers were elected as follows: L. T. Mercer, president; L. M. Graves, vice-president; C. D. Sturm, secretary; A. W. Terrik, treasurer; F. B. Haymaker, Orville Harrison and F. H. Burke, executive committeemen.

## MASSACHUSETTS TRAVELERS AT DINNER.

Enjoyable Event at the Hotel Plaza—Twenty-four New Members Join the Association.

BOSTON, Jan. 18.—The second annual dinner of the Traveling Men's Auxiliary of the Massachusetts State Pharmaceutical Association was held at the Hotel Plaza, with an attendance of nearly one hundred and fifty members and guests. It was a gloriously successful event in every way. Guests of distinction sat at the head table and the members outdid themselves in the matter of attendance. The menu was exceptionally clever and was so designed that instead of passing away with the dinner it will be of use throughout the year, because the title page was arranged with a calendar pad and a piece of bright blue ribbon to hang it up, and the inner pages contained information of a character that will be of permanent value.

Invitations had been extended to the members of the State boards and the president and secretary of each of the New England State associations, but only those from Massachusetts found it possible to be present. C. F. Ripley, I. P. Gammon and Peter J. McCormick, of the State Board of Registration, attended, and C. E. Carter, first vice-president, and Thomas B. Nichols, treasurer of the State Pharmaceutical Association. Other guests included Hon. Allen T. Treadway, president of the Massachusetts Senate; Hon. William J. Bullock, mayor of New Bedford, and Hon. John N. Cole, former Speaker of the Massachusetts House of Representatives.

T. F. Mullen, president of the auxiliary, presided during the dinner and presented George H. Johnson as toastmaster. The occasion was not made one of seriousness, but one of jollification. The speakers refrained from propounding heavy themes, and their remarks were aimed more to amuse than to exhort.

The speeches were interspersed with music by a male quartet and solos by Miss Clara Gateley, soprano; Frederick S. Hall, tenor, while further spice was contributed by the fancy dancing of Miss Floretta Clark.

At the business meeting preceding the dinner twenty-four new members were admitted, making the total membership two hundred and fifteen.

## Drug Clerks Entertained by Manager.

NEW ORLEANS, Jan. 18.—Manager Albert J. LaPlace, of the American Drug Store, was the host at a stag supper and snooker given to the twenty or more clerks at Mr. LaPlace's residence, 3708 Canal street, the interior of which was decorated in green for the occasion. Among the guests was Dr. R. Sauvage, proprietor of the store, and at the supper one of the most enjoyable speeches made was by Dr. Sauvage. Mr. LaPlace was toastmaster and every guest was called upon for a brief speech. The supper was an elaborate one and toasts were drunk with champagne. Following the supper there was a smoker and for several hours the guests, feeling much at home, enjoyed a general relaxation. G. J. Paquette, W. Primo, P. L. Bacas, H. Marchand, H. M. Ricketts, Charles DeBlois, Fred Ameling, Dr. H. Goff, F. Clark, M. Clark, P. O'Donnell, W. A. Posey, J. Prats, H. Gamotis, T. Armbruster, A. Auret, D. LaPlace and G. R. H. Sauvage were also present.

## Paterson (N. J.) Clerks Seek Shorter Hours.

PATERSON, N. J., Jan. 18.—The Paterson Pharmaceutical Society, at its last meeting, appointed two committees, one to present the question of reducing working hours of drug clerks to the Retail Druggists' Association, the other to consult them personally. The committeemen are Malcolm Braechlin, O. R. Gillette and Charles R. Garrahan. Resolutions were adopted to communicate with Newark drug clerks with the view of instituting a branch there. Henry Hannerberg was elected, and Harry C. Post, who has become a proprietor, was chosen an honorary member.

## Nathan A. Cozens to Leave Retail Trade.

PHILADELPHIA, Jan. 18.—Nathan A. Cozens, recording secretary of the Philadelphia Association of Retail Druggists, upon the advice of his physician, has sold his store and after a rest of a month or two expects to take up a line of work which will be less confining. He had recently been re-elected to the office which he had filled so efficiently for several terms. Israel Subin is the purchaser of the store.

## GAS BILL COLLECTIONS BY DRUGGISTS.

## Larger Commission Not Granted in Milwaukee and Department Stores Apply for the Privilege.

MILWAUKEE, Wis., Jan. 18.—In spite of the recent action of the Milwaukee Pharmaceutical Association in refusing to act as collecting agents for the Milwaukee Gas Company, it is hinted that a large number of individual druggists have renewed their contracts with the gas company for pay stations, and it is said that several applications have been received by the company from other druggists who wish to collect bills.

Rather than accede to the demands of the druggists, who are asking for an increase in the collection fee from 1½ cents to 3 cents, the gas company is making arrangements with merchants in various lines for the opening of new pay stations. Among the big department stores of the city which are applying for agencies is that of Gimbel Brothers. Managers of the store are anxious to secure an agency, believing that it will be a great convenience to the trade. Nothing will be charged by the store and it is said that this policy is being followed by the other large stores.

The fact that the department stores are making such liberal offers to the gas company is not at all pleasing to the Milwaukee druggists, who hoped to "bring the gas company to time." It is now a foregone conclusion that the company will not accede to the demands which the druggists believe are only just.

G. H. Keston, committee chairman of the druggists' association, has issued a statement which covers the situation from the druggists' standpoint:

"The business of collecting these gas bills has grown to such an extent that the druggists have been collecting at least \$5 per cent of them. We told the gas company that we would be glad to continue the work if they would allow us 3 cents for each bill collected, and then we would secure special help and keep the work separate. Our petition was not granted, and consequently the resignations of practically all of the druggists were sent in."

## Pioneer Pharmacy Closed.

ELYRIA, O., Jan. 18.—N. Parke Wooster has leased the building occupied by him as a drug store, to the Pillsner Brewing Company, of Cleveland, for a term of three years with the privilege of a similar lease at the expiration of the first period. The site has been occupied by the Wooster drug store for the past sixty years, William Wooster having opened a drug store in the building in 1849, he continuing in the business until his death a few years ago when his son, N. P. Wooster, assumed control. Thus the oldest business name in Elyria will terminate with this deal.

The Wooster building is the oldest business site in this city and at the time of the senior Wooster's death it was necessary for N. P. Wooster to be appointed administrator for a man who died in 1823.

In order that a clear title could be secured to the property owing to an old mortgage which had not been cancelled.

At that time it was discovered that the property was described as being so many feet east of the creek which intersected West Broad street at a point near the old mill owned by Garrett Reublin, it being a continuation of the creek which ran through the old fair grounds and emptied into the west branch of the river.

## Local Option Increases Liquor Sales.

CADILLAC, Mich., Jan. 11. In one week there were 452 drug store sales of liquor in Wexford County—the largest since the local option law went into effect.

## PURE DRUG LAW RULES FOR KENTUCKY.

## Pure Food Commission Organized Under State Law Begins the Work of Enforcing the Statute.

LEXINGTON, Ky., Jan. 18.—Acting in accordance with the provisions of the Pure Food and Drugs Act enacted at the last session of the General Assembly of Kentucky, a meeting of the Pure Food Commission was held at the Kentucky Experiment Station recently and rules and regulations were formulated concerning the handling and sale of drugs in this State. The question of formulating rules regulating the sale of liquors will be taken up by the commission at a later date.

When completed the rules and regulations regarding the sale of drugs and liquors will be many and will be published in pamphlet form and each druggist and liquor dealer throughout the State will be supplied with a copy for reference. In general any drug preparation that conforms to the standard of the United States Pharmacopoeia or the National Formulary will be a salable product by the druggist without fear of prosecution by the commission.

Drugs which do not conform to the requirements of the dispensary or the formulary will be considered adulterated and a druggist found guilty of selling such drugs will be prosecuted. The exact quantity of each ingredient of the mixture or compound must be indicated by a label.

Tincture of opium shall be considered of the standard of the United States Pharmacopoeia. If of less strength it must be labeled "unofficial tincture of opium," with the strength given on the label. The percentage of alcohol, morphine, cocaine, acetanilid, and like compounds are not to be used in any preparation unless the amount is given of each ingredient on the label. The only exceptions to this rule are the prescriptions of a regular practicing physician or official preparations.

Preparations containing substances of an unknown quantity which are now on druggists' shelves for sale cannot be sold, under penalty of prosecution, until the amounts or proportions of the ingredients are ascertained from the manufacturer or the mixture or compound submitted to the commission for analysis. The commission will ask the druggists to conform to the law as to labels as rapidly as possible.

A drug inspector will be appointed within a few days and the work of making collections of drugs throughout the State will be inaugurated. The samples will be analyzed at the Kentucky Experiment Station. A meeting of the commission will be held monthly until the druggists throughout the State are made familiar with the provisions of the Pure Food and Drugs Act.

The meeting was attended by the following persons composing the commission: Dr. M. A. Seovell, director of the

Kentucky Experiment Station; Dr. Harry McCormick, Bowling Green, representing the State Medical Society; Dr. J. W. Gale, Frankfort, secretary of the State Pharmaceutical Association.

## Matrimonial Mention.

—OSCAR LOWELL, of Tehula, Miss., is home from a trip to Odian, where he captured a fair Tennessee bride.

—LOYD J. BIGGS, of Princeton, Ind., and bride, nee Miss Celeste Prince Downey, are enjoying a honeymoon trip to Cuba.

—MISS MARTHA VOGELER, daughter of Alfred Vogeler, the wholesale druggist of Cincinnati, has announced her engagement to R. P. Strauss, a St. Louis business man. The date has not been made known.

New Features for Quincy.

W. R. STOTT.

first vice-president of the Illinois Pharmaceutical Travelers' Association, is one of the best-known drug men of Illinois. For the last few years he has carried the lines of Johnson & Johnson, chemists, Chicago. Mr. Stott has always been active in association affairs. He was chairman of the Entertainment Committee of the I.P.T.A. at the 1906 and 1908 conventions at Peoria and distinguished himself by the excellent programs he provided. At present he is busily engaged in creating interest for the 1909 convention and intends to make the features at Quincy eclipse past ones.

## ASSAYS AT MEETING OF MANHATTAN P.H.A.

Prof. Diekmann and Dr. Wimmer Present Interesting Demonstrations—Health Board Chief to Speak.

At the meeting of the Manhattan Pharmaceutical Association of New York, held last Monday evening at the College of Pharmacy, the members and a number of students were interestingly and instructively entertained by Prof. George C. Diekmann, who delivered an address on the subject "Pharmacopoeial Assay Methods." In his introductory remarks Professor Diekmann stated that the assays as presented in the Pharmacopoeia were intended for and could be carried out by the average retail pharmacist.

Professor Diekmann impressed upon those present the simplicity of both the work and apparatus involved in performing an assay, the largest items being an analytical balance and a set of weights, which combined cost approximately \$45.

Rigid adherence to the Pharmacopoeial instructions and specific care in the selection of reagents were advised, and instances were cited where worthless results had been obtained in important assays because abbreviations in the method had been attempted and disregard shown relative to temperatures and other points.

"The value of the work to a pharmacist is great," said Professor Diekmann, "the esteem of the physician is secured and any trouble experienced in getting fairly standard drugs from the supply house would soon be obviated, if assays were made at intervals and rejections made."

Individual assays, illustrating types, were demonstrated by Professor Diekmann, assisted by Dr. Curt P. Wimmer. Those carried out in full were of oil of thyme, citrate of iron and quinine, pancreatin, iodide of iron (for free iodine), mercurial ointment and extract of nuxvomica. References were made to the processes employed in assaying tincture of opium, linseed meal and pepper. Explanations of the differences in the use of the gravimetric and volumetric methods were also made, together with descriptions of various extractive apparatus.

The members accorded Professor Diekmann and Dr. Wimmer a rising vote of thanks. At the meeting in February Hugh Craig will give a discourse upon "The Value of the Show Window of the Retail Druggist."

It was announced by President Arthur C. Searles that at either the April or March meeting Dr. Thomas Darlington, head of the Department of Health in New York City, would address the members on the relations existing between the pharmacists and his department.

Jacob Diner, chairman of the legislative committee, called attention to the recent reference in the message of Governor Hughes to the State Board of Pharmacy. No action was taken, but Mr. Diner was instructed to report at the coming meeting, with recommendations, if any could be formulated.

## BOSTON A.R.D. AND A.P.H.A. GET TOGETHER.

Both Elect Officers and Plan to Meet on the Same Day, With Dinner Between the Meetings.

Boston, Jan. 18.—The annual meetings of the B.A.R.D. and the New England section of the A.P.H.A. were held on the same day recently and plans were projected that may prove of far-reaching influence in the history of both organizations.

The annual meeting of the B.A.R.D. was held at the Massachusetts College of Pharmacy in the afternoon. Officers were elected as follows: Prof. Elie H. LaPierre, of Cambridge, president; William H. Doherty, of South Boston, first vice-president; E. T. Harrington, of Dorchester, second vice-president; Charles H. Davis, of Dorchester, secretary; Lyman W. Griffin, of Allston, treasurer. The executive committee consists of the chairman of the several boards, and is the same as last year. Three new members were elected, as follows: J. B. Walsh, L. H. Graves and J. H. Dorsey.

The annual meeting of the New England section of the A.P.H.A. was preceded by a dinner at the Hotel Plaza, and the association entertained as guests members of the B.A.R.D. C. Herbert Packard, of East Boston, the president of the New England section, presided. Officers were elected as follows: C. Herbert Packard, of East Boston, president; Prof. James O'Hare, of Providence, R. I., vice-president; R. Albion Newton, of Southboro, Mass., secretary and treasurer. James F. Finnegan, of Boston, was made chairman of the committee

on professional relations, and W. H. Glover, of Lawrence, Mass., chairman of the committee on membership. President Packard gave a talk on "Little Helps in Drug Stores."

Then the chief topic of the meeting was taken up, that of cultivating closer relations with the members of the B.A.R.D. and of making the stated meetings of the society of more interest and profit. It was voted to have monthly meetings for the next four months of February, March, April and May, and that the meetings would be held on the second Wednesday evening of the month, the same day as those of the B.A.R.D. A committee consisting of Professor LaPierre, of Cambridge; W. H. Doherty, of South Boston, and C. B. Wheeler, of Hudson, was appointed to confer with the entertainment committee of the B.A.R.D. as to a programme for the meetings. The plan is for the B.A.R.D. to meet at 2:30 as usual, then to have a dinner at a hotel immediately after the meeting, at which the members of the two associations will meet. The regular meeting of the A.P.H.A. will follow in the evening.

## REFEREE BOARD NOT TO BE ABOLISHED.

Change of Congressional Sentiment Reported as Due to an Explanation Made by Secretary Wilson.

WASHINGTON, Jan. 18.—Since the announcement was made by some of the members on the House Committee of Agriculture that the Board of Referees in the pure food and drug branch of the Department of Agriculture was to be abolished, and that this proposed elimination of the Board of Referees as a check to Dr. Wiley was to be accomplished by stipulating that no part of the money appropriated for the department next year is to be used for the maintenance of the board, a decided change has come over the committee.

This change was brought about by Secretary Wilson at a hearing a few days since. Secretary Wilson made a strong plea for the retention of the board. He pointed out that great commercial investments, running into millions, hinge for success or failure, upon the investigations of one man, and that no matter how efficient or conscientious that one man may be, it seemed to the administration too grave a responsibility to vest in a single person. It was for that reason, he said, that the Board of Referees had been created to verify or revise the findings of the Chief chemist, in important questions that have been made a matter of dispute.

According to members of the committee, Secretary Wilson stated that the Board of Referees has not in any instance reversed Dr. Wiley's decisions, and has before it only two important appeals from Dr. Wiley's findings, one the question of the use of benzoate of soda and the other the use of sulphur by fruit packers. The board, he said, is conducting minute investigations into these two subjects at the present time, and has not yet announced its findings.

A member of the committee, who first opposed the diversion of \$100,000 from the department's funds for the creation and expenses of the Board of Referees, said today that Secretary Wilson's testimony before the committee put the whole matter in a different aspect, and that in view of the great commercial investments at stake in the pure food decisions he could not well see how the administration could have done otherwise than create an appellate body.

## Bills Introduced in the New York Legislature.

ALBANY, N. Y., Jan. 18.—Assemblyman Glick has introduced in the Legislature his bill which failed last year providing for the disclosure to the State Health Commissioner of the ingredients of patent medicines and printing the same on the labels.

Senator Cobb has introduced a bill providing for printing on containers the net weight or measure of any commodity intended for consumption by man or beast.

## Pharmacists to Confer With Gov. Hughes Today.

A notice has been issued by Governor Hughes that he will give a hearing to the pharmacists relative to pharmacy legislation at the Executive Chamber in the State Capitol at Albany this afternoon. Several members from the Eastern Branch of the State Board of Pharmacy have announced their intention to be present. The chairmen of the public health committees of the Senate and Assembly will also be present.

## DRUG EXCHANGE ELECTION NEXT TUESDAY.

**Annual Banquet on Thursday Promises to Be a Greater Success Than Any of Its Predecessors.**

PHILADELPHIA, Jan. 18.—The next events of importance in local drug circles are the annual meeting of the Philadelphia Drug Exchange at the Bourse on January 26, and the annual banquet at the Hotel Walton on January 28. The committee on nominations has submitted the following ticket which, although other nominations can be made, will doubtless be unanimously elected: President, Dr. A. W. Miller; vice-president, John Ferguson; secretary, William Gulager; treasurer, Edward H. Hance; directors, Charles E. Hires, Edward J. Lavino, Mahlon N. Kline, Clayton F. Shoemaker, Walter V. Smith, A. Robinson McIlvaine, Adam Pfromm and Richard M. Shoemaker. Dr. Miller is the present president of the exchange, Mr. Hance is serving as treasurer and Mr. Gulager is completing his twenty-third consecutive term as secretary. He has occupied every office except treasurer. The election and the annual report will doubtless be the features of the annual meeting, the attendance at which promises to be large.

The committee of arrangements for the banquet has about completed its work and it is expected that this event will be conspicuous for the presence of men prominent in the drug and other lines of business, not only in this city but from other places as well. Each member has the privilege of inviting guests and already the committee expect about one hundred and fifty persons, nearly twice the membership of the exchange. Dr. Miller will act as toastmaster and the speakers will be Judge Carrow, a prominent justice of Camden County, N. J.; Franklin Spencer Edmunds and J. Hector McNeil, prominent young attorneys, whose ability as after-dinner speakers has made their presence much sought after, and Rev. Joseph Krauskopf, who enjoys a national reputation for his writings, his sermons and his work for the Jewish church, its people and humanity in general. The decorations, menus and other accessories of the banquet proper promise to eclipse the efforts of previous years.

William Gulager, the veteran secretary, is convalescent after suffering for several days from the effects of a fall. He expects to be able to attend both the meeting and the banquet.

## Drug Club Again Elects Wm. L. Cliffe President.

PHILADELPHIA, Jan. 18.—Reports presented at the annual meeting of the Drug Club Friday evening indicated that the affairs of the organization, thanks to the sturdy support given the club by every department of the trade, are now in excellent condition and that the coming year will be a most successful one.

When it became known that President William L. Cliffe had acceded to the requests of the majority of the membership that he allow his name to be used for the head of the ticket and that he again fill the office of president, other candidates gracefully withdrew. The same was true of the office of secretary, which has been so acceptably and efficiently filled by Frank W. Smith. The election resulted also in the choice of Charles Rehlfuss, vice-president, and Lewis H. Davis, treasurer.

The board of governors was elected as follows: Walter V. Smith, David J. Reese, H. A. Nolte, Adam Pfromm, C. W. Haviland, George D. Feidt, Miers Busch, S. B. Davis, E. T. Hahn, W. A. Johnson, Charles H. LaWall, E. I. Santee, D. J. McFerren, Walter P. Miller and John Jolley, Jr. Messrs. Smith, Pfromm, Haviland, Feidt, Busch, Hahn, Johnson, Miller and Jolley are members of the old board.

Miers Busch announced that the equipment debt of nearly \$10,000 of a year ago had been taken care of and that the affairs financially were in very good condition. An innovation of the future will be card parties for ladies.

## LIVELY ELECTION OF THE CHICAGO R.D.A.

**Attorney-General Asked to Investigate Alliance of the Proprietary Association and the N.W.D.A.**

CHICAGO, Jan. 18.—The annual meeting of the Chicago Retail Druggists' Association, held in King's restaurant, 112 Fifth avenue, Tuesday evening, was important and busy. Officers for the ensuing year were elected, important measures put through and after the members enjoyed a very elaborate buffet lunch. About two hundred were present and a great deal of enthusiasm was shown during the evening for the interests of the association.

There was one stormy period. It began when the president announced that the election of officers for the ensuing year would take place. Once or twice during the early part of the evening several members had clashed. While one was proceeding to make a nomination J. P. Crowley arose and moved that all visitors and also members whose dues were not paid in full should be excluded from the election, as it was a matter with the members alone. This signified that something was brewing and the motion carried, with one exception made in favor of Thomas S. Potts, secretary of the N.A.R.D.

It seemed that a faction of another druggists' association in Chicago was making a fight against the present administration through the association's own members. The new ticket fought hard and only gave in when it saw the strength of the first ticket was enough to carry everything. With the exception of a new trustee practically no change was made in the last year's staff of officers. The meeting was in session until 1 o'clock in the morning, but the lunch at the end was a very harmonious affair. This was the first time in years that the Chicago association has had a "hot election."

H. P. Sandkoetter introduced a measure favoring the changes in the pharmacy law, abolishing the registration of apprentices and increasing the requirements for full registration, which was voted unanimously by the members. It was resolved that the legislative committee of the C.R.D.A. be instructed to work with the legislative committee of the L.P.A. to obtain these changes, and further that each member is to solicit support for the bill from his Representative and Senator.

A protest was unanimously passed against the alliance of the Proprietary Association of America and the National

Wholesale Druggists' Association for the supposed purpose of confining the distribution of patent medicines to the members indicated by the National Wholesale Druggists' Association. The measure further asks the Attorney General of the United States to investigate the status of the existing relation between these two associations.

J. P. Crowley introduced a measure asking the city council to investigate the loose methods of dispensing at hospitals and free dispensaries and charitable institutions.

The reports of the various committees were read covering their work during the year, and this was followed by the election of officers, and a stormy period in the meeting. The following officers were elected: Sidney C. Yeomans, president; L. P. Larsen, first vice-president; B. A. C. Hoelzer, second vice-president; Joseph A. Hottinger, third vice-president; Isam M. Light, secretary; C. A. Storer, treasurer. The trustees elected for this year are: J. P. Crowley, A. E. Zuber, W. H. Krauskopf, J. J. Boehm, E. E. Williams, W. H. Brown, Joseph Swanson, T. F. Cannon and W. H. Armbricht. The only changes made in the former staff of officers was that T. F. Cannon succeeded Joseph A. Hottinger on the board of trustees. B. A. C. Hoelzer was elected second vice-president and was succeeded by Mr. Hottinger as third vice-president.

L. P. Larsen, vice-president of the association, proposed an amendment to the by-laws by which the members in the various wards are to meet and appoint their own supervisors, a function which was formerly exercised by the president of

SIDNEY C. YEOMANS,  
Re-elected President Chicago R.D.A.

the association. It was passed by the required two-thirds vote.

An address by Sidney C. Yeomans, president of the association, was a feature of the meeting. In part, he said:

"The Chicago Retail Druggists' Association this year enters upon the thirty-third year of its existence. It is exceedingly gratifying to your officers to be able to acknowledge their appreciation of the splendid support accorded them during the last year. It is this 'one for all and all for one' principle that points to the future possibilities that lie within our reach for the betterment of pharmacy, and it is this grand ideal that lends impulse to our efforts during the year before us to higher and nobler achievement.

"During the past year many knotty problems have been up for solution, at times we were almost bewildered with the mass of work which confronted us, a large portion of which called for prompt dispatch. The story of the protective features of our work is an interesting one. It lends force to the contention of last year that it should be made a prominent feature of our usefulness. Some forty-six cases of this nature were brought to our attention, and we emerge from the year's work with the proud record of having successfully defended or adjusted every one.

"Many of these cases involved large sums of money that would play a great hardship upon the individual druggists' pocket-book and reputation had they come to trial. When the black-mailing or hold-up man awakened to the fact that druggists have the powerful backing of the association behind them, he 'takes to the woods.' Probably the hardest-fought case in the annals of pharmaceutical damage suits was the now famous oxalic acid case in which the druggist was charged with giving oxalic acid instead of boracic acid. This desperate case was fought with all the steam three successful lawyers could command. It had the characteristic of a hold-up suit, but on account of the circumstances surrounding it and the death of a child it placed a burden on the defence from which only the rarest tact and skill could emerge with success.

"In this connection I wish to emphasize the peculiar position the druggist is placed in and with what ease, actions of this kind can be trumped up against him. Any package purchased in a drug store can be refilled after it leaves the store and it is up to the druggist to prove and convince twelve men that the customer got what he asked for. The burden of proof is against the druggist usually and it makes a hard case to fight.

"In the course of the past year Chicago druggists have steadily adhered to the pursuit of profitable business and have shown a marked tendency to dispense with unremunerative fields of endeavor. The theory that a druggist should run a kind of 'public comfort' station with all modern conveniences, such as directory, postage stamps, free phone, night calls, message delivery, express packages, money orders, etc., is passing out of vogue and the attention of the pharmacist is being directed to new fields of activity that are more in keeping with his educational attainments. Price-cutting is becoming a rare exception, and year by year higher schedules have been put into effect in all portions of the city. The druggist who would accept one dollar for a bottle of patent medicine, the contents of which are estimated at one-half to seven cents, and on the other hand halt and stammer at asking a fair price for his own makes, or non-secret preparations, is sadly in need of a nerve restorer and it is small wonder that the drug business is unprofitable to those who place such small value upon their own services."

President Yeomans said that the profitable field to cultivate for this year will be how to increase the size of each sale made and the elimination and discouragement of the use of patent medicines. In regard to the U.S.P. and N.F., he stated that they are fast becoming the standards in R writing, and a better understanding between the physician and pharmacist is the result. He said the last year was happily devoid of any unfavorable local or State legislation affecting pharmacy.

"The last anti-pharmaceutical statesman who attempted to put one over on us on expense was interrupted in the political potter's field at our direction," he added. The president was loudly applauded by the members.

Dr. Bernard Fantus, of Evanston, followed with an address on some of the causes for poor pharmacy conditions in Chicago. He stated that there is something the matter with pharmacy in Chicago, as indicated by the recent closing of several stores and other evidence that show the profession is not what it

should be. He remarked as noticeable that the corner drug stores in Chicago are being supplanted by Greek fruit stores and the drug stores are moving to the middle of the block.

"The recent failures denote a mushroom growth," said Dr. Fantus. "Too many stores are being opened and it seems the standard can be raised in every direction. The standard of education should be raised. It is evident that the old-fashioned pharmacist is passing away and not being reproduced, and this is due to the present system of hours and wages, both of which should be remedied. This is also evident by the number of accidents during the past year; but this can hardly be unexpected when the working days are so long that the entire reserve force of the druggist is expended before the day is through.

"Again the medical profession does not support the druggist; but the fault seems to be on both sides. For one thing there are fewer prescriptions written. The reason for the diminution is the habit of the physician of self-prescribing. This is full of danger and is very detrimental to the best medical practice, for the doctor usually dispenses that which he happens to have and fits the patient's case to it. The physician's dispensing is not so scientific or resourceful as that of the druggist. When the druggist is doing the work the doctor will prescribe what the patient really needs, no matter what amount of labor or thought is needed for its preparation; when, if he is doing it himself, he usually takes short cuts as he, like other individuals, often falls into lazy habits. Also the doctor is more liable to make mistakes than the painstaking druggist, as he is usually overworked and in no condition to dispense.

"Why does the doctor dispense? Chiefly because others do, especially the homeopath, but they are dying out gradually. The doctor is compelled to compete with the man who charges nothing for medicine. The views and relations between the druggist and doctor need to be clarified. Some times the doctors set sore because the druggists unduly favor other doctors by doubtful methods. Another reason for the divergence between the doctor and the druggist is the fact that the latter pushes patent medicines, while the physicians have declared war against them. Of course it is natural for the druggist to want to sell them for the easy profit. This is another point for the doctors and druggists to get together upon for the clarification of views.

"The free hospital and medical charities is one of the reasons for the druggist receiving few prescriptions. People go to these institutions who are able to pay for their medicine. Some of the free dispensaries are likely to be eliminated and the others confined altogether to medical schools."

Dr. Fantus believes that the druggist's scope should and will be in time greatly broadened. He thinks the druggist should relieve the physician of making microscopic examinations and it would be a great stimulus to both professions if the druggist took over the making of sterilized goods preparations, and their manufacture be not confined exclusively to the manufacturers. Sterile dilutions should be in the stock of all druggists for emergency calls. Dr. Fantus stated that while there was little demand for the druggists to have these preparations on hand now there will be in time. The keynote of the address was that the druggist and physician should get together and understand each other for the best interests of both.

#### Druggists Will Comply With Excise Law.

NEWARK, Ohio, Jan. 18. At a joint session held recently by committees from the Licking County Medical Society and the Newark Druggists' Association it was decided that hereafter no one can secure alcohol, whiskies, brandies or any other intoxicating liquors from druggists unless presenting a prescription from a reputable physician, stating that it is to be used for medicinal purposes only.

#### Heavy Fine for Mailing Illegal Compound.

TOLEDO, Jan. 18.—Frank G. Sloane, president of the F. G. Sloane Company, Sandusky, Ohio, was fined \$2000 in the Federal Court last week on his plea of guilty to two indictments for sending an illegal compound through the mails.

#### Bruen-Ritchey and Lilly Teams Bowl Tonight.

The teams of Bruen, Ritchey & Co. and Eli Lilly & Co.'s branch of New York City will bowl the third in the series of games scheduled for the season this evening at Luhrs' Alley.

## PATENTS, TRADE MARKS, ETC.

## PATENTS.

Granted January 12, 1909.

909,309—Wilhelm Kelle, Stuttgart, Germany, assignor of one-third to William Elworthy, Sunnyside, Wellington, Somerset, England and one-third to Christian Heide, Stuttgart, Germany. Apparatus for generating ozone.

909,380—Paul Ehrlich and Alfred Bartheim, Frankfurt-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Brünning, Höchst-on-the-Main, Germany, a corporation of Germany. Arsenophenol.

909,460—Jacob L. Schrade, New York, N. Y. Apparatus for evaporating liquids.

909,527—Henry S. Blackmore, Mount Vernon, N. Y. Composition for antiseptic and other purposes.

909,536—George F. Brindley, Niagara Falls, Ontario, Canada, assignor to the Roessler & Hasselacher Chemical Co., a corporation of New York. Composition of matter for generating hydrogen.

909,541—Jurgen Callsen, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany, a corporation of Germany. Sanatol ether.

909,578—Antonio Gaillard, Barcelona, Spain. Apparatus for making sulphuric acid.

909,623—Ernest J. Lees, Cleveland, Ohio, assignor to the Grant-Lee Machine Company, Cleveland, Ohio, a corporation of Ohio. Micrometer.

909,627—Edith W. Locke, Chicago, Ill. Therapeutic lamp.  
909,702—August Stock, Höchst-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brünning, Höchst-on-the-Main, Germany, a corporation of Germany. Ketone sulfoxylate and process of making the same.

909,736—Edward L. Arndt and Julius I. Marquart, Beaver Dam, Wis. Bottle-washer.

909,780—Sigmund Gardner, Savannah, Ga., assignor of one-fourth to Leopold Adler and one-fourth to Harvey Grange, Savannah, Ga. Non-refillable bottle.

## Hadden't Any Mind.

"I never lose my presence of mind," boasted young Softy. "No, I should say not. It is very obvious that you don't," murmured Miss Caustique.

## TRADE MARKS.

Published January 12, 1909.

31,055—Karl Hermann, Karlsbad, Bohemia. Class 6. Tooth paste.

33,002—Robert H. Williams, Kansas City, Mo. Class 6. Remedies for skin diseases, comprising an antiseptic germicide disinfectant and a healing agent in liquid and ointment form.

33,338—Barelay & Barelay, New York, N. Y. Class 6. A medicated preparation for the hair, scalp and skin.

33,975—Henry Kephart & Son, Berrien Springs, Mich. Class 6. A crump ointment intended to be used for the relief and mitigation of crop, swellings, sore throat, etc.

34,581—Malz & Co., Philadelphia, Pa. Class 6. A remedy for rheumatism.

35,615—Solomon Marculescu, New York, N. Y. Class 6. A toilet cream.

35,840—Christopher Dennis Griffin, San Marcos, Tex. Class 6. A hair tonic.

35,905—John B. Daniel, Atlanta, Ga. Class 6. A remedy for the treatment of inflammation of the kidneys, brick-dust deposit, catarrh of the bladder, diabetes, dropsy, gravel, headache, dyspepsia, incontinence of urine, etc.

37,707—Ernest Bischoff, New York, N. Y. Class 6. Veterinary remedies for treatment of splints, spavin and galls.

37,972—Selena D. Hall, Salt Lake City, Utah. Class 6. Remedies for coughs, croupers and diphtheria.

38,288—The Roessler & Hasselacher Chemical Co., New York, N. Y. Class 6. A bleaching fluid.

38,336—The Roessler & Hasselacher Chemical Co., New York, N. Y. Class 6. Washing powder having bleaching properties.

38,785—Samuel Bernstein, New York, N. Y. Class 6. Bleeding wax, wash-blin, paper, ranch powder, and bedding desodorizer.

38,711—Morris Goldstein, Chicago, Ill. Class 6. Corn, wart, lunion, callus and incrown toenail paste.

38,777—National Toilet Company, Paris, Tenn. Class 6. Toilet powder.

38,845—Joseph J. Bates, Denver, Colo. Class 6. A tea for gonitis, galls and tuberculosis.

39,019—George W. Hurlbaums, Washington, D. C. Class 6. An indigestion and dyspepsia remedy.

39,032—Alfonso de Paul, Philadelphia, Pa. Class 6. Skin cleansing preparations.

Genius may be all right, but it takes ninety-eight per cent of hustle back of two per cent of genius to reach business.

## Gang of Drug Trade Swindlers With Ramifications in New York.

(Continued from Page 67 of This Issue.)

letter heads, on which the date was corrected to "June 30, 1906."

Cronin's operations were extensive and the lesser of the building states that on the average ten persons a day have inquired for Cronin, wanting money. One firm in Connecticut displayed a bill amounting to \$150 for bottles, and another from the same State \$25 for shipping tags. A Massachusetts firm has a bill for \$57 for medicine. Cronin had several assistants and claimed telephone connection on his stationery, but had none. Notices regarding his business methods appeared in the ERA under dates of July 2, 1908, and July 23, 1908.

The trade is also warned in connection with a party known as W. C. Kochler, 332 West Fifty-ninth street, New York. The method employed by this concern is to mail an order enclosing check. An instance is known where this concern ordered five gross of a preparation and enclosed check for \$109.80. Upon inquiry by telegraph the reply from the bank was "no account."

The London Trading Company, located in Attorney street, New York, number of address unknown, is also a concern of mysterious operations. As far as can be ascertained this company is a source of supply to retail cutters in Connecticut.

Sam Koller, "Commission Broker and Dealer in Drugs," of 737 Broadway, New York, is another individual who is also difficult about dispensing cash when his rush orders are held subject to funds before delivery. Parties in this city held one of his orders for three weeks, but their request that he show some of his money to secure attention has not yet been complied with.

## FOR PERMANENT TARIFF REVISION.

### Convention of Representatives of Commercial Bodies to Consider It at Indianapolis.

A call for a National Tariff Commission, to be held at Indianapolis on February 16, 17 and 18, has been issued by a number of national commercial organizations, board of trade, etc., acting in response to requests from all sections of the country. The purpose of the convention will be to give immediate and adequate expression for the creation of a permanent, non-partisan, semi-judicial tariff commission, which shall collect and study commercial and industrial facts in this and other countries pertinent to the tariff question for the information and use of Congress. The convention will be held in Tomlinson Hall, the largest auditorium in the city.

Henry Riesenbergs, of Indianapolis, president of the Lemare Pharmaceutical Company, of New York, will be chairman of the convention. Mr. Riesenbergs is also vice-president of the National Harbors and Rivers Congress. Albert Plant, of Lehi & Fink, has been appointed to represent the Merchants' Association of New York.

William J. Mooney, president of the Mooney-Mueller Drug Company, of Indianapolis, is on the reception committee, and John N. Carey, of the Daniel Stewart Company, also of Indianapolis, is on the committee on finance.

### Denatured Alcohol From Porto Rico is Taxable.

WASHINGTON, Jan. 18.—Commissioners Capers, in answer to a letter asking about the manufacture and exportation to the United States of denatured alcohol produced in Porto Rico, has written that the law authorizing the withdrawal of distilled spirits from bonded warehouses free of tax for denaturation in the United States does not apply to Porto Rico, and that importations of denatured alcohol from Porto Rico would be subject to the same tax as the alcohol not denatured.

### Only One All-Night Drug Store in New Orleans.

NEW ORLEANS, Jan. 18.—Beginning January 1 this city has had to be content with one all-night drug store. For many years May's, Cusack's and Williams' Pharmacy have kept open all night, but for two of them business proved unprofitable, and first May's and then Cusack's discontinued the all-night practice, leaving Williams' Pharmacy the only one in the city.

## London Drug Market

LONDON, Jan. 9.—Business in the drug and chemical market has not, as yet, commenced in real earnest, but there is a good undercurrent of inquiry which will probably result in a fair amount of business. As regards drugs, buyers naturally prefer to wait until the public sales are resumed next week. The general opinion is that business will improve in the near future in spite of the depressing circumstances that official records show that we have been passing through twelve months of bad trade. The Board of Trade returns which have just been issued show that during last year the value of goods imported into the United Kingdom was \$263,000,000 less than the previous year, while the value of our exports decreased by more than \$300,000,000. As to the articles classed as "chemicals, drugs, dyes and colors," the value of the imports of these decreased by over \$7,000,000 and the value of our exports by \$3,500,000.

Messina products have continued to advance in price but buyers are cautious and are restricting their purchases to immediate requirements. Business has been done in Essence of Lemon at 12s. 6d. per pound, which is fully four times the price ruling before the earthquake, and the normal quotation is over 15s. It is highly probable that prices will recede in the near future. Oil of Bergamot is very scarce on the spot and a small business has been done at 42s. 6d. per pound, or about three times the value prior to the disaster. Citric acid is not quoted by English manufacturers in view of the uncertainty as to raw material, but buyers would probably have to pay 1s. 10d. to 2s. per pound. Citric Acid of foreign make is worth 1s. 8d. per pound at which price business has been done, while early in the week twenty-five tons were sold for shipment to the United States at 1s. 7d. per pound. Citrates have also been advanced in price by the makers, Potassium Citrate being quoted 1s. 8d. per pound.

The Iodine Preparations Combination have rearranged their scale of prices, and while the quotations for small quantities of the potassium salt has been advanced 3d. per pound, makers will now send one cwt. lots carriage paid instead of two cwt. lots as formerly. Glycerin continues very firm without quotable change in price. Opium is very firm market with a hardening tendency; Morphine and Codeine are also very firm. American Peppermint Oil is steady with a small business in Wayne County tin oil at 6s. 3d. per pound.

Camphor is quiet, 2½ pound Japanese slabs being quoted 1s. 6d. per pound. Ethers made from rectified spirit have advanced 1d. per pound, as also have spirituous preparations, Japan wax is steady at 54s. per cwt. for good squares.

## A.D.S. WILL MANUFACTURE ITS OWN PLASTERS.

### New Company, Organized by Mr. Goddard, Will Be Separate From Syndicate, But Auxiliary to It.

If the plans of C. H. Goddard, secretary and general manager of the American Druggists' Syndicate, materializes there will soon enter the manufacturing field a new co-operative concern to be known as the Aseptic Products Company, which will be incorporated under the laws of New York with a capital stock of not less than \$200,000. The company will engage in the manufacture of plasters, surgical dressings and suspensories, etc. According to Mr. Goddard, \$50,000 of the capital will be represented by preferred stock with a par value of \$10 per share. The stock will draw 7 per cent interest from date of issue and every member of the A.D.S. is asked to take at least one share and as many more as he wishes up to twenty shares. Mr. Goddard agrees to subscribe \$1000 of the stock as a starter, and Mr. Luft, the A.D.S. treasurer, will follow with an equal amount.

Mr. Goddard expects to have the new plant in operation before March 15, and he has already engaged the services of an expert plaster maker, as well as a superintendent to manage the venture. The plaster manufacturing enterprise will be kept separate and distinct from the A.D.S. business, but the output will be distributed by the A.D.S., it is claimed, without comparatively any selling expense. Mr. Goddard estimates an aggregate output for the new company of at least \$250,000 the first year. By making its own plasters the A.D.S. will not have to depend upon outside plaster makers.

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

Supplement to The Era Druggists' Directory.

**ALABAMA—ANNISTON**—J. R. Taylor, 530 West Fifteenth street, has been succeeded by Searlbrough & Moore; style of firm to be Model Drug Store.

**SMITHVILLE**—Powell, Jones & McGlade, it is reported, have opened a new drug store here.

**WYOMING**—J. F. Butler; store destroyed by fire.

**VIRGINIA—LOVINGSTON**—Lovingston Drug Company, incorporated, is the style of the new drug store here.

## Dangerous Fire in Jersey City.

**JERSEY CITY, Jan. 18**—Owing to the explosive nature of the drugs and articles of stock, the members of the fire companies were compelled to cautiously fight a fire which did \$1500 damage in the pharmacy owned by G. S. Hoffens, 250 Washington street, last week. The firm was successful in preventing the flames from communicating with apartments above the drug store, which are occupied by two families. The cause was not discovered.

## Brooklyn Pharmacists Elect Officers.

At a meeting of the Brooklyn Pharmaceutical Society held recently in Alandorff's Hall, Bushwick, the following officers were elected: Otto Dieckman, president; Thomas Lamb, vice-president; Robert Medl, second vice-president; L. J. Cohen, secretary, and Walter Schneider, treasurer. The directors are: Charles Hamerzhahn, Carl Mintzenzweig, Otto Wicke was reappointed chairman of the legislative committee.

## Wholesale Drug Company Incorporated.

**INDIANAPOLIS, Jan. 18**. The Daniel Stewart Company, wholesale dealers in drugs, has been incorporated with a capital stock of \$250,000, by William Scott, Martin S. Scott and Charlotte S. Scott.

# THE DRUG MARKETS

## GOOD CONDITIONS PREVAIL IN MARKET.

Business of Satisfactory Volume. With More in Sight.

Prices Firm With Upward Tendency.

NEW YORK, Jan. 18.—Business in drugs and chemicals has been of a satisfactory volume, and a good jobbing movement of seasonable articles into channels of consumption is reported by dealers. Statements are also being made that there is more business in sight than there has been of late. The market has continued to hold very firm, and the scarcity of some articles has caused a rapid advance and made transactions difficult. On the average, however, there have been no radical changes, but the tendency of prices has been upward. Opium is very firm, but there is no demand, the market having a very quiet appearance. Sulphate of quinine is in better demand, but without change in value. Norwegian cod liver oil is much more active, with the prices tending upward. The Messina oils, such as bergamot, lemon and orange, are still advancing. Olive oil is getting very scarce and the market is almost bare of good non-edible quality. Menthol is doing better and higher prices may be looked for. Calabria varieties of licorice may be affected by the disaster in Italy, and the Corigliano brand is in very tight supply here, prices for all sizes having advanced 2c. per pound. Importers have had no information from the manufacturers of the latter brand, but communications have been sent to the Duke of Corigliano, who controls the article, to ascertain if the supply is likely to be interrupted for some time to come.

OPICUM.—The market continues firm with rather more inquiry from the consuming trade, but there is no quotable change in values. Natural is held at \$1.600/\$1.45, granulated at \$5.600/\$5.85, U.S.P. powdered at \$5.600/\$5.85, all per pound, as to quantity and seller, and efforts to shade the inside figure have been unsuccessful. There is a hardening tendency in the primary markets and higher prices are anticipated by holders who are not free sellers in the present market. Total sales of 85 cases for various destinations have been reported. The arrivals in Smyrna for the week ending December 25 amount to 1967 cases, as against 1321 cases for the same period last year. The total arrivals, reported by cable, to January 15, amount to 1900 cases.

QUININE SULPHATE.—There is nothing in the way of new features with which to supplement previous reports concerning the market for the past week. The demand has been somewhat better since the passing of the middle of the month, but the business is wholly routine. Prices maintained are as follows: 100-oz. tins, oz., 160/17c.; 5-oz. tins, oz., 190/20c.; 1-oz. vials, 240/26c.

CITRIC ACID.—The demand continues very active and manufacturers are so hard pressed that they are unable to make deliveries with any degree of promptness; and while they have not made any change in their prices, they will not accept any orders at the quoted prices nor make any contracts. The outside market is about 5c. for barrels, but with little obtainable for immediate delivery at that price. A sale of a lot consisting of 10 barrels at 51c. per pound has been reported. Cables from London report big advances with the tendency still upward and a general active demand.

MESSINA OILS.—The market for Messina essences and Sicilian oils, like bergamot, lemon and orange, is so unsettled that it is difficult to give quotations that are reliable. Lemon is held now at \$3.750/\$4.50, bergamot at \$11.000/\$13.00; orange at \$4.000/\$5.50, all depending upon holder and for moderate quantities only. The trade continues to maintain firm views on the situation and expects to see much higher prices. Several holders have been forced to reduce their first quotations to customers holding their contracts, due to the fact that the contracts contained no contingency clause bearing on the situation.

MENTHOL.—There is a better demand for this article, with inquiries for large lots which are not obtainable at the present market price for single cases, which are now held at \$2.250/\$2.35. The market is very firm under the influence of higher

prices abroad, and if the present demand continues higher prices will no doubt prevail.

NORWEGIAN COD LIVER OIL.—Demand is increasing owing to more seasonable weather, and an active market is looked for during the next three or four months. Stronger cables from Norway has made the cost to lay down the oil \$22.00 per barrel. The market here has not advanced, prices still ranging, in large quantities, from \$21.000/\$25.00, as to brand and quantity. Cables recently received, however, will no doubt influence the price, as on the 14th instant the equivalent reported on sales for shipment was \$21.50 with further parcels held at \$22.00 per barrel.

CAMPHOR.—Japanese refined camphor in 1/2 ounces, 24s and 48s is scarce, and prices are fully up to those of domestic refiners, but other sizes are obtainable at the usual difference. The demand, however, is light and unimportant.

CASSIA FISTULA.—Under an improved consuming demand, together with diminishing spot stocks, quotations have been advanced to 70/8c. per pound in large quantities.

BALSAM COPAIBA.—The demand is chiefly for the South American variety. There is a satisfactory consuming outlet and quotations are firmly maintained at 480/50c. per pound, as to size or orders.

STROPHANTHUS SEED.—The market is firmer owing to a fairly good inquiry. Quotations for large lots have been advanced to \$550/60c. per pound, with sales reported at the inside figure.

ITCHU LEAVES.—The short variety is receiving more attention from manufacturing consumers, but quotations are unchanged at 230/25c. per pound, as to quality and quantity. The long leaves are quoted at 250/30c. per pound in large quantities, with an improved inquiry and stocks exceedingly light.

JUNIPER BERRIES.—A good consuming inquiry exists, spot stocks are steadily diminishing, and there is none coming forward. Consequently the market is strong and quotations are well sustained at 40/45c. per pound, as to quality, quantity and seller.

NEX VOMICA.—This article continues in good demand from manufacturing consumers, but there is no quotable change in values, and the ruling range is 230/30c. per pound in large quantities, according to grade.

RAPE SEED.—The market is a shade easier and dealers are offering quantities at fractional concessions. Only a light business is reported.

SICILY SUMAC.—Out of recent arrivals parcels are reported to have been sold at \$82.00 for 28 per cent. February-March shipments are held at \$75.000/\$78.00.

RUSSIAN ERGOT.—On the spot this article is very firmly held at 290/30c. per pound in large quantities, with the tendency of values upward, owing to the receipt of cables from Hamburg to the effect that the price there had been advanced to 29c. It is also stated that there is very little coming forward from producing districts.

OLIVE OIL.—Supplies of good non-edible oil for commercial purposes are almost unobtainable, with local market almost bare of stock. Prices have been advanced both here and in the primary markets and dealers are quoting \$1.500/\$1.55 per gallon in large quantities for either green or yellow, and jobbing interests are quoting \$1.650/\$1.80 for Malaga in retail lots.

CACAO ALKES.—The market for this article is reported quiet and is not receiving much attention, the undertone, however, remaining fairly firm, with 710/2c. quoted per pound in large quantities. For a loin there is a moderate to fair demand, with the market quite steady and quotations ranging at 750/85c. according to seller and size of order.

SUGAR OF MILK.—This article is still more or less unsettled, but without quotable change. Spot goods of the powdered are available at 30c. per pound, but up to 12c. is being asked for 1000 contracts. Crystals, in large quantities, are selling at 15c. per pound.

QUINCE SEED.—Quotations have been advanced to \$1.00 per pound in large quantities, due to reduced stocks.

## Formaldehyde as a Preservative.

Dr. H. W. Wiley has issued in Bureau of Chemistry Circular No. 42 the general results of his investigations showing the effect of formaldehyde upon digestion and health. Its use as a preservative is condemned as injurious to health.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, JANUARY 28, 1909

No. 4

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 49 Dearborn St., Chicago

Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the	
Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE.

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Postoffice as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Ured S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album

90 WILLIAM ST., NEW YORK.

## THE BENZOATE OF SODA DECISION.

President Roosevelt's Referee Board of Experts by deciding in favor of the harmlessness of benzoate of soda has practically reopened the whole subject of the use of preservatives in food. Dr. Wiley's war against preservatives induced many manufacturers of food products to discard all artificial means of preservation and the movement in that direction has gained an impetus which has caused many of them to take an active stand in favor of the Chief Chemist's position in this particular matter. They have discovered that they can get along without preservatives and it is doubtful if any of them will return to the old system. The value of being able to advertise purity of goods and absence of preservatives, whether harmful or otherwise, will tend to prevent any return to old methods with many manufacturers.

With benzoate of soda vindicated by the results of "poison squad" experiments similar to those upon which Dr. Wiley based his condemnation, there will no longer be any hesitancy in properly classifying this salt at its correct value. While Dr. Wiley will naturally feel more or less piqued at the turn of events, everybody will hope that he will neither be displaced nor permitted to resign. On this particular question there has been much disagreement with his conclusions, but in most other matters affecting the public health and welfare he has been sustained by popular sentiment. Dr. Wiley has years of usefulness to come which ought to be devoted to further effort along lines connected with the conservation of the public health and enforcement of pure food and drug laws.

## NEW LIGHT ON CANADIAN MEDICINE LAW.

Canada's Minister of the Inland Revenue, who is charged with the enforcement of the new "Proprietary or Medicine Act" which becomes effective on April 1 next, has thrown some new light on the operation of the new law. In a decision he says:

"In respect to provisions of Section 10, such are not intended to prevent being used on imported medicines any wording required by the laws of the country in which such medicines are manufactured (such wording being designated as that of said Foreign Country) so long as such wording does not in its strict construction the provisions of the first subsection of Section 10, and provided further that such medicines are marked as required by Section 3 of the Proprietary or Patent Medicine Act."

Earlier interpretations of the law were to the effect that goods manufactured in the United States would be unsalable in the Dominion if they bore the American label in addition to the Canadian label. The Montreal *Pharmaceutical Journal*, in calling attention to the ruling, says that it "cannot account for the error" (in construction) "attributed to the

officers of the Proprietary Articles Association of Canada." A perusal of the following portions of Section 10 of the law makes it clear that a natural construction was placed upon it by the manufacturers:

"10. No manufacturer, importer or vendor shall, in any advertisement or in any other manner, assert or indicate that the certificate of registration issued by the Minister passed upon the merits of any proprietary or patent medicine, and no reference to such certificate, or to any other certificate or guarantee, other than by this Act specially provided, shall be made in any advertisement, upon any label upon the package or bottle in which such medicine is contained, or in any other manner.

"2. No proprietary or patent medicine shall be imported, exposed, sold or offered for sale in Canada which bears any representations as respects certificates issued under any Canadian or foreign governments different from that allowed under this Act."

The new form of Federal guaranty is practically the same as that adopted by the Dominion, for neither even indirectly guarantees the goods. Under the ruling of the Minister, therefore, there would now seem to be no objection to publishing both guarantees on proprietary medicines sold in the Dominion. A full summary of the law was published in the ERA of December 3 last, page 703.

#### REVISING THE NEW YORK PHARMACY LAW.

It is very unfortunate that Governor Hughes has taken the position that the present New York State Board of Pharmacy is not constitutionally constituted, as recently reported in the ERA, and that he insists upon the transfer of its source of membership from election by the pharmacists of the State to appointment by the Governor. The present system has worked admirably and the high character and efficiency of service of the board members has been due as much to the fact that they were elected by and responsible to the pharmacists of the State as to any other cause. It is understood that the pharmacists see the futility of opposing the Governor's wishes in the matter and at a conference on Monday night it was decided to draft a bill to conform to his ideas.

The necessity for any change does not appear to be felt outside of Albany. The experiences of pharmacists in other States where board appointments have been dragged into practical politics are so well known that the trend of events will be generally regretted.

#### WILL N.A.R.D. AND A.P.H.A. GET TOGETHER?

Action by the executive committee of the N.A.R.D. in selecting Louisville as the place and the week of September 6 as the time for the 1909 convention of that association, without the committees of the N.A.R.D. and the A.P.H.A. having come to any agreement as to the proposed joint or simultaneous meeting of the two organizations, places very much in doubt the possibility of the two organizations getting together this year.

The whole proposition is now in the hands of the Council of the A.P.H.A., which body will select the time and place for this year's meeting. The ques-

tion will occur as to whether Louisville can accommodate both associations, but there will be other considerations, such as temperature conditions in the summer in a city located so far South as Louisville. It has been suggested that the A.P.H.A. might meet the week previous at Cedar Point, on Lake Erie, which is not a great distance from Louisville, and this plan no doubt will have fair support. Held consecutively in nearby places, neither convention could detract from the other and there would not be too much for the members of both to try to do at the same time.

#### ANOTHER RULING OF IMPORTANCE.

One of the features of the Canadian law which has been the subject of much controversy has been the phrase regarding the "inseparable part of the label and wrapper," as mentioned in Section 4:

"Section 4. All proprietary or patent medicines shall be put up in packages or bottles, and every one of these, intended for sale or distribution in Canada, shall have placed upon it, in conspicuous characters forming an inseparable part of the general label and wrapper, the name and number under which the medicine is registered, with the words, 'The Proprietary or Patent Medicine Act' and also the manufacturer's name and address, which name and number shall be sufficient identification, as to the manufacturer thereof, for the purposes of Section 14 of this Act."

While it seemed clear that a "sticker" could not be used, there was a question as to whether a label containing the required wording as a part of the original printing would be necessary to comply with the law. President Gibbard, of the Canadian Pharmaceutical Association, has taken this point up with the authorities and has obtained from the Minister of Inland Revenue the following ruling on the subject:

"The information required by Section 4 of the Act may, as respects labels now held in stock by manufacturers of proprietary or patent medicines, be accomplished in distinct characters of a color different from that employed in connection with other printing on said labels and wrappers."

The effect of this ruling is that not only can the old labels be used, but that in printing the new legend over the old matter a rubber stamp could be employed, which would be especially convenient in marking goods already labeled or packed. The Canadian authorities seem disposed to cause as little unnecessary trouble as possible in putting the new law into operation.

#### DUTY OF CONGRESS AS TO OPIUM.

It is difficult to understand the object of Representative Payne, of New York, in holding up in Congress on Saturday the Donby Bill which prohibits the importation of opium except for medicinal purposes. We are inclined to question his assertion that the revenue will lose \$1,000,000 a month through the enactment of this measure, or that the illicit use of the drug would go on just the same. The opium affected is of the kind used for smoking and it is inconceivable that any such enormous amount of that quality is imported as would be the case if Mr. Payne's figures are correct.

Placing the commercial aspect of the opium smoking peril ahead of the humanitarian is a most

remarkable view for a Congressman to take. The bill has been reported favorably, its passage is demanded by the best interests of the country, and there is no sordid argument which ought to be permitted to stand in the way of the enactment of a measure which has for its object such an important reform. It is the duty of Congress to pass the Denby Bill without further quibble.

When a man stands on his dignity he sometimes puts his foot in it.—*Philadelphia Record*.

According to Miss Evans Montgomery, there are now between sixty and seventy women pharmacists engaged in the practice of their profession in California.

Be prompt yourself, if you expect other people to be prompt with you.

The re-election of Dr. Adolph W. Miller to the presidency of the Philadelphia Drug Exchange is but one of the testimonials of the esteem and affection of his associates for one who for nearly fifty years has been one of the most prominent figures in commercial and professional pharmaceutical circles in the Quaker City. His activity and ability in other organizations along allied lines have been similarly recognized again and again, and today Dr. Miller's name is known and his friends are legion wherever pharmacy or medicine has a representative.

Sixty-one years ago William H. Miller, the father of Adolph W. Miller, who also was a pharmacist, decided to leave the Fatherland and seek his fortune in America. The son was then a child of seven years. The family settled in Belleville, Ill., but after learning the language and the ways of the country of his adoption, the father decided that there were better opportunities in the growing city of St. Paul, where he moved in 1855. Minnesota was then a territory and pharmacists were few and far between in that section.

German thrift and German industry soon made themselves recognized and the pharmacy, at what is now Third and Exchange streets, St. Paul, prospered accordingly. A few years later the son was sent to the Philadelphia College of Pharmacy, where he was graduated in 1862. While at college, Dr. Miller had been working during his spare time in the establishment of Henry O. D. Banks & Co., Third and Calwellhill streets, the

business being largely in paints. Upon graduation, the young man was offered a partnership in the business and instead of returning to the West, as he had expected, he accepted the offer. His rise after that was a rapid one and three years later the sign of Henry O. D. Banks & Co. came down and instead there appeared the announcement of Aschenbach & Miller, the former being Frederick Aschenbach, a fellow employee. Drugs became an important factor in the business, which was continued at the same location. Three years ago, upon the death of Mr. Aschenbach the business was incorporated and Dr. Miller was elected president.

Throughout his business career, Dr. Miller lost no opportunity to perfect his education along allied lines. He took up medicine and in 1871 was graduated at the University of Pennsylvania. One year later he received the degree of Doctor of Philosophy at the same institution, and until the death of his partner, which necessitated a closer attention to the details of his business, Dr. Miller was a lecturer on pharmacy and materia medica at the university. While at college, Dr. Miller developed a fondness for the study of botany, which since has been followed systematically and scientifically. In fact, frequent botanical excursions at home and abroad have formed Dr. Miller's principal source of recreation. His visits to the botanical gardens of Palermo, Italy; Athens, Greece;

Heidelberg, Berlin and Strassburg, in his native land; the Kew Gardens, of London, and others in Spain, Scotland, and in fact throughout Europe, have not only meant exceptional health and the utmost pleasure to Dr. Miller, but have frequently been the subjects of interesting lectures and addresses before the students of the University of Pennsylvania, the Philadelphia College of Pharmacy and other institutions and organizations in which he is interested.

When the American Pharmaceutical Association met in Philadelphia in 1876, Dr. Miller was the local secretary. He is the corresponding secretary of the Philadelphia College of Pharmacy; is president of the Pennsylvania Botanical Society of the University of Pennsylvania; treasurer of the John Bartram Association, and holds membership in many other organizations of a pharmaceutical character. Dr. Miller still owns the site of his father's store in St. Paul, now occupied by a hardware store. A self-made man, he attributes all that he is to the training of his youth and the development of the opportunities that industry, integrity and education made possible.

A strange secret of thirty-one years' standing was revealed recently, according to the *New York Sun*, when more than a score of prominent Chicago physicians and surgeons admitted that they were members of the Ustion Fraternity, a society having for its object the dissection of the bodies of its members after death and cremation of the remains. This weird fraternity, to which only members of the medical profession are admitted, is of national scope. Its headquarters are in a well-furnished clubhouse at 3232 Lake Park avenue, Chicago.

Chapters exist in New York, Philadelphia, Boston, Cleveland, Detroit and other cities. Its membership is taken from the ranks of the most prominent practitioners in different parts of the United States. Each chapter is known as a vertebra. The Chicago chapter, being the first organized, is called the "Prime Vertebra." Its high officer is known as the "encephalon," and its next highest officer is the "medulla." Its other officers are named for other parts of the human body.

The members of the fraternity must undergo a preparation or apprenticeship of four years before they are admitted to full knowledge of its weird rituals. During this period each must study some physiological or medical problem entirely original in his own mind. If his faith and perseverance in the ironclad rules of the society are deemed doubtful he does not become a part of the "body." If the showing is complimentary the fantastic ceremonials are administered. The society is divided into three "degrees," through which its members must pass. They are fraternity, autopsy and cremation.

Dr. P. M. Cliver, who lives in Chicago, is the supreme encephalon or national head of the Ustionians. This strange fraternity had its inception at Hahnemann College in that city in 1878. During the thirty-one years of its existence its weird teachings and practices have been a profound secret. Its members at the end of their probationary period take an oath that silences their tongues forever.

The life on this earth is enjoyed to its utmost by them. At the end their colleagues, attired in long white surzical gowns, gather about the bier on which lie the earthly remains of their friend. The spirit they know has departed, and the clay that is left is given over entirely to science. Their theories are augmented by this gressome gift. When they have finished the rites are said. At a crematory all that remains is given over to the flames. The doctor that was is reduced to a handful of dust.

Dr. Fred W. Wood, former supreme encephalon, acknowledged that the fraternity was for the purpose of autopsy and cremation. "We believe in three degrees," said Dr. Wood. "They are fraternity, which means the real fellowship on this earth; autopsy after death, which helps all mankind, and

DR. A. W. MILLER,  
of Philadelphia.

cremation, which puts an end to the earthly shell that remains after the spirit has flown."

"What is done at the autopsy?" was asked.

"I cannot say," replied Dr. Wood. "Our oaths are solemn. What we do to the body is all in the interest of science. It does no harm and it advances our knowledge."

"What is the fraternity's belief in regard to cremation?" was asked.

"We believe that cremation is proper. The body is but clay, and sooner or later becomes but a handful of dust. When it is given over to the fire all is ended. The translation of 'Ustion' means fire."

As far back as the reign of Queen Elizabeth there was a crown official known as the "Uncorker of Ocean Bottles," whose duty it was to open all sealed bottles cast up by the sea and examine the contents. The official "Uncorker" continued to flourish down to the reign of George III, when the position was abolished.

Neptune's mail cannot be said to be a quick method of communication. In July, 1887, while cruising in his yacht, the present Prince of Monaco threw a bottle overboard in mid-Atlantic. It was not recovered until seven years later, when it was picked up on the beach of San Salvador, in the Bahamas.

In point of time it was one of the longest bottle drifts on record, says the English Illustrated, but it has been eclipsed by a bottle which was found recently on the beach near Carmarthen. The latter contained a message dated as far back as March 13, 1898, which stated that the steamship Brunswick was sinking off Cape Horn. It was the first intimation to reach England regarding the fate of the long missing vessel, and it is curious that it should have been cast on shore in Great Britain after drifting all the way from the Horn. In another case a bottle which was thrown overboard by an American captain was not recovered until twenty-one years later, when it was picked up on the coast of Ireland.

For the Christian Church to found and foster hospitals is unquestionably commendable, writes Dr. James M. Buckley in the February Century in a discussion of the "Dangers of the Emmanuel Movement," and the reasons why it should not be generally adopted; but the diagnosis, treatment and prognosis should be left to those who have made this their life study and profession; to them belongs psychotherapy as well as medicine and surgery. For the church to provide chaplains for institutions and give them every facility is also rational. To attach hospitals to individual churches under rectoral or pastoral superintendence is of doubtful expediency. To provide physicians or attempt to treat patients personally would invade the sphere of an indispensable profession and encourage an irregular movement in other departments of medicine.

A large proportion of the best physicians and surgeons of Boston and vicinity sympathize substantially with the view announced by Dr. Putnam. They believe that it places "the medical and clerical professions in a false light," that "it raises false hopes," that "it interferes with the relations between physicians and their patients," and that "it encourages haste and superficiality in the consideration of a serious problem."

Alcohol is recognized the world over as the proper, most efficient and wholesome preserver of medicinal compounds, and while some journalists try to alarm the world by the cry that patent "medicines contain more alcohol than beer," they neglect to state that proprietary medicines are taken in doses from a teaspoonful to a tablespoonful, while beer is a beverage that is consumed in quantities from a glass to several quarts a day.—*Gloucester News*.

Dinks—The aeronaut's wife seems to be so anxious to carry out his wishes.

Winks—Yes; she is the most dirigible wife I ever met.—*Illustrated Bits*.

The discount habit is a good one to form—once formed it will grow. The result will be to make a more careful merchant, careful in buying and careful in selling. Discounts mean so much extra money. Why so many men who could discount prefer to let accounts run until maturity is a problem we could never solve. Of course, if a man's capital is too

small to carry his business, discounts are not always possible, but the end that every merchant should have in view should be to discount. Merchants who discount are the preferred class, not only for credit, but for bargains.—*Grocers' Review*.

Since you don't live in Siberia you need not be afraid, says M. Narrion, a Russian, to get drunk through eating ordinary bread. In far eastern Siberia, in that region which lies between the sea and the river called Missuri, the humidity of the climate, as well as the soil, is remarkable. In certain districts the humidity is so intense that there grows upon ears of corn a kind of fungus matter made up of microfungi. As a result of this sporadic excretion the bread made from the corn in question gives all the results of an overdose of alcohol. In very humid climates the phenomenon is likewise known, though to nothing like the extent of eastern Siberia, where whole districts are affected by this strange kind of "alcoholized bread."—*London Globe*.

"I suppose your motto is business before pleasure?"

"No, sir," answered Mr. Dustin Stax. "In my opinion, when business is good there is no greater pleasure."—*Washington Star*.

"Stories about umbrellas," said a New York physician, when that useful article was the subject of discussion, "are as numerous as fish stories, and often test just as severely the credulity of those who listen to them. This is a true one: A patient telephoned an hour after he had been at my office one morning that he had left his umbrella on the hall rack; would I see that it was taken for him? My servant found it, and that evening while we were at dinner he called, got the umbrella and came in to thank me. Then he told a long story as to how he valued the umbrella because he had carried it a long time, and it was just the right weight and showed a dent in the silver handle which had been made by his little boy when he used it as a hockey stick. I saw my wife smile while the story was being told. She understood my wink, however, and we said nothing. But when the man had gone away with the umbrella under his arm we laughed, for we had recognized the umbrella which I had carried out and never brought back more than three years ago."

"By one of dem wise provisions of nature," said Uncle Eben, "a man dat thinks he's too good to work ain't generally competent to do work dat 'ud amount to nuffin' now."—*Washington Star*.

The annual conference of those interested in the use of horse flesh as an article of food has just closed in Paris. It was attended by horse butchers, manufacturers of sausage and delicacies made out of horse flesh and cafe proprietors who make a specialty of serving this article. The statistics showed that last year over 60,000 horses were slaughtered for food in France and 30,000 in Germany, and that horse flesh was becoming more and more popular in all countries of the Continent. At a banquet given after the convention a menu was served composed of horse flesh.

There is no substitute for a square deal.

A street car conductor of Stamford, Conn., while bowling recently, swallowed a plate containing three false front teeth. He was almost strangled before the plate passed into his stomach, but had no further trouble and was able to go on ringing up fares as usual. It takes more than three false teeth on a plate to upset a trolley car conductor.

The country parson was condoling with the bereft widow.

"Alas!" he continued earnestly, "I cannot tell you how pained I was to learn that your husband had gone to heaven. We were bosom friends, but we shall never meet again."—*February Lippincott's*.

F. M. Wells finds that smoking retards the growth of bacteria. He took cultures from his own saliva before smoking a cigar, and repeated this every five minutes for half an hour after smoking. He is of the opinion that if smokers keep their teeth clean and allow the smoke to percolate around them they generally have much better teeth than non-smokers.—*Chemist and Druggist*.

## • NOT ALWAYS FOR BABIES

Lime Water is Largely Used  
by Adults, for

Heartburn, Diarrhoea, Diabetes,  
Nausea, Acid Stomach, Dyspepsia

Do you know that one part of  
lime water, mixed with two or three  
parts of milk, forms a diet more  
effective than any other plan of  
treatment in Dyspepsia, accompa-  
nied by vomiting of food.

Mixed with an equal measure of  
milk, Lime Water is one of the  
best remedies in existence for Nausea  
and vomiting, dependent on irrita-  
bility of stomach.

Lime Water is largely used as an  
addition to babies' foods to guard  
against stomach and bowel troubles.

Our Lime Water is made from  
specially prepared lime. Lime that  
is manufactured expressly for mak-  
ing lime water.

D. Charles O'Connor, proprietor of the White Drug Store,  
of Fitchburg, Mass., is unanimously awarded the prize of \$5  
offered in the ERA'S Cash Prize Competition this week for  
the "best advertisement used by, or for the use of a retail  
druggist." Mr. O'Connor offered a number of his advertise-  
ments in the competition and three of the samples are printed  
herewith, the award being made on the one advertising post  
cards. Mr. O'Connor is a liberal advertiser in the local pa-  
pers. In writing to the ERA, he says:

"To my mind, the majority of retail druggists are not alive  
to the possibilities of trade promotion through advertising, and  
I hope your new prize venture will awaken them to a realiza-  
tion of what good copy in advertising can produce and that  
originality of ideas is what causes the rapid advancement of  
advertising as a motor force."

Mr. O'Connor's advertisements are of good proportion, be-  
ing neither too large nor too small, seasonable as to time of  
publication and informative in character. While dealing  
with ordinary subjects there is a newsworthy appearance that is  
attractive and calculated to command the attention of readers.

The terms and conditions of the ERA'S Cash Prize Compe-  
tition can be found on advertising page 6 of this issue. It should  
be remembered that this competition is free to all, whether

subscribers or not, the only conditions being those named in  
the announcement.

### Forty Druggists for Sunday Observance.

ATLANTA, Jan. 25.—At the monthly meeting of the Evangelical  
Ministers' Association Dr. A. R. Holderby, in a report  
of the Committee on Sabbath Observance, said that the outlook  
is very bright for a discontinuance in the near future of the  
sale by drug stores of everything but absolutely necessary  
drugs. He reported that forty of the most prominent druggists  
have signed an agreement to put an end to all of their  
Sunday business with the exception of the bare filling of  
prescriptions. It is Dr. Holderby's opinion that without resort  
to law, the movement to secure the discontinuance of the sale  
of such articles as soda water, candies and tobacco by the  
drug stores on Sunday will shortly meet with success.

Despite the above apparent victory for Sunday closing,  
several druggists declare that the stores will not be closed on  
Sunday unless legal means are used to force the closing.

### Shorter Hours for Newport Druggists.

NEWPORT, Ky., Jan. 25.—All the druggists of this city have  
signed an agreement to close at 9 p. m., except Saturdays and  
Sundays. The move is the result of shorter hours agitation  
by the Union Clerks' Association.

## OUTLINES.

By Joel Blanc.

### Wilson's Earthquake.

A committee of six were sitting in that ivory-white store of Sam's, talking legislation. The entrance of a boy with the evening paper changed the topic of conversation to the terrible Sicilian earthquakes.

"I tell you what it is," said Rich, the chairman: "It takes some world-shaking catastrophe like this Italian quake to make men appreciate their real brotherhood. We cannot realize the sufferings of the homeless, starving and maimed who are at present in that devastated country. Our most

vivid imagination cannot picture within those ruined cities the sights of depravity created by physical and mental agony. No fancy can bring to our ears the voices of orphaned children nor to our nostrils the putridity of the pestilential stench. We dare not think of the intellectual standard of the sufferers nor of class characteristics which may be theirs. We only remember that they are men, women and children, fathers, mothers, babes. Distance, which so often dims the light of happiness, in this case adds to the density of misfortune's clouds, adding to the store of our sympathy and bringing it into actions which speak louder than words."

"You make me feel stingy," said Brad. "Probably each of us has already given a mite for the Messina sufferers, but suppose that we now chip in another dollar apiece. Rich can leave it at the headquarters of the relief committee on his way home."

Each man produced a dollar and handed it over to Rich.

As Sam contributed his money, he quietly said: "There was a little earthquake in this city a couple of days ago. You boys may have heard of it, but possibly have already forgotten it. Something went wrong with Horner's carbomotor; it's an old-fashioned machine, but as good as Horner can afford. Wilson, Horner's clerk, was manipulating the machine when it broke loose. Wilson is in the hospital and likely to be there for a couple of months, may lose one eye, I am told. Couple of hundred damage to the store and no insurance. That's pretty hard on Horner, he's poor. Of course, Horner cannot afford to pay a clerk who is in the hospital, but Wilson will get good care and plenty to eat while he is there. However, there is a Mrs. Wilson and a little Wilson about due. I understand that Mrs. Wilson is broke and without relatives or friends. When that carbomotor let go, it was an earthquake for her."

For a moment the men gazed at Sam and each other. Then Rich placed a five-dollar bill on the counter. The others each did likewise. As they filed out, Rich said: "Use that for the Wilson earthquake sufferer, Sam."

### Wasn't It Funny?

No one ever accused Souders of being bright. In fact, the general opinion was that he was very dull. He was one of those fellows who seem to be born in a rut and whose eyes never see beyond its edges. However, as Souders had practically no competition and the people of his neighborhood were not particularly intellectual he managed to plod along in a living-making way.

Bob Inglis was in his second year at college when he went to clerk for Souders. Bob was bright, there was no doubt about that. He was one of those nervous, quick-witted fellows who usually are called "smart."

As soon as Bob was at home in the store he started in to wake things up—everything except Souders. Bob was a boy of ideas and those ideas commenced to work from the ends of his fingers about as soon as they were born in his brain. The store became cleaner; Bob cleaned it. The windows were

more tastefully trimmed; Bob trimmed them. New lines were displayed; Bob had suggested their purchase. In fact, Souders' business commenced to pick up as soon as kid Bob commenced to stir things up. Bob certainly deserved the credit for improved conditions and Souders, in dull wonder, acknowledged it.

Bob was not one of the sort to let any personal credit get by him, but he handled his honors in a peculiar way. He had a sarcastic laugh which spoke more than words, and when he did use words he used a good many of them, those words could be given more than one meaning. Not that Bob abused or ridiculed his boss; in fact, he always spoke in his defense. But he did it in a sort of pitying, sneering way that made his faint praise doubly damning.

The more quick-witted of the patrons soon realized the relations between employer and employee, and they considered that the conditions in Souders' drug store were exceedingly funny. They laughed at Souders—each week more and more people laughed at Souders—and poor Souders laughed with them without knowing what they or he were laughing at. Wasn't it funny?

Everyone wondered what Bob was after. Outside of college hours he was in the store every business minute, working like a horse and that for insignificant pay. As Souders noted the steadily increasing receipts his flacid lips parted wider and wider in open-mouthed amazement. So far as Souders could be enthusiastic about anything, he was enthusiastic about Bob, and Bob was constantly faying him with veiled scorn and witty sarcasm. Wasn't it funny?

When Bob graduated, passed the board and could write Ph.G. and R.P. after his name, it dawned upon Souders that he should pay his clerk a larger portion of the profits which that clerk was so instrumental in creating. He offered Bob an increased salary—he went further, he offered him a partnership in the business. Bob laughed in his face. Wasn't it funny?

Souders made his offer on Saturday. Bob quit that night. He had already leased a store on the corner diagonally across from Souders. Bob's folks had some money and had made him a very liberal graduation present. When Bob opened his store it was the palace. Souders' store was a hovel. Souders gazed across the street in wide-eyed wonder, for he could not yet quite understand. The whole town laughed at Souders. Wasn't it funny?

Today Robert Inglis is known as a very successful man, highly respected, prominent citizen, very charitable, church pillar and all that. In Vernon people still tell how Robert Inglis built up a business for himself in another man's store. The ratelors laugh, so do the hearers. Isn't it funny?

Souders? Oh, after he failed he left Vernon, drifted from one thing to another, health broke and he killed himself. Said to have become insane, I believe. Wasn't it funny?

### The Barrier.

Overman had owned a drug store for twenty years, had the best store in the city and everyone acknowledged him to be a fine business man. Perhaps he was a little impulsive; in fact, he said so himself. Miller had been with Overman during the entire life of the business and was chief clerk. He liked to refer to himself as "manager." Overman called Miller cautious, some said he was dull, others narrow; still others, envious. Overman said that he was often very restrained by Miller. Overman occupied himself with the buying, advertising and financial ends of the business and let Miller look after sales and prescriptions. All the help was under Miller and until Ferris came, it had been hired by him and was just his sort. Ferris already had a record and when Overman heard of it he hired him, but naturally he placed him under Miller. Clerk Ferris was a good bit like Overman. His head was full of ideas and sometimes those ideas boiled over and splashed around a bit. If Miller had ever had an original idea it had never gotten out of his head.

Ferris soon noticed two things. One was that Miller tried to keep him and Overman apart. The other was that if Ferris had a scheme that was too deep for Miller to understand it was "not worth while." If the scheme was within Miller's range of reasoning it was pronounced "good, but crude." Miller would always undertake to "remove the crudities." If the changes spoiled the idea Ferris was blamed for failure; if success came Miller took most of the credit. These condi-

of Miller, Ferris admired Overman, was loyal to his interests, and might have been made to fairly worship him. But if Ferris did get a scheme direct to Overman, even though the latter approved it, it was referred to Miller and invariably turned down. Of course, Overman was only showing respect for and confidence in an old and faithful servant.

Ferris' letter of resignation read, in part: "I would rather work for you than any man I ever knew. I tried to give you the best that was in me, and had you let me get close to you I would have learned from you and made myself more valuable to you. You have paid me all I earned and I want no presents, but I want a chance to earn more and cannot get it in your service. I cannot climb over Mr. Miller to get to you and I will not try to undermine him."

Today, Ferris is Overman's most dangerous competitor. Who is to blame, Miller or Overman?

### Ginger Growing in Jamaica.

Ginger is the dried underground stem of a plant which grows wild in southeast Asia and in the Malay Archipelago, and is cultivated extensively in South America and the West Indies, particularly Jamaica. The ginger produced in Jamaica is recognized as of superior quality and commands more than double the price of any other. The botanical name of the stem is rhizomes, the real roots of the ginger plant being the fibers which are given off from the rhizomes. Leafy shoots rise from the underground stems to a height of 1 to 3 feet, according to conditions of soil and climate. The plant bears a blossom on a stalk separate from the leaves. Ginger requires a rich soil, well drained, rich vegetable loam being best adapted to its cultivation. These conditions being met, tions led Ferris to strive to get directly at Overman, in spite of it may be grown from the sea level to high mountainous regions, provided the rainfall be abundant or irrigation be adopted.

The plant is propagated by division of the rhizomes, each rhizome being carefully divided into small pieces, pains being taken to leave at least one shoot bud on a cutting. The cuttings are at once set out in the field in holes that have been specially prepared for the purpose at distances of about a foot apart. It is essential that the land should be well cleaned and trenched, the refuse and rubbish being buried in the trenches to enrich the soil. The best time for planting is in March or April. The plant is cultivated in much the same way as the potato. Manure is generally placed in the holes when the planting takes place, and also spaded into the ground when the same land is used for several years in succession.

The plant is in blossom about September. Thereafter the shoots wither, and the rhizomes increase in size, and by January or February the spice is ready to gather. The plant is dug out of the soil, with a fork, care being taken not to injure the rhizomes or hands, as they are termed in Jamaica. The hands vary in size, some being very large and weighing over half a pound.

After the hands are divested of the fibrous roots and all adhering mold and dirt, they are scalded for some minutes in boiling water, to destroy their vitality, and then dried in the sun, when they become the ginger of commerce. The darker kinds are sometimes bleached by exposure to fumes of chloride of lime or burning sulphur. What is known as "scraped," "uncoated," and "white" ginger is prepared by scraping the hands with a knife until the dark outer skin is removed, and then drying them in the sun. When cultivated under favorable conditions, an acre of land will produce as much as 4,000 pounds.

Ginger is shipped in bags, which generally contain a hundredweight each of the spice. There is a considerable acreage of land under cultivation of ginger in Jamaica, mostly in the hands of small settlers in the southern part of the island. During the last fiscal year about 1,400,000 pounds were exported from this island, about 650,000 pounds being taken by the United States, and 600,000 by Great Britain. Canada took nearly all the balance. The crop last year was little more than two-thirds the usual amount, because of the severe and long-continued drought in the island. Preserved ginger is prepared and exported from Jamaica only in small quantities (Consular Report).

The druggist who "trusts to intuition" sometimes mistakes his own instinct for intelligence.

## The Slaughter of the Innocents.

A Too-Little Considered Field of Habit-Forming Drugs.

By Emma Gary Wallace.

The numberless kinds of work, the industrial and professional conditions of each, and the tremendous amount of accompanying detail, which a government like that of the United States has to supervise and regulate is well-nigh incomprehensible. No wonder that the jungles of Africa, with a few sociable wild animals thrown in, are a sylvan retreat of alluring restfulness in comparison!

Of course, each class of workers feels its issues, its legislation and its protection are all-important. So perfectly, however, is this vast aggregation of interests systematized that a truly wonderful amount of good work is accomplished each year. If unwise legislation sometimes slips through, or certain details are not properly regulated, it is small wonder. It is of the greatest importance that each class be continuously on the look-out for the safe-guarding of its own best interests.

The legislation concerning the importation, the manufacture and the sale of habit-forming drugs is receiving serious and timely attention. It might at first appear, that in this connection, the women-folk have no direct interest, but such is not the case. There is one field, the control of which comes almost entirely within the province of women, and that is the administering of quieting medicines and narcotics to young children.

If statistics were available, which they are not, to prove who it is that purchases and deals out the great quantity of such medicines prepared and sold in this and other countries, there is little doubt that at least 95 per cent of it could be shown to be handled by women—mothers, non-professional nurses, older children and women relatives. The children are the hope of the nation. Preserve them and our future citizenship will take care of itself. Anything which menaces the health, the life or the morals of the child should be carefully investigated. Anything which broadly menaces the child through the ignorance or the carelessness of women should be made the subject of study and effort to rectify by the women of our land, who are fortunate enough to have greater opportunities for wisdom.

There has been an awakening during the past few years to the necessity for guarding child-life more carefully. Juvenile courts, which aim to keep the children from going wrong, playgrounds, to give them a chance for fresh air and healthful exercise, and a broader training to fit them for more symmetrical lives are the result. These are all good, excellent, but what if the child's physical and mental development have been partially or wholly arrested before it is old enough for the good influences of these worthy institutions? We must go back of all this, back to the days of colicky infancy and the tedious months of painful teething, when tired, ignorant or careless mothers or female attendants administer medicines of unknown effect to soothe wailing children. Unknown, save for the immediate effect of stupefying them into unnatural slumber or a condition of partial insensibility to pain or discomfort.

Many do not realize the evil effects on brain and body of this practice, and yet it is a self-condemning fact that as a rule women deny using anything of the kind, even when evidences of their use are painfully apparent.

One mother with five pallid, listless children was interrogated by a prominent druggist's wife regarding the health of her little ones. She acknowledged that they were all of an exceedingly nervous temperament—inherited from their father—and that she had done her best to keep them clothed, fed and in good health. She stoutly denied ever giving them anything in medicines except a simple tonic for their nerves. Further questioning revealed that the whole five had been

freely given a medicine which contained an excessive amount of morphine to the ounce before the Pure Food and Drugs Act came into force, and which still contains too much to be given indiscriminately and continuously to children.

There were those little ones with their stunted mentalities, their thin little bodies, yellowed skins, and lack-lustre eyes, with the seeds of a deadly habit planted in each little system. They will grow up, if they live, into whatever sort of citizens surrounding influences make, to become in their turn the parents of further degenerates.

The evil is not wholly confined to the ignorant or to those who plead the necessity for a chance to labor uninterrupted. Sometimes the well-to-do employ nurse girls without making a rigid investigation of their previous records. A beautiful, motherless boy, whose home was with his grandmother—a woman of culture and social position—was placed in the care of a woman of supposedly good character. She was devoted to novel reading, and to gain leisure for this pastime she freely drugged the child with what purported to be an entirely harmless syrup. The "dope" was purchased and administered without the knowledge of her employer, and it was not until the child's health and moral nature were wrecked and the woman had gone on to pastures new that the cause of the trouble was discovered. Is that woman still gaining time to read trashy novels by drugging helpless children?

Another case was that of a fine, lusty child which cried so much that its own mother—an apparently intelligent woman—decided to yield to the advice of her neighbors and to give it a soothing medicine. The effect was magical. The irritable, exacting baby became a quiet child that took long unbroken naps. The mother worked or neighbored in peace. When the medicine was used up, the child's irritability increased and in desperation she obtained more with the same good (?) results. After several unpleasant experiences of being "out", it was purchased in several bottle lots. There was no further trouble—then. But, now that the child is a grown woman she is a living reproach to her mismanaged babyhood. Poor child, she has been more sinned against than sinning. Intellect and the power of speech alike hopelessly crippled. She would have been a beautiful girl had Mother Nature had her way, fair as a lily, with hair like a web of sunbeams. She must now go onward through life a helpless, incoherent blabber.

Just one more example, and this last a case peculiarly sad. The child was the son of a fairly prosperous druggist. The mother was a girlish young woman who, like many another mother, lacked much knowledge that a mother should have. The little fellow was irritable and peevish in his almost continual confinement in the few rooms above the store. After long days and late hours of nerve-trying, particular work, it was hard to be kept awake by a fretful infant, and a bottle of a sweet, soothing nature was brought upstairs. It gave relief, and that was the beginning. Perhaps the father did not realize how many bottles followed the first, or it may have been that "familiarity bred a certain degree of contempt" for likely results. And the angels wept over another life the natural brightness of which was dulled.

These cases are typical of the ignorant, hard-working woman who feels that she must have her hands free to help earn the daily bread; the society woman who gives the care of the precious young lives entrusted to her into the hands of irresponsible hirelings; the unnatural mother who blindly and persistently seeks present freedom from annoyance without giving due heed to future results; and perhaps the most serious of all, those who have the opportunity right at hand of knowing better, and yet who still follow the line of the least resistance and ignore results.

There is no gainsaying that quieting medicines have their place, but their place is in the hands of a competent physician who is prepared to take the responsibility of saying when such medicine is needed, what should be given, and how long it should be continued. Self-medication on the part of the ignorant is bad enough, but the ill-advised, blundering medication of helpless children which tends to dwarf development and implant a craving for habit-forming drugs is nothing, if not criminal.

The extent of the evil is difficult to estimate, because of a pronounced inclination to be secretive regarding it, but the steady demand for such medicines tell of their widespread use. The government can provide for a legitimate use of medicines and in some measure prevent their abuse, but the mothers

themselves, the women of the nation and the incoming tide of immigrant motherhood should be taught the results, the far-reaching results of such a habit.

The mother of a child which cried bitterly and showed evidences of distress was advised to give it something soothing, but wise woman that she was, she refused. The little one was showing marked symptoms of mal-nutrition. A doctor was called and an investigation proved that the milk supply came from cows fed with ensilage. Ensilage is fermented corn fodder. Every drop of milk taken, added fuel to the fire of the trouble. The milk was changed and that child and several others similarly affected got well.

Another child, the infant son of a college professor, was restless, and the young mother was urged to give this and that quieting preparation. It was astonishing how many were prompted by sympathy to tell of similar use. But this wise little woman said: "No, we have doctors and druggists and I shall have special service for this child." A doctor was summoned and found an incipient spinal trouble which could only be averted by prompt measures.

In either of these cases the soothing medicines recommended would have quieted the children, and at the same time lessened their power of resistance against the real troubles. Perhaps they would have lulled the fears of the mothers temporarily to rest, giving the diseases an opportunity for the total destruction of their victims.

A great doctor has said something to the effect that a young child is literally an animated stomach. This being the case, it is most important what is taken into the stomach in the shape of either food or medicine. The time will undoubtedly come when our government will establish a Bureau of Infant Intelligence. Surely such a department would be of as great importance as the scientific study of plants or stock breeding, or even the stamping out of certain diseases.

If the women-folk of the drug trade could be the means of the dissemination of useful information among the women of our nation concerning the dangers of indiscriminate infant medication, and could see the ball rolling to bring about practical government help in the proper management and safe-guarding of young children, with accompanying demonstrations of the evils following in the wake of certain methods of care, diet and dosing, the future generations would have reason to rise up and call us blessed.

#### Arranging for Chapter 6's Musicales.

PHILADELPHIA, Jan. 25.—Officers and members of Chapter 6, W.O.N.A.R.D., are very busy these days arranging for their musicale and dance, to take place the evening of February 25, at Mercantile Hall. The proceeds will be for the benefit of the chapter and the affair will be the first of the many entertainments given by the local chapter to which admission will be charged. All of the talent will be professional. The musical part of the programme will be followed by a playette.

The rapid rate at which tickets are being sold is an indication of the support that the chapter is receiving from its many friends in the trade. The entertainment is in charge of the following committee: Mrs. N. D. Stroeter, chairman; Mrs. H. A. Noble, Mrs. E. M. Platt, Mrs. E. W. Gohardt, Mrs. J. G. Howard, Mrs. Walter Rothwell, Mrs. L. A. Hance, Mrs. H. F. Vosage and Miss Margaret Campbell.

#### Druggists and Their Wives at Dancing Class.

PHILADELPHIA, Jan. 24.—With a display of interest that promises to make the druggists of Philadelphia famous for their proficiency in the terpsichorean art, prominent retailers, with their wives and daughters and a few affiliated with the trade, on Friday evening turned out to the first class after the holidays. The lesson lasted from 9 to 11 p. m., and at the close, when it was asked how many would be on hand for the next lesson two weeks hence, the assent was unanimous. Each one also promised to bring friends.

Among those present were Mr. and Mrs. Charles Rehffuss, Miss Lebo, Mr. and Mrs. William E. Lee, Mr. and Mrs. S. B. Davis, Mr. and Mrs. J. J. Kelley, Mr. and Mrs. Fred. R. Keller, Mr. C. S. Gill, Miss Paul, Mr. and Mrs. J. E. Marsden, Mr. and Mrs. Frank W. Fluck, Mr. and Mrs. Harry G. Comp, Mr. and Mrs. L. H. Davis, Mrs. C. G. Nedy, Miss Neely, Miss Dora Rubin, Miss Esther M. Wolfe, Mr. and Mrs. Darley and Miss Warner.

## Original and Selected

### CARD SIGNS THAT SOLD GOODS.\*

By Edw. Williams, Antigo, Wis.

During the past winter I was engaged during my spare time in the manufacture of a hand-made copy of Omar Khayyam, that I bring it here for your inspection and while working at it the thought struck me that similar signs or cards would be a good thing to draw attention to my window displays. They were such a pronounced benefit that I present my experience here that other members may profit by it. There is no expense in connection with the manufacture of these signs, as the materials used are such as are found in every drug store. The red color is carmine dissolved in dilute ammonia; the blue, Prussian blue dissolved in a dilute solution of oxalic acid; the gilding is Japanese gold paint, to which I add a small amount of gasoline when necessary to increase its fluidity or covering capacity. Higgin's India ink I find to be the best for the general lettering of the signs, and either red, blue or gold for the illuminated capitals. The type of lettering most attractive and distinctive from the professional card writer's work is a modification of the vertical handwriting now being taught in the schools. A stylographic pen is an ideal instrument with which to execute this class of lettering and an ordinary camel-hair pencil is good enough for the color work and gilding of any special design. For more elaborate sign work a set of Prang's "school water colors" is very useful, furnishing at small expense colors that are fairly permanent to light and by judicious blending of the primary colors of the set any tint desired can be produced. For gray tones dilute the India ink largely with water and brush out rapidly after first wetting the paper slightly with water to make the color spread uniformly. Do not think that it is only the fancy signs that sell the goods; common black ink signs on ordinary cardboard have their usefulness also.

I bring here two ordinary black letter signs that sold out their window displays in three and four days respectively. The "rat biskit" card I put in the window with the goods the first real cold day last fall and it was one of the best pulling signs I ever used.

The "boy's bat" card sold three dozen boys' bats in three days and incidentally sold other goods in the same line, such as balls, mitts, gloves, etc., which were frequently sold to the bat customers. The point I wish to emphasize is: Make your cards harmonize with your display of goods.

For artistic packages of stationery, such as the Eaton-Hurlbut line, I used the sign shown here with good results, but for a "rough timber" display, such as bats or rat poison, a plain black and white business-like card with prices matches best and pulls the most business.

#### Mr. Dooley on Buying Clubs.

(With apologies to Mr. Dunne.)

"Have ye joined the buyin' club yet?" said Hogan, leaning carelessly on the bar.

"I have not," says Dooley, "and the chances are I won't."

"Why, a feller was in me place the other noight tryin' to sell me a bar'l of booze direct from the factory fer spot cash which, says he, would intitle me to a membership in the 'Buyers' Liberal League,' he says. I told him that I bought me booze from O'Donnell, the wholesaler, he the tallon and still owed him for the most of it. 'Niver moind that,' says he, 'the evolution of modern business demands the elimination of the middleman henceforth. Time was,' says he, 'whin the small dealer with cash to pay his bills pathronized the wholesaler, but nowadays the lad with the ready cash jines the buyin' club and buys from the factory direct, and whinever he's shy of the ready cash it's time to look up the address of the despised middleman.' I asked Doc' Leary about it yisterdab and, says he, 'Dooley, the buyin' club is a good dale loike the polisman's club, it's only good for the lad that swings it."

Moine ye the co-operation between min is a good thing whin buildin' churches, lookin' after the public health and kapin' the ward Dimmycratic, but don't make the fatal mistake of puttin' yer bank-roll in the same pile with y'r competitor across the street who is makin' faces at ye the day long. If ye do, don't look for anny better dividends thin ye are drawin' from the bunch of co-operative minin' stock ye have in the cellar."

"Ye don't belave in buyin' clubs then," says Hogan.

"Not unless I'm the club," says Dooley.—J. A. Connelly in *McPike's Bi-Monthly*.

### CHEMICAL CHANGES IN DISPENSING THAT CAUSE COMPLAINT.\*

By J. Leon Lascoff, New York.

In my practical experience I have come across a good many prescriptions which change their color on standing, due to chemical reaction. While a colorless solution sometimes turns red, a mixture originally dispensed of a reddish shade will, in a short time, change its color to a pale straw shade. In some instances a good many change to different colors, as yellow,

green, brown or olive green. Two white powders mixed together will suddenly change to a pink or carmine color, and the longer we triturate the darker will the mixture become.

Many pharmacists, as well as myself, receive complaints from our customers on account of these changes, especially in repetitions. For instance, a medicine is sometimes of a different color than that previously dispensed. A customer on receiving his medicine for the first time, notes its color. Upon renewing the same the color is entirely different. This naturally makes him suspicious and he thinks that the prescription has been incorrectly dispensed, or substitution practiced.

J. LEON LASCOFF.

As is the case, many people are timid about taking medicine, and upon receiving a newly repeated prescription and noting that it does not possess the same color as the original, they lose confidence entirely, and lay the whole blame upon the shoulders of the dispenser. He tries his best to convince them of the error on their part, but in vain.

Looking at the case from the customer's point of view, he can hardly be blamed for his distrust, if he has not been notified before that a change of color is possible. The customer knows nothing at all about chemicals, and although the pharmacist tries his very best to explain the reason for the change in appearance and that the medical properties are the same, it is impossible to convince the patient who loses confidence in the pharmacist. This has often been the case in my own practical experience, although the utmost care and the best checking system has been always observed in our prescription department.

A very interesting and valuable paper was not long ago presented before the American Pharmaceutical Association on "Some Chemical Reasons Why Solutions Deteriorate," in which the author called attention to the conditions resulting from physical and chemical forces. He also suggested excellent remedies that every pharmacist ought to take advantage of.

\*Read before the Wisconsin Pharmaceutical Association and reprinted from the Proceedings.

\*Read before the New York Branch of the A.Ph.A., January 11, 1909.

But to our great sorrow, not every pharmacist takes an interest in reading the proceedings of the meetings or the interesting papers which are presented. The author in his paper mentions solutions.

In this paper I will present for discussion some mixtures which have been prescribed by practicing physicians who are a little weak in chemistry. In attempting to compound them the pharmacist is placed in a position where he cannot change or omit any of the ingredients.

I can illustrate this contention with a great many prescriptions, but will present only a few of them:

(1)

Tr. ferri chloridi .....	10.0
Antipyrin .....	0.12
Sweet spt. nitre .....	15.0
Aqua .....	ad. 100.0

By adding the antipyrin to the tincture of iron, the yellowish color is changed to purple; by mixing it with the sweet spirit of nitre the color is changed to green, then, on standing, to an olive green, and lastly to a brown (four colors).

Chemically it forms iso-nitroso-antipyrin, which is considered by many a poisonous compound.

(2)

Potass. citratis .....	10.0
Liq. ammon. acetatis, .....	
Spt. aeth. nitros. ....aa.	30.0
Tr. cardamom comp. ....	15.0
Aqua .....	q. s. ad. 240.0

On compounding this prescription it becomes on standing a reddish colored mixture which changes to a straw color. Here again the cause of the color change is sweet spirit of nitre. Alkalies change the color to purple. The potassium citrate has no effect on the compound tincture of cardamom. It will turn the mixture to a deeper tint, but the spirit of nitre contains traces of nitrous acid which cause discoloration of the mixture.

(3)

Heroin hydrochlor. ....	0.2
Potass. iodide .....	4.0
Spt. aeth. comp. (Hoffman's drops) .....	12.0
Syr. pruni virg. ....	20.0
Aqua .....	q. s. ad. 90.0

The color will also change in this mixture on account of the ethereal oil contained in the Hoffman's drops in combination with potassium iodide.

(4)

Resorcin .....	15.0
Acid. salicyl. ....	0.18
Spt. odoratus .....	30.0
Spirit. vini. ....	q. s. ad. 150.0

Use externally.

This mixture will turn to a reddish shade after standing.

We also know that a change of color will occur in ointments of mixtures containing the iodides and their preparations and mercury and its preparations. Dr. G. C. Dickman recently read a paper on "Oleate of Mercury" and exhibited eleven specimens of this preparation. The specimens, which had been collected from a number of wholesale and retail sources, varied in color from a grayish-yellow to dark brown. All, however, contained practically the required percentage of mercury which was calculated as oxide.

(5)

Tr. iodi. ....	
Aq. ammon. fort. ....aa.	15.0
Liq. saponis camphor. ....	q. s. ad. 60.0

Lintment; use externally.

On mixing the above mentioned ingredients a lintment results which is first of a dark shade; it gradually gets lighter, then yellow, and finally becomes colorless.

(6)

Acid. carbolic .....	8 grains.
Tr. iodi. ....	10 drops.
Aq. ....	q. s. ad. 3 ounces.

This was prescribed for internal use. The color of the mixture is red, but on standing a certain length of time it gets lighter. The prescription was returned to me on account of the change in color, and I was requested to compound it over

again. After a long argument and explanation I convinced the patient that the prescription was dispensed in the same way as was done before, but in the time wasted on explanation I could have dispensed at least half a dozen prescriptions.

(7)

Infusion of buchu .....	2 ounces.
Fl. ex. corn silk .....	2 ounces.

I collected samples of fluid extract of cornsilk from four manufacturing houses and all showed a great variation in color, ranging from a light straw color to a very dark brown.

(8)

Phenolphthalein .....	0.15
Magnes. calc. ....	0.25
M., ft. caps. ....	

On mixing these powders a sudden change from white to a pinkish tint will be noticed and the color is not uniform. I would suggest that a few drops of alcohol be added to reduce the volume of bulk powder, which may then be dispensed in smaller capsules, and the mixture will also be of a uniform color.

The above mentioned prescriptions which change their appearance on compounding are but few in comparison with the number I have dispensed during my practical experience.

The suggestion I would submit regarding prescriptions which change their color after standing certain lengths of time, is that they be labeled with a little paper bearing a notice something on this style:

\* Our patrons will please bear in mind \*  
\* that after standing, the color of the mix- \*  
\* ture may change. The color does not in : \*  
\* any way affect its medicinal properties. \*  
\* \* \*

It is a much better method to notify your patrons in advance than it is to incur their distrust of your methods of dispensing, and possibly lose their confidence in you and their patronage as well.

### Chemical Progress in the United States.

Some interesting figures relating to the progress of chemical manufactures in the United States are to be found in Bulletin No. 92, recently issued by the Department of Commerce and Labor under the direction of the Bureau of Census, forming a part of the census of manufacturers of 1905. In the value of products the present census shows a decided advance in the value of products over that of 1900, or 39.3 per cent. In the department of chemicals, which also includes sulphuric, nitric, and mixed acids, wood distillation, etc., the report shows \$92,088,378 for 1905, as compared with \$62,637,008 for 1900. A marked increase is also shown in the value of essential oils, the figures reported indicating the development of a profitable industry. It is also noticeable that in the comparison of the number of establishments in the various States with those of the same States in 1900, the largest increase is shown in Georgia, with twenty-nine establishments, while the greatest decrease is reported for New York, or twenty-one in number. The shifting of manufacturing activity may be traceable to several causes, the controlling factor in most instances being the nearness to the source of the raw material.

### Candy "Nuisance" Proved a Trade Winner.

"When I was in the drug business, not long ago," said a resident of Detroit's North Side, "I used to keep a complete stock of cheap colored candy to sell by the pennyworth. While I found that in itself it wasn't very profitable, I used it to good advantage and I believe that what trade I had when I quit the business and which, I might add, was as good as any in this vicinity, was built up solely through the little penny candy counter. I got the stock when I bought the store and decided at once that it was a grand nuisance. I wanted to get rid of it and so I started to advertise that I would give it away to children who had prescriptions put up at the store. I soon had a flock of children there bringing prescriptions for every sort of household remedy and I found that they were selling much more rapidly than I had expected. I bought more candy and advertised it still more and in the end I developed the stock until I had it already made up into little packages which I could just hand out with every bottle. It was a great scheme and I honestly think it made my business."

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Kidney Pills.

(F. H. H.)—We have never analyzed the proprietary pills you name. The following formulas, however, are typical of the class generally designated as "kidney pills":

(1)

Powdered digitalis	1 grain.
Potassium nitrate	2 grains.
Powdered squill	1 grain.

For one pill.

(2)

Copaiba resin	3 grains.
Extract of cubebs (alc.)	1 grain.
Extract of huchu	½ grain.
Oil of juniper	q. s.

For one pill.

(3)

Powdered digitalis	1 grain.
Powdered squill	1 grain.
Mild chloride of mercury	1 grain.
Extract of hyoscyamus	1½ grains.

For one pill.

## Shoe Polish.

(H. P.)—For tan shoes a mixture of wax, soap and turpentine is generally employed, the following being a type of this compound:

Yellow wax	4 ounces.
Potassium carbonate	4 drams.
Resin soap	2 drams.
Oil of turpentine	8 ounces.
Anilin yellow (phosphine)	4 grains.
Water	q. s.

To 12 ounces of water contained in a suitable pot, add the wax and soap in scrapings, together with the potassium carbonate, and boil until a smooth creamy mass is obtained; remove the heat and add the turpentine and the dye, the last named having been previously dissolved in alcohol. Mix thoroughly and add sufficient water to make the product measure 24 ounces.

The paste polish which is used with the liquid application is composed of yellow wax and rosin thinned with petrolatum; say wax, 4 parts; rosin, 1 part; petrolatum, 12 parts; mixed according to art.

A simpler form of the liquid polish or shoe cream is made by dissolving equal parts of yellow wax and palm oil in three parts of oil of turpentine.

A black shoe cream or polish may be made according to the following formula:

Yellow wax or cerasin	3 ounces.
Spermacei	1 ounce.
Oil of turpentine	11 ounces.
Asphalt varnish	1 ounce.
Borax	80 grains.
Frankfort black	1 ounce.
Prussian blue	2½ drams.
Oil of mirbane	1½ drams.

Melt the wax, add the borax, and stir until a kind of jelly has been formed. In another pan melt the spermacei; add the varnish, previously mixed with the turpentine; stir well and add to the wax; lastly add the colors, mix well and incorporate the oil of mirbane.

For the preparation of the water dressings only these waxes

are available which are capable of being emulsified, including carnauba, bees, Japan, and insect wax and shellac. Paraffin, ceresin and mineral waxes are not available. In order to produce an emulsion it is necessary to use a small amount of neutral soap in addition to the required amount of alkali, though care must be taken to avoid an excess of soap, as this would make the resulting paste too readily soluble in water. Dressings of this class are made by heating the soap, alkali, wax and water to nearly the boiling point of water, stirring constantly until a uniform milky substance is produced, which on cooling solidifies into a mass of the consistency of an ointment.

## Shampoo Paste.

(C. M. N.)—Try one of the following:

(1)

White castile soap	2 ounces.
Ammonia water	2 ounces.
Bay rum or cologne water	1 ounce.
Glycerin	1 ounce.
Water	12 ounces.

Dissolve the soap in the water by means of heat; when nearly cold stir in the other ingredients.

(2)

Castile soap	4 ounces.
Potassium carbonate	1 ounce.
Water	6 ounces.
Glycerin	2 ounces.
Oil of lavender flowers	5 drops.
Oil of bergamot	10 drops.

To the water add the soap, in shavings, and the potassium carbonate, and heat on a water bath until thoroughly softened; add the glycerin and oil; if necessary to reduce consistency, more water may be added.

## Sea Foam.

(E. S.)—

(1)

Potassium carbonate	½ ounce.
Castile soap, powdered	1 ounce.
Water	8 ounces.
Tincture of quillaja	1 ounce.
Oil of bay	5 minims.
Alcohol, enough to make	1 pint.

(2)

Soft soap	1½ ounces.
Potassium carbonate	2½ drams.
Alcohol	3 fl. ounces.
Essence of jockey club	½ fl. ounce.
Water enough to make	25 fl. ounces.

(3)

Spirit of soap	7 fl. ounces.
Glycerin	2½ fl. ounces.
Rum	2 fl. ounces.
Spirit of lavender	2 fl. ounces.
Alcohol	14 fl. ounces.
Rose water	8 fl. ounces.
Vanillin	1½ grains.
Oil of wintergreen	2 drops.
Sandalwood, powdered	75 grains.

Mix. Allow to stand for two days and filter.

## Candlenut Oil.

(F. M.)—The name "Candlenut", as we understand it, is a synonym for both *Alaurites cordata* and *Alaurites Moluccana* (A. triloba, Forst.), the seeds of *A. cordata* being the source of tung or Chinese wood oil, the candlenut oil of commerce being derived from *A. Moluccana*.

The candlenut oil is obtained by boiling in water the crushed seeds of *A. Moluccana* which grows in tropical regions, in the isles of the Indian and Pacific Oceans, India and the West Indies. The oil is known by several names as kene oil in Ceylon; Bankul oil in India; Spanish walnut oil in Jamaica; kenui oil in the Sandwich Islands, where it is used as a mordant for vegetable colors. The tree yielding the fruit is known as the candleberry tree, from the fact that the seeds strung upon palm fibers are used for lighting purposes by the Polynesians. The nuts taste like walnuts and are used as food by the natives of New Georgia. The tree is called Indian Akrot (walnut) in India. On account of the oil being much used by painters, it is sometimes known as

country-walnut oil or artist's oil ("Treasury of Botany"). The oil is limpid, transparent, syrupy, amber-yellow, odorless and rapidly-drying. The yield is about 60 per cent. It consists of palmitin, stearin, myristin and olein, the latter being somewhat like linolein from linseed oil. The oil is laxative. It is also known as Lumbang oil.

#### Hectograph or Copying Pad.

(W. O., Jr.)—"Being a subscriber to the ERA and having read with interest your "QUESTION BOX" each week, I thought that perhaps you could give me a good formula for making a hectograph. I hope I may read the answer to my request in the next issue."

Various formulas have been published for making copying pads (hectographs), but the following seems to be about as good as any:

Gelatin .....	4 ounces.
Water .....	8 fl. ounces.

Allow to stand for twenty-four hours, turning over occasionally. Add to:

Glycerin at 200° F. ....	14 fl. ounces.
--------------------------	----------------

Stir gently, so as to avoid formation of air bubbles, and pour into a thin tray about three-eighths to one-half inch deep placed on a perfect level table. Allow to set.

For the ink use the following: Methyl violet, 1 part; alcohol, 10 per cent, 10 parts. Dissolve.

The writing must be well done on glazed paper and allowed to become perfectly dry. Place the sheet upon the pad, face downwards, and with a photographic roller press perfectly flat. Allow to remain in contact for five minutes. Remove. Copies are taken by pressing on the pad paper nearly free from size. A few seconds suffices for the first impression, but afterwards, as the ink becomes exhausted, a longer time must be given and the paper must be slightly damp. With care there is no difficulty in taking from twenty-five to fifty impressions.

Afterwards clean off with a sponge dipped in a mixture of

Hydrochloric acid .....	1 part.
Methylated spirit .....	9 parts.

and set aside for a few hours before using again. After much use the pad may require remelting.

#### White Liniment.

(C. H. H.)—"I have at hand your ERA Formulary and the ERA from which I have tried to find a formula for a white liniment that will not separate and one that does not contain eggs in the manufacture of the same. Please publish a formula."

"White Liniment" is a synonym for Stoke's liniment of the National Formulary, which, however, directs the use of eggs in its preparation. There are any number of formulas for liniments under the above title which does not call for eggs, the following being typical examples:

(1)	
Alcohol (90 per cent) .....	6 drams.
Olive oil .....	12 ounces.
Oil of thyme .....	2 drams.
Oil of turpentine .....	6 ounces.
Solution of ammonia .....	6 ounces.

(2)	
Acetic acid .....	2½ ounces.
Liniment of soap .....	3 ounces.
Oil of turpentine .....	3 ounces.
Strong solution of ammonia .....	3 ounces.
Distilled water to make .....	20 ounces.

(3)	
Soft soap .....	4 ounces.
Distilled water .....	4 ounces.
Oil of turpentine .....	16 ounces.

#### Elixir of Terpin Hydrate With Wild Cherry.

(H. F. L.)—"We cannot give the formula for the proprietary preparation, but under the above title the following formula has been published: Dissolve 256 grains of terpin hydrate in 12 fluid ounces of deodorized alcohol, add 2 fluid ounces of glycerin, 2 fluid ounces of fluid extract of wild cherry, U.S.P., and 2 fluid drams of tincture of vanilla, U.S.P. Incorporate 2 drams of powdered pumice stone with this mixture, and filter through a well wetted filter, refiltering, if necessary, until brilliantly clear.

## LETTER BOX

### Ohio A.D.S. Members Like Buying Club Idea.

*Editor The Pharmaceutical Era:*

The following resolutions were unanimously adopted at the last regular meeting of our club, which has a membership of over two hundred. Your editorial "Play Ball" is the first I have ever noticed where you ever considered us. Quite a number of our members oppose the ERA for its decided stand against co-operation and in buying clubs.

*Whereas*, The Ohio Branch of the American Druggists' Syndicate is only appreciative of the moral influence as well as the commercial influence of certain drug journals, and does hereby acknowledge the same; and

*Whereas*, Many of the drug journals do not represent the interests of the retail druggists, because they are not published by retail druggists, for retail druggists, nor of retail druggists; and

*Whereas*, The retail druggists have for many years been jobberized and Tri-par-tited, therefore, be it

*Resolved*, That the Ohio Branch of the A.D.S. is opposed to the position of these drug journals in antagonizing and discouraging so-called buying clubs and co-operative organizations; and, furthermore, be it

*Resolved*, That copies of these resolutions be sent to the various drug journals by the secretary of this association.

J. E. HISCHE, Secretary.

Columbus, Ohio, Jan. 12, 1909.

### Medicinal Plants in Texas.

*Editor The Pharmaceutical Era:*

I am giving you herewith an annual report of the work done with medicinal plants here at Sherman and a list of the weights of cured crude drugs sent to market. I began in 1908 on April 1 by harvesting wild boardwood and closed on December 24 by harvesting rue, which was in full blossom at that time. I have booked orders for about fifteen tons of plants for 1909 already. I enlarged my garden during the past fall by dividing the plants and resetting. As we can work in the garden here all winter we do not lose any time. By setting plants in the fall and winter they become well rooted and push forward during the first warm days in the spring; in fact, some of them do not stop growing at all and we do not have to lose three or four months on account of ice as it sometimes happens in the North.

I ran across some conium plants growing wild right in the heart of the town a year or two ago. They are the first plants of this kind that I have seen for twenty-five years and I think they are the only ones in Texas. I have no idea how the seed got here unless it came in feed shipped in. I shall watch the plants closely and gather the seed when ripe and then sow a big crop in the fall. Our Congressman is at home for a few days and he says that when he gets back to Washington he will take the matter up and see if he cannot get a drug plant experiment station located here at Sherman. He sees by what I have done that there are great possibilities for Texas along this line and she is sure to get there with both feet. Here is a list of weights of cured herbs which I have sent to market during the past year:

Stramonium leaves, 840 pounds; marigold flowers, 365 pounds; lemon balm, 600 pounds; benne, 600 pounds; blessed thistle, 400 pounds; borage, 500 pounds; tansy, 1100 pounds; rue, 420 pounds; parsley leaves, 200 pounds; wormwood, 700 pounds; hoarhound, 1200 pounds; fleabane, 875 pounds; motherwort, 355 pounds; mullein leaves, 50 pounds; yarrow, 300 pounds; hyssop, 125 pounds; marshmallow leaves, 100 pounds; mugwort, 26 pounds; southernwood, 25 pounds; catnip, 100 pounds. Yours truly,

J. LONG,

Sherman, Tex., January 7.

### Value of the Trade Journal.

"The business man," says Editor W. H. Schwartz, of the *Bulletin of the Pennsylvania Department of Agriculture*, "should be a regular reader of at least one trade journal. It will give him pointers concerning the conduct of his business that will be worth many times the subscription price."

## PERSONAL MENTION

—H. O. RYERSON, of Newton, N. J., called upon friends in the New York trade last week.

—R. L. JUSTICE, of the Justice Drug Company, Greensboro, N. C., was a caller in New York City last week.

—JAMES E. DAVIS, of the Michigan Drug Company, has been elected a director of the wholesalers' association of Detroit.

—D. W. C. RODEARMEL commenced his duties as representative of Parke, Davis & Co. in northern Massachusetts last Monday.

—D. C. SCHLOTTE, of the Red Lilly sales force in Los Angeles, has returned from a week's visit to the home office in Indianapolis.

—J. P. EDWARDS, Eli Lilly & Co.'s Salt Lake City representative, spent some time recently in Indianapolis visiting the home office.

—EDWIN H. BURR, of New York, American representative of Roure-Bertrand Fils, of Grasse, France, left recently for a few weeks' trip West.

—J. M. FRIX has been appointed to represent the H. K. Mulford Company in eastern South Carolina. His headquarters will be Charleston.

—MAURICE HANNAN, for two years with the C. H. Jones establishment at Beloit, Wis., has resigned and is now manager of a pharmacy at Madison, Wis.

—WILLIAM HALL, who represents Eli Lilly & Co. in Albany and vicinity, has returned home from a week's visit to the Lilly laboratories in Indianapolis.

—WILL SIEG, proprietor of a popular and paying drug store at 1795 Michigan avenue, Detroit, is planning an extensive pleasure trip to Texas, leaving next week.

—A. H. BUDSAL, of Columbus, one of the Red Lilly salesmen for Ohio, has returned to his territory after spending a week in the Lilly laboratories in Indianapolis.

—HARRY MERRIMAN, representative of the Milwaukee Drug Company, with headquarters at Green Bay, Wis., recently spent a short vacation with relatives at Chicago.

—L. L. WALTON, president of the Pennsylvania Pharmaceutical Association, is slowly improving at his home in Williamsport, after suffering with symptoms of pneumonia.

—E. C. GLENNON, chemist with the wholesale drug firm of Morrison, Plummer & Co., of Chicago, recently enjoyed a short vacation at his former home at Stevens Point, Wis.

—CARL WILSKE, assistant pharmacist with A. F. Sheldrup & Son, at Stoughton, Wis., has resigned and will complete his course in pharmacy at Marquette University, Milwaukee.

—RALPH PETERSON, recently the proprietor of a pharmacy at Crandon, Wis., has accepted a position with a leading pharmacy at Racine, Wis., and is now located in that city.

—MIERS BUSCH has been elected chairman of the house committee of the Philadelphia Drug Club. The other members are David J. Reese, Walter P. Miller, Harry P. Busch and Dr. W. B. Christine.

—C. N. CAMERON, who recently disposed of his drug business at Dewakee, Wis., with his family has started for southern California, where he expects to make his permanent home, probably at Sacramento.

—WILLIAM SCHMIDT, druggist at Hartford, Wis., with Schmidt & Mertes, and C. W. Helbing, druggist at Beaver Dam, Wis., were among the leading entries in the recent State pony bowling tournament held at Milwaukee.

—H. J. SUNDAY, who formerly represented the H. K. Mulford Company in Omaha, Neb., has been transferred to eastern Pennsylvania. He is a brother to P. Carleton Sunday, a well-known druggist of York, Pa., and has many friends in his new territory.

—LEWIS DAVIS, of Davis & Davis, dealers in botanicals at Baltimore, is out again after having been confined to the house for three weeks with blood poisoning. He ran a rusty nail into his hand and his condition was for a time disquieting.

—P. P. BROWN, of the Philadelphia office of Armour & Co., spent several days recently at the home office of the company in Chicago. Friends of Mr. Brown are congratulating him upon his advancement from the position of Philadelphia man-

ager for the extract of beef and soda fountain supply departments to manager for Pennsylvania, Delaware, central and southern New Jersey and a portion of Maryland for the same departments.

—H. F. PRIEN, the president and general manager of Serwe-Prien Company, of San Francisco, Los Angeles and Seattle, and Pacific coast distributors of Sharp & Dohme's products, was in New York for several days last week, in conference with Mr. Stauffen.

—M. K. CHRISTINE, a son of Dr. W. B. Christine, secretary and treasurer of the St. Cloud Pharmacy Company of Philadelphia, has just made his debut as a salesman, covering a portion of Philadelphia, Chester, Media and adjacent cities and towns for Armour & Co.

—O. W. SMITH, manager of the New York branch of Parke, Davis & Co., together with W. B. Kaufmann, head of the importing department, left New York last Saturday to attend the annual meeting of stockholders of the concern, which was held in Detroit on Tuesday.

—MRS. W. A. CARPENTER, the wife of a well-known Philadelphia druggist, has announced an entertainment at her home on the afternoons of February 18 and 19 for the benefit of the equipment fund of the new food and drugs laboratory of the Philadelphia College of Pharmacy.

—W. F. PLETZGER, central Wisconsin representative of the Milwaukee Drug Company, who was recently taken to his home at Manitowoc, Wis., after a long confinement at the Sacred Heart Sanitarium, Milwaukee, is slowly recovering and expects to be out on his territory by February 1.

—T. G. DRAKE, who has represented the H. K. Mulford Company in St. Louis for the past three years, is being congratulated by his friends upon his promotion to the management of the branch house in that city. Mr. Drake proposes to give his personal attention to his customers as before.

—JOHN F. SPRAGUE, formerly manager of the sales department of Sharp & Dohme, the Baltimore manufacturers of pharmaceuticals, has connected himself with the W. H. King Drug Company, of Raleigh, N. C. He was in Baltimore recently and arranged to act as distributor for some goods.

—CHARLES LE COMTE, proprietor of the Le Comte drug store at Green Bay, Wis., has departed for a two months' trip abroad and will spend most of the time at Antwerp, Belgium, his native city. During the absence of Mr. Le Comte the drug business will be under the charge of Joseph Lefebvre.

—JOHN M. A. LAKE, Portland, Ore., has resigned from the Oregon Board of Pharmacy after a continuous service of more than twenty years, being president at the time of his resignation. He recently retired from active business and will hereafter devote his time to conducting a preparatory school of pharmacy.

—T. J. LONERGAN, formerly with the W. M. Rickert Company at Fayette, is now at C. J. McLaughlin's, West Union, Iowa. If he follows in the footsteps of his predecessors in that position he will soon be running a store of his own, as under Mr. McLaughlin's tutelage pharmacists speedily graduate into proprietors.

—DR. HENRY W. JAYNE, of the Barrett Manufacturing Company, of Philadelphia, one of the best-known chemists in that city, has gone to Arizona for the benefit of his health. He expects to remain the balance of the winter. Dr. Jayne is a trustee of the Jayne estate and is a prominent member of the Franklin Institute.

—MAYOR HOBELICK, of Racine, Wis., of the Horlick Malted Milk Company, has presented a new automobile to Chief Baker, of the Racine Police Department. Mayor Horlick made a proposition with the city some time ago that he would furnish an auto to the police department if the city would furnish one to the fire department.

—W. H. BETTS, for many years one of the Baltimore city salesmen for Sharp & Dohme, and who has been recuperating for the past six months at Saranac Lake in the Adirondacks, visited the New York S. & D. contingent at 41 John street last week en route to Baltimore to resume his duties, having been considerably benefited by his vacation.

—HALSEY HASTINGS, of Portsmouth, Ohio, has shipped his household goods to his former home in Sciotoville, pending his departure for the Southwest, where he intends to locate permanently. Mr. Hastings is awaiting the return from Mexico of Charles Reiniger and party with the expectation of securing information that will be useful in formulating his future plans.

## REFEREE BOARD OVERRULES DR. WILEY.

**Decides, After Experiment With a "Poison Squad," That Benzoate of Soda is Not Injurious to Health, Nor Does It Impair the Nutritive Value of Food—Board is Unanimous.**

WASHINGTON, Jan. 25.—The Referee Board appointed to determine whether benzoate of soda used in food as a preservative is harmful and deleterious to human health has decided that it is not, and thus joins issue with Dr. Harvey W. Wiley, Chief of the Bureau of Chemistry of the Department of Agriculture, who holds that it is harmful and injurious, and who was responsible for the issuance of a series of restrictive regulations under the pure food act concerning the use of benzoate of soda by canners.

The Referee Board was appointed last March and consists of Dr. Ira Remsen, president of Johns Hopkins University; Russell H. Chittenden, director of the Sheffield Science School of Yale University; John H. Long, professor of chemistry, Medical School, Northwestern University; C. A. Hertel, professor of physiological chemistry, College of Physicians and Surgeons, New York, and Alonzo E. Taylor, professor of pathology, University of California. Dr. Taylor has been absent in Europe and did not participate in the consideration of the question. Otherwise the report of the board is unanimous.

The Referee Board reached its conclusion after experimenting on a "poison squad." Dr. Wiley reached his conclusion after experimenting on a "poison squad."

In presenting the issue the President submitted to the board two propositions, as follows:

1. Does a food to which there has been added benzoic acid or any of its salts, contain any added poisonous or other added deleterious ingredient which may render the said food injurious to health? In large quantities? In small quantities?
2. If benzoic acid or any of its salts be mixed or packed with a food is the quality or strength of said food thereby reduced, lowered, or injuriously affected? In large quantities? In small quantities?

"To make this experimental inquiry as thorough as possible," says the report of the board, "and to minimize the personal equation, three independent investigations have been carried out: One at the Medical School of Northwestern University in Chicago, a second at the private laboratory of Christian A. Hertel, of Columbia University, New York, and the third at the Sheffield Scientific School of Yale University."

"The same general plan of procedure was followed in all three experiments. A certain number of healthy young men were selected as subjects and during a period of four months these men under definite conditions of diet, etc., with and without sodium benzoate, were subjected to thorough clinical and medical observation, while the daily food and the excretions were carefully analyzed and otherwise studied and comparison made on clinical, chemical, bacteriological and other data collected. In this manner material has been brought together which makes possible conclusions regarding the effect of small and large doses of sodium benzoate upon the human system."

The board says that the fact should be emphasized that the results obtained from the three separate investigations are in close agreement in essential features. The main general conclusions reached by the board are:

1. Sodium benzoate in small doses (under .05 gram per day), mixed with the food, is without deleterious or poisonous action, and is not injurious to health.
2. Sodium benzoate in large doses (up to 4 grams per day), mixed with the food, has not been found to exert any deleterious effect on the general health nor to act as a poison in the general acceptance of the term. In some directions there were slight modifications in certain physiological processes, the exact significance of which modifications is not known.
3. The admixture of sodium benzoate with food in small or large doses has not been found injuriously to affect or impair the quality or nutritive value of such food.

Ordinarily fruit manufacturers using sodium benzoate, according to the report, content themselves with .01 of 1 per cent, so that only by eating two-thirds of a pound of the preserved fruit could a daily dose of .03 of a gram of the salt be received. This was the minimum daily dose given in the clinics, and in many cases this was increased to the unusual amount of 4 grams a day, with no noticeable effects.

What will be the exact effect of this decision upon Dr. Wiley's official career can only be guessed at. His friends say that he will resign immediately, though when seen he re-

fused to make any statement. There is a pretty general impression that the report of the scientists will be used as a weapon for still further reducing his powers, and if that course is followed no one doubts that he will resign at once.

Dr. Wiley has been fighting to have three substances—benzoic acid and its salts, sulphate of copper, and saccharine—put under the ban, and his greatest efforts were directed against benzoate as being the worst of the three. Now that it is declared not unhealthful it is thought that the other substances will also get certificates of immunity.

## New Association to Aid Dr. Wiley.

Representatives of several of the largest food packing establishments in the East met on Monday at the Waldorf-Astoria in New York and organized the American Association for the Promotion of Purity in Food Products. This alliance was made for the purpose of aiding Dr. H. W. Wiley, Chief of the Bureau of Chemistry, in his efforts to set a higher standard for preserved foods.

## STATUS OF DRUG BILLS IN CONGRESS.

**Slim Chance of Passing Measures at This Session, But Surgeon-General Wyman Makes Promise.**

WASHINGTON, Jan. 26.—Four bills are lying dormant in the pigeon holes of congressional committees which are being watched with interest by druggists. Two of these bills pharmacists are anxious to see emerge from their resting place, and two of them they are content to let undisturbed in the committees' boxes. Hope of passing the patent reform law appears to be dead for the present, the opposition of the Commissioner of Patents being the great obstacle in its way. As the patent office is blocking the passage of the patent bill, so the Marine Hospital Service is said to be blocking the bill fixing the grade of pharmacists in the service. With the short session rapidly drawing to a close, hope of passing either of these two measures, which are not yet on the calendar of the House, is very slim.

There are also two postal bills, certain features of which the druggists are opposing. One is the bill providing for a comprehensive revision of the postal laws. This bill contains a provision for a cheap postal note. Druggists find this provision to be intended to pave the way for the parcels post and their national association is opposing the measure.

Another objectionable piece of proposed postal legislation is a provision in the postal penalties bill aimed at the suppression of mail trade in abortive nostrums and appliances. The objection to this provision is that it has been drawn so drastic as to close the mails to any prescription that may call even for infinitesimal quantities of poisonous drugs. There is prospect, however, that this defect in the measure will be remedied before such a bill is passed.

Surgeon-General Wyman, speaking of the pharmacists' bill, said today: "The pharmacists will be taken care of in due time, but they cannot be taken care of at this time."

## UNITED DRUG CO., BOSTON, INVADES DETROIT.

**Louis K. Liggett and Associates Purchase Interest of John W. Gray in Gray & Worcester.**

DETROIT, Jan. 25. Louis K. Liggett, president of the United Drug Company, of Boston, and some of his associates have purchased John W. Gray's half-interest in the retail drug concern of Gray & Worcester in this city. The consideration was not made public. Mr. Worcester will remain as treasurer of the company, with Mr. Liggett as president; J. C. McCormick, Boston, vice-president, and James McCoubrey, Detroit, secretary and general manager.

D. H. Kinney, of the Hall-Lyon Company, Providence, is temporarily in charge here. The firm name will be retained. Mr. Gray plans a tour abroad and will locate later in California.

## Appeal Taken in Balsam in Capsules Case.

The Collector of Customs at New York has been directed by the Secretary of the Treasury to file an application for review of the recent decision of the Board of General Appraisers wherein it was held that certain balsam in capsules is dutiable under Paragraph 20 of the Tariff Act as a drug advanced in value and condition.

## Many Associations Of Druggists Elect Officers—Three Active Men In New England.

CLARENCE BOWMER, of Providence,  
Secretary Rhode Island Ph.A.

HOWARD A. PEARCE, Providence,  
President Rhode Island Ph.A.

CHAS. F. NIXON, of Leominster,  
President Fishburg-Leominster D.A.

### H. A. PEARCE HEADS RHODE ISLAND Ph.A.

#### In Annual Session Pharmacists Decide to Hold Meeting With the Physicians of the State.

PROVIDENCE, Jan. 25.—Officers were elected, committees appointed and routine business was transacted at the thirty-fifth annual meeting of the Rhode Island Pharmaceutical Association. There was a large attendance and much enthusiasm was manifested.

The following applications for membership were referred to the executive committee: Benjamin de Blasio, of Providence; Howard de Wolf, of Warren; Irving T. French, Jr., of Providence; Dr. James F. Duffy, of Providence; George W. Fochr, of Pawtucket; James R. Slattery, of Providence, and Herbert Haynes, of Providence.

The following new members were elected upon recommendation of the executive committee: Frederick Robinson, Thomas J. O'Neill, Adolph Bakst, Herbert L. Chatterton and Thomas H. Carr, all of Providence.

After the reading of the reports of the various officers and committees, which showed the association to be in a good condition, the following list of officers was reported by the nominating committee, consisting of ex-Presidents James O'Hare, Frank A. Jackson and John E. Groff: President, Howard A. Pearce, of Providence; vice-presidents, Providence County, Edward T. Colton; Bristol County, W. A. Bullington; Newport County, James T. Wright; Kent County, Alfred L'Amoreaux; Washington County, James A. Wright; secretary, Clarence Bowmer; treasurer, George W. Armstrong; executive committee, Alfred J. Johnston, Jr., of Pawtucket; Enoch W. Vars, of Niantic, and Harry L. Swindells, of Providence.

A committee consisting of Edward T. Colton, Nicholas F. Reiner and George W. Payne was appointed to arrange for a conference between the pharmacists and physicians of the State. A committee consisting of John E. Groff, Gilbert R. Parker and Clarence Bowmer was appointed to revise the constitution and by-laws.

Resolutions of thanks to Charles H. Daggett for efficient services as secretary during the past ten years and to Edward T. Colton as treasurer were adopted. The entertainment committee served a luncheon at the conclusion of the meeting.

### Poughkeepsie, N. Y.

At a recent meeting of the Poughkeepsie Association of Retail Druggists the following officers were elected for the ensuing year: C. W. Allen, president; F. T. Hiller, vice-president; T. R. Lawrence, secretary; H. B. Revier, treasurer.

### HENRY F. LACKEY ELECTED PRESIDENT.

#### Druggists in Tarrant County, Texas, Will Fight the Prevalent Practice of Medicine Vending.

FORT WORTH, Jan. 22.—Instructing the secretary to forward petitions to the members of the State Legislature to support the Haytyn Bill, the Tarrant County Retail Druggists' Association, in annual session recently, put itself on record as being against the man who sells medicine on the streets. The Haytyn Bill, which provides a tax of \$150 per year on the man who follows this business, is being supported by druggists' associations in all parts of the State.

Others elected are as follows: Henry F. Lackey, president; R. Hathaway, first vice-president, North Fort Worth; John Coulter, second vice-president, Arlington; G. O. Holt, secretary, Fort Worth; C. C. Martin, treasurer, Fort Worth.

Members admitted were Messrs. Barnett, R. L. Jordan and C. C. Saunders.

At the banquet in the evening John W. Covey, the retiring president, acted as toastmaster. As the first speaker, he addressed the banqueters upon topics touching upon the volume of business during the year just past. "I believe that I voice the sentiments of the entire organization," he said, "when I make the assertion that last year was the most prosperous in the history of the organization."

Mr. Covey was followed by H. F. Lackey, the newly elected president, who spoke of the work which is being done by the N.A.R.D. The speaker came out strongly in favor of Sunday closing in some form and cautioned the younger men present who believed in it at present while they are working for someone else to not forget their convictions when they enter business for themselves.

L. G. Eberle, of Dallas, spoke in the interest of the Itinerant Vendor's Bill, prohibiting the peddling of patent concoctions from door to door by fakers.

A fine discourse on "The Benefits of Organization" was delivered by Dr. J. L. Cooper. R. H. Walker, secretary of the State Board of Pharmacy, delivered a short address, as did W. H. Roberts, president of the board; W. F. Robertson, Bruce Vredenburg, Tom Snell and John A. Weeks. J. P. Brashear, the poet laureate of the association, read an original poem dedicated to the man of the mortar.

### Westchester County, New York.

The twenty-fifth annual meeting of the Westchester County (N. Y.) Pharmaceutical Association was held in the White Plains Club. The following officers were elected for the en-

suings year. President, W. H. Smith, of White Plains; first vice-president, J. Harold Thomas, of Yonkers; second vice-president, John Heineke, Tuckaheo; treasurer, J. B. Sackett, Tarrytown; secretary, John Romer, Chautauqua; executive committee, L. J. Schlesinger, Yonkers; Frederick Koch, Mamaroneck; W. H. Leonard, North Tarrytown. The re-election of Mr. Sackett as treasurer makes it the twenty-first consecutive year that he has held that office.

Among the charter members of the association are Eugene Barnes, J. B. Sackett and W. H. Leonard. They were present at the meeting, together with F. A. Russell and Frederick Farrington. Later the druggists went to Briarcliff Lodge, where dinner was served. Toasts were responded to by four charter members. The next meeting will be held in Ossining in April.

#### Rock County Druggists Hold Banquet.

MOLINE, Ill., Jan. 25.—At the annual banquet and business meeting of the Rock Island County Retail Druggists' Association recently the following new officers were elected: President, A. J. Riess, Rock Island; vice-president, Victor H. Dumbuck, Silvis; secretary, C. Brunstrom, Moline; treasurer, Gus Lindvall, Moline.

J. Jennich was elected to membership and E. Heimbeck, of Moline, was made an honorary member of the association. H. O. Rolfs, William Ullemeyer, W. M. Battles, William Hartz and E. Jericho were elected trustees; C. C. Coyne, C. J. Strate, N. W. Steiner, F. J. Clendenin and G. W. Sorlock were named as the trade committee, and the following were chosen as members of the U.S.P. and N.F. propaganda committee: H. V. Burt, August Sundine and A. J. Lydehn.

Following the banquet, at which thirty-one druggists, including several invited guests from Davenport, were present, a programme of addresses was enjoyed, the principal talk being by George P. Mills, of Evanston, chairman of the State propaganda committee. J. B. Singer, representing the Illinois association, and M. Whipple, of the Iowa association, also made short talks. H. O. Rolfs presided as toastmaster at the banquet.

#### Detroit.

C. A. Weaver was elected president of the Detroit Retail Druggists' Association at the recent annual meeting. Other officers: R. A. Carmichael, first vice-president; R. W. Renney, second vice-president; George B. Simons, secretary, and W. A. Hall, treasurer. Mr. Carmichael told of the progress of the Sunday early closing movement, saying that West Side druggists generally are still continuing to close their stores Sundays at 6:30 p. m., and that many on the East Side are joining the movement. But four of the druggists at the meeting opposed the movement.

#### Atlanta.

The Atlanta Retail Druggists' Association has elected officers for 1909 as follows: T. H. Brannen, president; James Sharp, vice-president; B. J. Adams, secretary; W. P. Smith, treasurer; executive committee chairman, Charles A. Smith. The retiring officers, J. A. Pickard, president, and J. Q. McRae, secretary, were complimented for their earnest efforts in behalf of the association during the past year. This association is one of the best of its kind in the country, and nearly every retail druggist in Atlanta is a member.

#### LaCrosse County, Wisconsin.

The regular quarterly meeting of the LaCrosse County (Wis.) Retail Druggists' Association was held recently at LaCrosse and the following officers elected for the ensuing year: President, George E. Mariner; vice-president, O. T. Erhart; secretary, Charles Bayschlag; treasurer, M. Simon; trustee, John Kindley. Some interesting trade discussions were participated in by the members present. The county association experienced a profitable year during 1908 and indications are that 1909 will be even better.

#### Smoker at Salt Lake City.

At the annual smoker of the Salt Lake City Retail Druggists' Association, held at the Commercial Club in that city recently, many of the representative druggists of Utah were present. Following a general discussion regarding the drug business, in which different methods of conducting business

were threshed out, the party adjourned to the private dining room of the club and carried out a quiet social meeting until a late hour.

Among those present were Frank Sherwood, James Doull, B. H. Townsend, Charles Van Dyke, Walter Dreuhl, George Brice, James L. Franken, Joy H. Johnson, Clem Schramm, W. Dayton, Dr. Wade and Earl Leaver.

#### An Oyster Roast in Galveston.

The Galveston (Texas) Retail Druggists' Association will hold an oyster roast on February 3 for members, their families and friends. The programme will include music, vocal entertainment and dancing. Miss E. C. Domingo is chairman of the Ladies' Auxiliary and will assist I. F. Orton, who will have charge of all the arrangements. The tally-hos will start at 7 p. m. for the oyster resort down the island, and an automobile will call at 9 p. m. for all those that could not leave with the first crowd to join the merry-makers.

#### M.A.R.D. May Decide to Disband.

The annual meeting of the Metropolitan Association of Retail Druggists is scheduled to be held tomorrow evening at the Brooklyn College of Pharmacy. The question as to the advisability of continuing the association will probably be discussed and action taken. If it is decided to continue there will be an election of officers. This scheduled meeting is the first held by the association since last September.

#### Fitchburg and Leominster, Mass.

At the last meeting of the Fitchburg and Leominster Druggists' Association, Charles F. Nixon, of Leominster, was elected president; John F. Hayes, vice-president; William D. Johnson, secretary, and Frederick W. Baker, treasurer. The session was harmonious and it is believed that a threatened rate war was averted. A new price list of druggists' supplies was agreed upon and will come out shortly. Prices will remain about the same as they are now, with few exceptions.

#### Santa Rosa, Cal.

Santa Rosa (Cal.) druggists met recently and organized for mutual benefit. It was agreed to close Sunday afternoons from 1 to 6 o'clock on and after Sunday, January 24, with the exception for one firm, which would remain open for emergency cases. The organization was completed by the selection of Dr. N. Juell as president; Paul Habman, secretary, and G. M. Luttrell, treasurer.

#### New Britain, Conn.

New Britain (Conn.) Retail Druggists' Association has elected the following officers for the coming term: President, William J. Marsland; vice-president, George M. Ladd; treasurer, Arthur S. Clark; secretary, Charles Scherp. The executive committee consists of the officers and W. J. McBriarty, W. H. Crowell and S. Bergquist.

#### Banquet at Plainfield, N. J.

Following its recent quarterly meeting, the Plainfield (N. J.) Retail Druggists' Association held a banquet at Truett Hall. Speeches were made by Thomas S. Armstrong, Lawrence Mallinson, Peter B. Dodge and Dudley S. Miller. L. W. Randolph acted as toastmaster.

#### Sunday Closing in Hattiesburg.

HATTIESBURG, Miss., Jan. 25.—Every drug store in the city now closes its doors on Sunday. This reason is the action of the grand jury which indicted the drug stores here for violating the Sunday law by keeping open. The druggists have the option of remaining open and selling only prescriptions, but they say this would result in loss, and they prefer to close altogether.

#### Recruiting Members for St. Louis Chapter.

ST. LOUIS, Jan. 23.—Mrs. J. V. Calver, general organizer for the W.O.N.A.R.D., has been here for several days visiting wives of druggists and recommending membership in the St. Louis chapter. The members who have been keeping in touch with Mrs. Calver's work expect good results at the January meeting.

## FATHER OF THE VERMONT STATE BOARD OF PHARMACY AT LAST CONSENTS TO BE ITS PRESIDENT.

W. R. WARNER, of Vergennes.  
Elected Treasurer.

J. G. BELLROSE, Burlington.  
Elected President.

D. F. DAVIS, of Barre.  
Elected Secretary.

MONTPELIER, Vt., Jan. 25.—At the annual meeting of the Vermont State Board of Pharmacy, recently held at the State House, the following officers were elected: J. G. Bellrose, Burlington, president; D. F. Davis, Barre, secretary; W. R. Warner, Vergennes, treasurer. The other members of the board are W. L. Gokay, Bennington, and W. F. Root, Brattleboro.

Mr. Bellrose, the new president, was largely instrumental in passing the law creating the board and has been a member of it ever since it was organized in 1894, and during that time has always been the secretary. He is known to many as the father of the board. Mr. Root, the retiring president, has filled that office for two terms, and at present is president of the New England Association of State Pharmacy Boards.

Four candidates appeared before the board for examination. Miss Elizabeth Gregg, of Bennington, passed a successful examination. Forty-five candidates have appeared before the board for examination during the past year and fourteen were successful. The board revoked ten licenses for the non-payment of biennial dues and issued thirty exchanges to persons coming into the State under the Reciprocity agreement. Twenty-three certificates were granted to persons from Vermont to other States.

Meetings for examination of candidates for registration will be held at the State House, in this city, as follows: April 6, 1909; July 13, 1909; October 5, 1909, and Jan. 4, 1910.

#### Missouri.

ST. LOUIS, Jan. 25.—The Missouri Board of Pharmacy has issued certificates to ten members of a class of twenty-five applicants examined at Jefferson City on January 11. The successful candidates are: W. B. Adcock, Washburne, Mo.; H. Brooksbank, Springfield, Mo.; W. E. Harrington, St. Joseph, Mo.; Joseph W. Horne, St. Louis, Mo.; John R. Lee, Mountain Grove, Mo.; James Morgan, Kansas City, Mo.; E. E. Powell, Birch Tree, Mo.; E. E. Roberts, Dearborn, Mo.; Manly Scrutfield, Wellsville, Mo., and H. W. Sterling, Dunweg, Mo.

Next examination in Kansas City on April 12.

#### Wisconsin.

MILWAUKEE, Jan. 25.—Fourteen out of the thirty-eight applicants who recently appeared before the Wisconsin State Board of Pharmacy were granted registered pharmacists' certificates at the examination held in Milwaukee. The following were successful and are now full-fledged druggists: Walter S. Jones, Milwaukee; Ralph H. Allen, Superior;

Clarence Brown, Hebron, Ill.; William L. Braun, Merrill; Joseph LeFebvre, Green Bay; Fred F. Staeben, Beloit; Gus Crikelair, Green Bay; Alvin J. Boden, Lake Geneva; Matt Cholsky, Mukwonago; Peter Gisher, Milwaukee; Michael Reischel, Milwaukee.

Assistant pharmacist certificates were granted to the following: Henry Zimmerman, Milwaukee; Robert H. Baarth, J. Vosly Vary, Thompson, Ill.

Members of the board present were: O. J. S. Roberg, president, Eau Claire; H. G. Ruenzel, secretary, Milwaukee; Edward Williams, Madison; H. B. Allen, Richland Center; G. V. Kradwell, Racine. The next meeting and examination is scheduled to take place at Madison on April 13 and 14.

#### Enforcing the Michigan Pharmacy Law.

DETROIT, Jan. 25.—Five of the eleven druggists and drug clerks recently complained against by Frank L. Henderson, an inspector for the State Board of Pharmacy, for alleged violation of the Pharmacy Law, which requires that all pharmaceutical work shall be under the personal supervision of a registered pharmacist, were found guilty by Police Justice Stein. Of the five, only William H. Young is a proprietor. He was fined \$85 with the alternative of thirty days in the house of correction. Each of the four clerks tried and convicted was fined \$10 with the same alternative. All paid. About the only defense offered was ignorance of the law. The clerks fined were: Walter Pazeau, J. E. O'Rourke, Donald N. McRain and Charles Freeman.

#### Michigan Board Acts on Liquor Selling.

LANSING, Mich., Jan. 25.—The Michigan State Board of Pharmacy will take up the matter of druggists in "dry" territory turning their places practically into emporiums for the dispensing of liquor. There have been so many complaints regarding druggists' violations of the local option law that the board has requested the Anti-Saloon League to take up the matter with it. Attorney Marsh, for the league, met in conference with the board last week at Ann Arbor.

#### Alabama Ph.A. to Meet at Gadsden on June 9.

Secretary W. E. Bingham, of Tuscaloosa, announces that the Alabama Ph.A. will meet on June 9 for two days' session at Gadsden, the home of Lee Wharton, the first vice-president. Mr. Wharton will be the local secretary. The State Board of Pharmacy will meet at Gadsden on June 10 to hold an examination.

### CONFER ON GOV. HUGHES' MESSAGE.

Legislative Committee of New York State Pharmaceutical Association Will Draft Pharmacy Bill.

A conference was held last Monday night at the New York College of Pharmacy by the Legislative Committee of the New York State Pharmaceutical Association to consider that portion of the annual message of Governor Hughes which recommended changes in the pharmacy laws, with particular reference to the method of selection of the members of the State Board of Pharmacy. As noted in the ERA, the Governor objects to their election by the pharmacists of the State and prefers to have them appointed by the Governor.

The conference was well attended and while there was regret that the method of selection had been called into question, it was evident that there was no serious disposition to dispute the Governor's point regarding the constitutionality of the board. Some of the speakers considered the proposed change a step backward.

The present law was gone over carefully and it was decided to draft a new bill, embodying the Governor's ideas and the chief points of the Whitney bill and present pharmacy laws. This will be done by a committee composed of Dr. William Muir, Felix Hirsman, Warren L. Bradt, Fred S. Rogers and Peter Diamond, assisted by counsel.

Changes tentatively agreed upon were that the board be constituted without sections or divisions and that its members be appointed by the Governor. To be eligible to membership on the board, a person must be a registered pharmacist of at least ten years' standing and also a resident of the State.

Subdivision 4 of Section 190, relating to the election of branch members was stricken out, as was also Subdivision 5 of Section 201, relating to the distribution of funds.

Regarding the issue of permits in rural districts, to sell poisons, medicines, fill prescriptions, under Section 190, a portion was revised to the effect that poisons and medicines must only be dispensed in original packages bearing the label of a licensed pharmacist. Permit to fill and compound prescriptions was also crossed from this section.

Section 200, on the matter of the compounding of prescriptions by unlicensed persons, was made to read on the eighth line "the immediate personal supervision"; the word "immediate" being inserted for the purpose of facilitating prosecutions for violations under this section.

It was stated that the only opposition the Governor had to the Whitney bill was that its enactment would mean considerable power to a board which was not a State creature. Several present expressed their opinion to the effect that the Governor would probably have signed the measure and would do so at its future presentation if the board was appointive by the Governor.

### N. Y. Executives of Parke, Davis & Co. Have Dinner.

The annual dinner to the executives and their assistants of the New York branch of Parke, Davis & Co. was given by O. W. Smith, the manager of the branch, on January 12, at the Drug and Chemical Club. An enjoyable evening was spent, a programme being carried out and a number of speeches made. Mr. Smith was ably assisted by S. H. Carrigan, assistant manager of the branch. The following were present: A. J. Carr, N. Nicola, W. D. Rowles, A. Jenkins, H. R. Saunders, William McKay, John Burnside, A. De Castro, E. McCall, Chris. Brunn, J. Doran, G. R. Tompkins, Walter Snyder, H. Romerstein, H. Kniesel, Harold Kellogg, H. Robinson, D. Lyle, V. Pinto, N. Loubriel, W. Patrick and Dr. G. M. Gutierrez. Due to previous engagements, E. Plummer and W. R. Kaufmann were unable to attend.

### New Wholesale Concern for North Carolina.

ASHEVILLE, N. C., Jan. 25.—The Asheville Wholesale Drug Company has been chartered by the State and subscriptions to the capital stock are fast coming in to the organization committee in preparation to the general meeting on February 20, when organization will be completed. The capital stock is \$100,000 and business will not begin until \$50,000 is subscribed. The organization committee is composed of Dr. E. B. Glenn, S. Lipinsky, R. L. Fitzpatrick, J. H. Lange and A. W. DeLand.

### DRUGGIST WEDS FAIR LADY FROM PARIS.

Groom Speaks No French, Bride No English and They Courted Through an Interpreter.

Although M. Leman, a druggist, of 124 West One Hundred and Thirty-fifth street, does not speak French, and although Miss Helen Soquet, who came to New York City from Paris less than two months ago, speaks very little English, friends of the two learned recently that they had been married at the City Hall.

Mrs. Leman said that she had first met the druggist when she went to his store to telephone to her sister. He spoke English and she spoke French, she explained, and each spoke a little German.

"My sister, who speaks French, English and German with equal facility, interpreted for us," Mrs. Leman continued. "An hour before the ceremony was performed I telephoned the news to her from Mr. Leman's store, and she replied: 'I give you my blessing.' She joined us and went with us to the City Hall, where we were married."

Mr. and Mrs. Leman have taken an apartment at 127 West One Hundred and Thirty-fifth street, and Miss Soquet, whose services as interpreter were invaluable, has given up her apartments in a hotel and gone to live with her sister. She said:

"I have lived in New York for two years and until my sister telephoned to me that she and Mr. Leman were to be married I thought I had seen so much of American life that nothing could astonish me simply because it moved swiftly. When my sister came here from Paris she could speak no English at all. When she first spoke of Mr. Leman I thought surely he must speak French, because I could not see how a man who knew no French and a young woman who knew no English could make themselves understood to each other.

"I helped them by interpreting for them, and now they are happily married. My sister is learning English and Mr. Leman is learning French, and I have written to our relatives in Paris to tell them that it is impossible that anything they have heard of the strangeness of New York can be exaggerated."

Mr. Leman has had a drug store in West One Hundred and Thirty-fifth street for more than twenty years. He is forty-seven years old and his wife is twenty-six.

### Cupid On a Pharmacy Phone Wire.

CINCINNATI, Jan. 25.—An argument between a young druggist and the chief operator of the Canal telephone exchange has resulted in a love match. Dan Cupid, who happened to be on the wire, has the principals so well in hand that they will consent to let him lead them to the altar in a few days. The groom-to-be is Marshall Wood, of Moscow, Ohio, who is employed in Cincinnati as a druggist, and the bride-elect is pretty Miss Lillian Oldiges, 3316 Hackberry street, Cincinnati.

Mr. Wood was using the phone longer than Miss Oldiges felt was right and proper one night recently, and she "called him down". Wood was temporarily abashed, but central's voice was pleasant. The pair will go to Los Angeles, to make their home.

### Couple Trapped in Telephone Booth.

Harold Cartwright, of Pond, Bowes & Cartwright, druggists, 2635 Broadway, held a man and a woman in the telephone booth until the arrival of a policeman, on a charge of attempting to rob the money box connected with the instrument. They claimed to be Mr. and Mrs. Edward Barrett and gave a fictitious address. Barrett was held on a charge of petty larceny preferred by the New York Telephone Company, and Mrs. Barrett was held as a suspicious person. It is reported that two keys which fitted the cash box were found in Mrs. Barrett's muff. About \$5 in small change was found in Barrett's possession.

### Ginseng Growers Elect Officers.

DETROIT, Jan. 25.—The Michigan Ginseng Growers have elected the following officers: President, George A. Roof, Big Rapids; first vice-president, A. B. Ingram, Fenton; second vice-president, John Ferris, Plainfield; secretary, A. E. Cook, Flushing. The next meeting will be held at the Agricultural College, in Lansing.

## PROF. ANDERSON LECTURES IN CINCINNATI.

## SUCCESSFUL DINNER OF THREE D'S IN CHICAGO.

New Yorker Tells Ohio Druggists His Views on the Future of Pharmacy—Attacks Manufacturers.

CINCINNATI, Jan. 25.—The Ohio Valley Druggists' Association members were addressed last week at the Lloyd Library by a number of eminent authorities on chemistry and the problems which confront the drug trade. The speakers were introduced by President A. O. Zwick.

Prof. William C. Anderson, dean of the Brooklyn College of Pharmacy, spoke of the commercial and professional phases of pharmacy. He argued that the two must be carried on together and in harmony, and that druggists must not lose sight of either in their work. He said that under present conditions druggists cannot profitably conduct a pharmacy on wholly professional lines, and therefore it is absolutely necessary that the commercial side be considered. The majority of pharmacists, he said, have gone into it not only because of the ethical or professional side, but also from a commercial standpoint, in that it affords a means of making a living.

Competition of grocery stores, dry goods stores and large department stores have made it necessary for the druggists to develop the commercial side more and more. Losing the support of the physicians has also been a great factor, for "just as soon as you lose the support of the physicians the professional side decreases and the commercial side must be developed."

Speaking of the proprietary evil, he said: "Manufacturing houses, aggressive in their methods of advertising, flood the physicians with literature which shows, or pretends to show, the advantageous results desired from the use of their preparation, and they point out to the physician the easy manner of prescribing their medicines, and he naturally, like all human beings, having a tendency to do things in the easiest way, that great work, the United States Pharmacopoeia, which the physicians themselves compiled, is buried under an avalanche of literature sent out by the proprietary manufacturer. What is the result? Every one of us have a back room upon the shelves of which you will find one patented preparation after another which cost a great deal of money, some of which a physician may have prescribed but once and for which we have never had a second call. This means a large investment upon which we can never realize."

Professor Anderson believes the time is ripe for a change, and advises the druggists to adopt methods that will bring this about. The U.S.P. and N.F. propaganda offers the greatest opportunity, he said, and the druggists must combine if the best results are to be obtained. He spoke of work that was being done by druggists in Brooklyn and Manhattan boroughs of New York City, not only laboring among the physicians, but inducing the medical colleges to devote more time to materia medica and therapeutics. What has been accomplished in New York can be done in Cincinnati, if the proper effort is made.

He was loudly applauded as he concluded, whereupon Dr. Zwick called upon several others for remarks. Among those who responded were T. B. Huston, of Toledo, president of the Ohio State Pharmaceutical Association; Z. T. Baltzy, of Massillon, Ohio; Professor Wetterstrom and C. A. Apmeyer.

Professor Waldbott, head of the department of chemistry of the Ohio Mechanics' Institute, Cincinnati, and who was an assistant to Prof. John Uri Lloyd in the Lloyd Library some time ago, told the history of the library and its thousands of interesting and valuable volumes on scientific subjects.

The next lecture will be by Professor Beal, on "Some Peculiar Pure Food and Drug Legislation."

## Likes to Entertain Druggists.

CHARLES E. CLARKE.

representing the Miles Medical Company in Chicago, is chairman of the entertainment committee of the Chicago Social Drug Club, which holds its fifth annual ball and reception at Masonic Temple Drill Hall on Feb. 4. He also is a member of the Illinois Pharmaceutical Travelers' Association and is interested in making the "round up" at Quincy next June a huge success.

Five Hundred Listen to Harmony Speeches at Feast Under C.R.D.A. Auspices at Auditorium Hotel.

CHICAGO, Jan. 25.—The annual get-together dinner initiated by the Chicago Retail Druggists' Association was a great success. It was a get-together dinner in truth when five hundred of Chicago's doctors, druggists and dentists gathered in the banquet room of the Auditorium Hotel and spent four hours discussing their overlapping interests on Tuesday night last. The attendance was entirely representative, the leaders of both professions being there.

Dr. Alfred C. Cotton was toastmaster and started off the evening with a laugh. He was followed by Dr. Corwin, who made a semi-serious but forceful appeal for harmony between the two professions. His speech elicited a great amount of enthusiasm from both pharmacists and physicians.

The keynote of the big meeting was struck when Dr. Bernard Fantus spoke on "The Need of a Code of Medic-Pharmaceutical Ethics." He said that while the physician has his code of ethics, the druggist had none and he deplored the need for such a code. The result would be a betterment of public service given by both professions. He stated that the great tract of common ground between the two would then be covered and tend towards more harmony. Dr. Fantus stated that while this was a meeting to produce harmony he would utter words of discord which could hardly be gotten around, as the discord really did exist.

The speaker candidly stated the errors made: favoritism and counter prescribing by the druggist; self-dispensing and the outrageous demands of the physician at times. He said that it is a very common practice for the druggist to diagnose a case over his counter and prescribe a remedy, and he could hardly expect not to encounter the displeasure of a physician. In speaking of the faults of the physician, Dr. Fantus denounced as an outrage the habit of the physician of demanding that the druggist keep in stock as many as half a dozen makes of the same preparations. He scored the physician for trying to dispense his own medicines. "No doctor," he said, "can carry around enough medicine in his case to fill all needs, or be conscientious and rely on the remedies at hand."

Dr. Fantus took occasion to urge the druggists to help the physicians in their war against patent medicines. Dr. Fantus' remarks were loudly applauded.

Dr. William E. Quine discussed the "Relation of the Physician to the Pharmacist." He said that there is now a divergence between the two professions, as each is more or less independent of the other, but in his long experience he had never been mistreated by a druggist and he advocated that each druggist get an understanding with his doctors and that all understand one another. This mutual understanding would reflect great credit on both professions, according to Dr. Quine.

H. F. W. Spilver and H. P. Sandkoetter, two leading members of the C.R.D.A., followed with discussions on the "Relation of Pharmacist to Physician" and "Relation of the Pharmacist to the Public," respectively. Mr. Spilver stated his belief that if the physician would mark his prescription "not to be refilled" the aggravation caused by the druggist refilling them would be dispensed with, as then the druggist could tell the customer that he would have to see the physician. He believed this to be the most flagrant fault in the relations between the druggist and physician. George P. Mills, the Evanson druggist, concluded the discussion of pharmaceutical relations with a terse exposition of the "Pharmacists' Relations to Each Other," as they are now, and what they should be.

Dr. Charles P. Pruyn summed up the whole situation, as

far as the dentists are concerned, in a short speech on the "Relation of Dentists to Physicians, Pharmacists and the Public." Dr. Pruyn represented the dentists of Chicago at this meeting, along with a committee of twenty others appointed to attend, at a recent meeting of the Chicago Dental Society. The attendance of the dental fraternity was a feature of this year's dinner, as it was the first time they had taken a part. Prof. C. S. N. Hallberg expressed "The Ultimate Object" as being the proper relations of the different allied professions.

"The subject is simply an alkaloid one," he said. "The two professions are the most important to humanity and they should get together on a common ground and evolve ethics that will reach the people directly."

Thomas H. Potts, secretary of the N.A.R.D., was the last speaker on the programme. He discussed the benefits of U.S.P. and N.F. propaganda. It was almost 1 o'clock when Mr. Potts had finished. The speaking was preceded by a seven-course dinner.

## MORE INTERPRETATIONS ON INFLAMMABLES.

Long List of Articles Excepted From Restrictions.  
Will Supplement List at Intervals.

Dr. William Jay Schieffelin, chairman of the committee on regulations for transportation of inflammables of the National Wholesale Druggists' Association, has mailed to the trade Circular No. 895 of the American Railway Association, containing interpretation No. 10 relating to the articles classed as "similar or generally understood to be similar" under Paragraph 1802.

In connection with the subject of the transportation of explosives, the committee interprets the paragraph (1802) as follows: "Many articles that are safe to transport as ordinary merchandise have names that cause them to be classed as 'similar' articles. Shippers are required to state in their shipping orders for these articles 'No label required' and to furnish the certificate. It is desirable that the burden of the clerical work, placed on the shipper and on the railway employee by the regulations, be decreased as much as is consistent with safety. While it is not practicable as stated in the general notice to furnish a complete list of technical and trade names of inflammable articles and acids, it will be practicable to furnish from time to time a list of articles whose names might subject them to suspicion and for which, after investigation by the Bureau of Explosives, the requirements of a certificate and 'No label required' are deemed unnecessary. An omission from an attempted list of articles requiring precaution might cause an accident, while an omission from the list of exceptions would only require additional clerical work pending the safe growth of the list as the result of experience. Shipping orders for any of the following articles, bearing notation 'No label required' and shippers' certificate should be accepted, but it will not be necessary to transfer his information to waybills covering these excepted articles. Shippers should be notified of the change in requirements, in order that they may be relieved of any extra labor, and that further supplies of their printed shipping orders may be made to conform."

The list of excepted articles that may be accepted, when properly described, without requiring a notation "No label required" and the certificate prescribed by Paragraph 1802, is as follows:

Acetic Acid.  
Acid, dry.  
Aerated Beverages.  
Ale.  
Ammonia or Aqua Ammonia  
(not compressed).  
Asphalt.  
Asphaltum.  
Axle Grease.  
Ealsum, Crude.  
Beer.  
Beer Tonic.  
Benzaldehyde.  
Benzene.  
Castoria.  
Castor Oil.  
Champagne.  
Charged Storage Batteries.  
Cider.  
Claret Wine.  
Cocoa Butter.  
Cocoa Nut Oil.

Oil Cassia.  
Oil Cedar.  
Oil Citronella.  
Oil Cloth.  
Oiled Clothing.  
Oil Clove.  
Oil Copaiba.  
Oil Eucalyptus.  
Oil Fusel Rectified.  
Oil Juniper Berries.  
Oil Lavender Flowers.  
Oil Lemon.  
Oil Lime.  
Oil Mirbane.  
Oil Mustard.  
Oil Pennyroyal.  
Oil Peppermint.  
Oil Pine Needle.  
Oil Sandal.  
Oil Sassafras Natural.  
Oil Sweet Orange.  
Oil Turpentine Rectified.

Cod Liver Oil (plain or in emulsion).  
Cordials (not containing over 30 per cent of alcohol).  
Cotton Seed Oil.  
Cressote.  
Cressote Oil.  
Cylinder Oil.  
Dry Paints.  
Earth Paints.  
Electrolyte.  
Dilute Sulphuric Acid not exceeding 30 per cent in strength).  
Eucalyptol.  
E-Z-Ola Shoe Polish in tins.  
Fish Oil.  
Ginger Ale.  
Glycerin.  
Hay, Baled (well cured).

Wines (not containing over 30 per cent of alcohol).

In an additional interpretation, No. 12, the restriction of the limit of one-half gallon is only placed upon the more volatile liquids with flash points below 50° F.; also that well-packed and cushioned bottles, not packed in cylindrical tin vessels and metal or glass tubes, of not to exceed four and one-half ounces capacity, may be accepted. These liquids may also be packed in tight metal cylinders or drums.

The circular, in addition to the above interpretations, contains interpretations Nos. 11, 13, 14, 15 and 16, all relating to various paragraphs of the regulations.

## TO CONFORM TO WHOLESALE METHODS.

N. Y. Consolidated Drug Co. Elects New Officers.—Important Changes Are Planned.

At the annual meeting of the stockholders of the New York Consolidated Drug Company, held last Thursday at Allaire's, 192 Third avenue, a resolution was adopted which will practically place the company on the basis of a wholesale jobbing establishment.

August Diehl and Robert S. Lehman, both of New York, were elected directors to serve three years, and F. W. Hain, of Newark, N. J., was elected to fill the unexpired term of Felix Hirsman, resigned, as director.

According to the reports presented by the officers, the affairs of the company were shown to be in an excellent condition, and the retiring officers, President Felix Hirsman, Treasurer William C. Alpers, and also the present manager, S. Y. B. Swann, were praised for their devotion, efforts and excellent administration of the company's affairs.

The board of directors, convening directly after the meeting of the stockholders, elected the following officers for the coming year: President, F. A. Russell, Tarrytown, N. Y.; vice-president, August Diehl, Manhattan; secretary, Robert S. Lehman, Manhattan; treasurer, Charles Heimerzheim, Brooklyn, N. Y.

## Condennus Permanent Tariff Revision.

At the twenty-fourth annual meeting of the American Protective Tariff League, which was held last Thursday in New York, action was taken condemning the proposed permanent tariff revision commission. Arguments were presented stating that the leaders of the movement were free traders and tariff reformers, who had fallen back upon the plan of a permanent non-partisan tariff commission as a means of keeping the tariff in a perpetual state of "reform" and agitation.

Congress was also complimented in its proposed action in rendering it impossible for the executive department to hereafter negotiate tariff agreements without the full consent and approval of the Congress. Confidence was expressed in the Ways and Means Committee of the House and the Senate Finance Committee to act in accordance with the interests of the majority.

## RATE-CUTTING THREAT IN ST. LOUIS.

**Local Association Stirred by Demand of a Non-Member That Differential Be Given Downtowners.**

ST. LOUIS, Jan. 26.—The members of the St.L.R.D.A., at their last meeting, were confronted with a new proposition in St. Louis, an ultimatum from a non-member that a differential scale must be made for downtown druggists or cutting would start at once. The matter was discussed for more than two hours and then the meeting adjourned so abruptly as to postpone the election of officers. It was understood that the question of price scale will be referred to the sectional associations for discussion and that committees from them will meet with downtown men and a definite report will be drawn for a meeting of the St.L.R.D.A. to be held within three weeks at least, and two weeks if possible.

The ultimatum came from the Raboteau Drug Company, which has recently leased the corner of Broadway and Washington avenue, and will, it is understood, conduct a much more pretentious business there than has been attempted at Broadway and Lucas avenue, where the firm has been Raboteau & Co. for many years. Mr. Raboteau withdrew from the local association about two years ago because he believed the scale was being disregarded in some instances. He said at that time he had no intention of disarranging any scale the association might make.

The word that came to the association this time was that the Raboteau Drug Company was ready to cut if a special rate was not made for downtown men. The proposition was that they be permitted to sell at present prices, 22 cents, 43 and 54 cents, and that uptown and suburban stores push up prices to 25, 45 and 90 cents.

Representatives of Wolff-Wilson, Judge & Dolph and Johnson Brothers served notice they would be compelled to withdraw from the association in case the Raboteau Company was permitted to carry out this threat. After considerable discussion, a straw ballot was taken and seven of the members present voted "No." President Johnson asked each to state his objection, if he cared. All but one said the negative vote was more in the interest of more time to study the question, which had not been proposed to them until the meeting was called to order, than a final sentiment.

Mr. Consensus, of the Anti-Monopoly Drug Company, which was at one time the famous cutter of the city, was the most persistent debater on the floor for a one-price-for-all schedule. His store was for many years at Sixth and Market streets, but a few days ago was moved one block west because the old building is to be replaced with a new one.

Prof. J. M. Good took the position that stores like his would find trouble in advancing prices to an even-keel basis and it might be better to permit downtown men to shade the present schedule somewhat; that while he favored a differential, he would object to raising prices.

As the discussion was not gaining much ground, the suggestion was made that everybody "hustle" for a bigger meeting at a call soon to be issued, and that the question be passed to the North, West and South Side associations and committees be appointed to draw an exact agreement to be talked over at another general meeting.

Election of officers was declared in order, but E. A. Sonnenwald advanced the argument that it would be a bad time to change horses while crossing the river, and a hurried adjournment followed.

## Kentucky Druggist Makes Assignment.

UNIONTOWN, Ky., Jan. 25.—O. C. Hardig has made an assignment to W. C. Bland. His indebtedness is \$75000 to \$60000; assets not given.

## N.A.R.D. MEETS AT LOUISVILLE SEPT. 6.

**Executive Board, at Chicago Meeting, Extends Invitation to A.Ph.A. to Meet at Same Time and Place.**

CHICAGO, Jan. 25.—The Executive Board of the National Association of Retail Druggists was in session for four days last week at the New Brevoort Hotel. Charles F. Mann, chairman of the board, presided, and all the members were present.

The most important matter before the board was fixing a place and date for the next convention of the national body, which was taken up immediately after the routine business had been transacted. The next convention will be held at Louisville, Ky., during the second week of September, beginning on the 6th of the month. It has been a cherished hope of the officials that an agreement could be reached with the A.Ph.A. so that the conventions of the two organizations could be held simultaneously and at the same place. The latter association, it was said, had been slow in taking any steps in the matter, so the N.A.R.D. board decided to appoint a place and time and invite the A.Ph.A. to meet there also at that time.

Early in the meeting it was decided to leave the place and date open, subject to the consent of the A.Ph.A., but later there was a reconsideration. Three cities made bids for the convention. These were Louisville, Ky.; Cedar Rapids, and Niagara Falls. Of these Louisville was chosen, largely because of its location, as it is neither too far east, west, north or south. Invitations had been received from the Governor of Kentucky, the Mayor of Louisville, the president of the Chamber of Commerce, the president of the Citizens' Association, and others. Simon N. Jones, former chairman of the Executive Committee, presented the invitation to the board. The Kentuckians were so enthusiastic in the matter that they had planned a trip to the Mammoth Cave before their representative left for Chicago. Louisville, it was argued, has been a great success as a convention city and never does things by halves. It entertained 1,000,000 members and friends of the G.A.R. last year and at another time 300,000 Shriners.

A most cordial invitation was extended to the members to spend either the week before or following the convention in the city of Louisville. Pharmaceutical exhibitions will be held the same as at the last convention at Atlantic City.

In connection with selecting the time and place the following resolution was prepared and unanimously adopted, a copy being ordered sent to the A.Ph.A. officers:

Whereas, The committee appointed by the president of our association to confer with a similar committee from the American Pharmaceutical Association to consider the feasibility of holding a joint meeting, or contemporaneous meetings, of the two associations, has been unable to reach such a conclusion with that committee as would enable it to recommend to the N.A.R.D. a definite time and place for holding its 1909 convention; and

Whereas, It has always been the custom of this committee to name at its mid-year meeting the time and place for holding the annual convention of the N.A.R.D., and our members are expecting the usual announcement at the close of the present meeting of this committee; therefore, by the Executive Committee of the N.A.R.D., be it

Resolved, That we hereby select Louisville, Ky., as the place, and Monday, Tuesday, Wednesday and Thursday, September 6, 7, 8 and 9, as the time for holding the 1909 convention of this organization.

Resolved, That, desirous as we are of co-operating in every helpful way possible with the American Pharmaceutical Association in the efforts which that organization and our own are making to advance the professional and commercial welfare of pharmacy, we hereby extend to the A.Ph.A. a hearty invitation to meet with us at the place and, as nearly as may be possible, at the time designated.

Chairman Rodemann, of the telephone committee, appeared before the executive board and urged that the central idea of

Author, as Well as Student.

THOMAS A. MAJOR.

who has attracted attention by writing a book entitled "The Road From Damascus," which is a reply to a book written by a woman entitled "The Road to Damascus," in which an attack is made on a professor of the University of Michigan, where Major is a senior in pharmacy.

promoting slot telephones in different cities be developed as rapidly as possible. This view was immediately accepted by the committee.

A motion was made that every department of the N.A.R.D. go into a price protection plan, but it was held up pending the approval of the general counsel of the association.

#### Presentation to Messrs. Wooten and Jones.

An interesting feature of the week was the presentation to Thomas V. Wooten, former National secretary, and to Simon N. Jones, former chairman of the executive board, of handsomely engrossed resolutions testifying to their worth and expressing the gratitude of the members to them for their untiring efforts in behalf of the organization. The presentations were made as the result of action taken at the Atlantic City convention last year, upon the initiative of Samuel L. Hilton, of Washington, D. C. Mr. Hilton was appointed chairman of the committee and his associates were Dr. A. O. Zwick, of Cincinnati, and T. S. Armstrong, of Plainfield, N. J.

Each set of resolutions is ornately engrossed upon vellum, has the seal of the association in gold over a blue ribbon and is signed by the president and secretary of the N.A.R.D. and by the special committee having the matter in charge. The engrossed resolutions are folded once and separately enclosed in cases of envelope or portfolio form. These portfolios are of fine, white, art leather and lined with watered silk. Upon the flap of each portfolio are the letters "N.A.R.D." in gold, and below the letters a gold clasp for closing. The engrossing was done and the cases made by Galt, of Washington, D. C., who is known as the Tiffany of the Capital.

#### Dr. Hynson Favors Cedar Point for A.Ph.A.

BALTIMORE, JAN. 25.—Dr. H. P. Hynson is in receipt of a communication from Thomas V. Wooten, of Chicago, advising him of the action taken at a meeting of the executive committee of the N.A.R.D., appointed to act upon the suggestion that the organization hold its annual meeting at the same time or on consecutive weeks and at the same place as the annual meeting of the American Pharmaceutical Association.

Dr. Hynson says, with regard to the subject, that it would be entirely agreeable to him to have the American Pharmaceutical Association meet at Cedar Point, Lake Erie, during the week of August 30, or just before the annual meeting of the N.A.R.D., so that druggists who desire to attend the latter will have ample time to go down to Louisville and take in that gathering on a single trip. Dr. Hynson is a member of the conference committee and of the A.Ph.A. Council.

#### Will Honor Dr. Hugo Schweitzer.

On Saturday, March 13, a celebration will be held in honor of Dr. Hugo Schweitzer, who has long been active in promoting the progress of chemistry. This year marks the twenty-fifth anniversary of his doctorate, the twentieth of his landing in America and the fifteenth of his secretaryship of the New York Section of the Society of Chemical Industry. The following committee will arrange a knapsack and souvenir presentation: C. F. Chandler, chairman; J. Hasselbacher, treasurer; M. T. Bogert, secretary; V. Colbantz, F. Hemingway, E. G. Love, C. F. McKenna, W. C. Murrie, R. W. Moore, W. H. Nichols, T. J. Parker, A. Plant, M. Toch.

#### Nominal Fine For Misbranding.

CINCINNATI, Jan. 25.—The Heekin Spice Company, charged with having misbranded two dozen bottles having the label "White Cap Flavors, Lemon," has pleaded guilty before United States Judge Thompson. A nominal fine of \$5 was imposed. The Government inspectors claimed there was but a small portion of oil of lemon in the compound.

The company says it has withdrawn the article entirely from the market.

#### Dr. Schieffelin is Guest of Political Reporters.

Dr. William Jay Schieffelin was one of the guests of honor recently at the annual banquet held by the New York City Hall Reporters' Association. Dr. Schieffelin was present by virtue of his office as president of the Citizens' Union, in which organization he has been an active worker for reform. The association is composed of the principal political writers for the New York daily papers and only their friends are invited to their annual banquets.

## "TINCTURES" AND "EXTRACTS" EXPLAINED.

### Maine Official Furnishes Some Interesting Information Regarding an Important Matter.

Charles D. Woods, director of the Maine Agricultural Experiment Station at Orono, in Official Inspection No. 6, explains the use of the terms "tinctures" and "extracts" as viewed under the Maine Pure Food and Drugs Law. He says: "There are a number of materials the alcoholic solutions of which are used for both medicinal and flavoring purposes. In the majority of instances the U.S.P. name is a 'tincture,' while in the food standards the only name recognized is 'extract.' This has led to some confusion and misunderstanding and the following is an attempt to make their labeling clear to manufacturers and dealers:

"All preparations for medicinal purposes should be of U.S.P. strength and should bear the name recognized in the latest edition of the U.S. Pharmacopoeia. If other strength is employed the package should be plainly labeled 'above standard' or 'below standard' to accord with fact, and the exact strength given on the label. All medicinal preparations must bear upon the label the percentage of alcohol.

"While the only name recognized in food standards for the alcoholic preparations of flavoring materials is 'extract,' the use of similar words as 'essence,' 'flavor,' 'flavoring,' etc., will be allowed and will be considered as strictly synonymous with the word 'extract.' That is, goods labeled 'essence' or 'flavor' should correspond in strength to the standard as established for 'extracts.' If a preparation is below standard, it should be plainly labeled so as to show the fact. For information, the standards for flavoring extracts for foods are here reprinted. Such extracts do not need to carry a statement showing the percentage of alcohol."

The list of standards referred to is the same as that given in Pure Food Circular No. 19 issued by Secretary of Agriculture Wilson.

## WOULD TAX FOUNTAINS \$10 A DRAUGHT ARM.

### Massachusetts Legislator Has Novel Measure, But So Far None of His Radical Bills Have Passed.

BOSTON, Jan. 25.—In the Massachusetts Legislature a bill has been introduced that is sure to arouse menacing hostility from operators of soda fountains. It calls for a tax of \$10 for each faucet of a soda fountain.

The author is Representative Thomas J. Fay, of Roxbury, a salesman for the grocery house of S. S. Pierce Company. Mr. Fay is serving his third term in the Legislature, and he has already become conspicuous for his novel methods of creating revenue. He has been noted for his radical ideas ever since he has been in the House. He was the most persistent advocate last year of the bill to increase the salaries of members. The year before he came into prominence for his bill to provide for a deputy mayor of Boston, and also to penalize policemen for chubbing.

Representative Fay said: "This fountain tax is not altogether original with me. I understand that the State of Georgia already has such a law, and that it has worked well. One purpose of the bill will be to provide a revenue for towns and cities in lieu of the former revenue from liquor licenses. I would tax every soda fountain \$10 for each faucet and have it apply to every fountain in the State, whether in a pharmacy, confectionery or periodical store. I would have one-quarter of the fee go to the State treasury, as in the same manner and proportion as the liquor license fee is divided."

As yet not a single radical chance which the Roxbury Representative has yet advocated has found its way into law.

#### Perkin Medal for Arno Behr From S.C.I.

Arno Behr was presented with the Perkin Medal at the meeting of the New York Section of the Society of Chemical Industry at the Chemists' Club last Friday evening. Dr. Behr being absent, the medal was presented by proxy to Dr. Nichols, Prof. Charles F. Chandler making the speech of presentation. Maximilian Toch, chairman of the section, made an address of welcome to the members and their friends. "The Great American Industry of Corn Products" was the subject of a paper read at the meeting by T. B. Wagner, of Chicago.

# BOOK REVIEWS

**THE NATIONAL STANDARD DISPENSATORY.** Containing the national history, chemistry, pharmacy, actions and uses of medicines, including those revealed in the Pharmacopoeias of the United States, Great Britain and Germany, with many references to other Foreign Pharmacopoeias. In accordance with the Eighth Decennial Revision of the U. S. Pharmacopoeia, by authorization of the Convention. By Hubert Amory Dure, D.Sc., M.D., professor of Therapeutics and materia medica in Jefferson Medical College, Philadelphia; Charles Caspari, Jr., Ph.D., Ph.D., professor of theoretical and applied pharmacy in the Maryland College of Pharmacy, Baltimore; and Henry H. Rusby, M.D., professor of botany and materia medica in the College of Pharmacy of the City of New York; Expert in Drug Products, Bureau of Chemistry, Department of Agriculture, Washington, D. C.; Members of the Committee of Revision of the U. S. P., with valuable assistance from Edward Kremer, Ph.D.; Daniel Base, Ph.D., and Joseph E. Geisler, Ph.D. New (2d) edition, thoroughly revised. Imperial octavo, 2656 pages, with 478 engravings. Cloth, 80 net; full leather, 87 net. Thumb-letter index 50 cents extra. Philadelphia: Lea & Febiger.

An examination of the new and revised edition of this Dispensatory bears out the publishers' claim that it exemplifies the type of a book required by all who have to do in any way with drugs. Originally created to supply the intentional omissions of the Pharmacopoeia, self-limited as that work is to bare description of drugs arbitrarily selected as "official" and to the lists of ingredients in compounds thereof, the authors have developed the great usefulness of the Dispensatory by the addition of two other main features. Besides containing the Pharmacopoeia and rounding it out with the information absolutely necessary to its use in practical pharmacy, the book contains the fullest pharmacology, and completes these two departments with a third, that on medical action and uses, appealing thereby no less to the prescriber than to the dispenser, and enabling them to co-operate safely and efficiently. It goes far beyond the Pharmacopoeia by dealing fully with the "non-pharmacopoeial" or "unofficial" drugs, a section of materia medica of scarcely less importance.

The Dispensatory contains the latest changes made by the Committee on Revision of the Pharmacopoeia and in every way marks the advanced position occupied by the pharmaceutical and medical professions. One has but to compare the present edition with its predecessor to become cognizant of the changes and improvements that have been made. Descriptions of two hundred new drugs of value have been incorporated and important features are found in the addition of the National Formulary in abstract, as well as a Formulary of unofficial preparations widely used, and the United States Pure Food and Drugs Law, together with the regulations and decisions necessary for its interpretation. The general index of 120 three-column pages, contains in one alphabet the names of drugs in English, French, German, Italian, Spanish and Latin, rendering it easy to find any article on any substance used for medicine by civilized nations. This applies to the minor as well as the major drugs of the world, an inestimable service peculiar to this book. The therapeutic index of twenty three-column pages, arranged under diseases, brings out most suggestively to the mind of the physician every drug of value, and guides him to the directions for its use. In every way the book is encyclopedic and contains a mine of information for the pharmacist, physician, chemist and technologist; in fact, for everyone concerned with drugs, their manufacture, dispensing and medicinal uses.

**A SHORT PHARMACEUTIC CHEMISTRY, INORGANIC AND ORGANIC.** By I. V. Stanley Staibaus, M.S., Ph.D., professor of pharmacy and organic chemistry and dean of the School of Pharmacy of the Medical-Chirurgical College of Philadelphia, and Charles H. Kimberley, B.S. (in pharmacy), Ph.D., professor of applied chemistry in the School of Pharmaceutical Chemistry of the Medical-Chirurgical College of Philadelphia. Second edition. 12 mo., 616 pages, flexible covers, \$2.50. Philadelphia: P. Blakiston's Sons & Co.

In preparing this book the authors have succeeded in making it what the title implies, a chemistry for students of pharmacy. In addition there is presented much information that every educated person should know something about as the manufacture of iron and steel, cement, coal gas, and the various chemical problems pertaining to the dyeing and tanning industries. Beginning with a general discussion of the subject definitions and classification of compounds, there follow

in succession a description of the non-metals and their acids, water and its analysis, metals and their compounds, particular attention being accorded to those official in the Pharmacopoeia. The periodic law, Mendeleeff's classification of the elements and a description of the rare metals are also given. Equation writing is explained, as also chemical stoichiometry. Part II is devoted to organic chemistry, its scope, the leading facts pertaining to the "open chain" and "closed chain" series being given in logical sequence. Particularly worthy of mention are the chapters devoted to the classification of alcohols and the terpenes and essential oils. These are followed by methods for the purification of organic compounds, proximate and ultimate analysis, vapor density, determinations, etc., the book concluding with a comprehensive chapter on toxicology. The classification and sequence of the sections on organic chemistry are based on the lectures of Prof. Daniel C. Mann, of the Brooklyn College of Pharmacy, to whom the authors give due credit. As a text book, this work should be of special service to the student and pharmacist.

**REQUISITES OF LATIN.** With special reference to the nomenclature of the U. S. Pharmacopoeia, the National Formulary and the text-books in materia medica and botany. Including also prescription writing and notes on nomenclature of the German Pharmacopoeia. By Julius William Stürmer, Ph.D., professor of pharmacy, Purdue University, Lafayette, Ind. 12 mo., 92 pages, cloth, 81. Published by the author.

This book, to use the author's expression, is built on rather original lines, in that he does not follow the arrangement and sequence of subjects as laid down in the standard text-books used by instructors in teaching Latin. He does, however, present a systematic course of instruction for students of pharmacy and medicine which is quite sufficient to carry them through the Latin of pharmacopoeial nomenclature, prescriptions, botanical names, etc. For schools where an extensive course in classical Latin is impossible or out of the question, Professor Stürmer's book will fill a distinct want.

**WELLCOME'S PHOTOGRAPH EXPOSURE AND RECORD DIARY.** 1909. Burroughs Wellcome & Co., London and New York.

This interesting annual contains a great deal of information of just the sort the photographer needs in his work. Uniform in style with previous editions, the book contains a very complete article on exposure, two new features of which are a speed test for over eighty bromide papers and lantern slides. There should also be mentioned Wellcome's "Exposure calculator," which is arranged to tell correct exposure in any circumstances by one turn of one scale. The annual is in pocket-book form and there are blank pages for records, notes and diary. Three editions are published, viz., Northern Hemisphere, Southern Hemisphere and Tropics, and United States.

**THE LIVING CHURCH ANNUAL AND WHITTAKER'S CHURCHMAN'S ALMANAC, 1909.** 12 mo., 480 pages, paper, 50c; cloth, 75c. Milwaukee: The Young Churchman Company, New York; Thomas Whittaker, Inc.

The individual who desires information regarding the status of the Episcopal Church in the United States is sure to find it in this handbook. Complete statistics of the churches and a full roster of the Episcopate and the clergy of the various dioceses in the country and mission fields are given.

## Other New Books.

**BRYANT, JOSEPH DECATUR, M.D., and BUCK, ALBERT H., M.D., eds.** American practice of surgery: a complete system by representative surgeons of the United States and Canada. New York: William Wood & Co. In 8v., v. 5, 973 p., ill. pls. (quarter col.), 8s., cl., 87.

**FRIEDBERGER, FRANZ, and FROHNER, EUGENE.** Friedberger & Frohner's veterinary pathology. Tr. by Matthew George Hayes, with notes on bacteriology by Prof. R. Tanner Hewlett. 6th ed., rev. and enl. 2 v. Chicago: W. T. Keener & Co. 8s., cl., 88.

**MCCAYLEN, ALAN.** The cell as the unit of life, and other lectures, ed. by T. Tanner Hewlett. Philadelphia: P. Blakiston's Sons & Co. 83 net.

**PROCTOR, H. RICHARDSON.** Leather industries laboratory book of analytical and experimental methods. 2d ed., rev. and enl. New York: Spon & Chamberlain. 29+160 p., ill. diagrs., pls., tabs. 8s., cl., 87.50.

**WOOLSEY, G.** Applied surgical anatomy, regionally presented, for the use of students and practitioners of medicine. 2d ed., rev. and thoroughly rev., with 200 illustrations, including 50 plates mostly colored. New York: Lea & Febiger. 6s., 17+601 p., 8s., cl., 84.50.

# THE DRUG MARKETS

## BUYING LIMITED, BUT PRICES ADVANCE.

### Demand Moderately Active in All Directions—Effort to Depress Market for Messina Oils.

NEW YORK, Jan. 25.—Business during the past week has been moderately active in all directions, but there has not been any departure from the rule of limiting buying to actual requirements; and while the changes in values have not been important, nearly all show an advance. The Messina essences continue to attract attention, but there seems to be an effort on the part of some dealers to depress the market for lemon, bergamot and orange. These dealers seem to be short of stock and have contracts to deliver, which explains the motive behind their action. The active demand for lemon and orange will come later on, and it is believed that higher prices will prevail. Citric acid is still in good demand. Opium firm and quiet in absence of any heavy demand. Norwegian cod liver oil is very active with a good consuming demand.

**QUININE SULPHATE.**—The demand is fairly good at full prices, but no interest is shown in quantities beyond the 1000 ounce limit. At Amsterdam last Thursday the cinchona bark sale went off at an average unit price of 3.03 Dutch cents, against 3.43 at the December sale. There were 9422 packages offered and nearly all of this quantity was sold. The result of the sale has had no visible influence on the market for quinine. Makers are still quoting on the basis of 15c. per ounce in 100-oz. tins. The shipments of bark from Java to Amsterdam for December, 1908, are 1,570,000 pounds, against December, 1907, 1,100,000 pounds; December, 1906, 561,000; December, 1905, 858,000 pounds. During the year 1908 the total amount was 15,677,000 pounds, against 1907, 17,212,000 pounds; 1906, 13,316,000 pounds; 1905, 15,339,000 pounds. The sale of 50,000 ounces of quinine at auction in Amsterdam is scheduled to take place tomorrow.

**OPTICUM.**—The market remains quiet, with the limited business wholly of a jobbing character, as consumers are inclined to purchase only in accordance with actual necessities. There is, however, no abatement of the steady feeling which has been manifested by dealers for some time past, and quotations on natural are maintained at \$4.00-84.85, as to quantity. Granular is quoted at \$5.60-85.85, and to all appearances there is comparatively little available. Powdered is a shade lower, owing to competition, but is still quoted at \$5.60-85.85 in most quarters, most business being done at the inside quotation. There have been no cables of importance. The arrivals up to January 22 amount to 1999 cases.

**CITRIC ACID.**—This article is still meeting with a fairly good consuming demand, and former prices are still current, but in some quarters there is a disposition to report an easier undertone, which is said to be due to advices to the effect that crude material is offered more freely. Manufacturers continue to quote 43-49c. per pound, while second hands report sales at 50c. per pound and upward, according to quantity.

**ANISE SEED.**—The Italian variety is slightly easier, with sellers of the true at 9c. per pound in large quantities, but some holders of choice quality are still quoting 12c. Russian varieties are held at about 6c. and star is bringing 18-20c. per pound, as to quality, quantity and seller.

**NORWEGIAN COD LIVER OIL.**—Cable-grams have been received from Norway stating an advance of \$1.00 per barrel, and it will not be surprising to see a further advance. The demand in the local market is good and the sale of 50 barrels for prompt delivery is noted among last week's transactions. No reports as to how the fishing is progressing have as yet been received.

**SWEET ORANGE PEEL.**—More inquiry for this article has disclosed the fact that stocks are very light, with prospects of receiving additional supplies from the primary sources of supply very slight. With some demand the price has been advanced on the bale for the Trieste quality in ribbons. Malaga quality, in some quarters, is extremely scarce.

**BAY RUM.**—The Payne Bill, imposing a tax of \$1.10 per proof gallon on Porto Rico bay rum, has passed the House of Representatives, and will probably be passed also by the

Senate and become a law, thereby ending all controversy on this article in the future. As a result of this act the market is decidedly firmer, with an upward tendency. The present prices in barrels is \$1.50 per gallon, and all other sizes are at the usual advance from this basis.

**MENTHOL.**—There is a better demand for this article and the market is much firmer, with prices ranging between \$2.60 and \$2.75 per pound.

**HENBANE LEAVES.**—There is a good consuming request and prices in large quantities are steady at 15-16c. per pound for the U.S.P. grade.

**BALSAM COPAIBA.**—This article is becoming very firm under reduced available stocks and a good consuming demand. The inside quotation for large lots has been marked up to 48c. per pound.

## London Drug Market

LONDON, Jan. 16.—The week's public sale of drugs had been looked forward to with considerable interest, as six weeks have elapsed since the last auction was held. Large supplies were catalogued, but the demand did not come up to expectation, although prices on the whole were well maintained. Aloes was in plentiful supply, a feature being some very large gounds of Barbadoes Aloes, of which part sold at 75s. per cwt. for fine bright liver; Cape Aloes was firm at 25s. 6d. per cwt. for good hard bright, and Tamptas was also firm at 85s. per cwt. for good hepatic.

Balsam Tolu was steady at 10s. per lb. Two cases of Siam Gum Benzoin sold at 27 per cwt. for fine, bold, free almond; Sumatra Gum was easier at 47.5s. to 47.15s. per cwt. for good seconds, and ES for good almost seconds. Ipecacuanha was not in demand, but a few bales of sound lio sold at 7s. 2d. per lb., damaged in proportion, and Carthagen realized 4s. 3d. Buchu leaves were steady at 10½d. per lb. for good green sound, and 9d. to 10d. per lb. for fair; stalky and yellowish at proportionate rates. Coca leaves sold on the basis of 8d. per lb. for fair green Ceylons; Nux Vomica realized 11s. per cwt. for dark Ceylons. Grey Jamaica Sarsaparilla realized 18. 6d. per lb. and good Lima 18. 3d. Wax was very firm. Honey was neglected. Four coppers of Essence of Lemon (Carlo Periviechie & Co., Palermo) sold without reserve at 4s. 6d. per lb., and a tin of Essence of Lemon (Marie de l'Assommoir) sold without reserve at 4s. 6d. per lb. Two cases of Dodge & Olcott's American Peppermint Oil sold without reserve at 6s. per lb. Of Casarea Sagrada about 600 bags were offered and bought in. Scenna was steady and the supplies were for the most part of poor quality. Cardamoms advanced from 1d. to 2d. per lb.

Privately business in drugs and chemicals has not been brisk. Considerable interest continues to be centered in Essence of Lemon, but the position is very uncertain. The forced sales at Thursday's auction afford no true indication of the state of the market, and while holders have changed their views as to the near future, business has been done this week at 10s. per lb., there are offers from Palermo at 4s. per lb., but little importance is attached to them at this moment. A small business has been done in Essence of Bergamot at 40s. Business has been done in Citric Acid up to 1s. 8½d. per lb., and English makers quote nominally 1s. 10d.; the general opinion is that prices will recede very shortly. Small sales of H.G.H. Peppermint Oil have been effected at 8s. 11d. per lb.; Wayne County Tin Oil is steady at 6s. 3d. Menthol is lower and a fair business has been done at 6s. 10d. per lb. for "Kobayashi," smaller quantities at 7s. On the spot small sales of Japanese Camphor have been made at 1s. 10d. per lb. for 1-oz. tablets, and a good business has been done in 1-oz. tablets for arrival at 1s. 5½d. per lb. c. i. f. Small sales of Japan Wax have been made at 54s. per cwt. for good squares. The Shellac market, which was dull early in the week, has brightened up and fair "T. N. Orange" is quoted at 78s. per cwt. Russian Errot of Rye is scarce and 1s. 4d. per lb. is quoted on the spot. Quicksilver has been reduced 2s. 6d. per bottle, the new price being 87s. 6d. Opium is very firm. Citrates have advanced 2d. per lb., the Potassium Salt being quoted at 1s. 9d. to 1s. 10d., according to quantity. An idea of the dwindling importance of the London Cinchona Bark sales can be obtained from the fact that at the auction this week less than 110 packages were offered, of which only part sold at steady rates.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, FEBRUARY 4, 1909

No. 5

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn, Chicago

Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the	
Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

90 WILLIAM ST., NEW YORK.

For Era Album

## CERTIFIED COLORS IN FOOD AND DRINK.

As most of our readers know, Regulation 15 of the rules and regulations for the enforcement of the Food and Drugs Act provides that the Secretary of Agriculture shall determine by chemical or other examination those substances which are prohibited or inhibited in food products, and especially those colors or dyes coming within the scope of the regulation. To carry out the provisions of the law Food Inspections Nos. 76 and 77 were issued and a list of coal tar dyes was published which might be used in food products provided that a guaranty was given by the manufacturers that such dyes were free from subsidiary products and represented the actual substance of the name which they bear. The effect of this decision placed a new aspect upon the character of the dyes previously used for the coloring of foods, confectionery and the like, and manufacturers and experts began to devote their energies toward the fabrication of dyes which should conform to these standards. That an American manufacturer should be the first in the field to comply with these standards appeals to our sense of patriotism and belief that our countrymen are as fertile and resourceful in inventive ability as any in the world.

The era of pure food and drugs has come to stay, and as our knowledge of the composition of these substances increases, the authorities, backed by a discriminating public opinion, will demand the enforcement of all the laws and regulations which have to do with the health and lives of our citizens. "Certified colors" only will be permitted in the fabrication of foods and beverages, and the manufacturers of such products will have a strong claim for patronage by boldly advertising the use of such colors. Of course, the use of any dye, harmless or otherwise, to color or stain in a manner whereby damage or inferiority is concealed, is specifically prohibited by law, but there is a legitimate demand for harmless dyes which must and will be supplied.

## THE MANN BILL NOT NECESSARY.

On another page we give considerable space to an attack on Congressman Mann's Drug Bill, together with Dr. Wiley's reply to the criticism. With the Federal Pure Food and Drugs Law in operation it is difficult to see the necessity for further legislation such as is contemplated in the Mann Bill and the unwisdom of loading the statute books with laws of this description is so obvious as to call for little comment.

The druggists of the country seem to be generally opposed to the measure and Congressman Mann, has, we understand, promised to amend the measure

to meet their wishes, but really it would seem, in view of the opposition and the improbability of enacting the bill, that the best thing to do would be to let it die a natural death. Nobody would shed any tears outside of the few persons who may have axes to grind on the tablet which they are seeking to have turned by the Congressional machinery.

#### PURE DRUGS IN SOUTH DAKOTA.

It is unfortunate that there should be any conflict in South Dakota over the enactment of pure drug legislation. Two years ago a law was put through which differed from the Federal law and was so complex in its verbiage that the courts promptly threw it out as unconstitutional. An effort is being made by Dairy Commissioner Wheaton to push through a somewhat similar bill, which is to be regretted, for the general experience is that State laws in conflict with the National Act have been unnecessarily confusing to the trade and have accomplished no material benefits to anybody.

Some thirty States have adopted the Federal statute as a model and the South Dakota State Ph. A. has fathered such a bill, the only change being that enforcement is vested in the State Board of Pharmacy, a very wise provision. The law makers should have no hesitancy in passing the pharmacists' measure. Mr. Wheaton is a faithful and conscientious official and his ideas are of value. They may ultimately prevail, but for the present it is extremely desirable that State and Federal pure drug laws should be practically the same.

#### LOOKS LIKE A POLITICAL GRAB.

Assemblyman Conklin's bill to reorganize the New York State Board of Pharmacy reduces the board from fifteen to nine members, abolishes district lines and gives the appointment of the members to the Governor. Examinations will still be conducted by the board, but they will act subject to the supervision and approval of the regents. That the chief object is to provide political patronage seems to rise with spontaneity in the minds of the pharmacists who believe that there is no necessity for changing the present method of electing the members of the board and this feeling is intensified by the failure of Mr. Conklin to introduce a single feature of the Whitney-Wainwright bill, which might well have been incorporated in the Pharmacy bill, if reform was the real object.

The omission to do more than take from the pharmacists of the State the right to elect the board and transfer it to the State leader of the political party which polled the highest number of votes at the preceding Gubernatorial election certainly justifies the conclusion that it is patronage more than reform that agitates the politicians at Albany. How pharmacists of high professional attainment will like the idea of being made practically clerks to the regents is problematical and no doubt that feature may have been included in the bill for the purpose of preventing such men from accepting office on the board should the new bill become a law. The provision is unquestionably a reflection upon the attainments,

ability and integrity of pharmacists who may be named under its provisions for membership in the board, should it be enacted.

#### PHYSICIANS DECLARE WAR ON OPTOMETRY.

Now that Vermont, quickly following New York, has passed a law recognizing optometry as a profession, making the fourteenth State to enact legislation regulating its practice, the physicians have come to a realization of what seems to them to be a dangerous encroachment upon the prerogatives of their own profession. The National Legislative Council of the American Medical Association, at its conference in Washington last month, voiced this growing sentiment on the part of the doctors by passing resolutions declaring that—

the granting of such a license to opticians will do great harm to the public by reason of the fact that it gives to persons who are ignorant of the fundamental principles of diagnosis, ignorant of the profound relation that may exist between ocular fatigue and serious neurological disturbances, as well as of the many deep-seated, intra-ocular affections of the eye, the sanction of the State in their attempts to do the work which should only be done by the educated and duly qualified physicians.

Resolved, That the efforts of the self-styled optometrists to obtain such legislation should be discouraged and opposed in every legitimate manner and upon all proper occasions.

The resolutions do not go quite as far as do the writers in the medical press, who urge that laws which give "optometrists the same privileges as legally qualified physicians who are oculists, yet only requiring of them one-half the qualifications exacted of physicians" are clearly unconstitutional and should be contested in the courts on the ground that they are class legislation. The Vermont law is very much like the New York law (which was summarized on page 804 of the ERA of December 24, 1908), the definitions, qualifications and exemptions being the same. The arguments advanced by the physicians in attacking the Vermont law would also apply to the New York statute. The outcome of the agitation will be viewed with interest by pharmacists.

#### WHY NOT SELL DENATURED ALCOHOL?

For some unknown reason, despite the prominence given in the newspapers to the possibilities of denatured alcohol, the retail druggists of the country have apparently given little attention to the benefits which they could obtain by featuring the sale of this fluid fuel and illuminant and the lamps, heaters, stoves, etc., which are designed for its use. It is true that large profits cannot be made on the denatured alcohol, but the utensils called into trade by its exploitation offer good returns and lay the foundation for a permanent demand for the fluid.

The suggestion is worth considering by druggists who are progressive and anxious to supply their patrons with the latest innovations that may be of benefit to them. As usual, our readers will find the ways and means to enter this side-line fully set forth in our advertising pages.

Plans of the Hudson-Fulton Celebration Commission have fully materialized and the observance of the three hundredth anniversary of the discovery of the Hudson River by Henry Hudson and the one hundredth anniversary of the successful application of steam to the navigation of the river by Robert

Fulton will be an important event in this year's history of New York City. The latter anniversary ought to have been celebrated two years ago, but it was decided to postpone its observance so that the two might be made the subject of a larger and better celebration. The joint commemoration will begin on September 25, with appropriate services in the churches, continuing for eight days, during which period there will be band and water parades, a carnival, exhibitions and displays of fireworks. With decorations and throngs of visitors the week will be a gala one for New York City.

There are some druggists who think they are indulging in innocent amusement while doing that they would fire a clerk for, if he did it.

It is quite natural that the man behind the times should have a grouch. Very few things are pleasant when viewed from the rear.

Perhaps the reason some druggists keep no accounts is for fear of being forced to calculate their losses.

Representing the third successive generation of his family in the wholesale drug trade in Boston, and now the head of what is generally admitted to be the largest wholesale drug house in New England, Charles F. Cutler, president of the Eastern Drug Company, occupies a unique position in the drug trade of the United States. Not only has he spent all his life since early manhood in the drug business, but he has back of him now the record of more than eighty years of ancestry in the same business. Mr. Cutler is a descendant of one of the men who founded the wholesale drug firm of Lowe & Reed, in Hanover street, Boston, in 1826, a name which was subsequently changed to Reed, Cutler & Co., and later to Cutler Bros. & Co., which it remained until merged with other wholesale drug houses into the Eastern Drug Company. Dr. Abram T. Lowe, of the original firm, was an uncle to the Cutler brothers who succeeded to the business, and one of the Cutler brothers was the father of Charles F. Cutler, president of the Eastern Drug Company.

Yet the elder Cutler did not depend upon the past history of the house as an equipment for his son. Charles F. Cutler was carefully educated for the position which it early seemed would be ready for him. He was prepared for college at the Boston Latin School, the oldest preparatory school in America, and he won a Franklin medal at graduation for high scholarship. Then he entered Harvard College, where he pursued special courses in chemistry, and in 1882 he was graduated with honors. With very few days intervening, he entered active business in his father's house. The exact date is July 1, 1882. He was not altogether a stranger in the house, for he had spent two of his college vacations working in the store. But now he was put through a special course of training. He was first put on the stock, and in the course of the next two years he was employed in all the various departments outside of the office. For the two years following he was in the office. This period was followed by two more years on the road, visiting customers of the house all over New England, making acquaintances and winning friends. At the end of that training, which might be likened to an apprenticeship in the wholesale drug business, Charles F. Cutler was admitted to the firm of Cutler Bros. & Co. as a member.

For the next six years the partnership continued with the three elder Cutler brothers, and the son and nephew. In 1894 William J. Cutler died, followed in 1896 by the death of E. Waldo Cutler, and in 1898 by the death of George Cutler, father of Charles F. Cutler. The latter carried on the business alone for two years, until it was merged with other wholesale drug houses into the Eastern Drug Company. In the corporation were included the firm of George C. Goodwin

& Co., which was established in 1841, and the house of West & Jenney, established in 1887. Charles F. Cutler was made treasurer of the new corporation, and continued in that capacity until the death of Charles C. Goodwin, when he was made president.

The house has continued to expand with the passing years. The house does business in every State in the Union and in Canada and Mexico, and it has resident salesmen in Cuba and Porto Rico. It has twenty traveling salesmen and a total of one hundred and seventy-five employees. It occupies six floors of the building at Fulton, Barrett and Cross streets, which has a ground area of 100 x 160 feet. Its paid in capital is \$400,000 and it has a surplus of \$100,000.

Mr. Cutler's association with druggists' organizations has made him quite as well known to the trade of the country as has that of his own business. He has served as vice-president of the National Wholesale Druggists' Association, and also as chairman of the committees on membership, on entertainment, and on credits and collections. He was chairman of the entertainment committee when the N.W.D.A. and the Proprietary Association of America met in Boston in 1903, and he filled the arduous position to perfection. He has also been president of the Boston Druggists' Association, the oldest organization of its kind in New England. He is now treasurer of the New England Drug Exchange.

Mr. Cutler also holds membership in many societies, including the Massachusetts Society of Mayflower Descendants, the exclusive Country Club of Brookline, the Commercial Club, the Exchange Club, the University Club and the Algonquin Club, all of Boston. He is a life member of the Harvard Union and also of the Bostonian Society.

In still another sphere of business Mr. Cutler is active. He is a director of the Commercial National Bank of Boston, and a member of the finance committee. The bank has resources of about \$2,400,000. He is also a trustee and member of the investment committee of the Home Savings Bank of Boston, whose deposits are nearly \$12,000,000.

Mr. Cutler is at his desk in his office in Fulton street every morning at nine o'clock, and he remains there throughout the forenoon, but much of his afternoon hours are occupied with his banking and trust affairs.

He lives in the Back Bay of Boston, in its most aristocratic thoroughfare—Beacon street. He is exceedingly fond of automobiling, and he attended the convention of the wholesale druggists at Washington two years ago and last year at Atlantic City by making the journey to and fro in his touring car.

CHARLES F. CUTLER,  
of Boston.

The recently discovered method of Dr. Randle C. Rosenberger for identifying the tuberculosis germ in the blood is described by him in the *American Journal of the Medical Sciences*. According to Dr. Rosenberger's description a patient suspected of having tuberculosis germs in his blood is brought into the operating room and a tourniquet is bound tightly about his arm in order to bring the veins into prominence. From any vein of sufficient size, at the elbow, the blood is drawn with a hypodermic syringe.

About two teaspoonfuls of blood is drawn from the vein and immediately mixed with a salt solution to prevent its clotting, and the tube containing it is put on ice for twenty-four hours. Herein lies the difference between this operation and the cultivation of the typhoid germ, wherein heat plays a part. Into the salt solution there is introduced about 2 per cent of citrate of soda.

After twenty-four hours the blood has settled in the vial and this sediment is withdrawn through a glass siphon. This is spread on glass slides and dried. The slide is next immersed in distilled water, the red corpuscles removed and dried again. It is next "stained," that is, immersed in carbol fuchsin, a red stain. Then it is immersed for five minutes in Pappenheim's solution, a blue stain by which the entire slide is stained blue, except the tuberculosis germ itself, which re-

main red. Under the microscope these red germs are revealed against the blue field.

To the medical profession the value of the process lies in its furnishing a means of making an immediate truthful diagnosis of the presence of tuberculosis. Heretofore the tuberculosis germ has frequently been mistaken for the typhoid germ.

Don't trust the fellow who has a vacant look in a poker game. He generally has a full house.—*Philadelphia Record*.

Before being too loquacious about imaginary cures, we should consider the volume of imaginary ills and imaginary science—unless we are satisfied with imaginary profits.

Druggists and others who demand a law for everything may learn by reading history that when law overflows the measure it becomes immeasurable lawlessness.

The more rapidly we secure laws to deprive others of freedom of thought, the more quickly will we find ourselves deprived of freedom of action.

A New York man milliner who imported the hats which Miss Hattie Williams wears in "Fluffy Ruffles" returned from Europe recently with the startling news of the probabilities in his line of trade.

"Summer hats will be again of overwhelming size," he said. "New York follows Paris so closely that hats worn on the boulevards in the French capital are copied within a week. Moreover the leading milliners now resort to cabling the latest fashions, just as any news is cabled. Early spring fashions will be small compared with recent shapes, but the summer models will be expensive.

"Pastel colors for spring and summer are mostly followed by the prominent Paris modistes. For ten weeks I have been in Paris obtaining the latest ideas for America, and I feel convinced that the American woman will have a greater variety of charming and picturesque styles than for several years before."

The Japanese have taken up the manufacture of celluloid, two factories having been established recently, one managed by an American, with American machinery, the other by a Swiss, with machinery from Germany and France.

The question whether playing on an organ as a part of a religious service is an infraction of the Sabbath laws caused much discussion in Berlin recently. The Jewish congregations of that city have considered organ playing as work and have always employed non-Jews for that purpose. When it was proposed to allow Jews to do the "work" the discussion arose, with the result that the question was laid for decision before a board of nine rabbis, of whom four voted for and four against the innovation and one leaned both ways and finally agreed to a compromise which must have been favorable to the liberals, because several changes in their favor have already been made.

"All the world's a stage," quoted the Wise Guy. "Yes, and the trust magnate wants to be the property man," added the Simple Trust.—*Philadelphia Record*.

Aeronautic ships are now being added to all the principal European navies except the British, says a writer in the *February Century*. Germany has two converted aeronautic transports, and another large one is being built specially for this work. This one is so planned that the masts, smokestacks and other upper works will not interfere with the inflation of large dirigible balloons or the launching into the air of aeroplanes. It will be fitted with the finest apparatus for producing hydrogen gas rapidly, also with a special arrangement for the storage of an enormous quantity of hydrogen

compressed in steel cylinders. These will be connected with the pipes running to the deck, so that by turning stop-cocks the gas may flow into the balloon for inflation as rapidly as wished, without disturbing the storage cylinders. There will be special facilities for storing aeroplanes, and arrangements for assembling them quickly on deck for flight; also complete workshops for repairs and alterations; and, still more important, there will be magazines for storing special aerial torpedoes. This ship will have great speed and will be protected like an armored cruiser.

"More money is spent for frivolity than for necessities."

"Oh, I don't know. It's costing the Chinese \$4,000,000 to bury their Emperor."—*Cleveland Plain Dealer*.

The very busy druggist who says: "I don't have time to eat," sometimes belies himself by having a double chin on the back of his neck.

"You know, of course," said a watch factory foreman to a reporter for the *Chicago Inter Ocean*, "how Lynn captured the African shoe trade—making shoes that squeaked softly. The native considers the discomfort and expense of American shoes quite futile if they don't squeak as he walks, like an ill-greased cart wheel. We have now hogged the African cheap

watch trade by turning out a good dollar watch that ticks like a boiler factory. You can hear this tick through a feather mattress. In fact, natives wearing our watches tick audibly. As they swagger along, their American watches ticking, they give out as much noise as a brass band."

A Sacrifice.

"Do you sell postage stamps here, Bub?" asked old Mrs. Bargin, entering the drug store.

"No, ma," returned the boy. "We just give 'em away at cost."—*Ottumwa, Ia., Courier*.

way through Ladakh into British India at the rate of \$600,000 worth annually. The drug is used throughout India for smoking with tobacco. A pouy load of 240 pounds generally sells at Ladakh for \$13.33 to \$16.66, and is transported to the Punjab, where it sells for about \$33.33 per 80 pounds. The retail dealers who sell it by the tola realize from \$66.66 to \$166.66 per 80 pounds. The high price of 1903, however, caused an overproduction, with the usual result of a big fall in prices. The imports into India of charas for Ladakh and Kashmir during 1907-8 was 2883 hundredweight, valued at \$763,520. Some charas is made in Nepal and adjacent localities in the Himalayas, but most of it is consumed locally. Except the limited amount of charas made from the bang plant in Gwalior, none of the drug is made on the plains of India.

"Politeness costs nothing," said the proverbialist.

"Which may explain," answered Miss Cayenne, "why some people of ostentatious wealth have so little use for it."—*Washington Star*.

Japan's new crop of peppermint is expected to produce almost 150,000 pounds of menthol crystals and nearly 220,000 pounds of oil of peppermint.

## Valentine Hints in Era's Prize Winner for Drug Store Display.

In the ERA's Cash Prize Competition this week the \$5 prize for the "best photograph of a druggist's show window or any display of goods in a drug store" is awarded to Frank J. Butler, Ph.G., secretary and treasurer of the John S. Murphy Company, druggists of Pontiac, Ill. Mr. Butler's contribution is particularly interesting at this time inasmuch as it contains hints of value to retail druggists in the display of goods not only at holiday time in the future, but for the valentine and Easter trade. Attention is called to the announcement of the conditions of the Cash Prize Competition which will be found on advertising page 40 of this issue of the ERA.

### Booths for Valentines, Easter Novelties, Etc.

(By Frank J. Butler, Ph.G., Pontiac, Ill.)

The most attractive way of displaying Christmas post cards, New Year cards, Valentines, Easter novelties and cards, is to build booths either on some of the unused floor space or on top of some of the show cases, on either one or both sides of the store.

The above picture shows but one of the many booths that I built for the holidays, and was left standing for the display of New Year post cards, and later for Valentines.

It is easily made. Four large four-inch corner posts with square two-inch boards or caps on top of each, and the arches are simply thin chair rail molding such as any wall paper

dealer carries. The molding is bent and covered with evergreen; the posts are covered with two coats of white alabastine.

It is very convenient and profitable to build booths on some of the rear show cases, over the paint brush case or any of the eight-foot cases not much used at holiday time. They are easily covered with flooring and booths arranged on top of them with arches extending from the case to the top of the shelving.

A system of booths and arches so arranged, the posts covered with white cloth or alabastine and the arches with evergreen, makes a delightful display for winter.

I have found that goods displayed in booths sold themselves when marked in plain figures, and the sales more than double in the same lines, such as perfumery, etc., compared with former years, when displayed in glass cases.

Booths, of course, are only temporary fixtures and must only be used in the ordinary store during the busy season, for it puts on a holiday attire and makes the store look more than stocked.

The same system could be used at summer resorts or winter resorts for the sale of souvenirs, post cards and novelties.

It is a good idea to change the style of the booth from year to year. The posts could be higher, and a gable top put on with a roof of holly crepe paper suspended by wood strips and white tape. Electric lights add much appearance to the display. "Try a booth or two ad see."

### Coat Hangers as a Means to Boom Drug Trade.

For real enterprise few druggists have anything "on" Andrew R. Cunningham, proprietor of the Standard Drug Store, in Detroit. A few days ago he ran across a bargain in wire coat hangers and a happy thought struck him. Here was a chance for some good advertising at greatly reduced rates. He ordered five gross of the hangers, getting an inside figure, and put them on sale the following Saturday at five for 10 cents, after announcing the "flyer" in the Friday evening papers. The way the natives went after those coat hangers was a caution. Early in the afternoon it became apparent that the supply would not survive the run, so Mr. Cunningham skinned around and secured ten more gross.

The demand continued all that day and many who called simply to buy coat hangers remained to inspect the other departments of the store and, in some instances, made liberal purchases. Up to date Mr. Cunningham has sold seventy-three gross of coat hangers and has a big reserve stock on hand, while his general trade shows an appreciable increase.

### Iowa College Wants Its Own Building.

The Pharmacy College of the University of Iowa is asking for a building to be erected from the millage tax and plans and specifications are to be submitted to the General Assembly at the present session. The Pharmacy College is the only professional college in the university that has not been provided with a building of its own.

In equipment and building per capita the Medical College is thirteen times greater than pharmacy, while homeopathic medicine is sixteen times greater, dentistry three and one-half times greater and engineering six times greater. In apparatus and supplies pharmacy shares per capita the following comparison: Medical, almost double, exclusive of hospital.

### Opportunity for a Modern St. Patrick.

Four Columbia druggists filled three thousand prescriptions for snake medicine during the month of December. Athens needs a St. Patrick powerfully bad.—*Edmon (Mo.) Telegraph.*

## A February Forethought.

How a Simple Tonic Disguised by a Sweet Vehicle  
Proved a Powerful Stimulant.

By Emma Gary Wallace.

The Apothecary turned the leaves of last year's cash book reflectively. He had a fancy for comparing monthly totals of the current year with those of the same months of previous years, and it was not encouraging to see a descending scale. The columns of figures told little, but the footings were eloquent. January had been quiet. Januaries frequently were quiet, but February—what was the matter with February? Surely the intervening weeks since the holiday season gave ample time for enaciated pocket-books to become fairly plump again, and yet the average daily sales of that month showed a constitutional tendency to sag.

He closed the book with an emphatic bang, replaced it in the drawer of the roller-top desk and pulled down the cover. It was the established rule that particulars of the business be kept under lock and key. General results might be discussed openly, but experience had shown the wisdom of a decided reticence on cash details.

Under protest, the Apothecary had finally admitted picture post cards, and the seasonable supply included many with a valentine sentiment. Regular valentines had never been sold, and yet what was the commercial difference between a valentine sale at twenty-five or fifty cents and a valentine post-card sale at two for five, or even five straight? Madam had figured that there was a difference, and it was on the profit side of the valentine.

### A Discriminating Decision.

That evening the two interested parties held a consultation on the advisability of trying this side line. The comic penny horrible was promptly eliminated from the proposition as degrading in its influence and beneath the dignity and service of the store. It was decided, however, that a well-assorted stock of attractive, popular-priced valentines should be purchased and the side-line window given over to promoting the sale of those goods for the week preceding the fortnight.

Madam insisted that, to stimulate one line of business by legitimate means, meant a certain degree of benefit to all similar lines, and that not to take advantage of the extra impetus thus available was poor business.

The Apothecary agreed. "But I do not quite see—" he hesitated.

"We'll concentrate our efforts on sweet things," she declared. "It shall be a carnival of sweetmeats, sweet fragrant odors, and sweet sentiments. Why I just long to commence, and if the idea meets with your approval I will begin preparations in the morning."

"Barkus is willing," laughed the Apothecary. "I'm up to my eyes in manufacturing, and I know of no one more likely to make a success of the undertaking than yourself."

### Taking Time by the Forelock.

The perfume stock was looked over and all fancy packages left from the Christmas trade were laid aside. As none with a holly decoration had been purchased at that time, the remaining goods were still perfectly salable. There were plenty of these on hand with the possible exception of a few special odors. The selection of the candy was easy, as regular lines only were chosen. The purchase of the new side line and the preparation for a successful window display were where the work and thought would come in.

Starting bright and early one clear, cold morning, Madam "did" the valentine wholesales and succeeded in making a fine selection. She inquired at several places for advertising posters and was soon rewarded by finding just what she wanted. The posters were of generous size and the principal decoration was a pair of exceptionally well-nourished cupids.

Each held in one hand a large square envelope, presumably a regular cupid's missive, and in the other a bow and arrow. A mental picture of the finished window flashed upon Madam with delightful distinctness. These cupids were to give the required touch of originality which she wished.

Upon reaching home the bows and arrows were neatly cut away from the uplifted hands as being likely to present difficulties later. The store label brush and the store paste-pot next came into play, for the figures were now neatly and smoothly pasted upon sheets of stiff cardboards, and set away to dry. The next day the outlines of the figures were slowly followed with a very sharp knife, and a strip of cardboard fastened on the back in the form of an easel stand, and behold, two well-made cherubs stood alert and ready for business. The figures had been so arranged that both could be stood with faces toward the center of the window.

With a child's set of ten-cent water-color paints the cheeks were tinted pink, the eyes blue and the chubby hands, arms and legs were washed over with flesh color, so lightly, however, that the poster shading showed plainly through. With a broad, flat brush the wings, hair and garments were richly gilded, and a deep, irregular, stippled edge laid in, on the face, and then the back received a coat of the same paint. Even with this liberal use, less than half of a fifteen-cent package of the gilt powder and the accompanying liquid had been used. The result was so beautiful that Madam was tempted to gild them all over, faces and all, and she felt sure that such a method would have given quick and effective results.

At a fire sale she had found some broad pink satin ribbon. Here and there a water-spot ruined its original salability. Five yards of this were purchased at twelve cents a yard, but if it had not been procurable at an exceptionally low price Madam would have cut strips of pink crepe paper and slightly ruffled the edges. The ribbon would give a more distinctive appearance to the window and could be used from time to time, and even colored later.

Two large heart-shaped signs were cut from Bristol board and fastened together locket-shape on the wrong side with small hinges of white cloth. The backs of these were likewise gilded, and a deep, irregular, stippled edge laid in, on the right side. On each sign was printed in large, clear letters, by means of a broad shading pen, especially designed for the purpose, the following sentiments:

There is <i>some one</i> somewhere	You are traveling but <i>once</i>
who will be <i>happy</i> to be	over <i>life's</i> pathway. Do
remembered by you	not neglect to make
on <i>Valentine's</i>	those you <i>Love</i>
<i>Day</i>	<i>Happy</i>

### The Easy Part.

The difficult part of a task is the getting-ready part, and so Madam found it. The rest was now but a matter of skillful arrangement. With drawn curtains she went to work at the window. The base was covered with the same soft, grey-green material that had seen previous use. The color was admirably adapted to throw into prominence the brighter shades of the goods to be displayed.

About equidistant between the plate glass and the background—a dark green curtain on a brass rod—and about one-third of the distance from the end to the center of the window a cupid was placed, slightly turned toward the central point. In the uplifted hand of each, from which the bow and arrow had been cut, a streamer of ribbon was placed. These silken strands were loosely festooned to a much higher point in the exact center of the window. From this higher point the heart-shaped sign cards hung, surmounted by a great shimmering bow of pink, which used up all the remaining ribbon. The crepe strands could have been used in the same manner. A fancy envelope, hand-addressed and stamped, was slipped over the missive held in the other hand of each figure. The effect was wonderfully good. The great open heart with its generous buying suggestions, and the life-sized little winged boys holding the rose-colored streamers made a balanced and striking effect, even from the opposite side of the street.

In the left of the window open candy boxes showed a valentine postcard standing upright in the end of each, conveying the hint that a box of sweets would make an acceptable gift. The perfume packages were destined to be the right flank, but their appearance must be varied from that of the

Christmas season. The outward appearance of an article that has not appealed before is not likely to make a strong appeal next time it is displayed, unless extra inducements are offered.

Accordingly, a dainty valentine had a box of perfume placed upon it, and a narrow pink ribbon was passed around both, and in the bow on top, three or four tiny blue velvet forget-me-nots were caught. The perfume boxes used were those which regularly retailed for fifty cents, but in this new combination they proved ready sellers at seventy-five. The cost of the valentine and trimmings averaged less than ten cents, so that the sale yielded the regular profit and an additional one as well. The packages especially appealed to those who wanted something with some degree of usefulness and yet having a festive appearance as well. There was still a nice clear space in front of the central decorations for a display of the valentines themselves. Inside the store a narrow, emergency counter-table was devoted to their use, while perfume and candy supplies were kept in attractive readiness on the tops of their respective cases.

#### The Results of Careful Preparation.

As opportunity permitted, Madam studied the people who paused before the side-line window, and from her observations she learned much, and not the least of the knowledge gained was that even a *Valentine Sale may supply a real want*. It was surprising how many men and women from whose hearts one would have supposed the romance to be quite dead, came to a standstill, read the heart-signs, dropped their heads a moment, and then turned slowly back and entered the store. These people never went out without at least one generous purchase and Madam liked to feel that each purchase of this kind would carry unexpected happiness which would brighten and cheer at least two hearts.

There was appreciative service for every one, from the little tot with the nickel, to buy a valentine for mamma, to the prosperous young man whose manner clearly indicated that nothing was too good for the best girl in the world.

On the morning of Saturday, the 13th, a shabby man stood in front of the window some time, and then passed on, evidently to his work. At noon he stopped again and looked hungrily at each class of goods. About half-past six that evening Madam looked up from a customer she was serving to see the same shabby individual waiting his turn. She nodded brightly to him. Someway her heart went out to this anxious-faced man in the thin, faded coat. In a moment she was free to attend to him, and she noticed that his face was one of patrician outline, although marked with toil and care. He looked at her a moment and she noticed that he swallowed hard.

"I haven't taken a valentine in thirty years," he said in embarrassed apology, "but I want one tonight, and I expect that this one will be the last that I shall ever buy. You see, my wife has been dreadfully sick. She is in the hospital, and I shall go to see her tomorrow—it's visiting day, you know—and I want to take her something. A few days ago the doctors told me that she could not live many days, perhaps a week at most, and well—I thought I'd like to let her know—well, that is to say, Lady, I thought I'd like to give her a little pleasure! There are just the two of us left now—the children went a long time ago, and when she goes—" his voice trailed off brokenly.

"What can you give me for twenty-five cents?" he asked in a tone that endeavored to be matter-of-fact.

"What do you think she would like?" Madam asked softly. He pointed to one of the gay packages of valentine, perfume, ribbon and flowers. "She always loved flowers," he said earnestly, "how much is the outfit?"

"Twenty-five cents!" Madam replied unblushingly.

"I'll take it," he said with a glow on his face that made him almost handsome.

Madam deftly erased the tell-tale mark and wrapped it up. The man slowly counted out two dimes and five pennies, and still he paused. "She'd like you," he added awkwardly, "an' I think you'd like her: She's sort of your kind," and without more ado the man hurried out, half ashamed of having betrayed so much feeling.

The Monday following Madam took account of cash and stock. The reduced sale of Saturday evening had practically cleared out everything that had been planned for the sale. The candy and perfume trade had exceeded that of the holiday season itself, as there were fewer competing attractions. Sta-

tionery, toilet and manicle goods had shown unusual activity. February returns certainly would not fall down this year, unless a blizzard or an earthquake or some other calamity entirely shut off trade for the rest of the month.

Madam figured out a neat profit and handed the paper to the Apothecary. He smiled.

"There is one item you have neglected to reckon in," he remarked.

"What is it?" Madam asked wonderingly.

"The pleasure given and received," the Apothecary remarked quietly, for no less an authority than Solomon himself has told us that 'a merry heart doeth good like a medicine,' and surely real happiness is more enduring than mirth."

## Me, Advertizing Expert.

By Joel Blanc, Jr.

This is a reglar draymaw. The docks thinked it was a tragedy, the reporters thinked it was a extravaganzanza, mama thinked it was a problem play and papa thinked it was a skinkin.

As it says in that volyum of Shakespear what papa is using the leafs of to paiste habills on, the draymawtis personay was these here personays. 1 trooley car, 1 bum, 6 buckits of blud (kinder-sorter blud), 11 docks, 1 amberlanse, 1 bunch of reporters and us kids.

You see, it happened this way. I herd papa telling Bill Spriggins, what is aisew a druggist and serry for it, that them docks is alwais getting thare names, peddygrease, dipplymore degrease and genral krimmel rekords in the free advertizing kolums of the noose papers evry time a nawtymble shuffer runs over a man for fun and the poor druggist dont get nutthing but two haf his floor all bluddied up and his bandiges used thout beeing paid for, and so on ad setery.

I thinked over awl what I herd and it did seam a mighty shame that poor papa never gets in the noose papers cepting when the sheriff is advertizing his bizness for sail at 37 sents on the 18 and I figgered out that us kids aught to get a little publickity for papa free gratis for nutthing.

I got us kids twogether and thay says awl rite, if I will get the munny for the blud and the brybe for Sim Waters what is our naberhood bum and dont do nutthing when he aint drunk cepting to get sober enough to get drunk agen. Well, I fixed Sim awl rite with some of the munny I robbed myself out of my own bank. Then thay is a feller lives neer us in a cheep hash labortory and he is a jurnalist and makes a poor living just a loafing around the cop stasbuns and fire engin houses to put in the noose papers about poles graft and fals elaruns ware thay aint no fires. And in our block there is five more jurnalists what is street cleaners (I meen, muck rakers) and keeps a noose stand on the corner and I give evry one of them jurnalists a tip soze he can have a skoop.

Well, to retrayce backward. Thay is 11 docks lives within 2 blocks of our store. Awl of them has offus ours at 10 oaklock A.M. in the morning and sum of them mite haf offus ours P.M., and awl nite two, cause thay aint got no pashints. At 10 oaklock Twosday I has one of us kids with his hand on the door bell of evry one of them docks, 7 jurnalists is hiding behind ass barrils and things like that and Sim Waters is standing on the curb with 9 bladders of slawter house blud hided in his pants and under his shurt and I has my big tin Happy New Year horn hided in my pants and it is neerly cutting my trayce off at the ankle.

Just as the loyfer, what is a sort of cow ketcher on the street and the offender, what is a sort of cage ketcher on the front peazza of the car just grazes Sims large and Sim jumps up into the air with a howl and comes down on his pants and basts one of them bladders and the blud spurts like a

leetric fowntin at the park and the reporters rushes out and carries Sim intwo our store and then I pulls my horn out of my pants and runs intwo the ally and blows it like the crack of dume and when us kids hears it they rings the bells of awl the docks and tells them that a man is beeing killed ded by a trooley car in our store and thay is a reporter thare and to come kwick and brung thare surgikle implements and plenty of thare bizness cards. The docks rushes out lickety split to thunder and yon wood thinked it was a maryanthony race to see the way thay tried to get thare ahead of each other.

And that old bum Sim was just doing fine. He was laying thare on the floor a raving and throurhing hisself aroun like a appleplektic fit and once in a wile a letting a uther bladdur of blud brake loose.

Old Jefflinks was the first dock what got in the store and as soon as he had handed his cards to awl the reporters he neeled down by Sim and Sim was suffering so horribble that he hit Jefflinks a bang in the eye what put that em dee out for the count and maid his eye look like a eg fried on both sides. Docks Swank and Dugles was a fighting at the door to sea which wood give the reporters his cards first and thay falled over Jefflinks and rite on top of Sim, and that maid Sim mad and he skweezed one of the bladders and skwirted a kwart of blud over Swank's personal appearence and sent a pint down Dugles neck. By that time Docks Wigglefort, Bullstein, Ruddle and Skidwing was passing out thare cards, and then thay tried to get at the corpse to safe its life. Ruddle tried to pore something out of a bottle down Sims' nek and Sim neerly bited Ruddle's finger off and he jumped back and necked down Skidwing and then set on him and by that time the uther 4 of the 11 had come in and after thay had passed thare cards to the reporters and telled them what hospickles thay was getting thare pay for charity work from thay tried to do some first ade to the ingered.

Dock Hidepoker, what is a oysterpatty or osteopathic or something like that tried to get at Sim, and Jefflinks pushed him out of the way and telled the reporters that Hidepoker aint no reglar practishner but just a bone puller and it is a shayme that the law dont make them oysterpathists go to jale, and please dont put that old Hidepoker in the paper. And Hidepoker he says that Jefflinks dont no nothing but pepsin and aumtytoksin and cant tell the difference between the pelvis and the scapula to safe his nek and while them too is scraping Dock Bubblestuffer tries to safe Sim's life with one drop of tinksher of nix vomitica diluted 41144 times and then awl the uther docks tells the reporters not to put Bubblestuffer's name in the paper cause he is one of them homelypathicks what dont use nothing but mind cure on a sugar pill and Bubblestuffer says he is got just as much right in the papers as them fellers and enyway, he dident learn his perfishin in a bone yard like them oysterpathicks or a aumtytoksin livery stable like the alleypathicks.

Then Dock Middlehike got at Sim. Middlehike is what thay calls a eclectic or something like that, and as a eclectic is a little of everything and not much of enything, and as the uther docks didnt no how to keep him out of the noose papers thay awl jumped on him at once and thay was awl piled on top of Sim and that skweezed more blud out of the bladders and neerly drowned the docks and Sim two.

The blud seemed to kindo cool thare intohosyasium and thay hollered at papa to bring awl the bandixes and liggy-chores and cotin and plasters he has in stock and thay gitted out thare saws and gimlins and things and started to cut Sim up and says to the reporters will thay please note the skill thay are alowt to use in safing the poor vikims life by cutting him to peaces.

By this time Sim was slitley aggravated and ill nachered and my, but Sim is strong evin if he is a bum. He necked them docks down as fast as thay end get up and he tried to get up hisself but when one dock wasnt setting on him three uthers was and evry time one of them docks wood set or fall on Sim thay wood be a reglar highdrawlik display of slawtherhouse blud and pritty soon them docks looked like thay is live blud puddings.

While them docks was fighting with Sim and getting more bluddud up thay kept hollering at the reporters what collige thay gradgerated from, what books thay wroted, and what famus people thay had killed in suksessful surgikle operations and calling each other kwacks and fakes and names what is two bad for me to write. Then the docks got to

punching each other and just then the amberlanse and five cops in a paterole wagin come and the cops sayled intwo the docks and Sim jumped up and necked the amberlanse dock intwo the nayberhood of the silent toom and runned out of the door.

When thay seed the corpse had flewed out, the docks tried to explaine but the cops didnt reckanize one of them cause thay was so covered with blud and awl chopped up and thare close awl tored and the cops loded awl the docks intwo the paterole wagin and rested them for unperfesul conduct unbecoming a gentilman and mayhem and anarky and a few uther things.

The store was a site, but you bet papa got in the papers awl rite. Them jurnelists wrote the hole thing up fine and the nex day the hole site was laughing at them docks. Of corse, the docks got thare names in the papers two but papa's was in bigger type and more often.

But my papa is a awful ungraitfull man. He said I had runed his ethycul reptashun and he woodent never get a uther preskripshun and he is gowing to kriteysize my pants till I cant set down. But as useyounall, mama come to the resque and safed my pants and life and people is coming from awl over the sity to shake hands with me and papa and by patint med-ins, seegars, postils and uther nawstrums. Papa come aroun at last as he useyounally does, when mama gets after him and he give me awl I took out of my bank and a kwarter more.

#### Notes of College of Pharmacy, Iowa City.

—Dr. C. S. Chase has been initiated in the Phi Chi.

—O. L. Rogers, '07, of Kalona, visited with R. A. Kuever recently.

—H. F. Eddington, of Pringhar, Iowa, has registered in the junior class.

—W. G. Pooley, '08, of Jefferson, called on friends in Iowa City recently.

—J. E. Packard, '09, of Manilla, has transferred to the College of Dentistry.

—W. R. Gray, '07, prescription clerk in Swayze's store at Eldora, was recently married to Edith C. Church, of Marshalltown.

—The second semester of the college begins February 8, and several have signified their intention of taking up the work at that time.

—G. L. Indra, ex-'08, who has been working at Ray, N. D., has returned to take up his work and expects to graduate with the class in June.

—The Pharmacy College shows a gain of over 30 per cent in attendance above total registration last year, and the largest gain of any professional college in the university.

—F. C. Lohmann, '03, of Wheatland, Iowa, is dead of typhoid fever. He was the owner of a successful pharmacy and was to have been married on Christmas day to Miss Pennegrath, of Tipton, Iowa, for which event he had built and furnished a fine residence.

#### Entertainment at Highland Park C. of P.

DES MOINES, Ia., Jan. 29.—The Highland Park College of Pharmacy recently gave a combined lecture and experimental entertainment which was pronounced a decided success. Prof. Maurice Ricker, principal of West Des Moines High School, gave an address on "Some Interesting Adaptation of Plants and Animals," and Dean Nagel and Mr. Roach, of the Conservatory of the College, rendered musical numbers.

The Science Building laboratories were open for inspection and visitors witnessed the process of manufacturing by the expansion of ammonia. The polariscope and spectroscope in connection with the general chemical work were shown in a most interesting way. Dr. Parker exhibited a lot of crude drugs illustrating the subject of materia medica and pharmacognosy, and Dr. Babel illustrated the methods of examining powdered drugs and food products and detecting their adulterants. The proceeds of the evening's entertainment are to be devoted to the scientific library.

#### Druggist's Daughter Disfigured for Life.

RIO, Wis., Jan. 30.—The five-year-old daughter of Druggist E. C. Molstad recently collided with a barb wire fence while coasting. Severe gashes were torn in her face and the child will be disfigured for life.

## Original and Selected

### HOME-MADE SHOW CARDS.\*

By A. R. Eberle, Watertown, Wis.

At the Appleton meeting in 1906 I read a paper on general advertising and made mention of the value derived from show cards displayed in the store. It is the purpose of this paper to dwell more especially on this particular feature.

Those who have not tried this method of advertising can hardly realize how much good such signs will do if kept fresh and timely. I have about twenty-five signs strung around the store which have, on many occasions made sales while customers were waiting for something else.

I know many druggists who will not consider the use of show cards on account of the item of expense, and it shall be my pleasure of presenting to you a method of making them that will cut down the expense to almost nothing.

I use for sign work cards 14 x 22. These can be bought in large sheets, 22 x 28 ten-ply white cardboard, at \$3.75 per hundred, making 200 cards of the size I use. For printing the signs I use a so-called "easy sign marker." With a little practice, patience and judgment in laying off the space, anyone can make a neat and attractive sign. The signs may be further improved by running a heavy red line around the lettering. For this purpose an ordinary ruling pen answers very well. Such a sign marker as I use can be bought from \$1.60 to \$2.75, depending upon the size of the type. You can see, therefore, that after you have your apparatus signs can be made for less than two cents each. Of course, this does not figure in your time, but this work can be done during spare time when trade is dull.

Black ink on a white card is most effective, but there are sign markers for sale which have two sets of letters—one solid face and one in which the letters are outlined, so that you can fill in the space with any colored ink desired. This gives you an opportunity to have certain words stand out by filling in the outlined letters with red ink. Sign markers of this nature are worth from \$12 to \$15.

Change your cards frequently. In our store some cards are changed every week, keeping seasonable articles before the public eye. Hot water bottles and cough remedies should be brought to notice during the winter months; spices and

flavoring extracts during the holiday season. When spring swings round placard your sarsaparilla and, as summer approaches, headline your kodaks and soda fountain. Prescription department, cigars and brushes can be featured the year around.

Many arguments are advanced in favor of free hand show cards, the chief taking point being their individuality. While I believe this method does save time and also attracts interest on account of the personal element of such work, I favor the printed sign on account of its neatness and finished appearance.

Show cards can be further embellished and will attract considerable more attention by pasting a picture of some kind on the card to aid in telling the story. I have made use of this only occasionally, but with very gratifying results. For example, a picture of a bald-headed man would focus the eye on a card "How you would look if bald. You need not be thus if you use our 'Crown hair tonic,' price 50c."

Another suggestion I saw offered not long ago is to paste the picture of a tooth on a card with the wording: "If your teeth were as large as this and ached all the way through, our toothache remedy would cure the ache. Price 10c."

In the same manner other cut-outs can be used to advantage. A lady's head will do nicely to enliven a card calling attention to face powders, perfumes, or any toilet articles. An ear of corn attached to a corn cure card will answer the same purpose, and so on. A great many cuts satisfactory for this work can be taken from discarded periodicals.

In the use of cards, especially for window purposes, do not make them too short. Mr. Gable, of New York, said some time ago in a paper along similar lines, read at the American Pharmaceutical Association, that he objected very seriously to the use of the so-called "skeleton" card. What is meant here is a card with a mere name painted on it. He asks one to imagine a window card bearing the words, "choice perfumes." In another your eye catches the message, "Climax Violet Extract, dainty and sweet as the flowers with the dew still on them." "Which card," he inquires, "would make the better impression on you?"

At the close of this paper I will show you some cards of my own manufacture to illustrate my ideas, and also a picture of the store to show the method of arranging and suspending the cards.

I have just said, do not use too few words in the making up of your cards. I would also warn you against too many, but rather have your cards bright, terse, snappy, convincing, suggestive and timely.

Before concluding I am going to read the wording of several cards that I have culled from several sources. Some of these

\*Proceedings of the Wisconsin Pharmaceutical Association.

I have seen displayed in stores I have visited and all of them I feel sure could be used to advantage.

"Don't hope to find a better drug store than ours. There isn't one."

"Buy your drugs where your doctor buys his—here."

"We can fill your prescription, no matter whose blank it is written on."

"There is pleasure in every puff of a 'Ben Ali' cigar. Price 5c."

"Our corn cure is not a lame argument. Price 25c."

"We'll cure that cough for a quarter."

"Falling hair now—a wig later. Our hair tonic makes both unnecessary."

"For comfort in your sleep have a hot water bag at your feet."

"We serve soda hot. It drives away the shivers."

"A truss you can trust; any truss fitted by us."

"Don't lose any time in becoming a Kodak."

"Refreshing bit of news—we are serving hot soda."

Such signs as these are not what would be termed "elegant" English, but they are catchy and will serve as silent salesmen for various lines of goods.

### JAPANESE PATENT MEDICINES.

#### Made for More Than Two Hundred Years, and Named With Free Imagination.

We of the West have got into the way of thinking that all, or anyway by far the greater part of Japan's newly acquired interest in such things as modern methods of hygiene and medicine has been borrowed or adapted from us. It will probably therefore surprise most of us, writes an Englishwoman in the *Queen*, to be informed that that very modern and especially American institution, the patent medicine monger, instead of originating in the land of the Stars and Stripes flourished in the Land of the Rising Sun long before he was seen or heard of in the Far West.

When Shakespeare was hardly cold in his grave they were making patent medicines in the country of the Mikado, and, moreover, were devising for them names which for lurid effectiveness would make the names given to our patent nostrums seem flat and feeble.

Did even Cousin Jonathan—the adept in inventing shockers in the way of labels for his wares—ever hit on one so likely to fetch the coin out of the pocket of the credulous as that invented by the physician Randaï-Jokan in the year 1682 and called by him Han-Gon-Tan, which translated into English means "Medicine Which Calls Back the Dead to Life"? This medicine is sold in Japan today, it has been selling there steadily for two centuries and a quarter, and if that is not a testimony to its powers what would be?

Whether the makers believed in the curative powers of suggestion—likely enough they knew all about its virtues long before we got hold of the first notion of it—they certainly showed a vivid imagination in finding names which should catch and hold the public attention and woo the pence from the public purse. Here are some of them—they are used in the Island Kingdom today: "Heal Everything Powders," "Spirit Cheering Pills," "Brain Healing Pills," "One-dose Healing Powders," "Poison Expelling Pills," "Second-to-none Plasters" and "Heal-all Pills."

They are all in the shape of powders, pills and ointments. Patent medicines in Japan are never sold in fluid form. Probably the reason for this is the very curious method employed for their distribution among the people, which began in the times of Prince Seïho Maeda, who died more than two hundred years ago.

This Prince was as much attracted by medicine making as many modern royalties are by horse racing. It was a craze with him; he might indeed be called the father of the modern patent medicine man. During the epidemics he used with his own hands to make up and give to the poor drugs and medications of various kinds, and it was he who started the credit system for the obtaining of medicines which has existed in Japan from his time down to the present day.

This system is simple in the extreme. The medicine monger comes with regularity of clockwork to every Japanese door, bringing his stock of "medicine which calls back the dead to life" and all the others with him. No doubt he expatiates with all the skill of an advertising agent upon their varied and

wonderful merits and, most seductive plan of all, he asks for no money!

Not yet! He receives a large order, for the Jap is as willing to be called back from the dead as his brothers and sisters of the West, especially when he can do it on tick, and then the medicine man goes on his way. He comes back again the following year and—he is certainly most accommodating—he takes away whatever drugs have not been consumed, obtains payment for those that have been used and leaves a supply of fresh medicine to go on with for another year, when he will call again and repeat the same procedure.

History does not hint what he does with the stale drugs that he takes back. Whether he, like the thrifty housewife who rebails last year's jams and maintains that that process makes it as good as new, remakes his medicines, we do not know; but there may in these days be a way out of the difficulty, for the Japanese now export their patent medicines to foreign countries, and this exported medicine is—since the end of the Russo-Japanese War in 1905—exempt from taxation, for Japanese patent medicines have to pay duty to the Government just as ours have.

It is hardly necessary to say that this free trade in drugs—in exported drugs, that is to say—has given a great stimulus to the outgoing of medicines from the shores of Japan, and as a consequence has increased their manufacture to a large extent.

There are now nearly a thousand different kinds of medicines made in the country—more, the uninitiated would suppose, than there were diseases calling for treatment. The medicine makers have increased in number from some hundreds until now there are over three thousand licensed makers of drugs, and the dealers in them are so numerous that in Toyama there is a patent medicine dealers' club with three thousand members.

There are patent medicine industry guilds, one of which has for its special object the lending of money to dealers who want to develop their business, and there is a Toyama patent medicine magazine. But perhaps the most curious and disturbing touch in the whole matter is that the Japanese, although they did not borrow the idea of making patent medicines from us, are borrowing some of our bad examples in the way of making them known. They have actually taken to the plan of putting up big boards in the meadows along the railway lines, just as we have been doing for years.

### NEW BOOKS.

#### PROCEEDINGS OF THE FIFTH ANNUAL MEETING OF THE NATIONAL ASSOCIATION OF BOARDS OF PHARMACY, 1908.

Readers of the ERA are already familiar with the work of the last meeting of the National Association of Boards of Pharmacy which was held at Hot Springs, Ark., last year. In addition to the report of the meeting the pamphlet before us contains the constitution and by-laws of the organization whose membership now numbers twenty-three active and eight associate members. The secretary-treasurer of the association is A. F. Sala, Winchester, Ind., under whose direction the pamphlet is published.

ALLEN, R. W., M.D., Vaccine therapy and the opsonic method of treatment. Philadelphia: P. Blakiston's Son & Co. c. 12 + 244 p. 8°, cl. \$2.

BERGEN, JOSEPH YOUNG, Essentials of botany. Boston: Ginn, c. 9 + 284 p. 11 pls. D. cl. \$1.20.

CASPAR, LEOPOLD, M.D., Text-book of genito-urinary diseases. 2d ed.; tr. by Charles W. Bonney, M.D. Philadelphia: P. Blakiston's Son & Co. c. 164 + 65 p. 8°, cl. \$5.

DEAVER, J. ELAIR, M.D., and Ashurst, F. Stanley Paston Cooper, M.D., Surgery of the upper abdomen; stomach and duodenum. v. 1. Philadelphia: P. Blakiston's Son & Co. c. 124 + 468 p. 8°, cl. \$5.

HOLLAND, J. A. W., M.D., The urine and clinical chemistry of the gastric contents, the common poisons and milk. Philadelphia: P. Blakiston's Son & Co. c. 104 + 100 p. 12°, cl. \$1.

STITT, E. R., M.D., Practical bacteriology, blood work and animal parasitology. Philadelphia: P. Blakiston's Son & Co. c. 114 + 294 p. 12°, flex. cl. \$1.50 net.

#### Interesting Papers for Chemists.

At the meeting tomorrow evening of the New York Section of the American Chemical Society several valuable papers will be presented, including one by L. H. Baekland on the "Synthesis, Constitution and Industrial Applications of Bakelite." The meeting will be held at 108 West Fifty-ninth street and will be preceded by the usual informal dinner at the Hotel Savoy.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Hectograph.

(S. G.)—See last week's *ERA*, page 88.

## Non-Lathering Shaving Cream.

(F. R. F.)—The so-called "creams" to be rubbed upon the skin to assist in shaving, and not to lather, are generally saponaceous emulsions of exceptional thickness, the following formulas representing the type of preparations:

(1)

Cacao butter .....	1/2 ounce.
Almond oil .....	1/2 ounce.
Glycerin .....	1 ounce.
Primrose soap .....	1/2 ounce.
Otto of rose .....	4 minims.
Oil of neroli .....	4 minims.
Oil of bitter almond .....	5 minims.
Distilled water .....	a sufficiency.

Melt the cacao butter and almond oil and pour into a warm mortar containing the soap previously rubbed down with three ounces of boiling water; stir briskly to make uniform cream, slowly adding 4 ounces of warm water previously mixed with the glycerin; finally add the perfumes. With 4 ounces of rose water and no glycerin, this gives a cream suitable for potting.

(2)

Powdered trazacanth .....	1/2 ounce.
Rectified spirit .....	4 ounces.
Put together in a dry corbyn quart and shake, then all the following in their order:	
Cream of almonds .....	1 ounce.
Oil of almonds .....	2 ounces.
Glycerin .....	5 ounces.
Water .....	45 ounces.
Mix well and perfume with:	
Oil of rose geranium .....	1 dram.
Oil of bergamot .....	2 drams.
Oil of neroli .....	1/2 dram.
Oil of citronella .....	20 minims.
Rectified spirit .....	1 ounce.
Mix.	

## Compound Elixir of Aletris.

(G. & G.)—We cannot undertake to give you the formulas employed by the various pharmaceutical manufacturers for making the "cordials" or other preparations containing aletris, starwort, crampbark, etc. However, some years ago the following formula under above title was published by the Cincinnati Academy of Medicine:

Aletris (star-grass or unicorn root)....	1 av. ounce.
Wintergreen .....	1 av. ounce.
Campip .....	1/2 av. ounce.
Crampbark .....	1/2 av. ounce.
Blue colosh .....	1/4 av. ounce.
Cinnamon .....	.60 grains.
Bitter orange peel .....	.30 grains.
Caraway .....	.15 grains.
Sugar .....	5 av. ounces.
Alcohol .....	5 fl. ounces.
Water to make .....	16 fl. ounces.

Reduce the drugs to a moderately coarse powder, and extract by percolation, using as a menstruum a mixture of alcohol

with an equal volume of water. When this menstruum has passed through the mixed drugs, follow with water until 13 fluid ounces of percolate are obtained. In this dissolve the sugar by agitation, add enough water to make 16 fluid ounces, and filter.

Whether this formula possesses any therapeutic superiority to the compound elixir of crampbark of the National Formulary is a question for the intelligent physician to answer. We cannot name the coloring agent employed in the proprietary article.

## Pine Tar Troches.

(A. C.)—The following formula has been published:

Pine tar .....	1/2 ounce.
Powdered cubeb .....	1/2 ounce.
Oil of wintergreen .....	20 minims.
Solution of potash .....	6 drams.
Orange flower water, enough to make....	4 ounces.

Macerate for 24 hours in a warm place, shaking occasionally, then filter through kaolin.

Then roughly bruise:

Marshmallow .....	2 ounces.
Horehound .....	2 ounces.
Licorice .....	2 ounces.
Anised .....	2 ounces.
Lobelia seed .....	1/2 ounce.
Hops .....	1/2 ounce.
Ipecacuanha .....	2 drams.
Capicum .....	2 drams.

Add to a gallon of water, boil and allow to simmer for some hours; press and strain, evaporate to about 30 ounces, to which add the preceding infusion of tar and cubeb diluted with 4 ounces of rectified spirit, and filter. Use this as a stock solution, to be added to any of the usual sugar pastes, about 2 ounces to every 14 pounds of finished lozenges. A good plan is to arrange with some lozenge maker to make and stamp the troches, using your medicated solution.

## Cardboard Paint.

(J. O. M.)—The paint employed for lettering cardboard may be easily made by using any of the so-called "dry water colors," with mucilage of gum arabic as a binder. Mix any color desired—vermillion, ultramarine blue, chrome yellow, lamp black, flake white, etc.—by adding enough water to make it the consistency of thick dough, adding whitening or flake white to any color you wish to be of a lighter shade; then grind the same by using a palette knife or spatula with a flexible blade or other similar means. Add a little mucilage as a binder.

In the place of the dry colors it is much handier to use fresco colors in distemper. It is said that these colors will give good results when thinned with water and a little mucilage, added as a binder. To increase the flowing property of the paint a mucilage containing a little glycerin is sometimes employed.

There are two kinds of water color paints, one of which has practically no body and of the consistency of varnish; the other has a heavy body and is said to be the most satisfactory for brush lettering. The latter paint, when set aside, should have a thin layer of water covering it which can be poured off when it is desired to use the paint. In this way the paint in the receptacle is kept thick and creamy and in a condition that enables it to "cut clean and cover well."

## Coloring Electric Globes.

(P. G. W.)—In further reply to your query, this journal, January 14, 1909, page 38, a correspondent who signs himself "N. Y. Z." writes that for coating electric light bulbs with anilin "banana oil" (bronzing liquid) is better than either collodion or varnish. Simply dissolve the anilin in the banana oil, put the solution in a tumbler or saucer and rotate the bulb in it.

## Wine of Camphor.

(A. A. W.)—Wine of camphor (vinum camphoratum) is prepared according to the German Pharmacopoeia by dissolving one part of camphor in one part of alcohol and incorporating gradually and with agitation 3 parts of mucilage of acacia and 45 parts of white wine.

## Bright Ideas in Decorations.

### Manipulation of Crepe Paper.

Crepe tissue paper admits of more varied manipulation and greater variety of artistic effect than any decorative material that has ever been found usable for store purposes.

#### Paper Ribbons.

Aside from its uses in merely covering flat surfaces, such as floors and walls of windows, the most general form in which crepe paper is used is in that of ribbons. The ribbons may be cut of any desired width, lengthwise with the roll and without unrolling the paper. To secure an absolutely clean and straight edge for the ribbons, it is best to lay a narrow, clean, straight-edged board across the roll at the desired distance from the end, place pressure, such as that of the knee, upon the board and cut through the paper roll along this straight edge with a very sharp knife. Two-colored ribbons are procured by rolling a strip of paper within a strip of a contrasting color and cutting both together. Use contrasting colors such as red and yellow or orange and green. The corrugations in the paper hold the two colors together in the ribbon. Crepe ribbons are generally used in twisted or screw form, to secure a light and airy effect. To illustrate: Suppose that a window canopy is to be formed. The ends of a number of ribbons are gathered together and tacked to one point in the center of the window ceiling. Then each ribbon is taken separately and the free end turned until the ribbon has taken the desired screw-like form, the free end being then tacked to the proper point at back or side of window.

To procure ribbons with contrasting edges, cut two colors together, as noted above. Then unroll and reroll with one edge of one paper protruding for the desired distance beyond one edge of the other. To procure a red ribbon with two orange edges, or vice versa, cut a red ribbon of, say, two inches in width and an orange ribbon of three inches, and roll the red within the orange. Be sure to roll evenly and firmly to get the corrugations to knit, but in manipulating be careful not to stretch the paper excessively.

#### Rosettes.

Cut a strip of paper of from four to six times as long as it is wide. For a rosette of average fullness the length should be five times the breadth. The breadth of the paper should be a little more than one-half the desired diameter of the finished rosette. For a twelve-inch rosette cut the paper six and one-half inches by thirty. Now cut a circle of cardboard eleven inches in diameter. With a back and forth fold pleat the paper across its breadth into a bundle about an inch wide. At one end force a heavy pin through all the folds about half an inch from the end and then force the pin through the center of the card and clinch it. Now fasten one of the outer ends of the paper to the cardboard with mucilage and permit it to dry. When dry, take the free outer end of the paper and circle it around the card until it meets the pasted end and then fasten it. Manipulate the ruffle thus formed until the tucks are symmetrical and then fasten to the card at five or six points with drops of mucilage. After all is dry press down the center of the rosette with the ball of the thumb and over this center lightly paste a small circle of paper of the same or a contrasting color. By repeating this operation upon the same piece of card with papers of decreasing width and length, one upon the other, a very full, rose-like effect may be procured. Papers of different widths and contrasting colors may also be used, one above the other. Tri-colored rosettes of red, white and blue make appropriate decorations for National and other celebrations. The use of the cardboard insures rigidity and permanency. Rosettes thus made may be used repeatedly and hung or tacked in any desired place and position.

#### Globes.

Cut two cardboard disks of the diameter desired for the globe. In each one make a slit from the center to one edge. Slip each one into the slit in the other so that they will be at right angles, then glue in place. Run thin strips of springy cardboard from pole to pole of one card disk over the edge of the other in sufficient number to form a globe-like cage. This cage may be covered with crepe paper in several ways. One is to merely tuck the paper around it and tie at top and bottom. A neater way is to first cover the cage with

oblong sections or slices of heavy paper, smoothly pasted in place. Upon this the crepe paper in varied colors, designs and contrasts, may be lightly pasted.

### Fan Decorations.

The foregoing directions answer for fan-shaped decorations by merely cutting the circular card into halves, thirds or quarters as may be desired, and making the paper of proportionate lengths. In the finished rosette or fan the card should never show, as the paper should extend slightly beyond its edges on all sides.

#### Bells.

Bells are appropriate for Easter, Christmas and other occasions. Of fine wire make a ring of the diameter desired for the bottom of the bell. Cut a strip of paper of the width desired for the height of the bell. For a wire ring four inches in diameter the paper should be five and one-half inches wide and in length a little more than the circumference of the circle of wire or twelve and a half inches. Paste the ends of this paper together with a fold of one-quarter inch. When dry, gather the paper in pleats across its breadth and tie firmly near one end with silk of the color of the paper. Open and spread the lower end of this bundle, and then pass the wire ring over the tied end until it rests upon the lower edge of the open end. Turn the edges of the paper upward and over the wire ring and so paste as to enclose the ring within the folded edge. You will now have a paper cone. When the pasted fold is thoroughly dry, take the cone in hand. Hold it so that the fingers are on each side of the paper just above the ring. With a pulling, smoothing motion work out the corrugations in the paper so as to form the curve or flare of the bell. Finish with a silk thread and glass bead or small ball of paper for a clapper. Small bells thus made are among the lightest and most fairy-like decorations. They are much more attractive than the machine-cut paper bells that have become so common.

#### Leaves and Light Shades.

Paper leaves for various decorative purposes and especially for making fancy shades for incandescent light globes are easily made, the proportions here given being those for making globe shades. A similar process applies to any size leaves.

Cut a cardboard pattern the shape of a rubber plant leaf and of the following dimensions: The base is a straight line two and one-half inches long. From either end of this cut on a curve until the curved lines meet in a point seven inches above the base line. The greatest distance between the curved lines should be three and three-quarter inches and that at a point midway between the base line and the point where the curves meet. Cut the crepe paper leaves around this pattern. Take pieces of fine copper wire ten inches long. Lay a wire along the center of each leaf from point to base so that the wire will extend three inches below the base. Cut strips of paper one-half inch wide and the length of the leaf. Paste these over the wires to hold the latter in place. If desired, two leaves of the same size or of different sizes and colors may be pasted together at the center to hold the wire in place. After the paste is thoroughly dry the wires may be bent to give any desired curve to the leaves. The free ends of the wires are used to fasten the leaves independently to the globe or they may be grouped around a wire ring or regular shade collar. A pleasing effect is procured by using leaves of alternating colors, as a red, then a yellow, then a red, and so on.

#### Flower Effects.

Space will not permit giving details for making the many paper flowers, but the following simple directions will enable one to secure what may, broadly speaking, be called a chrysanthemum. Cut out numerous circles of paper of various sizes, say, five of an inch in diameter and a similar number of inch and one-quarter, inch and one-half, inch and three-quarters, and so on to six inches. Cut all of these around the circumference into tongues the shape of chrysanthemum petals. At the end of a copper wire fasten a cardboard disk one-half inch in diameter. Cover this with paper. Now take the smallest circles of paper petals and singly pass the wire through the center of each one. Fold each petal upward and over the cardboard center. Continue this, gradually increasing the size of petals, fold each tightly over the preceding ones and keep folded until all are in place. Then shake out and curl outer petals over a metal edge.

## PERSONAL MENTION

—CHARLES L. TRUSLER, who represents the Red Lilly line in Peoria, is home from a visit to Indianapolis.

—DR. T. S. ANDERSON, of Live Oak, Fla., was a recent visitor to the Southern Drug Company, at Jacksonville.

—PROF. L. C. HOPP, of Cleveland, Ohio, will address the students of the Pittsburg College of Pharmacy on February 17.

—HARRY W. LYLE, who travels for the Red Lilly in southern Minnesota, was recently in Indianapolis visiting the home office.

—FRANK M. BELL, manager of the pharmaceutical department of Armour & Co., of Chicago, was a New York visitor a few days ago.

—N. W. PRAY, manager of the Diamond Laboratory Company, of Naugatuck, Conn., has been visiting friends in New York during the last few days.

—F. F. INGRAM, manufacturing chemist and perfumer, has been appointed chairman of the Detroit Credit Men's Association committee on legislation.

—E. J. KANE, formerly of the Liquid Carbonic Company, for some ten years, is now manager of the Marietta Manufacturing Company, Indianapolis, Ind.

—CHARLES WADLOW, of Texana, Okla., formerly in the drug business in Anthony, Kan., was a recent visitor to friends and relatives in the latter place.

—F. D. TROTTER, a former druggist of Pittsburg, Pa., has written to his friends in that city announcing that he is associated with a drug store at Riverside, Cal.

—RICHARD McNALLY, a well-known druggist of Pittsburg, Pa., and a former member of City Councils, is again a candidate, who has a large following in his ward.

—DR. THOMAS HOWELL, of Havana, and J. M. Young, of Lake City, were recent callers at the establishment of the Groover-Stewart Drug Company in Jacksonville.

—ROBERT WILLIAMS, formerly a drug clerk at Racine, Wis., and now located with the Chicago branch of the Horlick Malted Milk Company, is visiting friends at Racine.

—JAMES DUNCAN, who carries a sample case for the house of the Red Lilly, has returned to his home in Atchison after a week's visit to the Lilly laboratories in Indianapolis.

—S. E. MOORE, formerly with John Wyeth & Bros., is now representative for Sharp & Dohme in New Jersey. Mr. Moore was a recent caller at the New York branch of the firm.

—F. H. SNELL, of Lansing, Mich., has resigned his position with the Robinson Drug Company and has accepted a position with E. S. Nivins, druggist in Washington avenue south.

—JOHN GILRAY, traveling salesman for Schieffelin & Co., chemists, of New York, has been spending some time with his parents, Mr. and Mrs. William Gilray, of Sault Ste. Marie, Mich.

—WILLIAM A. SAILER, chairman of the sales committee of Sharp & Dohme, was here from Baltimore a few days ago, conferring with Mr. Stauffen at the New York branch of the concern.

—LOUIS BREHM, a retired druggist of Pittsburg, Pa., and the father of Fred J. Brehm, who is a member of the same profession, is spending the winter with his wife at Riverside, Cal.

—DR. JULIUS A. KOCH, dean of the Pittsburg College of Pharmacy, is at the head of a movement in that city which has as its object the organization of a branch of the American Pharmaceutical Association.

—CHARLES J. LYNN, secretary and general manager of Eli Lilly & Co., visited the New York branch of the firm a few days ago. Mr. Lynn had just returned from a trip through the New England States.

—F. L. MCCARTNEY, recently of Baltimore, where he was employed by Sharp & Dohme, has been transferred to the New York branch of the firm. Mr. McCartney is an assistant in the Spanish and credit departments.

—ALBERT A. MUNSCHE, who since his graduation from the Pittsburg College of Pharmacy in 1907, has been acquiring business experience in stores in that section, proposes to put that experience to his direct personal use and has purchased the pharmacy of H. S. Kossler, at Crafton, Allegheny County, Pa.

—EPHRAIM BACON, who is secretary of the Maryland

Board of Pharmacy, has severed his partnership with Dr. Truitt, at Roland Park, a suburb of Baltimore, and has taken personal charge of the drug store at Calvert and Thirtieth streets, which he and Dr. Truitt bid in at mortgagee's sale several weeks ago, the former proprietor having left the city.

—M. M. OSBORNE, of Elkins Park, vice-president of the Montgomery County (Pa.) Retail Druggists' Association, and a staunch supporter of organization in the retail trade, with Walter Rothwell, of Hathers, chairman of the executive committee of the same association, were among the number who dined at the Drug Club in Philadelphia last Friday. Both are members of the club.

—WILLIAM B. STRONG, vice-president and treasurer of the Milwaukee Drug Company, well known wholesale druggist, has been re-elected vice-president of the Merchants' and Manufacturers' Association, the leading commercial and civic organization of Milwaukee. Mr. Strong has several plans for furthering the city's public interests which he will carry into effect during his new term.

—EDGAR D. TAYLOR, of Richmond, Va., president of the Powers-Taylor Drug Company, and Mrs. Taylor were in New York the fore part of last week on a pleasure trip. Mr. Taylor is chairman of the committee on arrangements and entertainment of the N.W.D.A. for the next meeting of the association, which will be held in Richmond in October. During 1907 Mr. Taylor was president of the association.

—MEMBERS of the family of Frederick K. Stearns, of Frederick Stearns & Co., Detroit, who is now on his way to Egypt, say that he came very near securing passage on the ill-fated steamer Republic, of the White Star Line, which was rammed and sunk by the Italian, Florida, on January 25. Mr. Stearns, in planning his tour of the world, had the Republic in mind, but finally settled on a berth in the Carmania.

—F. V. JOHNSON, who has been president of the St. Louis R.D.A. for three years, was presented with a heavy gold mortar charm by members of the association at the January meeting, he having announced that he could not longer serve as president. The presentation was a surprise to Mr. Johnson and took place at the lunch after the regular meeting had adjourned. E. A. Sennevald made the presentation speech.

—EDWARD T. HAHN, a territorial manager for the H. K. Mulford Company and one of the best-known and most popular members of the sales force of that company, lays claim to the championship of the Drug Club of Philadelphia when it comes to playing "cowboy pool." So successful has he been that other aspirants for the same honors are ordered to "go and make a reputation" before their challenges are considered.

—W. F. MEDILL, who conducts a pharmacy at Fulton and Lafayette avenues, Baltimore, was severely burned about the hands last week in going to the rescue of his wife, whose clothes had ignited at the kitchen stove and who narrowly escaped being burned to death. Mrs. Medill escaped with slight injuries, thanks to the heroism of her husband and of another man, who, with rare presence of mind, threw his overcoat over her and smothered the flames.

### James E. Davis Heads Detroit Wholesalers.

DETROIT, Jan. 30.—James E. Davis, of Williams, Davis, Brooks & Hinckman Sons, has been elected president of the Detroit Wholesalers' Association. The other officers are: William C. Noack, first vice-president; W. D. Wood, second vice-president; George C. Bogue, treasurer, and Paul Leake, secretary.

### N. Y. Deutscher Apotheker-Verein Meeting Tonight.

A feature at this evening's meeting of the New York Deutscher Apotheker-Verein will be the reading, in the original, of the paper on "Earths and Kataplasma Kaolin" of Professor Schelenz, by Otto Raubenheimer. Emil Roller will also read a paper dealing with several practical subjects.

### Philadelphia Druggist Compromises Damage Suit.

TRENTON, N. J., Feb. 1.—Henry R. Nolte, of Philadelphia, has settled his suit against the Camden & Trenton Railroad for \$550 and costs.

### Will Install a New Fountain.

A. Ole, well known druggist at Kenosha, Wis., is remodeling his drug store and will install new fixtures and a new soda fountain.

## FOR AND AGAINST THE MANN DRUG BILL.

Dr. Johnson, of Washington, Quotes Prominent Lawyer Regarding Incongruous Consequences of Proposed Legislation—Dr. Wiley Declares in Favor of Passing the Measure.

WASHINGTON, Feb. 1.—In the House on Friday, Representative Mann, of Illinois, placed in the Record two communications bearing on House Bill No. 21,982, regulating foreign and interstate commerce in habit-forming and poisonous drugs. One was a letter from Dr. H. L. E. Johnson, M.D., of Washington, and the other a reply to Dr. Johnson by Dr. H. W. Wiley, of the Bureau of Chemistry. Representative Mann said many members of the House, in consequence of letters from constituents, had come to him for light on the subject, hence his presentation of the two communications.

Dr. Johnson follows a detailed discussion of the provisions of the bill with the following opinion by "a prominent member of the bar," who says that if enacted into law, the following will be some of the consequences of this act:

### Some Incongruous Consequences Foreseen.

"The maximum dose or quantity for either internal or external use of these drugs is no longer a question of medical science, but is fixed by act of Congress, so that, no matter what may be the necessity or advantage in the preservation of health or life in providing for a larger quantity than the act permits, the patient must be deprived of a rightful remedy, unless the physician and druggist are willing to bear the penalty of the statute.

"The citizen could not lawfully obtain a dram of paregoric for the purpose of administering 15 drops on a little sugar for his infant child, but must summon and pay a physician a fee and a druggist for putting up a prescription.

"No citizen may indulge in toothache drops or other like remedies for the relief of a maddening toothache without the expense of a physician's prescription or that of a dentist.

"Simple and familiar household remedies and home treatment would be abolished.

"A physician called in an emergency can not administer a hypodermic of morphine to relieve the excruciating agony of a person pinned under a fallen timber or otherwise critically injured until he has written a prescription giving the statutory limit of dose and the name of the probably unknown patient and sent it to a drug store to be compounded and recorded.

"A physician in his office can no longer apply the local anesthetic cocaine to a patient before operating upon eye, ear, nose, or throat; but must send out a prescription, to be compounded and recorded in the case of each patient."

### Inconsistency in Provisions of the Bill.

To this finding, Dr. Johnson adds the following conclusions:

"This (first) section is further emphasized by the inconsistent provisions of the second section, under which anyone may sell, furnish, give away, in any quantity in bulk, chloral hydrate, hyoscine, morphine, opium, and scopolin, all within the prohibition of the first section, together with a number of the most dangerous poisons, provided the package be conspicuously labeled as 'poison'.

"Under the second section a simple cough mixture, most beneficial and absolutely harmless, must be marked 'poison' and decorated with a skull and crossbones because it contains a trace of antimony and opium in each dose; so an ordinary adhesive plaster, to bind a cut or other wound, must bear the skull and crossbones and be marked 'poison' because it contains a little zinc.

"A large number of simple remedies, which have been familiar medicine in the family for half a century or more, must suddenly assume an alarming appearance, practically deterrent of their use, because of the warning crossbones and poison labels, though a quart of the mixture would not contain a harmful quantity of the prohibited drug.

"If the second section become a law, in addition to the burden it would impose it could be of little, if any, effect. The provisions of interstate commerce legislation end when once the transported package has been broken up and commingled with the other goods in the State of delivery, so that the prohibition of the statute could be readily overcome by a form of package which would convert the poison label into a sort of railway or steamboat ticket, to be thrown away when

the transportation was complete and the merchandise then reappear in the new State in a new suit of clothes."

### Dr. Wiley Denies Justness of Criticism.

Dr. Wiley, complying with Representative Mann's suggestion for a review of Dr. Johnson's criticism of the bill, says the law received the full sanction of the medical fraternity, and therefore criticism involving this law by Dr. Johnson is unwarranted and "comes with ill grace from one who poses as a public reformer." The following are Dr. Wiley's answers to the specific allegations made by Dr. Johnson and the "prominent member of the bar":

"Neither the doctor nor his patient is prohibited from carrying medicine from one State to another.

"Nothing in the law could be construed to interfere in any manner with physicians dispensing their own medicines.

"Telephoning prescriptions is not only a hazardous business, but would permit habitués ordering any amount of cocaine, morphine, etc., in the name of some physician. The druggist could not recognize the fraud over the phone."

"The bill requires the attachment of poison labels to the caustic hydroxides and concentrated mineral acids and not to preparations in the manufacture of which they or their salts are used.

### Many Efficient Remedies From Habit-Formers.

"In my opinion, every mother in the land should be advised against the use of laudanum, with or without 'sweet oil,' in the treatment of earache. The oil and water are either absorbed or dissipated, leaving residual matter, forming an excellent nidus for bacterial growth and thus aggravating conditions. I do not recall a single toothache remedy which contains any of the prescribed drugs, and if there is such a remedy, its use is absolutely uncalled for, because there are plenty of efficient remedies that can be used which are free from habit-forming agents.

"Cough mixtures containing cocaine, morphine, opium, codeine, heroine, chloral hydrate, etc., singly or combined, can not in any sense of the word be considered harmless. I have before me one of these cough remedies containing 110 grains of chloral hydrate to the ounce, sent into the home without restriction, containing no warning whatever, either by dosage or otherwise, relative to its dangerous character. It is to be used for croup, whooping-cough, etc. A single teaspoonful would land a child in eternity. The promiscuous, indiscriminate use of cough syrups containing the drugs named in the bill is liable to form a pernicious, life-wrecking habit.

### "Enough Dosage Permitted to Kill a Score of Men."

"It is claimed that the prescribed limitation relative to the amount of drugs that may be called for by a single prescription is too restricted in the case of chloral hydrate, and an attorney makes the criticism that the amounts would not permit the physician sufficient range to enable him to give proper dosage. There is no objection whatever to increasing the amount of chloral hydrate to one ounce, but the claim that there is not enough material permitted to give sufficient dosage to patients is incorrect, because there is enough material provided in each case, with the exception of chloral hydrate, to kill a score or more of men.

"The doctor claims that the law could easily be circumvented by giving numerous prescriptions calling for given drugs. While this is correct, it also places on record the transactions of the physicians, and thus enables the authorities to investigate the final use to which these drugs may be put. In this respect I believe that the Gallinger bill (S. 4892) contains an important nucleus. I believe the Government will be called upon sooner or later to supervise the manufacture, distribution, and final consumption of the drugs forming pernicious habits, with a view to decreasing the present illegal consumption. It is estimated that at least one-half of the cocaine, opium, morphine, etc., at present used in the United States is used for improper purposes. There is now a movement on foot to place a prohibitory importation duty on cocaine and its derivative, and at the same time impose an internal revenue tax to cover the expense of supervising the sale and distribution of cocaine and its derivatives."

### A Feminine Reason.

"Why does a hen cross the road?"

"Probably there is a rooster on the other side."

## More Associations of Druggists Elect Officers Three Active Organization Men.

LEWIS G. GILMAN,  
President Manchester (N. H.) R.D.A.

### H. L. SCHULTZ HEADS MILWAUKEE R.D.A.

#### Question of Collection of Gas Bills a Leading Topic of Discussion at the Annual Meeting.

MILWAUKEE, Jan. 30.—The report in some quarters that there is a violation of contract on the part of the druggists of Milwaukee in the refusal to collect gas bills for the Milwaukee Gas Light Company has been denied by leading druggists. G. H. Kesten, chairman of the gas committee of the Retail Druggists' Association, also denies that there is a legislative bill in preparation to protect the druggists from prosecution by the gas company.

The question of gas bill collection for the convenience of consumers was the leading topic of discussion at the recent meeting of the Milwaukee Druggists' Association. A resolution was unanimously adopted by which the druggists agree to remain firm and not handle the gas bills for a commission of less than 3 cents each. There was a dissenting opinion among some of the druggists and the stand taken by the majority may mean the loss of from twenty to twenty-five members of the association.

"It is not that we don't want to accommodate the people, but that we don't like to lose money when we know that the gas company is making a big profit," said W. F. Kaiser, secretary of the druggists' association.

Officers were elected as follows at the recent meeting of the Milwaukee Retail Druggists' Association: President, H. L. Schultz; vice-president, Max Goetz; secretary, W. F. Kaiser; treasurer, L. H. Krassin; executive board, W. H. Barr, R. M. Dadd, H. L. Schultz, G. H. Weigle, John Patterson and Herman Lambek, Jr. The association now has a membership of one hundred and twenty.

### Progress of the Bay Rum and Opium Bills.

WASHINGTON, Feb. 1.—The Porto Rico Bay Rum Bill has passed both branches of Congress and awaits the President's signature. He is expected to make it a law. Bay rum withdrawn from bond before the passage of the act will be tax free. Bay rum hereafter imported from the island will be taxed to place it upon the same footing as the domestic article.

The House today passed the bill prohibiting the importation of opium into the United States except for medicinal purposes. Chairman Payne, of the Ways and Means Committee, gave notice that his committee would soon report a bill imposing a prohibitive internal revenue tax on the manufacture of opium in the United States.

### BALTIMORE RETAILERS AGAIN ORGANIZE.

#### John B. Thomas Elected President and Will Be Supported by Other Active and Prominent Men.

BALTIMORE, Jan. 30.—In response to a call issued to retail druggists of this city generally a number of them assembled recently to complete the organization of the Baltimore Association of Retail Druggists, the preliminaries of which were agreed upon at a meeting before the holidays. Temporary Chairman Samuel Nattans, of the Read Drug & Chemical Co., called the meeting to order, and the temporary secretary, R. E. Lee Williamson, of Williamson & Watts, kept a record of the proceedings. The chief business was consideration of the report of the committee on organization, which consisted of Dr. H. P. Hynson, Owen C. Smith and Mr. Williamson.

The committee recommended that the organization be incorporated and that the charter take the place of the usual constitution, a draft of the by-laws being submitted at the same time. The latter provides that the membership be limited to persons actually engaged in the retail drug trade, such as owners of stores, managers, clerks and relief clerks. The officers are to include a president, three vice-presidents, recording secretary, corresponding secretary and treasurer, who are also to constitute a board of directors. The city is to be divided into four sections, with Guilford avenue as the dividing line east and west, and the president and three vice-presidents to come from the four sections, with other officers from the city at large. Meetings are to be held in the first week of every month.

The objects of the organization are apparent from the standing committees provided in the report, which include a committee on grievances, one on fraternal relations, one on legislation, one on social relations and one on telephones and post-office stations. The report of the committee was accepted, and the election of officers resulted as follows:

President, John B. Thomas, of the Thomas & Thompson Drug Co.; first vice-president, David R. Millard, of Morgan & Millard; second vice-president, M. S. Kahn; third vice-president, J. Fuller Frames; recording secretary, R. E. Lee Williamson, of Williamson & Watts; corresponding secretary, Charles L. Meyer; treasurer, Dr. H. P. Hynson, of Hynson, Westcott & Co.

The association accepted an invitation from the Merchants' and Manufacturers' Association to send a committee of three to a general meeting of business organizations to advocate an increase of the city's representation in the Maryland Legislature, a movement that has been brought prominently forward

of late. It is pointed out that the counties, by reason of a relatively much larger representation in the Senate and House, wield an influence in the General Assembly altogether disproportionate to their population, and that as a result of this state of affairs the city is made to bear much larger burdens in the way of taxation and license fees than it should bear.

A communication from the Baltimore Drug Exchange in regard to the narcotic ordinance, containing the information that the exchange had consulted legal talent and had been advised that the ordinance is non-enforceable and void, was laid on the table without action, the sentiment of the retailers supporting the measure.

#### Boston Retail Druggists' Association.

The annual meeting and dinner of the Boston Druggists' Association drew forty members around the table at Young's Hotel, where President James F. Finneran presided with dignity and grace. On either side of the president were Mayor George A. Hibbard, of Boston; Hon. Allen T. Treadway, of the State Senate, and Hon. Lloyd E. Chamberlain, of Brockton, president of the Massachusetts State Board of Trade, with which the B.D.A. is affiliated. All the guests made speeches, that of Mr. Chamberlain's dealing with the general need of America developing her natural waterways if she is to make progress toward leadership in commerce.

Officers for the ensuing year were elected as follows: Charles F. Ripley, of Taunton, president; George H. Ingraham, of Newton, treasurer; Harry C. Wiggin, of Newton, secretary; James F. Finneran, chairman; Fred A. Hubbard, R. A. Newton, Paul C. Klein, George W. Cobb, W. W. Bartlett, H. A. Estebrook, executive committee; Edwin W. Shedd, chairman; C. E. Harrington, J. A. Gilman, Elie H. LaPierre, Henry Thornton, membership committee. The new president is the secretary of the State Board of Registration in Pharmacy.

#### Pittsburg, Pa.

The retail druggists of the Eighth Ward of Pittsburg have organized a branch of the Western Pennsylvania Retail Druggists' Association and will conduct an organized propaganda campaign among the physicians of that section. The following officers have been elected: John C. Smith, chairman; Harry Evans, secretary. The example will in all probability be followed by the druggists in other sections of the city.

#### Druggist's Six Assailants Are Arrested.

PHILADELPHIA, Jan. 30.—R. Frank Beauchamp, a well-known Philadelphia druggist, was set upon by a gang of roughs a few nights ago and although he was putting up a game battle in all probability he would have been seriously injured had it not been for the timely arrival of a policeman. Mr. Beauchamp had the satisfaction of seeing his six assailants locked up to be held later by a magistrate.

#### Druggist Van Alstyne Appeals Jail Sentence.

PAW PAW, Mich., Jan. 30.—A writ of error has been sued out of the Supreme Court in the case of Charles Van Alstyne, druggist, who was convicted of having violated the Local Option Law, and sentenced to imprisonment in the county jail for ninety days, in addition to the imposition of a fine. Van Alstyne has been released on \$1000 bail, pending a review of his case in the Supreme Court.

#### In Jail for Violating Local Option Law.

ST. JOHN'S, Mich., Jan. 30.—Albert Martin, a druggist of Fowler, on changing his plea from not guilty to guilty, was sentenced by Judge Searl to serve thirty days in jail, in addition to paying his \$50 fine, for violating the local option law.

#### Every Druggist in Stigler Indicted.

STIGLER, Okla., Jan. 30.—Every druggist in Stigler has been indicted for violation of the prohibition law, and they have formed a pool and employed every lawyer in town, save the county attorney, to defend them.

#### Will Erect a New Perfume Factory.

WINDSOR, Ont., Jan. 30.—The Seely Manufacturing Company, perfumers, will erect a \$15,000 factory in Pitt street, near Church street.

## PROPAGANDA WORK AIDS THE ORLEANS P.H.A.

### Large Increase in Membership Due to Active Efforts in Conducting Campaign of Education.

NEW ORLEANS, Jan. 30.—That the propaganda work taken up by the Orleans Pharmaceutical Association will not only benefit the drug trade of New Orleans but that it will be a tremendous influence in increasing the membership of the local association was shown conclusively at the last meeting of the O.P.A. Directly as a result of the propaganda work and of the efforts of the special committee on new members, which has been carrying on its work along with the propaganda work, thirty-six new members were added to the association. In addition to these applications, which were passed upon favorably at the last meeting, ten or twelve more applications have been filled out for the next meeting, and by the time that date arrives it is expected that there will be many more New Orleans druggists seeking admittance into the association. The new members added or in sight bring the total membership of the association up to about one hundred and fifty, and it is more than likely that the good work being done will result in this mark being passed before very long. The new members admitted at the last meeting are:

William M. Levy, 1384 Magazine street; Henry J. Lagarde, 2801 Magazine street; H. Lichtenheldt, 1801 Magnolia street; Henry Vienueu, 1936 Esplanade avenue; W. B. Woney, 1301 Magazine street; E. J. Bastian, 722 Cadiz street; F. S. Harvey, 1243 Dryades street; Louis E. Henne, 800 Foucher street; W. E. Harter, 2375 Chippewa street; Thomas A. Hindricks, Carondelet and Erato; Louis J. Hubert, 1632 Hospital; Dr. George A. Thomas, 435 South Rampart; Louis A. Castillon, 900 Dauphine; Hippolyte E. Capdau, Canal and Rampart; Denis A. Capdau, 2555 Ursuline; P. P. Cresap, Lafayette and Rampart; J. C. Caillouet, 3105 Magazine; P. A. Culotta, 1940 Burgundy Jules Monnier, 3300 Dumaine; Edward Martin, 3204 Magazine; Leon Maine, 4139 St. Charles avenue; R. J. Mainegra, 800 Washington avenue; Henry P. Kenney, 217 North Rocheblave; Albert Javelet, 2103 Canal; Joseph M. Wagner, 1301 Esplanade avenue; William J. Weudt, 3005 Magazine; Edward H. Walsdorf, 5401 Magazine; J. F. Simon, 1424 Amelia; Claude E. Simons, 501 North Rampart; Dr. Henry J. Otto, Rampart and Gravier; George Guesnon, 904 North Claiborne; Charles Ammen, Prytania and Jackson; Henry Bourgeois, J. F. Code, Charles Kirchen, P. G. Charbonnet.

## W. J. GAGNET IS ELECTED PRESIDENT.

### Entertainment Follows Annual Meeting of the Louisiana Retail Drug Clerks' Association.

NEW ORLEANS, Jan. 30.—Officers to serve during the coming year were elected at the recent annual meeting of the Louisiana Retail Drug Clerks' Association held at the New Orleans College of Pharmacy. The new officers are: W. J. Gagnet, president; M. J. Paul, first vice-president; J. M. Olive, of Slidell, second vice-president; H. M. Ricketts, secretary; W. M. Voelkel, grand marshal; F. D. Ameling, sergeant-at-arms; A. J. Ferry, treasurer. The finance committee consists of E. Dasté, A. Troxler and G. Paquette.

Reports submitted by the outgoing officers showed that so far as finances are concerned the association is probably one of the richest in the country. Eight members were added during the year. Resolutions were adopted deploing the death of two members, Henry Theile and D. M. Thorn.

A. D. Heinemann, the retiring president, stated that lack of interest had been shown during the past year by some of the members, and urged that the newly elected officers exert themselves to bring about a larger membership, increased attendance and greater zeal.

Following the installation, adjournment was taken to the college hall, where refreshments were served. A string band was on hand, and other music was furnished by some of the talented members of the association. The programme included numbers by B. A. Jackson and A. Troxler; songs by George W. Weber; dancing by A. Troxler; comedy sketches by August de Lanzac and J. P. Ipsier, and several numbers by the College Quartette, composed of Messrs. Broussard, J. S. Gary, G. B. Schwam and J. Kelly. The arrangements for the stag were in the hands of A. Troxler, chairman; M. J. Paul and G. C. Auer.

**RETIREES AFTER HALF-CENTURY OF ACTIVITY.**

**Isaac C. Chapman Has Been a Conspicuous Worker for the Best Interests of His City, Newburg.**

NEWBURG, N. Y., Jan. 28.—Isaac C. Chapman, for more than a half century the proprietor of the leading drug store in this city, has closed out his business and will retire from active life. His entire stock has been purchased by the proprietor of a drug house in Albany and is now being shipped to the new owner.

With the retirement of Mr. Chapman there remain in business in this State but few pharmacists who have served for so long behind the prescription counter. Entering the retail drug business in 1855, within a door or two of the place he has just closed out, he has seen all of his co-workers of a half century ago pass away. It is said of him that of the one hundred and fifty trustees of the Newburg Savings Bank who have worked with him during his career, he is the only survivor. He has filled many places in public life and in the mercantile activities of this city. He was for a time a director of the Warwick Valley Railroad, was elected a director of the Newburg Savings Bank, in 1862, and for a score or more years served as its secretary; was elected a director of the National Bank of Newburg; was clerk of the Town of Newburg; served in the Board of Supervisors of the county; was a member of Brewster Hook and Ladder Company; an officer of the Union Presbyterian Church, and served in various capacities in many organizations with which he was associated, including among others the Masonic fraternity. For many years he was a member of the American Pharmaceutical Association and now holds membership in the New York State Pharmaceutical Association.

Mr. Chapman has made no plans for the future, but will content himself by taking a well-earned rest.

**PROF. HYNSON HEADS BALTIMORE A.P.H.A.**

**Successful Year Brought to a Close With a Discussion of Formulas in the National Formulary.**

BALTIMORE, Jan. 30.—The Baltimore branch of the American Pharmaceutical Association held its January meeting with President Samuel Mansfield in the chair. Reports of the retiring officers were read, showing that the organization had made gratifying progress and enumerating the subjects discussed in the course of the year, regarding which reports have been published from time to time in THE PHARMACEUTICAL ERA, and which showed that considerable activity had been manifested within the period stated. The executive committee was authorized to examine into the feasibility of arranging for a post-graduate course and was empowered to authorize such a course, if after a careful consideration such a step seems advisable.

Harry Martin, a representative of Burroughs Wellcome & Co., of London, made a short address, in which he emphasized the better fellowship that appeared to exist between the druggists in the United States than in Great Britain and commented upon the benefits to be derived from closer association, not merely in a social way, but also from the business standpoint. He said it had been his observation during the time he had spent in this country that American druggists were far more disposed to fraternize and that the profession had gained appreciably from the spirit of amiability and cordiality in evidence. Though an Englishman, he already feels himself to be American in spirit. He suggested an interchange of delegates between the Pharmaceutical Society of Great Britain and the American Pharmaceutical Association.

The following officers were elected for the ensuing year: President, Henry P. Hynson, president; vice-president, W. J. Lowrey, Jr., who is also ex-officio chairman of the executive committee; secretary and treasurer, Dr. E. F. Kelly; chairmen of standing committees, science and practice of pharmacy, Philip Henisler, re-elected; education and legislation, Dr. J. F. Hancock; membership, C. L. Meyer, re-elected; fraternal relations, Charles Feick.

The branch assigned the arrangements of the programme for the next meeting to Mr. Lowrey, that for the March meeting to Mr. Henisler, that for the April session to Mr. Meyer, and that for the May gathering to Mr. Feick, the subjects to be in accord with the character of the committees represented by the chairmen.

Then followed a discussion of the first thirty formulas appearing in the National Formulary, the criticisms brought out in the discussion to be forwarded to the revision committee of the new edition. Each member had been requested to carefully study these formulas and note any suggestions. The discussion proved very interesting, so much so that all the formulas given were not reached. The following suggestions were among those made in reference to the formulas named:

**Aromatic Vinegar**—That the flavoring oils were in excess and might be reduced. That heating the preparation was unnecessary, as better results, especially as to flavor, could be secured by allowing the mixed ingredients to macerate for some time before filtration. That heating the preparation aided rapid filtration.

**Acidum Citricum Saccharatum and Acidum Tartaricum Saccharatum**—The products do not keep on account of the presence of sugar.

**Balsamum Trinitaticum**—Should be omitted.

**Bismuthi Oxidum Hydratum**—Should be replaced by a "milk" of bismuth.

**Ceratum Camphore Compositum**—That a more permanent base, petrolatum being suggested, be used as the product as now official becomes rancid.

**Camphor Menthol**—That the ingredients can be more easily

ISAAC C. CHAPMAN, of Newburg,  
Retires After Half-Century.

**GOLD MEDAL FOR PRIZE.**

**Medico-Chirurgical Alumni of Philadelphia Elects Officers.**

PHILADELPHIA, Jan. 30.—Commencing with the present year, the student attaining the highest general average in the practice of pharmacy in the Department of Pharmacy at the Medico-Chirurgical College will receive a gold medal, presented by the Alumni Association of that department. To the student receiving the second highest average in the same branch a certificate and permanent membership in the association will be given. This course was decided upon at the annual meeting of the organization and it was most evident that in the future the Alumni Association of the Department of Pharmacy is going to be an important factor in the promotion of friendly competition among the members of the respective classes as well as in the encouragement and the fostering of the college spirit. The association is also considering the advisability of reading and discussing papers on practical pharmacy, chemistry or pharmacology at its monthly meetings.

Officers were elected as follows: Honorary president, I. V. Stanley Stanislaus, M.S., Ph.D.; president, William F. Kelly, M.D.; class vice-presidents, Frank M. Mooney, '99; Herbert G. Lilly, '00; Norman C. Rife, '01; John H. Stitteler, '02; William E. Gibbs, '03; William R. Levering, '04; W. Ross Gibbs, '05; James Fertick, '06; William W. MacNeary, '07; Harry B. Roshon, '08; corresponding secretary, William E. Gibbs; recording secretary, George C. Wilson, Jr.; treasurer, Herbert G. Lilly; executive committee, George C. Wilson, Jr., chairman; Clarence Eli Stover, H. G. Lilly, D. Davidheiser, William F. Kelly, M.D.; W. F. Hinkle, Elmer M. Apple, George A. Beltz, M.D.; Raymond H. Stutzman, William E. Gibbs, William Finkel.

If you want anything use the ERA'S Want Ads.

powdered by use of chloroform than alcohol. That the ingredients be liquefied without being powdered, by warming in a closed bottle.

**Chloral Camphoratum**—Same suggestion as made in reference to camphor menthol.

**Colloidium Salicylatum Compositum**—That fluid extract of *cannabis indica* be used to replace the extract, as it is more easily incorporated.

The discussion of elixirs as a class was very much prolonged and there was about an equal division of opinion as to the advisability of reducing the flavoring oils and the alcoholic percentage. The value of this programme was generally commented on and the work will very likely be continued. The next meeting will be held on February 18.

## THE PRACTICAL TESTING OF DRUGS.

**Illustrated Lecture by Dr. Reed, of Philadelphia, Showing the Advances Which Are Being Made in This Branch of Science—Danger in the Use of Unstandardized Drugs.**

PHILADELPHIA, Jan. 30.—The attendance at the third of the series of lectures and demonstrations, comprising the post-graduate course arranged for pharmacists and students by the local branch of the American Pharmaceutical Association, was far ahead of any of the previous meetings. This evidence of appreciation of the efforts of the officers of the local branch was greatly appreciated.

Dr. E. D. Reed, chemist for the H. K. Mulford Company, was the lecturer and his subject was "Accurate and Practical Pharmacological Methods for the Test of Drugs." Frogs and small animals were used in making the tests, and the therapeutic value of the various drugs and of different standards was made most apparent. These experiments and demonstrations were made at the Mulford laboratories, 428 South Thirteenth street, owing to the presence of the necessary apparatus and other material necessary.

Dr. Reed called attention to the fact that nearly every business has been placed upon a scientific basis except the manufacture of medicines. Scientists have been endeavoring to establish practical standards for the determination of strength and purity in the substances employed as medicines for years, as well as to adjust the finished products to fixed standards, to the end that uniformity in medicinal effect may be secured. Heretofore the basis of standardization has been chemical; but scientists have realized at last that, while the determination of the amount of so-called active principles in a drug by assay is of great value, the test of such drugs upon animals is the true therapeutic index.

A plan was proposed by which the degrees of activity of certain potent drugs can be determined by their administration to animals and by measuring the effects produced. It was ascertained that the drugs referred to acted as stimulants or depressants on protoplasm. The heart, for instance, may be stimulated through the action of digitalis, the pulsations decreased in frequency but increased in strength. It was shown that this action can be determined accurately upon the heart of a frog and if a number of samples be taken and tested in the manner described, a standard is obtained for measuring every other sample. It was found, also, by chemical examination, that the digitoxin present in a given quantity of digitalis is inversely proportioned to its lethal dose.

An examination of the various preparations of digitalis bought on the market demonstrates that the same U.S.P. formula made by different manufacturers, as well as different lots made by the same manufacturer, possess a range of variation of about 300 per cent; in other words, a physician prescribing unstandardized digitalis can never foretell whether or not the drug will prove active, still less what degree of digitalis will inhere in the particular brand dispensed. On the other hand, a physician can prescribe standardized preparations with the knowledge that they will produce calculated results.

Another advantage of standardized preparations, said Dr. Reed, is the uniformity secured thereby in all brands of the same name, no matter by whom manufactured. If, for example, a physician has used a standardized tincture of digitalis and has increased the amount to the maximum dose and if the patient then has the prescription renewed and if an unstandardized preparation be sold to him the strength of

which may be double that of the standardized product, it is manifest that the dosage has been doubled and the result may prove disastrous. But if the patient obtains a weaker preparation it may be necessary to give a dose three times the volume to obtain the desired effect and the consequences may be equally serious.

The lecturer noted that the American Pharmaceutical Association had taken up the work of standardization by both physiological and chemical methods in order that the manufacture of medicines may be placed upon a scientific basis. Conditions exist, he said, in which a physician who would send six copies of a prescription to six leading drug stores in a city would probably be supplied with six different strengths of the medicine prescribed; but by adopting the methods of standardization illustrated in Dr. Reed's lecture constancy is secured.

Following an invitation by President William McIntyre, at the close of the lecture, the company repaired to the French Club, where an elaborate luncheon was served.

## NEW PHARMACY BILL IN N. Y. LEGISLATURE.

**Reduces Board to Nine Members and Gives Control of the Examinations to the State Regents.**

ALBANY, N. Y., Jan. 30.—Assemblyman Robert Conklin, of New York, is first in the arena with a bill drawn on the lines of the Governor's message relative to a change in the inspection of drugs and the licensing of druggists and pharmacists by the State Board of Pharmacy.

His bill provides for a commission of nine, unsalaried save for a \$10 per diem compensation, appointed by the Governor from active, practicing pharmacists of five years' standing, and residents of the State, and all but two must have been actively engaged in practice for two years immediately antedating their appointment. The expenses must be paid from the income of the board through fines, etc., no expenses being chargeable against the State treasury.

This new board may inspect drug stores and samples for analysis but it may not fine or take away a pharmacist's license without first notifying him of the complaint against him and giving a hearing.

As to the licensing of pharmacists the regents are to have control of that by requiring them to hold the examinations after receiving the questions to be asked from the State Board of Pharmacy and sending the papers of applicants back to the said board for examination. But the State Board of Pharmacy must report back to the regents the results of their examination of each paper sent to them and no license shall be issued till the regents have approved of the examination report.

## Did Removal of Warts Cause Death?

J. S. Higdon, a druggist at One Hundred and Sixteenth street and Park avenue, Borough of Manhattan, New York City, was accused last Friday at a coroner's investigation of causing the death of R. S. Irish, who died from septicaemia on January 12. Several physicians testified that blood-poisoning was caused by an operation to remove some warts which Higdon is alleged to have burned with an acid, subsequently cutting them off with a pair of nucleus scissors. The hearing was adjourned for one week.

## A Dainty Perfumed Talcum Powder.

The season for Talcum Powder is fast approaching and dealers will do well to take advantage of the offer made by I. F. Nace's Sons, perfumers, Second and Race streets, Philadelphia, in their advertisement on page 37 of this issue. Talcum powder is extensively used for toilet purposes and that made by these manufacturers is prepared from a fine quality of imported talc and daintily perfumed with the odor of violets. Write to I. F. Nace's Sons for full particulars, mentioning the ERA.

## Dr. Schieffelin Out of Merchants' Association Board.

Dr. William Jay Schieffelin has resigned as vice-president and director of the Merchants' Association of New York because of the fact that his duties as president of the Citizens' Union will occupy all of the time that he can devote to public affairs. The resignation was accepted with regret, for Dr. Schieffelin has been an active worker in the association.

## HUNDRED SAMPLES SHOWN IN DEMONSTRATION

Interesting Papers by Professor LaWall and George M. Beringer Read at Philadelphia Meeting.

PHILADELPHIA, Jan. 30.—The retail druggists, students and others who attended the January pharmaceutical meeting at the College of Pharmacy were well repaid, for the programme was a most excellent one. The subjects discussed were strictly along professional lines and harmonized entirely with the topics that have been taken up from time to time at the various lectures and demonstrations included in the post-graduate course, held under the auspices of the local branch of the American Pharmaceutical Association.

In a most interesting paper, Charles H. LaWall told of the differentiation of the enzymes in milk by the use of hydrogen peroxide and its tests. Dr. C. A. Weidenmann, recording secretary of the college, who presided at the meeting, with Professor Remington, Prof. Henry Kraemer, George M. Beringer and others participated in the discussion. Mr. Beringer then gave the meeting the benefit of his experience in the study of fluid glycerates and showed more than one hundred samples of drugs that had undergone this process. He declared that the results of this work were of great value to physicians and that this process without the use of alcohol could easily be conducted by the retail druggist. He told which drugs had yielded the best preparations and mentioned others that had not been satisfactory. His announcement that he would present the specimens of his work to the college provoked hearty applause and the offer was accepted with thanks.

John K. Thum, pharmacist at the German Hospital, told of his experiences in making ampoules and in addition to illustrating his remarks with diagrams on the blackboard, showed specimens of his work and told how they were used. He admitted that while they were popular in other countries, it was a question as to their ever being generally used in the United States.

In his paper on the physiological action of fluid glycerates of digitalis and ergot, John R. Rippetoe declared that the results of his experiments indicated that the hydro-alcoholic preparation of digitalis is five times more potent than the hydroglycerin preparation. In referring to tests of ergot which he had made on roosters, he said they were not very satisfactory, considered qualitatively, but that having made duplicate physiological tests of each preparation, he felt convinced that the hydro-alcoholic menstruum is superior to the hydroglycerin menstruum for making liquid preparations of ergot.

This series of demonstrations has aroused a great deal of interest on the part of the pharmacists of the city.

### For the Benefit of Drugs Laboratory.

PHILADELPHIA, Jan. 30.—Retail druggists, their wives and daughters were conspicuous by reason of numbers at the entertainment given at the home of Mr. and Mrs. Otto Kraus recently for the benefit of the food and drugs laboratory of the Philadelphia College of Pharmacy, presided over by Prof. Frank N. Moerk. Charles Rehfuess, David J. Reese and George H. Oehme did the punching of the tally cards, while Mr. Kraus did the announcing in a manner which would have made any of the monologue artists of the day envious and which would guarantee him a place on any of the vaudeville circuits.

### Medicine Output in Off-year Trebled Good One.

EATON RAPIDS, Mich., Jan. 30.—At the annual meeting of the Derby Medicine Company, it was decided to increase the capital stock from \$50,000 to \$150,000. The output of the plant in 1908 was 300 per cent greater than during 1907.

## RESTRICTING THE SALE OF HABIT-FORMERS.

Prominent Men Discuss Regulation of Sale of Narcotics From Several Points of Observation.

WASHINGTON, Jan. 30.—At the second meeting of the City of Washington Branch of the A. Ph. A., held in the hall of George Washington University, the general subject for discussion was: "Restricting the Sale of Habit-forming Drugs."

Dr. William C. Woodward contributed a paper on "The regulation of the sale of habit-forming drugs from a legal standpoint." Henry P. Hynson, of Baltimore, discussed "The responsibilities of the retail druggist, in connection with the sale of habit-forming drugs," and Dr. Lyman F. Kebler discussed "The existing laws regulating the sale of habit-forming drugs and the necessity for additional legislation."

The general discussion was opened by Dr. George M. Kober and Willard S. Richardson. Dr. Woodward pointed out that the regulation of the sale of habit-forming drugs, apparently encroaches on the rights of the individual. This encroachment, he pointed out, is only apparent, as ownership is held on the implied condition that no harm is done to others than the owner. He also pointed out that it would be of no avail to legislate for the restriction of the local trade so long as any quantity can be sent to a consumer from without the State. To prevent this encroachment from without the National Government has been ceded the right to legislate for police protection in interstate commerce.

Dr. Woodward believes that the most satisfactory legislation on the restricting of the sale of habit-forming drugs must involve the registration of all such drugs and the distribution through licensed dealers only.

Mr. Hynson, in discussing the responsibilities of the retail druggist, pointed out that there was no gaining saying the fact that the sale of habit-forming drugs has increased out of all proportion to the increase in population, and that the increase in pauperism, lunacy and crime, in this country, is largely due to the pernicious influence of these same habit-forming drugs. He holds that membership in the pharmaceutical guild entails heavy responsibilities; that the pharmacist, more perhaps than the follower of any other occupation, is his brother's keeper and is in honor bound to do all he can to uphold the standards of his ancient calling and to eliminate from it objectionable or morally unfit members.

Dr. Kebler pointed out that with one single exception all of the States have enacted some form of law designed to regulate or to control the sale of noxious or habit-forming drugs, thirty-seven of the States having special restrictions on the sale of cocaine. In discussing these several laws, he pointed out that the laws in some of the Southern States are particularly stringent, but that by far the most satisfactory anti-narcotic legislation that has been enacted to the present time is the law passed by Congress for the Philippine Islands in 1903. This law involves the registration of the sale and the licensing of the distributor.

Dr. Kebler exhibited a number of samples of catarrh remedies containing cocaine and teething cordials containing morphine, and pointed out that these remedies were designed to cultivate and to develop the most pernicious of all cravings for stimulation, because acquired innocently.

Dr. George M. Kober, in opening the general discussion, pointed out that education is, after all, the most important factor and the one that should be provided for physicians, pharmacists and the public. He believes that the education of the public could and should be secured through a system of bulletins, like the present Farmers' Bulletins, distributed by the Federal Government. The fraud orders, as issued, should be given widespread publicity.

Willard S. Richardson, in discussing the need for some

ALFRED F. KUHN.

of Buffalo, N. Y., elected senior vice-commander of Seymour-Liscom, Camp 13, Spanish War Veterans, is floor manager of the Cahoon-Lyon Drug Company. He is a U. S. graduate, has been in business nineteen years, part of the time for himself. He served eleven months in the 202d New York Volunteers as hospital steward.

active and efficient regulation of the interstate traffic in habit-forming drugs, pointed out that even the proposed Mann Bill would be preferable to no regulation at all. He pointed out that the sale of habit-forming drugs should be confined to the proper channels and hedged in with as little hardship as possible. Registration he believes to be an evident possibility and offers the most readily applied or enforced method for control.

Dr. Motter expressed the opinion that the point made by Dr. Koher was of the utmost importance, regardless of the form of legislation that was advocated or adopted. Any law without a strong public opinion designed to insist on its enforcement, would be of but little avail. He pointed out that pharmacists, if they were themselves sufficiently desirous of complying with existing laws, or desirous of curtailing the sale of noxious drugs, could readily control the sale and the use of these drugs with little or no additional legislation.

The several papers were further discussed by Professor Kalusowski, Mr. Hilton, Dr. Keher and Mr. Hynson.

The third stated meeting will be held in the hall of George Washington University and will be devoted to a discussion of the need for the physiologic testing of drugs and medicinal products. The general subject will be discussed by Dr. M. G. Rosenau, Dr. Worth Hale, Dr. Albert C. Crawford and others. This subject is one that pharmacists should be interested in and the Washington Branch is being congratulated on the ability and attainment represented in the list of contributors to the success of its meetings.

## HELD FOR PRESCRIBING COCAINE TO "FRIENDS"

Physician and Brother in Baltimore Under \$1000 Bail for Grand Jury—Others Involved.

BALTIMORE, Jan. 30.—Cocaine came prominently to the front this week, resulting in the arrest of Dr. J. F. Lang, 933 West Fayette street, a physician, and Charles F. Lang, a druggist at 623 West Baltimore street. The former was charged with giving prescriptions, knowing that they were intended for use by habitués, and not in the ordinary course of medicine, while the latter was accused of filling the prescriptions written by his brother. Paul C. Hauser, 891 West Lafayette street, and Samuel Mansfield, Baltimore and Schroeder streets, pharmacists, also figured in the case, they having put up similar prescriptions.

The complainant was a detective of the city force, and the witnesses were Frank Harris and wife, notorious "dope" fiends, and several abandoned women. All testified that they had gone to Dr. Lang's office and asked for prescriptions for cocaine, telling him they used the drug and needed it. The attorney for the accused physician and his brother sought to make it appear that the prescriptions had been issued in the ordinary practice of medicine, and that no violation of the law was involved, but Justice Loden held them under bail in \$1000. The father of the accused became surty.

## Cocaine Easy to Purchase in Cincinnati.

CINCINNATI, Jan. 30.—As the result of a quiet but searching investigation which has been going on in Cincinnati for some time, Dr. Frank H. Frost, special agent of the Ohio State Board of Pharmacy, has filed informations against two Cincinnati druggists on the charge of selling cocaine without a prescription. The druggists are being closely watched pending arrest.

Two or three of the largest pharmaceutical concerns in Cincinnati are known to be under close observation, and the board officials expect to land some big game soon. It is said to be no more difficult to buy cocaine in Cincinnati than to buy a drink, and the illegal traffic in the drug is said to be on the increase. The informations filed are said to be against small concerns, but that the State officials hope, through prosecuting them, to uncover the sources of supply.

## Court Declares Indicted Kansas Pharmacist Insane.

GALENA, Kan., Feb. 1.—A. A. Jolly, a druggist of Baxter Springs, has been declared insane by Judge Ellis. He suffered with epilepsy for two years and a recent attack completely unbalanced his mind. He is being held under guard pending removal to an institution. Jolly was recently arrested on a charge of violating the State Liquor Law and would have been tried in March.

## OBITUARY.

### John Raboteau, of St. Louis.

St. Louis, Jan. 30.—John Raboteau, a member of the St. Louis C.P. Class of '75, and for thirty-nine years a druggist in this city, died unexpectedly at the Mullanphy Hospital recently. He was proprietor until recently of the big downtown store at Broadway and Lucas avenue, and only a few weeks ago incorporated his firm, including in the company several helpers who have long been associated with him, and leased a better corner at Broadway and Washington avenue, one block distant, at \$25,000 a year. It is said that overwork and attention to details in preparation for the new undertaking hastened his death, which followed an operation.

Mr. Raboteau was born in North Carolina fifty-three years ago, but moved to St. Louis while quite young and practically spent his life in that city. His father, a retired business man, lives in a suburb and a widow and young son also survive. Mr. Raboteau had been a semi-invalid for a number of years. For the last three years Mr. Raboteau has not been associated with the St. L.R.D.A., but observed its price schedules. It is said that James Gibson, who had been associated with Mr. Raboteau, will take up his work and carry the planned business to completion. Mr. Gibson was recently made a member of the firm, after being with the Raboteau store for thirty-five years.

### Tragic Ending of Druggists' Lives.

—ARTHUR SCHMIDT, formerly a drug clerk in Paducah, Ky., recently committed suicide at Mounds, Ill.

—JOHN J. WISE, drug manufacturer of Cleveland, Ohio, recently shot himself in the head and was taken to a hospital in a dying condition. Age and failing health were the causes.

—MAURICE S. INGALLS, JR., Halstead, Mass., was recently found dead in the bathroom of his home, suffocated by gas which had leaked from a heater. He was married only last October.

—FRANK McMILLEN, a Highland Park graduate, commander of a Knights of Pythias lodge and formerly a prominent druggist of Independence and New Hampton, Iowa, recently committed suicide with carbolic acid in Muscatine. His mind had become unbalanced through overstudy.

### Miss Alice R. Merrell, of Cincinnati.

CINCINNATI, Jan. 30.—Miss Alice R. Merrell, a daughter of the late A. S. Merrell, founder of the Merrell Chemical Company, Fifth and Pike streets, died recently at her home in Avendale, following an operation at Christ Hospital. A brother, A. H. Merrell, is in the drug business in Los Angeles, Cal. M. M. Fuller, of Indianapolis, is a nephew. Miss Merrell was well known and a universal favorite here.

### Obituary Notes.

—CHARLES BROWN, Salem, Ind., is dead.

—DR. JOHN WESLEY WADE, Denver, is dead, aged sixty-eight.

—MRS. CHARLES H. WIDELY, Troy, N. Y., is dead. Her husband, son and two daughters survive.

—HENRY JUNE, a popular druggist of Burlington, Iowa, is dead, aged forty. He was unmarried.

—DR. A. W. SEEROHM, Pomeroy, Ohio, is dead. His son, Charles, is well known to Cincinnati druggists.

—T. H. FISHER, of Columbia, S. C., recently passed away while on a trip to Cuba for the benefit of his health.

—FREDUS B. HOWE, well known in the Connecticut drug trade, died recently at Waterbury. He was born in 1833.

—B. F. P. BRIGHT, with the Oakman Drug Company, Spartanburg, S. C., is dead, aged forty-two. A widow and six children survive.

—JOHN KNOWLSON, who died recently in New York City, was well known in Utica, where he was formerly engaged in the drug trade.

—ROBERT LAUTENBACH, who had been in business nearly all his life at Saratoga and Entaw streets, Baltimore, is dead, after a lingering illness.

—MRS. MINNIE CARR VARNUM, wife of Edward Varnum, druggist, of Jonesville, Mich., is dead from heart failure. She is survived by her husband, two sons and a daughter.

## PATENTS.

Granted January 26, 1909.

910,490—Johannes Bock, Radeboul, near Dresden, Germany. Manufacture of large crystals.

910,498—Courland F. Carrier, Jr., Elmira, N. Y. Process of manufacturing chemical compounds.

910,530—Birger F. Halvorsen, Christiania, Norway, assignor to Norsk-Hydro-Elektrisk Kvaelfstofaktieselskab, Christiania, Norway. Method of absorbing oxides of nitrogen.

910,662—William T. Gibbs, Buckingham, Quebec. Process of making caustic alkalis.

910,686—John H. Hunter and William A. Palmer, Dublin, Ireland. Bottle and other vessel.

910,839—Eduard Münch, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany, a corporation of Germany. Process of making thioindigo leuco compounds.

910,858—Friedrich Raschig, Ludwigshafen-on-the-Rhine, Germany. Production of hydrazin.

910,882—George Truesdell, Washington, D. C. Bottle-washing apparatus.

910,923—Chancey M. King, Derby, Conn. Cork extractor.

910,970—Auril M. Stryker, Chicago, Ill., assignor of one-half to George B. Haines, Chicago, Ill. Tooth brush.

910,978—Charles Weizmann, Rusholme, Manchester, England, assignor to The Clayton Aniline Company, Ltd., Clayton, England. Process of making isobornyl esters.

910,982—William H. Allen, Detroit, Mich. Process of forming metal salts.

910,988—Johan E. Fagerström, Husqvarna; Anders E. Johansson, Gisebo, and Göström Streiffert, Malmö, Sweden, assignors to Aktiebolaget Universaltilslutaren, Malmö, Sweden. Closing device for bottles or other vessels.

Copy of any PATENT or TRADE MARK, 10 cents.

Author of copyrighted work on Protective Trade Marks.

Food and Drugs Act, and Valid Patents.

G. H. DAVIS, Attorney, 908 G St., Washington, D. C.

## TRADE MARKS.

Published January 26, 1909.

33,822—Chemische Fabrik Helfenberg, A. G. vorm. Eugen Dieterich, Helfenberg, Germany. Class 6. Laxative tablets.

37,061—Milford Chemical Company, Milford, Del. Class 6.

A preparation for the treatment of rheumatism, neuralgia, lumbago, grippé, Bright's disease, or kidney trouble and headache.

37,567—Rose Maston Crocker, Chicago, Ill. Class 6. A

tonic to be used in stock foods for animals.

38,525—Francis Alfred Rogers, London, England. Class 6.

A perfumed, non-poisonous, harmless and non-greasy insect

specific to prevent the bites of various insects.

38,749—John Wyeth & Bros., Inc., Philadelphia, Pa. Class

6. A laxative confection of phenolphthalein.

## New Window Glass Trust Assured.

COLUMBUS, O., Jan. 30.—After many months of negotiations it was announced recently that the organization of the Imperial Window Glass Company as a consolidation of independent glass manufacturers to put an end to ruinous competitive methods among the independents and to better cope with the so-called trust, the American Window Glass Company, had been practically completed, and it was expected that all the independents in the United States, including factories in California, West Virginia, Indiana, Ohio, Pennsylvania and New York, would be embraced in the merger. Headquarters of the new company probably will be in Pittsburg.

## Druggists Interested in Credit Association.

MILWAUKEE, Wis., Jan. 30.—Wholesale and retail druggists of this city attended in large numbers the recent annual meeting of the Milwaukee Association of Credit Men. The reports of the committee showed that the association has experienced a steady growth in membership. Officers were re-elected as follows: Harry Eisen, president; R. D. Barney, vice-president; H. M. Batlin, secretary; M. A. Grattinger, treasurer. William B. Strong, vice-president and treasurer of the Milwaukee Drug Company, was re-elected a member of the board of directors and chairman of the attendance committee.

### Modern Local Post Cards in Great Demand.

There is not a large city in the United States or in any country where there are not buildings of historic interest of which views of local, national or even international interest, are shown to the visitor only because of local pride. More than twenty-five years ago it dawned upon the people of Germany, Italy and France that they had a very large number of scenes, buildings and historic spots and that it would be a very wise thing to make them known to the world in an effective and economical way. After repeated efforts and experiments and an earnest desire to illustrate these different subjects in an original way the modern Post Card was evolved.

During the year 1908 the sale of these Modern Local Post Cards in the United States was larger than ever before and the orders given for delivery during 1909 will make the actual sales surpass those of any previous year. Many manufacturers who have advertised themselves as publishers of these Post Cards have spent large sums of money in their efforts to bring their cards to the attention of retail dealers, but usually orders have not been forthcoming without a large amount of correspondence or the visit of a traveling salesman. To economize in this direction William G. Frazer, Manager of the Post Card Department of the American News Company, New York City, has devised a plan that will cut off unnecessary correspondence and also the visits of salesmen, making it possible for the dealer to supply himself with cards which will please his customers and yet offer them a reasonable variety of good quality cards at a fair price. The company's advertisement contains full particulars regarding its proposition to the retail trade. If you will write Mr. Frazer you will receive by return mail all the necessary information condensed so that you will be able to place your order at once without asking a single question, and you will take absolutely no risk as to quality, price or delivery on time as agreed. The company will guard your photographs with jealous care and other cards will not be published from them under any circumstances. Write at once so that your cards can be delivered to you in time for your spring and summer trade.

### Half-Million Dollars for Advertising Diapiesin.

Pape, Thompson & Pape, of Cincinnati, Ohio, manufacturers of Pape's Diapiesin, announce that they are going to spend over half-million dollars this coming season in advertising. They state that every good daily, ten thousand county weekly newspapers, the standard magazines and also the street cars, will be full of Diapiesin advertising. By the demand that will thus be created they advise every retail druggist to

stock up on this article at once, and make arrangements with his jobber for a good supply and receive a discount. Each package has the formula plainly printed upon it and all the requirements of the Food and Drugs Act have been complied with. Any information, displays, etc., required will be gladly furnished upon application to Pape, Thompson & Pape, and mentioning the ERA.

### The Janus Vacuum Bottle.

The Janus Vacuum Bottle combines various features which make it a distinct improvement over all others. There is no plaster of paris or other adhesive used in its construction, which adds greatly to its strength. The glass part of the bottle rests upon a rubber cushion at the bottom of the case and fits into the latter so closely that there is no chance for vibration or strain. One of these bottles has actually been dropped upon a hard surface from a height of ten feet without breaking.

The Janus bottle carries a first-class guarantee, the unusual feature of which is that aside from the keeping of liquids at various temperatures for stated lengths of time, the bottle is

guaranteed against breakage for sixty days. The Janus Vacuum Bottle Company lays particular stress upon this clause, and stands ready to refund the purchase price or furnish new bottles. This vacuum bottle is a most convenient one to handle, as it causes very little trouble from breakage and can be taken apart should the glass part break through careless handling, a new part being easily inserted without necessitating return to the factory with its attendant delay and cost.

The Janus Vacuum Bottle Company has a large factory at 10 Beach street, New York City, its main office being at 652 Broadway. The manufacturers are fully protected against infringement, the bottle being made under U. S. Patents No. 889,092, issued June 8, 1909, and No. 129,480, issued September 1, 1908.

### Bohner's Patent Crushed Fruit Bowl.

Aside from the small vexations incident to the technical changes of an immaterial nature the Pure Food and Drugs Law has operated to the general benefit of all concerned. Indeed, none but the transgressor need fear its strictures. Now better conditions are ahead and not only must fountain supplies conform to recognized standards, but the service at fountains must be attended by protection from dust, insects, deteriorations, etc. The new order of things boosts the Bohner Patent Sanitary Crushed Fruit Bowl to the fore as one of the articles that fulfills requirements and makes service at the soda fountain a safe proposition instead of a risk. Order Bohner Bowls. If your dealer does not handle them, write to the Bohner Manufacturing Company, 42 State street, Chicago, Ill., for list, mentioning the ERA.

### The Opal Onyx Ice-Less Fountain.

"A real iceless fountain" is the claim put forth by the Marietta Manufacturing Company, Indianapolis, Ind., for its new invention, the "Opal Onyx Ice-Less Fountain," advertised in this issue of the ERA. This fountain embodies advanced and thoroughly practicable ideas of construction, the refrigeration being actually accomplished by means of cold dry air. The fountain is built of non-absorbing manufactured marble and onyx, making it absolutely sanitary. The Opal Onyx Ice-Less Fountain is in use in some of the largest stores in the country who are enthusiastic over the apparatus. Before obligating yourself to any other proposition, read the advertisement of the Marietta Manufacturing Company and learn all about the patent and claims made for this "Ice-Less Fountain."

### Castor Oil in Powdered Form.

A recent discovery that promises to be of great value to the medical profession is that of a process enabling oil to be put into powdered form. Practical use has already been made of this discovery by a German scientist who has succeeded in reducing castor oil to a tasteless powder, the new process making it possible, it is claimed, to eliminate the objectionable features of ordinary castor oil without interfering with its restorative virtues. Another advantage is that the powdered castor oil can be mixed with milk or other liquid and cereal food without being detected. In powdered form it is now sold in the United States under the name of "Castor Lax" by the Powdered Oil Company, New York, and may be obtained of all jobbers.

### The "Elite" Cloth Cleaning Pad.

The trade done by druggists in cleaning materials is worthy of greater attention. An article of this character which is claimed to instantly remove grease and food spots is the Elite Cloth Cleaning Pad. The manufacturers are B. L. Williams & Co., 132 Market street, Philadelphia, and the "Elite" may be obtained

of all jobbers or of the manufacturers direct. Read their advertisement in this issue of the ERA and learn full particulars.

The wise druggist smiles over the opinions of his friends and meditates upon the opinions of his enemies. The former are matters of sentiment, the latter are matters of fact.

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

Supplement to The Era Druggists' Directory.

**ARKANSAS**—ASHDOWN—Model Drug Company has been succeeded by Leslie & Hudgens.

**CONNECTICUT**—DARIEN—Town Hall Pharmacy has been succeeded by Frank Zahn.

**KENT**—Frank Zahn has sold his store here to Thomas & Gidding.

**ILLINOIS**—BLOOMINGTON—Abram D. Loar & Co., 533 North Main street, has moved to 217 North Main street.

**Chicago**—Charles H. Westphal, 557 West Twenty-sixth street, has been succeeded by E. F. Jusajns.

**EDWARDSVILLE**—W. D. Harnist, it is reported, has formed a partnership with E. A. Delicate. Style of firm will be Harnist & Delicate.

**MAYWOOD**—K. Hummeland, 14 Nineteenth avenue, has been succeeded by Bennett & Jacobs.

**WAUKEGON**—C. W. Gilbert, 201 Genesee street, has been succeeded by the Central Drug Store, H. W. Henderson, manager.

**INDIANA**—MARION—L. L. Shull, 1102 South Washington street, has been succeeded by E. B. Kyle.

**IOWA**—BRADGATE—Graham & Butler; firm dissolved. William G. Butler will continue the business alone.

**BROOKLYN**—C. S. Rainsburg has sold an interest in his store to J. F. Dillsaver. Style of firm will be Rainsburg & Dillsaver.

**CHARLES CITY**—H. E. Brouillard has sold his store to his brother, Edward Brouillard, who will continue the business.

**EARLY**—J. M. Kelly Drug Company has been succeeded by Fuller-Carlton Drug Company.

**ELDORA**—Charles A. Swayze has been succeeded by Smith & Reed.

**MAPLETON**—Larrison Brothers, it is reported, has been succeeded by Burson & Babbe.

**THORNBURG**—Hamilton & Co. have been succeeded by J. W. Proctor.

**KANSAS**—LEAVENWORTH—S. M. Dotterer, 519 North Third street, has been succeeded by Fred Schroeder.

**TOPEKA**—H. C. Martin, 421 Holliday street, has moved his stock of drugs to 431 Holliday street.

**WICHITA**—Oxley Drug Company have opened a new store corner Washington and Douglass avenues.—Wilson Drug Company, 1147 South Lawrence street, has been succeeded by Fox Drug Company, Mr. Wilson selling his interest to J. Leslie Fox.

**KENTUCKY**—LATONIA—D. L. Ringo has been succeeded by Gibbons & Rucker.

**LOUISIANA**—COUSHATTA—C. E. Edgerton; store destroyed by fire.

**MARYLAND**—BALTIMORE—J. W. German, 2141 West Baltimore street, has been succeeded by M. E. Robinson.

**MICHIGAN**—DETROIT—E. A. Schwartz has opened a new drug store at 2558 Jefferson avenue.

**MANCHESTER**—Lynch & Co. have opened a new drug store here.

**MISSISSIPPI**—DUBANT—Howard Drug Company have opened a new drug store here.

**MISSOURI**—ST. LOUIS—Bader & Baum, St. Louis and Grand avenues; firm dissolved. Baum Drug Company will be the style of firm to continue the business.

**MONTANA**—MISSOULA—The Owl Drug Company's stock has been bought by the Skillman Drug Company and moved to Livingston, Mont.

**NEBRASKA**—ATKINSON—E. G. Schultz & Son have dissolved, E. G. Schultz selling his interest to his son, W. L. Schultz, who will continue the business.

**HUMBOLDT**—O. W. Cass has been succeeded by H. W. Howe.

**SPENCER**—Motherseed Pharmacy has been sold to J. N. Sturdevant.

**NEW HAMPSHIRE**—ANTRIM—William F. Dickey has been succeeded by Lane & Weeks.

**NEW JERSEY**—ATLANTIC CITY—R. C. Lang, Youngs Hotel, Boardwalk, it is reported, has been succeeded by Charles H. Jackson.

**JERSEY CITY**—Hawkins Drug Company, 140 Ocean avenue, incorporated with a capital stock of \$100,000.

**PATERSON**—Post & Dawson have opened a new drug store at 357 Clay street.

**NEW YORK**—BROOKLYN—Israel Berow has opened a new drug store at 4305 Thirteenth avenue.

**YONKERS**—M. Zoole has opened a new drug store in Saw Mill River road.

**NORTH CAROLINA**—KINGS MOUNTAIN—Mauney Drug Company is the style of the new drug store here.

**OHIO**—EAST LIVERPOOL—The Potters Drug Store is the style of the new drug store here.

**ELYRIA**—T. Parke Wooster; out of business.

**NEWARK**—C. T. Bricker, Main and Third streets, it is reported, has been succeeded by J. S. Linclan.

**ZANESVILLE**—J. Adam Sauer has opened a new drug store at 625 Main street.

**OREGON**—SALEM—F. G. Haas has been succeeded by Ringo & Graber.

**TOLEDO**—O. O. Krogstad has been succeeded by the Toledo Drug Company.

**PENNSYLVANIA**—BEAVER FALLS—Sutter & Burns is the style of the new drug store at 1310 Seventh avenue.

**GORDON**—Gregory Pharmacy has been succeeded by G. G. Hubler.

**NORRISTOWN**—John Gerhardt has opened a new drug store at 147 West Main street.

**POINT MARION**—F. B. Ogilvie has been succeeded by E. S. Tyler, formerly of Uniontown, Pa.

**PORT CARBON**—J. E. Gregory has bought the Bartholomew stock of drugs at Pottsville and will move it to this town and open a first-class drug store.

**TEXAS**—LAMPASAS—Burrell & Skagg have been succeeded by Cone Drug Company.

**LLANO**—Holden & Porter, proprietors of the Corner Drug Store, have dissolved partnership, and O. G. Porter has become sole owner.

**HALLETTSVILLE**—J. R. Lay has been succeeded by E. E. Hunt.

**VERMONT**—MONTPELIER—Rivers Brothers; out of business.

**WASHINGTON**—SEDR0 WOOLLEY—Holland Drug Company; store destroyed by fire.

**WEST VIRGINIA**—KEYSER—Wells & Furbee have opened new pharmacy here.

**WEITMER**—R. W. Larke has been succeeded by Harry E. Dietz.

**WISCONSIN**—GALESVILLE—Red Cross Pharmacy is the style of the new drug store here; O. S. Bergquist, M.D., proprietor.

**MADISON**—H. J. Stangel has opened a new pharmacy in State street.

**WATERLOO**—Old Family Drug Store has been succeeded by L. A. Towne & Son. Style of firm will remain the same.

## Partners Agree to Disagree.

**WASHINGTON, Jan. 30.**—In the District of Columbia Supreme Court, Monday, Edward Wehel filed suit against his partner, Benjamin T. Lanham, for dissolution of partnership and a receiver for their retail drug business, at East Capitol and Eleventh streets, northeast. The partners purchased the business from J. C. Haley for \$6000 in December, 1907. Business disagreement is given as cause for the litigation.

## Bowling Match Won in Three Straights.

**DETROIT, Jan. 30.**—Teams picked from Farrand, Williams & Clark and the Michigan Drug Company (Williams, Davis, Brooks & Hinman Sons) engaged in an exciting bowling match last week. The former team, under the leadership of Walter Macadam, captured all three games, the score standing as follows: F. W. & C., 791, 725 and 846; Michigan Drug Company, 740, 709 and 707. Ed. Knight led the opposition.

The druggist who boasts of "doing" his patrons, often gets "done up" by his creditors.

# THE DRUG MARKETS

## PROGRESS IN MARKET SAFE AND STRONG.

### Jobbing Quantities of Fairly Good Proportions Still Feature—Speculative Trading Lacking.

NEW YORK, Feb. 1.—The market for drugs and chemicals is moving along quietly with little of interest transpiring; and while the business in jobbing quantities is of fairly good proportions, the demand continues to be limited to actual requirements. The changes have been few and unimportant, but generally in the direction of firmness, and while progress made is steady but slow, it is along safe and very satisfactory lines.

OPUM.—The market keeps quiet but firm, and there is no disposition to shade prices. Advices from Smyrna state that during the month of December severe cold weather prevailed, which damaged the small poppy plants. The arrivals in Smyrna up to December 31 amount to 1978 cases, against 1328 cases for the same period last year, and in Constantinople 1768 cases, against 403 cases. For the week ending January 8, the arrivals in Smyrna were 1985 cases, against 1333 cases last year, and the total arrivals to January 29 were 2013 cases. The stock in Smyrna December 31 was 2345 cases, against 2055 cases last year, and in Constantinople 178 cases, against 206 cases last year.

QUININE SULPHATE.—At the auction sale of Java quinine in Batavia on January 27, about 140,000 ounces of quinine were sold at florins 10.70, which is the same unit as at the previous sale in December; and last Friday 1400 kilos were sold at Amsterdam at florins 10.87, against florins 11.00 at the previous sale. The manufacturers here have reduced quinine sulphate and bisulphate one cent per ounce in the different sizes. Minor salts have not been changed. There is a fairly good demand prevailing.

MESSINA ESSENCES.—The market for oils of bergamot, lemon and orange is still unsettled, and while lower prices are named in some quarters, all cheap lots have been taken out of the market by those who have faith in a higher market when the actual consuming demand sets in later on. Advices from correspondents in Messina state that the tremendous earthquake has destroyed large quantities of essential oils in the warehouses in Messina and Reggio, and it is impossible to give any quotations for future deliveries. From Palermo, correspondents write that the demand from all parts of the world continues to be most important, with buyers from London, Hamburg, Paris, Marseilles, Grasse, etc., actually swarming the market hunting for the cheapest parcels. There is no doubt that the situation in the producing districts is very serious, and the manufacture of the article can only be resumed on a very small scale, as a large part of the population is too much upset by what has happened to think of regular and steady work.

NORWEGIAN COD LIVER OIL.—A recent cablegram from Norway states that the weather has been very stormy and there has been no fishing, also that higher prices may be expected. The demand continues satisfactory.

VENICE TURPENTINE.—Primary markets are reported higher and with a very small stock in our market. The trade is short on both cases and stands, but imports now due will have a tendency to perhaps ease the market here.

JAPAN WAX.—Owing to large arrivals the market is easier and prices have been reduced one cent per pound for full cases. The competition in this article is exceedingly sharp, and at the ruling prices it is unprofitable to importers.

CASSIA FISTULA.—The market is now well supplied, due to recent arrivals, and all orders can now be executed promptly. The demand is good and prices are well maintained.

MANNA.—The stock of small flake is very scarce on the spot and holders are asking high prices. There are shipments of small and large flake on steamers now due which will probably have some easing effect on present conditions.

CANARY SEED.—The tone of the market is firmer in sympathy with corresponding conditions abroad and the outside quotation for not less than 25 bars is 2½¢ per pound.

ERBOR.—Under the influence of higher markets abroad this article is stronger and spot quotations for large quantities have been advanced to 30¢/31¢, for Russian, and 35¢/37¢.

for prime Spanish. The stock of the latter is reported small. Cables from Hamburg yesterday quoted a lay-down cost of 31¢, for Russian.

SODIUM BENZOATE.—In consequence of the decision regarding the use of this salt in preserved foodstuffs, manufacturers are looking for a considerable increase in the demand. The market is steady but with no advance in the quotations.

CITRIC ACID.—This article is less active, the recent urgent demand having apparently subsided. Manufacturers continue to quote 46¢/46½¢, as to style of package. Twenty-five barrels were recently sold at 45¢, by a speculative holder.

CACAO BUTTER.—Only a limited inquiry exists and the market is easier to the extent that wrapped fingers in 12-pound boxes are more readily obtainable to 34½¢ per pound, although in some quarters 35¢ is still the ruling inside figure.

## RIVAL PURE DRUG BILLS IN SOUTH DAKOTA.

Measure Fathored by the State Ph.A., Following the Federal Law, Opposed by Dairy Commissioner.

PIERRE, S. D., Feb. 1.—There appears to be an irreconcilable difference between Dairy and Food Commissioner Wheaton and the druggists, which is brought in issue in the two bills pending, H. B. No. 2, by Mr. Sasse, and H. B. 36, by Mr. Simonson. The bill introduced by Mr. Sasse follows the lines of the Federal law and was drawn under the auspices of the State Pharmaceutical Association. Its enforcement is vested in the State Board of Pharmacy.

The Sasse Bill makes the United States Pharmacopoeia, or National Formulary, as it exists at the time the investigation shall be made, the standard of judgment. Mr. Wheaton insists that this is not a proper test; that the Pharmacopoeia is made and controlled by the druggists, is liable to be changed at any time, so by changing the language of the Pharmacopoeia they would be able to virtually amend the law after it was enacted; and that the courts of some States have already held laws based on it to be fatally defective.

The Simonson (or Wheaton) Bill requires every article to be as pure as it purports to be, and requires the percentage of opium, cocaine, and a long list of other poisonous or deleterious ingredients, to be printed on the package in briefer caps. The drug men demur to this on the ground that it exposes their trade secrets and is unnecessary.

The druggists say the Wheaton Bill would drive the patent medicines either out of the State or give the trade to the mail order houses. The contest promises to be a spirited one.

## THE LABELING OF TURPENTINE.

If Marked "Not for Medicinal Use" It is Not Subject to Pure Drug Law.

WASHINGTON, Jan. 30.—The Board of Food and Drug Inspection, in reply to a number of letters received by the Department with reference to the proper labeling of the product generally known as "wood turpentine," etc., obtained by steam distilling or destructively distilling woods, has issued the following decision (No. 103):

Food Inspection Decision 58 recognizes that "products used in the arts and for technical purposes are not subject to the Food and Drugs Act \* \* \* when plainly marked so as to indicate that they are not to be employed for food or medicinal purposes."

It is held, therefore, that when wood turpentine is labeled "Not for Medicinal Use," etc., it is not subject to the Food and Drugs Act. When not so labeled it is in violation of Section 7 of the Food and Drugs Act unless labeled "wood" or "stump" turpentine. Articles labeled "turpentine," "spirits or turpentine," or "gum turpentine," etc., must comply with pharmacopoeial requirements; that is, they must be light oils of certain properties made by distilling the oleoresin of various species of Pinus. The word "wood" or "stump" should be in the same type and on the same background as the word "turpentine," thus being given equal prominence.

## Manufacturer Burned by Explosion of Chemicals.

CLEVELAND, O., Feb. 1.—A. L. Sausman, president of the Prescott Chemical Company, 4003 West Twenty-fifth street, was painfully burned about the face by an explosion which destroyed the plant recently. The loss is about \$5000.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, FEBRUARY 11, 1909

No. 6

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John.

Cable Address: "Era, New York."

Western Office:

Room 500, Dicker Building, 40 Dearborn, Chicago

Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album

90 WILLIAM ST., NEW YORK.

## SHOULD HASTEN TO SETTLE THE TARIFF.

Tinkering with the tariff is always disturbing to business and this is especially true at this time. The country has fairly recovered from a serious financial depression only to confront the depressing effects of an agitation which in the end will probably fail to satisfy everybody. The Era is not concerned at this moment with the question of high or low tariff, for arguments can be advanced in favor of each, but we do protest against the delay of the law-makers at Washington in coming to some conclusion. No matter how they decide, or what they do, they will displease a great many people, but that is less serious than present conditions.

The steel mills are closing on account of lack of orders, the wage-earners throughout the country are being laid off and merchants are hesitating in placing their orders on account of doubt regarding future prices for commodities required in their business. The drug trade is much less disturbed than most others, but indirectly there will be the ultimate effect of the lesser earnings of the people. Congress should hasten to end this uncertainty.

## HOLDING THE JOBBERS RESPONSIBLE.

There is a lamentable disposition on the part of some of the retail druggists to blame the jobbers for all the ills of the trade. In the evolution which is apparently in progress competition in the retail drug world has become intense. A new element, the "chains" of stores, having large capital and an ability to obtain low prices for great quantities of goods, is reaching out for the business that has been done by the comparatively small druggists and the resulting rivalry is unquestionably a menace to many of the latter. In this dilemma there is only one thought in the minds of the worried merchants: "The jobbers did it; blame the jobbers."

This spirit ought to fade into thin ether. The fact is that the great chains of pharmacies form as much of a menace to the jobbers as they do to the retailers. They are dreaded by one element as much as by the other. It would be better to be fair. If the jobbers are in the wrong blame them, if you will; but do not censure them for what they cannot prevent. More good can be done by friendly harmony than by indulging in unsound crimination.

## PREPARING A NEW PHARMACY BILL.

The Conklin Pharmacy Bill, introduced in the New York Legislature, has so many unsatisfactory features and is so devoid of others necessary to real improvement in conditions that the pharmacists

have drafted an entirely new bill which will be submitted to Governor Hughes for his consideration. This new bill will comply with the Governor's known requirements, but it will also include the provisions of the Whitney-Wainwright act regulating the sale of poisons in this State. It will follow the lines of the Federal Pure Food and Drugs Law and is designed to be a comprehensive measure.

The Conklin plan of forcing the Board of Pharmacy to carry on its work without State aid, manifestly unfair if the board is to be a State institution, is eliminated. Penalties will be turned into the State treasury and the expenses of the board will be paid by the State in the usual manner. Other minor features of the Conklin Bill also are discarded. If the only object of the attack on the present board is real reform the bill drafted by the legislative committee of the New York State Pharmaceutical Association will meet all necessary requirements. This does not mean that the proposed change in the method of selecting board members will be any improvement. That also appears to be the view of many pharmacists, but they seem to think that there is a determination to enforce a new order of things regardless of consequences and some of them consider it futile to make a fight for their franchise in selecting board members.

#### REMEDY FOR THE CHICAGO CONGESTION.

Quite interesting is the discovery made by Dr. Fantus that in Chicago the corner drug stores are being supplanted by Greek fruit stores and are being moved to the middle of blocks. Corner stores have always been considered more desirable than those otherwise located, but in the case of drug stores it is questionable whether the extra charge for rent, or taxes, is worth the advantage derived from the obviously more desirable location. In Chicago, except in a few instances, it is probable that the druggists would be just as well off elsewhere as they would be on corners, but that may not apply in other cities.

In Chicago conditions are peculiar. There are too many drug stores in the city and the result is unsatisfactory to all but the more prosperous proprietors. Attempts have been made to show that the poor condition of the retail business in Chicago was due to the improved health of the inhabitants, but statistics do not bear out the theory. If some of the smaller, struggling druggists would seek locations in less filled fields times would be better for them and for the others still in the city. Why not try the ERA Want Ads.?

#### WHAT IT COST NOT TO READ THE ERA.

Occasionally there can be found a drug merchant who is not a subscriber to the ERA. One was discovered the other day who ought to serve as an object lesson to any others like himself. He was too busy to subscribe for and read the ERA, but he was not too busy to fill orders for goods for swindlers exposed by the ERA. One order was for about \$60 and the other about \$70. The swindlers got the goods, sold them and the merchant is out the \$130.

A \$2.50 year's subscription, or the purchase and

perusal of two single copies of the ERA at a total cost of twenty cents would have saved this merchant the \$130. While the merchant in this case is fairly successful, the question arises: how much greater would his success be if he subscribed to the drug trade journals and profited by what they print? The \$130 would have paid for several years' subscription to all of them and there would not be the unhappy feeling of being "stung" and "stung" hard.

#### PROGRESS OF PATENT LEGISLATION.

While the House Committee on Judiciary has favorably reported Representative Currier's bill creating a Court of Patent Appeals, it is doubtful if it will be pressed for passage at this session of Congress. Mr. Currier has introduced a bill, designed as a substitute for the Drug Patent Bill, which has been referred to the committee of which he is chairman, providing for reciprocity in the treatment of foreigners and American citizens applying for patents abroad and in the United States. The bill proposes to amend the revised statutes as follows:

"Section 4886. Any person who has invented or discovered any new and useful art, machine, manufacture or composition of matter, or any new and useful improvements thereof, not known or used by others in this country before his invention or discovery thereof, and not patented or described in any printed publication in this or any foreign country before his invention or discovery thereof, or more than two years prior to his application, and not in public use or on sale in this country for more than two years prior to his application, unless the same is proved to have been abandoned, may, upon payment of the fees required by law and other due proceedings had, obtain a patent therefor; provided, however, that whenever a patent is issued to any citizen or subject of a foreign country it shall be subject with respect to its manufacture in this country to all the limitations, conditions and restrictions that are imposed by the patent laws of said foreign country, and the manufacture in this country of patents issued therein to citizens of the United States; provided further, this act shall not affect any patent heretofore granted."

While neither bill is likely to pass at this session, hearings will probably be held and the track cleared for action in the new Congress. It is probable that Chairman Currier's substitute will be reported in place of similar bills.

Passage by both branches of Congress of the bill prohibiting the importation of opium into this country except for medicinal purposes marks an important step in the war on narcotics and its enactment into law during the time of meeting of the International Opium Conference at Shanghai is especially significant for its moral effect. In Congress there is a disposition to go further in the suppression of the illicit use of narcotics and there are already suggestions of Government control of the manufacture and sale of these drugs. It is not unlikely that in the near future opium and cocaine will be subject to laws similar to those which control the disposition of alcoholic liquors and tobacco, but with greater restrictions and drastic penalties for unlawful use.

So the N.A.R.D. and the A.P.H.A. will not get together this year! Los Angeles is a beautiful city and those who are fortunate enough to be able to make the trip to the Pacific Coast will have one of the most enjoyable experiences of their lives. The proposition to hold a meeting of A.P.H.A. members residing in the East at Atlantic City during the A.M.A. convention will appeal strongly to Eastern members who are unable to go to Los Angeles and ought not in any way to interfere with the attendance at the latter city. No doubt quite a number of members will arrange to be present at both places.

There are salesmen who never seem to realize that salesmen can talk too much. Many a customer has been talked into a sale and out of it again. I have known salesmen who have talked clear up to the mountain top, and, instead of closing

up the sale when they got to the crest, they talked over the peak and down the other side, and they could not figure out why they didn't sell their goods.

A big buyer in a certain line of goods once told me that on one occasion he was ready to sign a contract, and actually had a pen in his fingers, but was prevented by the endless argument of the salesman, who did not perceive that his point was won and that action, not talk, was his duty. There is such a thing as having one's appetite spoiled by a trifle, with the food untouched before us. The salesman had talked too long.—*The Sample Case.*

The fad of American actresses in having their teeth jeweled instead of being a new idea is, according to E. P. Gaston, a lecturer at the Royal Geographical Society in England, a revival of the practice of countless ages in the past. The fad of jeweling teeth was popular among Central American women thousands of years ago. In the ancient burying grounds skulls have been found with jadites skillfully set into the enamel of the teeth.

Otto Stein, one of the best-known druggists in the Middle-West, was born in Stuttgart, Germany, September 18, 1852. After a thorough course in the schools of that city, he entered the great wholesale drug house of Fridr. Jobst, which house had connections throughout the entire world, with branch houses in Coblenz, Germany, and Milan, Italy. The house also operated the Fenerbach quinine factory, under the superintendency of the famous Dr. Hesse, and all leading pharmacists are familiar with his work in collaboration with Julius Jobst. The house was later combined with that of Heinrich Zimmer, of Frankfurt-on-the-Main, the title of the combination being *Die Vereinigte Chinin Fabriken*.

In those days, and with employers of the caliber of F. Jobst, students were not paid for their services, but bought their education with the work of their hands and brains. In the case of Otto Stein, he was apprenticed for the regular four years, without pay, and his parents were obliged to sign a bond in the sum of five hundred dollars as security that their son would be faithful in the performance of his duties.

The wholesale drug house of F. Jobst was built on the old lines. The firm was a heavy importer and dealt with all quarters of the globe, and consequently Mr. Stein, the young student, was in close touch and became perfectly familiar with huge seroons of Peruvian bark, aloes in skins and gourd, and a hundred forms of local packages which are now looked upon as real curiosities. Jobst was a heavy buyer at the London auctions, and always in original packages—camphor in "dells," metallic bismuth, antimony and zinc in the "regulus," cornu cervi, and many other things which the modern pharmacist knows only as antiques, if at all.

The goal of Mr. Stein was not, however, the special education of the chemist, but the more general one of the wholesale druggist as a merchant, and that he was faithful in his performance of the duties assigned him is pretty well evidenced by the fact that he completed his apprenticeship; for in those days laziness on the part of apprentices was never condoned, the lax one being held to a strict account, while the employer demanded his "pound of flesh." During his apprenticeship, Mr. Stein served in every department of the business and made the most of his opportunities.

In 1871 he went to Cincinnati and at once became identified with the firm of Vogeler, Wagner & Co., then doing business at Sixth and Main streets. As a matter of course, Mr. Stein found things quite different in this country and Cincinnati ways of doing business were not those of Stuttgart. There was more to be learned—if not in a scientific sense, there was in a commercial, and in his new position Mr. Stein put in his time to such good purpose that in 1878, when Mr. Wagner withdrew from the firm, a new firm was organized as F. Vog-

eler & Co., with Otto Stein as the "company." This firm continued in business until 1888, when Fred Vogeler withdrew, and the house of The Stein-Vogeler Drug Company was organized and incorporated with Otto Stein as president and general manager.

The business, under the new regime, grew rapidly and the firm name endured until 1901, when Mr. Stein withdrew from active business and indulged in a few months rest. As a matter of course, to an active nature like that of Otto Stein, more idleness is not rest, and in March, 1902, a new corporation entered the drug world under the title of The Stein-Gray Drug Company, with Otto Stein as president and general manager.

The success of The Stein-Gray Drug Company is a matter of history, and the subject of this brief sketch has earned for himself a place among the captains of industry in the wholesale drug business; the house being known from one end of the territory to the other, in spite of the fact that the commercial territory covered by its representatives is restricted to some extent by competition and natural conditions of trade.

Personally, Mr. Stein is a man of strong traits and his likes and dislikes are correspondingly strong. One who has known him for many years says that the cardinal sin in his calendar is unswiftness, and that the surest way to win his favor and confidence is to deserve it by being square; while his numerous employees say that those who do their duty are never "called on the carpet."

All men of positive character have their pet recreations, and Mr. Stein's are music and literature of the highest class. Mr. Stein and his family, which includes two interesting and charming daughters, never let an opportunity go by to attend musical or literary treats, and when there is anything of real merit being put on at Music Hall or at the theaters he and his family are sure to be present.

Mr. Stein is passionately fond of his family and home, and spends a large proportion of his evenings there. He is looked upon as one of the city's most solid business men, and on all sides he is honored and respected as such. While he has a business acquaintance with thousands he has never permitted himself to have more than a few "friends," and these friends, who know him as he really is, say they prize his friendship almost above all other earthly things, because he knows how to be a real friend in return.

The second shop for the sale of camel meat for food has been opened in the Rue Saint-Lazare, Paris. The first was established in the Rue Montmartre some time ago and met with such great success that a rival has arisen. The new shop is making a specialty of dromedary meat, and there has been quite a reduction in prices as a result of the competition. A nice dromedary steak can be had for one franc, and if you are content with a bit of the hump you can get it for a few centimes.

As our interest in the history of medicine and particularly the development of surgical practice grows, we find the so-called barber surgeon an increasingly entertaining figure. An interesting account of the barber surgeon's place in medicine has recently been given in Munford's volume of biographical essays, entitled "Surgical Memoirs and Other Essays," and our attention is again called to the matter by comments in the *Lancet* on speeches made at the six-centenary dinner of the Worshipful Company of Barbers. On this occasion the discussion turned upon the question as to whether historical evidence showed the physician or the surgeon to be the senior practitioner. In Hippocratic days no sharp distinction was drawn between medical and surgical practitioners. Then, as in fact, ever since, the physician did much surgery, but even at that remote period certain operations were considered below the dignity of the physician, forestalling the curiously degraded position which surgery found itself in during the Middle Ages. In the Oath of Hippocrates lithotomy was not

OTTO STEIN,  
of Cincinnati.

to be performed by a physician. Why this restriction was made is not clear, but very possibly specialism was even then developed to such a point that this operation was wisely left in the hands of the surgeon. Before the Norman Conquest surgery played a small part in English medicine. What was done was carried out either by priests or barbers. Bleeding was then popular and it is probable that the possession of razors made the barbers natural operators in the field. It may not be generally known that the barber poles still in existence represent the staff held by the patient to bring the veins into prominence; the white spiral represents the bandage used to increase the amount of blood in the arm, and secondarily, as a dressing for the wound. If we are to consider the barber surgeon as the earliest representative of surgical art, which no doubt is open to many historical objections, surgery must be regarded as an outgrowth of its older sister, medicine. On the other hand, our contemporary, we think, correctly maintains that whatever evidence we have from classical sources is rather in favor of the seniority of surgery, inasmuch as in classical writings injuries are spoken of before the treatment of conditions which we should not call medical. In view of the activities of ancient peoples in war, it would certainly be natural that the care of wounds and injuries be given first place in their medical practice (*Boston Surg. and Med. Journ.*).

In an article on the danger of long hours in druggists' shops *Hygienische Zeitschrift* says that during the four years ending July, 1907, thirteen dispensing assistants in Germany drug stores committed suicide and seven others attempted, but failed, to kill themselves.

The absent minded man didn't look up from his paper when the conductor came around, says the *Chicago Inter Ocean*. He just felt in his side pocket for his ticket and handed the ticket to the conductor. The ticket, however, was a theater coupon.

"Here," spoke up the conductor rather sharply, "this don't go. Come on with the right one."

The absent minded man glanced down over the top of his paper at the coupon.

"Well," he answered, "that's the coupon off the ticket the man gave me, and I purpose to occupy this seat right through all three acts. You can just—"

Then he came out of the fog, and with a sheepish look fished out the car ticket.

A postal card which was mailed in Ireland more than three years ago by Prof. George C. Sonn, now dead, was received in Newark, N. J., recently at the pharmacy of former Assemblyman John Brenzic, a member of the Board of Education. The card was found in the public yard of the post-office at Belfast on January 16 last and was forwarded to Mr. Brenzic. It was dated September 1, 1905. Professor Sonn was instructor in chemistry and physics at the Newark High School. He died May 10, 1906.

Mr. Brenzic was putting up a prescription at his drug store at 250 Springfield avenue when a letter carrier handed the card to his daughter, who also is a pharmacist. She manifested surprise at the receipt of the message from the dead teacher, and told her father she had a postal card from her former professor. Mr. Brenzic had attended the funeral of the professor and saw his body lowered into the grave. He was mystified until he read the few words written on the side of the missive by the Belfast postmaster, which explained that the card was found in the post-office yard.

A tip for the druggist who intends to plant a garden in his yard in the springtime:

Fenceman—Your garden is dug up to perfection. How did you ever get that boy to do it?

Gardner—I gave him a fishing rod and told him the garden was full of angle worms.

Advertising, broadly speaking, may be divided into two main purposes: to give information and to make personal appeal to prospective customers.

Informative advertising is the oldest, best known and most widely used branch of advertising. It is well defined by the term general publicity. It talks to the intelligence, to the reason. It makes every one know about the advertiser. It

makes people think and talk about him. If your customers, actual and possible, know all you know about your goods, it would not be necessary for you to advertise. But the people have their own occupations to learn; they don't know yours.

If you advertise on the assumption that you can take most of it for granted, you are making a mistake. Make everything clear as you go along. Write from the reader's standpoint; if you can, put yourself in his place. Have something to say about your goods every day and never assume that people know anything except the most fundamental things. Correct, forceful English is essential in an advertisement, but it can never make up for a lack of full and intimate knowledge of the matter to be advertised.

Roast 'possum served with thick gravy and sweet potatoes, "a la Taft," has sprung into some popularity in Boston since the President-elect ate his now famous 'possum dinner at Atlanta. One Boston hotel manager, quoted by the *Herald*, thinks the fad won't last long. He says: "I doubt if roast 'possum ever becomes very popular in Boston. May be in New York, but Boston is different. Roast 'possum has a lot of fat. We have served raccoon, which is about the same as 'possum, to an organization of New Hampshire newspaper men known as the 'Coon Club.' But we notice that they eat very little of it. We always have orders to have beef and turkey, so that they can fill. The raccoons are more of an ornament. That's why I don't think 'possum would suit the popular taste."

"Sometimes I 'spicious," said Uncle Eben, "dat de onlies' man dat really an' truly loves work is de one dat's birin' somebody else to do it."—*Washington Star*.

Frank W. Fluck, president of the Philadelphia Association of Retail Druggists, is an earnest advocate of the present propaganda movement and has been one of the staunchest supporters of all movement for bringing together the pharmacists and physicians of the Quaker City. He is heartily in favor of the proposition to have the P.A.R.D. hold a mass meeting and banquet at which the members of the association from all over the city should play the hosts to as many physicians as they might desire to invite. The banquet to be followed by addresses by prominent representatives from both professions. The good results of the recent meeting of this character held by the pharmacists north of Girard avenue, at which 400 were present, it is declared, have been felt all over the city and Mr. Fluck's plan is being heartily endorsed by his fellow pharmacists.

The February *Century* publishes, for the first time, twenty-two letters—the property of William H. Lambert—written at intervals during the years 1856-1860, to Lyman Trumbull, United States Senator from Illinois. In one of these letters, written just after his nomination to the Presidency, Lincoln said:

"Remembering that Peter denied his Lord with an oath, after most solemnly protesting that he never would, I will not swear I will make no commitments; but I do think I will not."

"How is your son James getting on at college, Mr. Boggs?" asked the Parson.

"Fine," said Boggs. "He's getting more business-like every day."

"I am glad to hear that," said the Clergyman. "How does the lad show it?"

"Well," said Boggs, "when he first went up and wanted money, he used to write asking for it. Now he draws on me at sight."—*February Lippincott's*.

Eye photography—which will be of great importance in diagnosing tuberculosis and other diseases—has been made nearly perfect by Dr. F. Dimmer, of Graz, who has overcome technical difficulties and obtained clear and valuable photographs of the back of the eye with extremely short exposures. It is claimed for these photographs, which can be enlarged to three inches diameter without much loss of detail, that they afford a new means of diagnosis of tuberculosis and other diseases more certain and rapid than any other.

The druggist who never takes a chance never has a chance to take in much—or anybody.

## Seasonable Remedy is Shown This Week in Prize Window in Era Contest.

J. Earl Taylor, of the drug firm of Dr. J. A. Taylor, Griddle, Ill., is a winner this week of the \$5 in the ERA Competition for the best photograph of a retail druggist's show window, or any display of goods in a drug store. The "Gold Cure" window is self-explanatory; it will be noticed that it is quite an effective exhibit of the articles which are displayed.

The full scope of the ERA'S Cash Prize Competition is given on advertising page 38 of this issue. The competition is open to everybody who may desire to compete, without charge or consideration. Every druggist should read the offer.

## Preparations of Booklets.

### Stitching or Stapling.

Every druggist realizes that if he and his help possessed the knowledge and appliances necessary there are odd moments when he, his clerks and the boy might do many things which he now pays others to do.

In the preparation of advertising booklets one of the most expensive items is the stitching or stapling. The average printer declares that he makes no profit on this work and is glad to leave it to other hands. With a seventy-five cent staple press, such as may be purchased at any well-equipped stationery store, any one in the drug store may staple booklets and thus largely reduce their cost. Have the printer do the press work and cutting, as usual. The leaves will then be delivered to the druggist in bundles, each bundle containing pages of the same number. Whoever is to do the stapling should arrange these bundles upon a table or counter in such order that by taking one slip from each pile in succession he will assemble a booklet with pages in proper order. Common sense supplies all the necessary instruction for the stapling itself. Two things, however, should never be forgotten: Have the leaves properly squared and then hold them tightly in position while the staple is being driven.

Some of the most novel and attractive forms of booklets

need only one staple. All single-staple booklets should be cut so that each leaf (two pages) is a separate sheet of paper. There should be no folds. An advantageous size, one that may be quickly rolled around a bottle before wrapping, laid flat within a package, or slipped into a tooth brush envelope, has a leaf measuring 2x6 inches. The printing is done across the narrow dimensions of the paper, and when assembled the booklet is fastened with one staple in the center of the top edge of the leaves. This booklet is well adapted for the advertisement of the druggist's own complexion, tooth and hair specialties, and the various brushes and other appliances used upon the face, teeth and hair. The booklet may be entitled "Head Harmony."

### Don't Forget Name and Address.

The cover leaves should differ in tint or texture from the inside pages. The title should appear at the top of the front cover page. Midway have a stock cut of a beautiful woman's head and at the bottom, the name and address of the advertiser. The last cover page should hold a condensed price list of the preparations mentioned within and a repetition of the advertiser's name and address. Each page should be primarily used to advertise some one specialty, but in connection therewith advertise the brushes or other appliances which may be used with the preparation. In addition to the price list on the back cover, prices should always be mentioned in the advertisements. In the printing of top-fastened booklets, such

as this, be sure that the printer gets the make-up so that the top of the second page backs the bottom of the first page, and so on.

### Novel Form Booklet.

Another novel booklet is four inches square with the type set so that the lines run from corner to corner, instead of from side to side. This naturally costs more for type-setting, but the novelty makes it worth its cost. This is bound with one staple set in the corner which forms the top of the page. This booklet is well adapted for advertising one or more of the druggist's own preparations for internal administration and may be entitled "A tight corner on health."

In the make-up place the pages in the same order as the "Head harmony" booklet. Booklets of this form are best suited to solid composition and the reading matter, within itself, must be of sufficient interest to carry the reader. Neat illumination may be secured by commencing and ending each page with an ornamental capital letter, thus giving two corner ornaments to the page.

By binding with a single eyelet instead of a staple, printing on one side of the leaves only and using a heavy cover stock, the pages may be turned upon the pivot which the eyelet forms, instead of being turned upward for perusal.

### "Our Round Table."

This booklet is unique because its perusal discloses the unexpected. The leaves are cut in circles and may be from three to five inches in diameter. In preparation of the copy for this booklet the druggist should first learn the diameters of the circular dies which his printer may have for cutting paper round. The type may be set in a circular form to comply with the shape of the leaf, or in a square of proper proportions to go within the circular leaf. Now, in fastening this booklet with one staple, ninety-nine people out of a hundred would so arrange the leaves that the staple would come at the top of the pages. The man who made up the booklet from which this idea is taken was different from the ninety-nine. He had the leaves gathered haphazard or in intentional disorder, and through them the staple was driven near any part of the edge that might be closest at hand. As a result, the person perusing the booklet found the staple at the top of one page, to the right of another, in the corner of the next, and so on. In this arrangement, every time a leaf was lifted the booklet had to be turned to read the next page. This brings to mind a good old definition of originality: "Think of how everyone else would do the work, and then do it some other way."

The booklet referred to had printed on the front cover page "Our round table." This title was in the center, with each word forming a line and one word above another. The back cover page was like that of the front, except that the lettering read "Your dining table." The interior of the booklet was given up entirely to advertising slices, flavoring extracts, baking powder, olive oil and such other articles of the druggist's merchandise as might be used in the preparation of food.

### Tied and Stitched Booklets.

The druggist is not advised to attempt the home stapling of folded booklets; that is, booklets in which four pages are printed on one leaf and that leaf folded between the pages. A booklet of this nature that is not more than four inches long may be held with one staple driven in the center of the fold. But the difficulty lies in keeping the sheets squared while the staples are driven. The difficulty increases with the size of booklet and number of staples. Generally, the printer trims the edges of such booklets after they are stapled.

If the booklet has a folded card cover of fairly stiff stock it may be tied with thread, twine or silk, by merely passing the tying material through the center, folding, then passing the thread over the back and fastening at the edge with a tight knot. Unless there is a stiff cover it is difficult to tie tight enough to keep the leaves from slipping from beneath the thread. For such tying, silk floss is the best material to use.

### One Perforation Stitch and Tie.

The best home-work method of fastening a folded booklet is as follows: Use linen thread or silk floss with needle. After the booklet is assembled and folded, hold it in the left hand with the cover up, the fingers being inside the center and the thumb pressed against the middle of the fold on the outside of the cover. Force the needle through from the inside so

that it comes through the center of the fold close to the thumb. Pass the floss or thread over the thumb and then pass the needle back through the perforation it has just made. This leaves a loop of thread over the thumb. Withdraw the thumb gently. Cut the thread so that there are two ends extending from the perforation inside the book, each end being a trifle longer than the length of the book. Pass these ends in opposite directions along the inside of the book, over the edges, and along the outside of the cover until they meet at the loop. Pass one of the ends of the thread through the loop, hold it firmly, and draw on the other end until the loop is drawn within the book. Now tie the ends in a fast knot immediately over the needle perforation through which the loop has been drawn. A booklet thus fastened is elegant in appearance, and while the leaves are permanently held in place, the thread allows enough movement to prevent any rigid irregularity of the edges.

### Cover Stock.

In the majority of cases it is well worth the additional expense to bind booklets in regular cover stock. Whether it should be cover paper or card stock depends upon the size and uses of the booklet. One druggist who is a regular user of booklets always has them bound in cover stock of the same surface, although the weights may vary. It has a light blue, marbled finish. Upon the back and front cover surfaces he has his name printed in very large letters, running diagonally from corner to corner. This is in blue ink only a shade darker than the color of the cover. Over this is placed whatever printing the nature of the contents may be, by following little what the nature of the contents may be, by following this uniform style the cover of each booklet becomes, in itself, a trade-marked advertisement.

## ALUMNI BALL A SUCCESS, AS USUAL.

Over One Hundred Couples Present Before Midnight.  
Dancing Continued Until 4 A. M.

Although the weather was somewhat stormy, the fourteenth annual ball of the Alumni Association of the New York College of Pharmacy, held on February 3, in the Madison Square Garden Concert Hall was among the most successful events given by the association for some time. Over sixty-five couples were in line when the grand march was called at 10:30, and an hour later more than 100 couples were on the floor.

The grand march was led by President Hieronimus A. Herold and Miss Marguerite Urban. Music was furnished by Crowley's Eighth Regiment Band and each of the two parts of the program consisted of twelve numbers.

Several of the classes and "frats" had arranged booths in the gallery, trimmed with the Columbia colors, blue and white, which predominated in all the decorations. Class yellows were a feature between the numbers on the program.

Dancing was continued until 4 A. M. when Auld Lang Syne was rendered from the balcony by a number of students who finished on the program. The committee in charge was composed of the following members: William H. Ward, chairman; Harry B. Ferguson, treasurer; Frederick A. Leslie, secretary. Thomas M. Davies, George C. Diekmann, William H. Elbitt, Charles S. Erb, Adolph Henning, Hieronimus A. Herold, William A. Holburg, Jr., Nelson S. Kirk, Eugene F. Lohr, Frank N. Pond, Anton Vorisek, Curt P. Wimmer.

### Coming Meetings of State Associations.

Massachusetts State Pharm. A. met in semi-annual session at Worcester at 11 a. m. Wednesday, February 10. Sixth-class licenses and recommendations of the Board of Pharmacy were among the important matters considered.

Indiana Ph.A. will meet in annual session this year at French Lick Springs, June 22-24.

Pennsylvania State Ph.A. will meet June 22 to 24 at the Bedford Springs Hotel, Bedford Springs, Pa.

### Phi Chi Meets at Chicago in March.

Irving H. Robitshchek, grand president of the Phi Chi Fraternity, has issued a notification that the next national council will be held in Chicago on March 4-6, at the Phi Chi Lodge, 398 East Superior street. Communications sent before March 1 to Mr. Robitshchek should be addressed to 1600 Ninth avenue, South Minneapolis, Minn.

# Capital, Ingenuity and Forethought.

By Emma Gary Wallace.

Madam Apothecary eyed the second new silent salesman now placed in her charge, as if she expected to gather some suggestion for its best use from its own transparent sides.

She walked several times up and down the length of the store and then sat down and began to figure. The Apothecary came and looked over her shoulder.

"You see," Madam explained, "I have estimated that there are at least three thousand people in our neighborhood who could conveniently buy their soap of us, and that each person, in order to be reasonably clean, ought to use about three pounds of soap a year.

It would require nine thousand pounds of soap to supply these possible customers and members of their families for whom they would naturally buy. We cannot expect to get all that trade, but as a matter of actual fact, how much of it do we get?"

The Apothecary shrugged his shoulders.

"I have looked up our soap sales of last year, and while I cannot get at the amount in pounds, I can get at it approximately in dollars and cents, and the humiliating truth confronts us that our soap sales were paltry—insignificant, in comparison with what they ought to have been. Our actual cash profit on that line of goods is far and away below what it has any business to be. By being alive to the possibilities we ought to gain and hold at least one-third of the surrounding trade in soap. Either the populace at present is not using the amount of this product it ought to use, or we are not getting our legitimate share of its patronage. If that is the case it is our own fault. Soap is good stock, as we sell it, shrinkage in weight does not count, and there is a steady demand for it every season of the year. It is easy to handle and ought to yield a fair profit."

Madam examined her calendar, and discovered with pleasure, that Easter with its increased opportunities for business was still some weeks away. That was good, for having decided that she would take the soap business under her patronage, she determined that one of the Easter displays should be soap. She wanted time, and there was none to be lost.

Correspondence was held with several firms and the contract finally given to a well-known and thoroughly reliable house to manufacture a quantity of extra fine toilet soap, of which the Apothecary was to control the dies and brand. Each cake was to bear the name "Bourbon Lily Soap," and the Apothecary's name and city. The cakes were to be specially shaped to fit the hand, the stock was to be first class in every way and the box-package refined and attractive. The margin of profit was satisfactory. This was to be a high grade special and so one thousand miniature cakes of the same were provided for sampling good "prospects." These samples were to be directly given or wrapped in the parcels of possible purchasers.

For a medium priced soap, another product was contracted for, which was of good quality, but less expensively molded and wrapped. It was to bear the more descriptive name of "Violet Oatmeal." There were no samples, but the price was decidedly appealing.

The third part of this order caused Madam considerable thought. It consisted of the cutest, little yellow soap chickens in gift boxes, the shape and decoration of which suggested a small coop; and another soap novelty in the form of a round box which held a nest made of a cleverly folded wash cloth, in which reposed three soap eggs, marked and colored in excellent imitation of various birds' eggs. On the covers of these boxes appeared the lines.

*I send to you, oh friend of mine,*

*A gift of Easter meaning;*

*Do not, I beg, these eggs decline,*

*They're fresh I know—and cleaning.*

For a little more expensive gift, a small order was placed for slightly-oval celluloid soap boxes, containing the same nest and eggs.

A moderate assortment of well-known soaps was purchased, and also a supply of what Madam was pleased to call Borderland goods, because they were on the dividing line between toilet and laundry, and were widely advertised for both uses.

Here Madam paused in her preparations, and consulted the Apothecary, for when it came right down to a question of the eternal fitness of things, Madam relied on his clear-sighted judgment. In her Southward travels, she had come across a splendid laundry product manufactured by a large soap and perfumery house, and which she declared to be the best and most economical piece of goods of that kind she had ever seen. Diligent inquiry at small and large retail groceries in her own and neighboring towns had failed to locate it. She had even requested her grocer to stock it, but he had never done so. As the Apothecary carried a small stock of toilet waters and toilet soaps of that very house, she advised adding that laundry soap to their line.

He could see no reasonable objection to placing this one brand in stock, as it seemed to be Madam's discovery, as it were, and as she had such faith in its quality. He, however, advised against further stocking of this class of goods, at present, as it might lead into deep waters.

Shaving soaps and creams, special hand-cleaners put up in glass containers for the use of near-by factory workers, bath bags, and other salable products of a soapy nature completed this part of the preparatory work.

Madam's next thought was her window. It must be attractive, suggest needed supplies, be artistic and suitable for this season, and it must not cost too much. She had an idea that had been gradually shaping itself in her busy brain for days. She first provided herself with a quantity of different shades of violet colored, leaf-green, and white, plain tissue paper, wire, and a few other necessities, including a small pamphlet book of Dennison's on paper flower making. Next, she wrote out a dozen invitations to as many of her younger friends, which somewhat enigmatically ran in this wise:

.....  
: You are cordially invited to attend, at eight :  
: o'clock on the evening of Wednesday, the twenty- :  
: third, A violet bee, at the home of Madam :  
: Apothecary. What is this? Please come and see! :  
: We'll have a flowery time—your scissors bring :  
: Also your gayest mood—it's the very thing. :  
: .....\*

There was no little speculation and gay badinage over the telephone between the invited guests and Madam, but she refused to disclose her plans, and when the evening came Madam's big front parlor was full of light and laughter and happy faces. They were all special friends of whom she felt free to ask this pleasant service.

She explained that she had a "heap" of violets to make for her Easter decorations, and she thought that instead of working all alone at them, it would be fun to have an old-fashioned bee, such as they used to have in apple-paring and husking times, and like the quilting party at the renowned Aunt Dinah's, and from which the fair Nellie never seemed to quite reach home. A few easy directions for making tissue paper lilies and violets were explained and demonstrated, and in half an hour the flower garden began to bloom riotously.

The gaiety of the occasion was contagious, and many declared themselves the debtors for an opportunity to learn so simple and so fascinating an art. At ten o'clock Madam announced that the supply of "cut flowers" was entirely sufficient, and the company crowded around the table to see the great mass of purple and lavender beauties, and exclamations of delight were numerous over the productions of the lily squad.

Many hands had made light work, and a vivacious college sophomore expressed it as her firm conviction that the flowers were sufficiently natural to deceive the most discerning honey bee. There was a prompt call for a few remarks on either zoology or botany, and amid much laughter the young lady departed to assist Madam to serve the light refreshments which announced themselves by a deliciously appetizing odor.

Some music followed, then came a short period of sociability and the evening was almost over, almost, but not quite, for each helper-guest was presented with a box of Bourbon

Lily Soap, and either a soap chicken or a box of soap eggs, as a souvenir of the evening.

Their delight over these gifts was later evinced by the great numbers of their friends who had seen their novelties and came to procure some also.

Madam banked the back of the window solid with violets and sprays of living green, and placed stately clusters of lilies at each end. The base of the window was covered with a soft, dull grey-green crepe paper. Not the rank shade so often selected which kills everything near it.

The Bourbon Lily Soap in boxes and singles, the Violet Oatmeal leader, and the novelties appropriately arranged made a display of simplicity and beauty. The price of everything was indicated by the use of the neat price-cards and card holders to be had for that purpose.

The Saturday morning the curtain went up on the soap window a number of small boys left an Easter Announcement in the homes of about three thousand people. These announcements were dignified and business-like. They called attention to the fine line of toilet articles, perfumes, and especially the soaps that had been secured for the Easter trade. Special notice was given to the prescription department.

On the Monday night following, the Apothecary looked gloomily out of the window.

"You have made a mistake!" he announced.

"How so?" demanded Madam with asperity.

"Why, in the size of your orders, at this rate we shall be sold out of our soaps, slick and clean, long before Easter. I suppose it is too late to order any more of those special goods now."

Madam laughed, one of those inimitable, rippling silvery laughs.

"Why, you dear old goosie," she said with a contradictory pat of approval. "I got that tip the night of the violet bee, when I saw how perfectly delighted the girls were over their gifts. I feared a shortage in the market myself, so I sent in a supplementary order by Special Delivery. You were so busy with those assays that I didn't tell you—perhaps I wanted to surprise you a bit."

"And you certainly have succeeded," acknowledged the Apothecary with manly frankness.

#### Well Attended Meeting of Boston Chapter.

BOSTON, Feb. 6. The January meeting of Boston Chapter 1, W.O.N.A.R.D., was held in a new meeting place in the Chaney Hall building in Copley square, and brought out a large attendance. Mrs. Godding, the president, occupied the chair, and the programme included an address on "The Unwritten Law of Courtesy," by Mrs. Marie A. Moore. Songs were contributed by Miss Leta Haskell, accompanied on the piano by Mrs. E. R. Sox. Refreshments followed, with Mrs. J. A. Tupper, chairman of the committee on entertainment, in charge, and with Mrs. John McIntire pouring the tea.

#### Branch of W.O.N.A.R.D. Formed in Syracuse.

SYRACUSE, N. Y., Feb. 1.—About thirty women, wives of druggists and members of their families, met in the assembly hall of the Chamber of Commerce recently and started a movement towards the organization of a companion society to the Syracuse Retail Druggists' Association. They were addressed by Mrs. Emma Gary Wallace, of Boston, former president of the W.O.N.A.R.D. The following officers were named: President, Mrs. W. B. Bissell; vice-president, Mrs. Rufus Smith, and secretary-treasurer, Mrs. George E. Thorpe.

#### Reception and Dance for Chapter 6.

PHILADELPHIA, Feb. 8.—Mrs. William Estell Lee, president of the W.O.N.A.R.D., will give an at home to the members of Chapter 6, of Philadelphia, at her home, 822 North Twenty-fourth street, Thursday afternoon. The second annual birthday reception and dance of Chapter 6 will be held at the College of Pharmacy Friday evening and provision has been made for the entertainment of several hundred members and friends of the banner chapter of the national organization.

#### Will Entertain Queen City Members.

CINCINNATI, Feb. 8.—Members of the Queen City Chapter No. 5, W.O.N.A.R.D., will be entertained at a euchre party February 19 at the home of their president, Mrs. A. O. Zwick, in East McMillan street.

## Spot-Lights.

By Joel Blanc.

Mama bought the tickets, saw that her two boys had their clothes on right, their faces clean, shoes polished, and then sent them off to see that beautiful fairyland, "Little Nemo." My! but the little fellow and I did enjoy it. Once, when the spot-light was playing on a dancer, the little fellow turned to me and said: "Papa, doesn't the light burn that lady?" I replied that it did not and that there was no danger.

We had hardly entered the elevated car for our homeward trip when the

little fellow, happily tired, cuddled close in my arms and went to sleep. As I felt his brow pressing sweetly against my cheek, there came to my mind his query about the spot-light. I had answered him wrongly, but it was better so. May it be many years before he shall know that the spot-light does burn, that it does leave terrible scars and sometimes kills.

As the thought goes back over twenty-six years spent within the domain of drugs, years holding so many thousands of miles of travel, of contact with so many people in so many places, of so many conditions, I realize that the spot-light flashes across the path of nearly every life and happy are those who find it without seeking, for they only stand within or pass through its glaring circle without being burned.

How the name of the light has changed as its glare has increased in intensity! Our parents, in speaking of it in a metaphorical and material sense, called it the "limelight." In our youth it was the "calcium-light"; today it is the "spot-light." As I use the term here, it stands for that fierce light which beats upon the stage of publicity which, strangely enough, brings honor and love to those whom it seeks, and unhappiness and remorse to those who seek it. Happy the man or woman who unconsciously stands within the circle and receives its rewards of honor, gratitude and love, unsought. But pity, yes, mercy, for those who struggle to face the spot-light's glare, to have its rays unveil them and then to realize when it is all too late, that for them it is a merciless light, unshrouding the dark depths of their own souls, disclosing the characteristics which prompted them to struggle to the center of the scorching circle, and there to lay bare their vanity, selfishness, hypocrisy, ingratitude and greed.

I can only think of the spot-light of publicity as shining from the eyes of Justice. Though all the courts of men may err, from within the circle of publicity's spot-light, every being upon whom it shines is disclosed at last in the beauty or hideousness of naked truth.

Wherever the spot-light of publicity shines there is a quiet, darkened auditorium of the mind from which many gaze upon those within the magic glare. The many gaze in rapture as they see upon those the soul-beauty that even in the spot-light is made more beautiful beneath the cloak of modesty or, they laugh at those whose inane antics become visible or who stand with all the horror of their duplicity nakedly exposed, assuming the posture of gods and goddesses, yet who have not awakened to the crushing realization that others have long seen what self to self would not confess.

One who has been familiar for any length of time with the work of any organization of whatever form or purpose, can look through memory and see the paths of the spot-lights of the past. There are always two paths, one to the right, the other to the left. Along the path to the right rest those whom the light sought out, but who did not seek it. Strangely enough, they are only semi-conscious that the light of publicity ever shone upon them. Although the spot-light brought them no additional wealth, and did bring them much hard work, they are at peace with all the world. They did the work cheerfully, joyfully, partly for the joy of working, partly to help others

along a little bit. They know that a vaguely understood something brought them more friends, more love. Although they did their hardest work and fought fatiguing battles in the glare of the spot-light, they were so earnestly thought-centered on what they were doing and so pure were the impulses which prompted lip and hand, that they were never fully conscious of the glare of the light in which they worked. Of course, they were often misjudged and abused, but a clear conscience armored them so effectively that shafts of injustice and malevolence could not wound them. And now, after the battle, the brilliance of the spot-light seems to have left them to dwell permanently within a soft effulgence, a sort of permanent reflection from the spot-light's rays, a reflection perpetuated in the mirrors of their own honor through the love of their friends.

But how different is the mind-picture disclosed in our view of that memoried spot-light path to the left. The circle of light has changed to fitful tongues of consuming flames which dart through billows of black smoke. That path is marked by the milestones of regret, remorse, shame and many other such attributes. Along the path wander the forms of some we recognize. Each in his or her hand holds the mirror of the soul. By means of this mirror they now see themselves as they know themselves to be and they begin to realize that the spot-light for which they so eagerly fought, must have long ago showed them to the many, just as the mirror of the bared soul now shows them to themselves. They, too, were sometimes misjudged and often slandered, but unlike those on the path to the right, they are denied the comforting nepenthe of having acted uselessly. In every memoried injustice rankles the thought of much deserved contempt.

And now we turn to the stage of life as it is today. That world-stage, in the limit of our own littleness, seems only to hold the actors who come personally within the sphere of our own lives. We see the spot-light, like a will-o'-the-wisp, darting hither and thither, following those who seek it not, followed by those who worship it. Let us watch those who strive to keep in the center of its glare. Some hold open pockets, hoping that the spot-light rays may turn to material gold. Others seek only notoriety and call it fame. See how selfishness prompts some to push all others aside as each strives to fill the entire circle of light, blind to their own littleness. Some foolishly scatter the little gold they have because it is echoed back as applause from the hands that receive it. Others work until mind and body are worn and torn. True, the work they do must bring some little good and for that let us give them credit, but prompted only by vanity or conceit they so scatter their efforts, so dissipate their energies, that the ton of labor evolves but an ounce of production.

All without the glaring circle within which the spot-light plays is shrouded in stygian darkness and many of those who do gain the light forget the worn garments they left in the darkness so close at hand. They forget that at the most unexpected moment, in the most unforeseen way, the light may fly to left or right, upward or downward and disclose that which they thought was forever buried in the gloom of oblivion.

But he or she who seeks only the right, who drops nothing but seeds of love, kindness and honest effort is in an impregnable position. When at last the spot-light unsought and unheralded comes, it may flit and bring into view the actions of a lifetime, but when the shadows have melted into the light nothing has been disclosed but fair flowers and fine fruits.

He is a coward who, before men for men, refuses to work in the world. He who slinks in darkness through fear of the spot-light is no better than he who seeks the spot-light in the belief that its glare will help him hide the darkness of his motives.

It is the duty of every man and woman to be fearlessly fit and mentally clean enough to face the spot-light's searching rays. But this, duty though it is, will not be accomplished until humanity in its entirety becomes divinity. So, let us thank the spot-light of publicity for the good it does though much of that good comes through the exposure of evil.

The spot-light of publicity punishes the selfish, it unmasks the hypocrite, it foils the mercenary, it awakens the fool, it identifies the public enemy and blocks private graft.

The spot light of publicity brings fame to those who deserve but do not seek it, rewards those who only ask for the right to help, carries peace to the peacemaker and victory to those who fight for right.

So, the spot-light of publicity shines from the eyes of Justice. Though her eyes may be bandaged the light will at last come through and shine upon her scales and guide the blade she holds. For a time its brilliance may seem to reward the undeserving and hold the true in shadowland, but sooner or later, to every man it shines upon, whether in drug trade organizations or political, religious or social bodies, it brings justice as punishment or reward.

It sometimes happens at the most unexpected time, when the spot-light is brightest, when the being within its circle seems greatest, noblest and fairest, there suddenly comes a terrific explosion. It is in such explosions that the innocent are often injured.

## Original and Selected

### THE ASSAY OF DRUGS.\*

By C. E. Parker.

The spirit of progress, a quickened sense of responsibility is manifest among practitioners of that branch of medicine dealing with the provision of agents for the prevention, alleviation and cure of disease which we call pharmacy. The whole prestige and distinction of the pharmacist which differentiates him from the common merchant, is contingent upon his fidelity to that obligation to use certain professed attainments for the benefit of others which is the essence of professionalism. If he for gain promotes the use of drugs regardless of the discipline of his profession and of the public welfare, he becomes a mere drug seller. The old-time apothecary who personally conducted practically all the details from growing drugs to dispensing prescriptions could not easily forget his professional responsibility. But the commercial development of applied pharmacy has now become so complex and drugs pass through the hands of so many people who have no personal or professional relations with the sick for whose benefit they are destined, or whose interest in pharmacy proper is subordinate to other affairs, that there is a strong tendency to divide and dissipate responsibility.

The professional status of the retail pharmacist depends upon his success in arresting and reversing this tendency. Power and authority naturally accrue to those who are efficient in the discharge of responsibility and depart from those who fail to "make good."

#### Effect of Pharmacy Laws.

The pharmacy laws of our country, which have been in a large degree shaped by the influence of pharmacists, are theoretically the basis of a compact whereby in consideration of his professional ability and obligation to conserve the physical welfare of the public, and to enable this to be done more effectively, the pharmacist receives certain exclusive privileges. Practically the provisions of many of these laws, and the activities of boards of pharmacy operating under their authority, have been more efficient in restricting the practice of pharmacy and thereby limiting competition, than in suppressing adulteration and other practices detrimental to the public health. Sometimes a disposition has been disclosed to regard pharmacy laws as primarily for the benefit of pharmacists rather than that of the public. On the other hand, the efforts of the ethical element in pharmacy have powerfully promoted the pure drug legislation of recent years, though as an expression of public sentiment it represents a loss of prestige by the boards of pharmacy. The prevalent tendency has been to withdraw from them and entrust to other officials in authority the duty of enforcing the new laws.

#### Responsibility of the Pharmacist.

Those laws generally provide a system of guarantees whereby the retailer can transfer to his source of supply the responsibility for drugs sold in the original packages, the liability otherwise being his own, and his willingness or unwillingness to assume the responsibility for what he sells may be expected to have a corresponding effect upon his professional standing. He may reduce his liability by selling a minimum of his own

\*Read at the meeting of the City of Washington Branch of the American Pharmaceutical Association, December 14, 1908.

preparations, thus tending to become a mere drug distributor; or he may attack the problem of supplying a creditable proportion of legal medicaments on his own responsibility. A rigid enforcement of the requirements of these laws would oblige pharmacists, by the application of pharmacopoeial and other tests, to assure themselves of the legality of many preparations for which they are necessarily responsible. Some have had no training in this branch, and for others it has had, since their college days, but academic interest. If a demand arises the colleges will no doubt provide suitable courses in pharmacopoeial technique, following the example of the Pharmacopoeial Division of the Zurich Polytechnic, Switzerland, which gives ten-day courses of instruction and laboratory practice based on the new Swiss Pharmacopoeia.

#### Valuations Based on Assays.

The first application of drug assaying was probably made to afford a rational basis of valuation in the purchase of opium and cinchona for the manufacture of alkaloids. Thus when the medical profession urged the desirability of more reliable and uniform products than the existing system of supplying medicaments afforded, the basis for a partial solution of the problem was available. Perceiving a commercial advantage in the extended application of scientific principles, manufacturing pharmacists, who had been controlling the quality of their crude drugs to some extent by assaying, began applying the principle to finished products. The success of this experiment helped to create a demand that assay methods be officially recognized by the Pharmacopoeia.

The Revision Committee was very conservative in respect to this innovation, hesitating to sanction methods which, however satisfactory for the use of trained chemists, would be liable to miscarry in the hands of the average pharmacist. Restricting the choice to methods supposed to be within the capacity of the latter, a few simple assays were made official. Though scientific progress and the needs of rational medicine were recognized by the introduction into the last Pharmacopoeia of a considerable number of assays, the technical limitations of pharmacists had a restraining influence in the exclusion of microscopic characteristics of drugs and the selection of assay methods. In regard to the latter the committee was instructed that assay processes should be "reasonably simple (both as to methods and apparatus required) and to lead to fairly uniform results in different hands."

#### Assay Methods Now Fairly Representative.

The methods adopted were the consummation of protracted and painstaking labors by a group of the most competent experts in the country, and, on the whole, fairly represented the existing status of this branch of chemical analysis. Some of the most important defects have since been remedied.

Though the Pharmacopoeia had been recognized to some extent in legislation, its authority was chiefly moral until the passage of the National Pure Food and Drugs Act of 1906. The probability being somewhat vague that its standards and methods would be made the basis for general legal regulation, a fairly high degree of accuracy appeared less important than it does under the altered conditions. For example, there was no requirement that the assay methods give correct or approximately correct results.

It is necessary now to ascertain how these methods, upon which an official status has been conferred, will respond to the requirements of the official chemist and prospective witness before the courts. Before the passage of the Pure Food and Drugs Act the Association of Official Agricultural Chemists had begun a cooperative study of analytical methods for crude drug plants under Dr. L. F. Kohler as referee, and since the law became operative the scope of the investigations has been considerably extended. The method of procedure, which has been found quite valuable in increasing the accuracy and efficiency of other branches of chemical analysis, is to distribute suitable uniform samples of the drugs, with detailed instructions in the methods of analysis to be tried, to a number of competent volunteer analysts, who report their results, with observations and constructive criticisms on the utility of the methods. A compilation of these returns is reported to the convention of the association, communicated to the collaborators, and made the basis of recommendation for the adoption of official methods for the use of the association, or provisional methods for further study.

In this manner since 1906 methods have been studied for the assaying of opium, cinchona, ipecac, nux vomica, acornite

leaves and root, belladonna leaves and root, coca and colchicum corn and seed. In every case the pharmacopoeial method has been compared with one or more other methods selected from the best available, the choice being influenced by the desirability of contrasting the aliquot and total extraction methods of obtaining the active principle, and the gravimetric and volumetric methods of determination. The pharmacopoeial method of assaying opium has been adopted as official by the association. In regard to the results obtained by the pharmacopoeial methods for other drugs, it may be said that they can scarcely be called "fairly uniform," as they sometimes scatter widely, differences amounting to 30 or 40 per cent of the average occurring. Other branches of analysis have made a similar showing when first made the subject of cooperative study.

Though drug assaying does not involve the application of any analytical principles peculiar to itself, it is attended by some special difficulties, so that even the competent chemist who is trained in other branches of analysis does not usually succeed in this without a certain amount of experience, and the amateur surely cannot expect to get very accurate results.

#### Criticisms of Pharmacopoeial Assays.

The pharmacopoeial methods are formulated in simple terms, and on carrying out the manipulations it will usually be found that more or less of the details are left to the judgment of the analyst, and there is small probability that any two attempting to follow the instructions exactly will perform the assays in an absolutely identical manner. If these differences are material it will be necessary to fill in the gaps with explicit instructions.

The methods start with the assumption that the analyst has a representative sample of the powdered air-dry drug. Air-dry drugs vary themselves, and are affected by atmospheric conditions of humidity with respect to the amount of moisture they contain. Therefore it would be better to make a separate determination of loss of moisture on drying and compute the assay to a basis of dry drug. A representative sample of crude drug is often very difficult to obtain. If a bale is ground and the powder mixed it is easy, but to make a representative mixture of portions from different places in the package of leaves, roots, etc., requires trained judgment. There is also difficulty in obtaining proper comminution of small samples of tough and refractory drugs, as every particle must be powdered and small mills will not readily accomplish this. For example, one would not obtain a representative sample of ipecac if he rejected any of the woody fiber which the mill refuses to grind. It is important that the powder be as fine as the Pharmacopoeia directs for assay purposes, as extraction may otherwise be imperfect and cause variation in results.

In extracting the drug both by total extraction and aliquot methods, the powder is directed to be digested in a stoppered flask with a certain amount of volatile solvent to which ammonia is usually added to liberate the alkaloid. The digestion is to be accompanied with agitation, though in some cases the use of a mechanical agitator is alternatively directed. The direction, "with frequent shaking," will be interpreted differently by different persons, and for the sake of uniformity it would be better to direct "with continuous agitation." A mechanical agitator driven by a small electric or water motor is easily arranged.

#### A Few Modifications Desirable.

The total extraction and aliquot methods are both recognized in the Pharmacopoeia, the latter being usually preferred for drugs which contain much alkaloid or are difficult to exhaust. Both have their advocates and advantages, but the cooperative work has not yet disclosed a decided superiority on the whole for either. A few modifications are desirable, such as the use of more solvent menstruum in the total extraction of certain drugs, and filtering the solution through cotton previous to drying, or after the shaking out process.

A number of alkaloids after isolation from the corresponding drugs are directed to be determined by titration. They are dissolved in a certain volume of tenth-normal sulphuric acid which is more than that necessary to combine with and bring them into solution, the excess being then titrated back with fifth-normal potassium hydroxide to the neutral point as indicated by cochineal or iodeosin solution. Owing to the relatively high molecular weight of alkaloids and the small amount usually present, small differences in measuring the few cubic centimeters of tenth-normal sulphuric acid require

## DEAN WHELPLEY, ST. LOUIS C.P., AND SPECIAL CLASS IN ADVANCED MICROSCOPICAL WORK.

ST. LOUIS, Feb. 9.—A strolling photographer happened in sight just as the advanced class in microscopy was gathering for the day's work at the St. Louis College of Pharmacy recently and the above is the result. Reading from left to right, John Harvey Throgmorton, Mannel Daniel Rozas (Costa Rica), Charles Herbert Hunt, Arthur Dahman, Lawrence Elmer Gohison, Julius Benjamin Boehm, Dr. H. M. WHELPLEY, John Andrew Göttinger, Francis John Wild, Jr., Bernard Friedrich Rohlfing, James Lathrop Jensen. The work done in this class is entirely voluntary.

have a relatively large effect upon the result. It seems desirable to substitute for tenth-normal, twentieth- or fiftieth-normal acid in corresponding amount, even though it should prove necessary to hasten solution by the use of neutral alcohol. In any case a blank titration is advisable for comparison.

These volumetric solutions are standardized upon purified potassium bitartrate as a basis. The standard is somewhat unfamiliar to analysts and a comparison with the usual standards has been instituted, but no conclusion has yet been reached. Experiments on checking the purity of the bitartrate by incinerating and cautiously igniting one or two portions and neutralizing the resulting carbonate with the reserved bitartrate resulted in a mixture of acid reaction. This may be attributable to loss in ignition.

#### Principle of Standardization.

The principle of the standardization is faulty in adjusting the normal potassium hydroxide (from which the fiftieth-normal is prepared by dilution) from the potassium bitartrate by the use of phenolphthalein indicator and then adjusting the normal sulphuric acid from the normal alkali with the use of methyl-orange. In the absence of carbonates the end points of phenolphthalein and methyl-orange do not differ so materially with normal as with weaker solutions. The methyl-orange, however, is used backward, so to speak, titrations with it being more commonly made to a pink than to a yellow color. The Pharmacopoeia takes cognizance of the fact that in alkaloidal titrations neither of these indicators, but a third cochineal or iodoquin is employed, and directs a special experiment and adjustment of the solutions of this indicator. The titration is apparently to have the tenth-normal acid adjusted to the fiftieth-normal alkali, whereas the acid, owing to its permanence and stability, is much better suited for a secondary standard. Cochineal as an indicator seems to give satisfaction to most analysts. As with other indicators, experience teaches, and a dummy in proximity aids in determining the exact end point.

Lack of time precludes any discussion of special methods such as the assay of opium, or modifications adapted to particular drugs, such as cinchona and nux vomica. The assay methods for galenical preparations are likely to be applied by retail pharmacists more than those for crude drugs, since the employment of a standard drug does not assure a standard product. Their interest as well as that of the public is subserved by their exercising due control over such products, for which, moreover, they cannot usually transfer the responsibility. The methods are generally quite similar to those for crude drugs, but more expeditious, since the active principles usually already in solution or readily dissolved.

Assaying the finished product does not ensure a complete remedy for all the abnormalities in drugs which may be occasioned by natural variation, accidental deterioration, or the ignorance, carelessness or cupidity of those through whose

hands they pass. An assay will show, for example, how much alkaloid is present in a certain preparation, provided it is the characteristic alkaloid of the drug in question. Ordinarily it will not show whether it is that particular alkaloid or a mixture of alkaloids; nor will it usually indicate whether the original drug was mixed with other drugs or inert matter, or properly cured and in a good state of preservation. The physical examination of the original crude drug is a very important factor in controlling the quality of the drug products. The process of grinding destroys many of the characteristics, and it is difficult to determine the quality of finely ground drugs even with the microscope. The efficient inspection and control of crude drugs at the point of importation into the country, therefore, is a very valuable agency in preventing the distribution of objectionable drugs.

### ERA COURSE IN PHARMACY.

#### Graduates January, 1909.

Matriculation	Examination
No.	Grade p.c.
5487, Rebecca Kehr, Hammond, Indiana, .....	98
5519, A. L. Powell, Marquez, Texas, .....	96
5572, Noble L. Croop, Goshen, Indiana, .....	95
5642, E. B. Holmes, Farmington, New Mexico, .....	98
5678, J. D. Brown, Nianqua, Missouri, .....	98
5777, Aylmer B. Green, Terrell, Texas, .....	98
5795, Rudolph Blohm, Nopal, Texas, .....	98
5902, John O. Brandenburg, Attica, Indiana, .....	98

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on official parchment, with the graduate's name embossed, especially suited for framing, will be furnished to all those who request it for the sum of 82. Those desiring the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

#### New Place Provided for Dr. Angell.

ANN ARBOR, Feb. 8.—The office of Chancellor of Michigan University is to be created by the Regents and President James B. Angell is to be installed therein. A new president of the university is to be elected and to assume the work, which is becoming too onerous for Mr. Angell's eighty years. President Angell as chancellor will remain actual head of the institution at a salary probably larger than the present one.

It is stated that on these conditions only have the Regents consented to let Dr. Angell retire from the presidency. His present plan is to present his resignation at the next meeting of the board, February 17.

Thus far Senator Beveridge, of Indiana is the only man who has been spoken of as President Angell's successor.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Bottle Capping Wax.

(Compounder)—

Rosin	1 ounce.
Hard yellow wax	2 1/2 ounces.

Color with lampblack or vermilion, and you will have a neat, dull-finish cap. See that the corks are of the best and are cut smooth on the top with a sharp knife in order to have the wax set evenly. Apply five minutes after removing from the fire, dipping and revolving the bottle at an angle of about 45 degrees in the mixture and then standing the bottle quickly upright.

(2)

Melt 8 ounces of white wax over a spirit lamp. For this purpose the wax may be put in any cheap tin or porcelain vessel with a handle. When the wax is melted add 2 drams of thick macilage of tragacanth and 1 ounce of bismuth subnitrate. Stir briskly until a uniform mixture results. The preparation is now ready for use. Dip the necks of stoppered bottles to the desired depth. The substance will coagel almost immediately. Repeat this operation about three times and you will have a beautiful white cap—firm and yet easily removed. During the capping process the mixture must be stirred and held over the lamp from time to time.

## Polish for Shoes (Paste).

(G. C. Dr. Co.)—For a tan polish try one of the following:

(1)

Yellow wax (dark)	1 ounce.
Palm oil	1 ounce.
Oil of turpentine	3 ounces.

Melt together on a water bath and color if desired with Nankin brown (5 grains) dissolved in a little alcohol.

(2)

Carnauba wax	8 ounces.
Sperm oil	3 ounces.
Oleaceous butter coloring	q. s.
Oil of turpentine	12 ounces.
Powdered soap	1 ounce.
Oil of mirbane	1 dram.

Melt the wax and first two oils together, remove from the source of heat, and add 10 ounces of the oil of turpentine carefully, constantly stirring. Then add the soap and oil of mirbane previously mixed with 2 ounces of oil of turpentine, and mix thoroughly.

A polish for black shoes may be made by using the above formulas, substituting oil-soluble nigrosin for the Nankin brown or oleaceous butter coloring, or, if a preparation of a creamy consistency is desired, you can try one of these:

(1)

Carnauba wax	10 parts.
Beeswax	20 parts.
Solution of caustic soda (40° B=27%)	4 parts.
Water	160 parts.
Oil of turpentine	60 parts.
Nigrosin (oil-soluble)	5 parts.

Melt together the waxes and the caustic soda solution and stir until homogeneous. When the mass has cooled somewhat add the turpentine, in which the nigrosin has previously been

dissolved. Lastly gradually add the water, which should be almost boiling.

(2)

Paraffin wax, high melting	20 parts.
Carnauba wax	20 parts.
Wool-fat	10 parts.
Solution of caustic soda (40° B=27%)	5 parts.
Nigrosin (oil-soluble)	5 parts.
Nigrosin (water-soluble)	4 parts.
Water	250 parts.

Place the paraffin wax and wool-fat in a water bath, and when melted and at the maximum temperature add the caustic soda solution all at once, and heat and stir until a smooth mass results. Next add the carnauba wax, and when a homogeneous mass has been formed, add the oil-soluble nigrosin. The color having been dissolved, add the hot water in small quantities at a time, the water-soluble nigrosin being dissolved in the last portions.

## Pharmaceutical Synonyms, Dictionaries, Etc.

(H. G. & W. H.)—We assume that you desire a book of pharmaceutical synonyms, something on the order of "Hedley's Polyglot Index," which covers fairly well the principal articles in the materia medica in Latin, English, French, German, Swedish and Norwegian-Danish. "Rudolph's Pharmaceutical and Chemical Directory" gives the drug names in English, Latin and German languages. Unfortunately both of these works are out of print, although you may be able to pick up copies from some dealer in second-hand books. "Moeller's International Medical and Pharmaceutical Dictionary" in three languages, French, English and German, may also prove of value. It costs about \$1.50. For vernacular German, French and Spanish names of all the important medicinal plants get Lyons' "Plant Names on Synonyms" (\$2.50). Hoffman's "Popular German Names of Drugs and Medicines" is also recommended. For general synonyms Rouse's "Dictionary of Synonyms for the use of Chemists, their Assistants and Apprentices" will be found useful. Good medical dictionaries for the pharmacist's particular use are Gould's "Student's Medical Dictionary" (\$2.50); Dunglison's "Dictionary of Medical Science" (\$8); Lippincott's "Medical Dictionary" (\$4.50); (Prof. Joseph P. Remington, of the Philadelphia College of Pharmacy, is one of the editors of this work). There are other medical dictionaries.

## Worm Syrup.

(W. M.)—Try one of the following:

(1)

Santonin	30 grains.
Oil of saffrafas	4 minims.
Alcohol	2 1/2 ounces.
Fluid extract of pink root	2 ounces.
Fluid extract of dandelion	1 ounce.
Fluid extract of golden seal	1/2 ounce.
Molasses, enough to make	6 ounces.

(2)

Fluid extract of spigelia	5 ounces.
Fluid extract of senna	3 ounces.
Oil of anise	10 drops.
Oil of caraway	10 drops.
Simple syrup	8 ounces.

Dose: One or more teaspoonfuls at intervals until purging commences.

(3)

Santonin	40 grains.
Stronger solution of senna	1 1/2 ounces.
Powdered tragacanth	5 grains.
Powdered acacia	5 grains.
Essential oil of bitter almond	2 drops.
Glycerin	2 1/2 ounces.
Syrup, enough to make	10 ounces.

## Advocates Rigid Anti-Liquor Law.

DES MOINES, Ia., Feb. 8.—C. H. Boyson, of Cedar Rapids, former president of the State Pharmaceutical Association, is here in the interest of a bill to prohibit the sale of liquor in the drug stores of the State even upon the prescription of a physician.

## PERSONAL MENTION

—W. H. NEWTON, who represents the Red Lilly in Connecticut, was a New York City visitor last week.

—W. N. FRANKS, of the Franks Drug Company, Atlantic, Iowa, has returned home from an extended trip to Illinois.

—HOWARD L. GRABER, of Parke, Davis & Co., recently addressed the Society of Detroit Chemists on "Food Digestants."

—R. S. VAN LOON, who represents Eli Lilly & Co. in Buffalo, spent a week recently in Indianapolis visiting the home office.

—DAVID Z. WINGER, of Norristown, Pa., has gone to New Orleans and will visit other points of interest during a vacation trip.

—J. M. McDONALD, of Detroit, connected with the tablet department of Parke, Davis & Co., was a visitor in New York a few days ago.

—DR. A. R. L. DOHME, of Baltimore, second vice-president of Sharp & Dohme, was a visitor in New York during the early part of the week.

—W. G. GOULD, of Santa Ana, Cal., recently sustained a fracture of his left arm by falling from his bicycle while riding on a wet pavement.

—B. O. QUILLIAN, who travels southern Georgia for Eli Lilly & Co., visited Indianapolis recently and inspected the home office and laboratories.

—E. J. TAYLOR, who sells the Red Lilly pharmaceutical line in Milwaukee, was a recent visitor to the home office and laboratories in Indianapolis.

—PROF. W. H. LAMONT, of the St. Louis C.P., and in charge of the Eli Lilly branch in that city, was recently in Indianapolis calling at the main offices.

—GUY C. WISOTZKI, a well-known druggist of Smithburg, Md., was operated upon recently in the Union Protestant Infirmary in Baltimore and has been very ill since then.

—C. M. FLETCHER, who for a time was with Bauer & Black, of Chicago, is again with the Miles Medical Company and will resume his visits to his patrons in Pennsylvania.

—JOHN F. QUEENEY was recently re-elected president and treasurer, also a director of the Monsanto Chemical Works, of St. Louis, Mo., at the annual meeting of the stockholders.

—JOHN B. MESSENGER, in charge of the Cairo (Ill.) district for Eli Lilly & Co., was a recent caller at the St. Louis office. A Clemens has succeeded Mr. Fieger in the Springfield (Ill.) district for that company.

—DR. E. R. LARNED, head of the experimental and research department of Parke, Davis & Co., Detroit, Mich., was in New York during the early part of the week in conference with his co-workers in the latter city.

—JORDAN LAMBERT, of the Lambert Pharmaceutical Company, St. Louis, was one of the five billiard players selected to represent that city in a match with Chicago recently. Mr. Lambert won his game handily.

—HENRY B. GILPIN, of Gilpin, Langdon & Co. and of the H. B. Gilpin Company, of Baltimore, who was operated upon recently for an abscess of the hip, is reported to be recovering rapidly and is expected to leave the hospital this week.

—W. I. LERCH, a former Philadelphia druggist, who has been representing Colgate & Co. in Western territory, has been added to the Colgate sales forces in Philadelphia and will report February 22 to C. W. Haviland, the manager in that city.

—J. H. BARLOW, who resigned as the Pennsylvania organizer of the N.A.R.D., January 1, is again visiting the trade as the representative of the Philadelphia Association of Retail Druggists. His efforts will be confined solely to Philadelphia.

—LOUIS DAVIS, of Davis & Davis, dealers in botanicals in Baltimore, has so far recovered from an attack of blood poisoning as to be able once more to attend to business. He was the recipient last week of a handsome past-master's jewel from his Masonic lodge.

—R. R. BOGGS, formerly representative of Lehn & Fink in Philadelphia, Baltimore, Pittsburg and adjacent territory, is in charge of the offices and salesrooms which were opened at 504 Arch street, Philadelphia, last week by Frank M. Prindle & Co., perfumers, of New York.

—MRS. H. G. THOMPSON, owner of the Thompson Phar-

macy at Marinette, Wis., widow of the late H. G. Thompson, a former member of the State Board of Pharmacy, and J. C. Quickenden, pharmacist at Columbus, Wis., were among the druggist visitors of the Milwaukee Drug Company last week.

—FRANK L. E. GAUSS, who until recently was on the soliciting staff of *McClure's Magazine*, has been appointed advertising manager of the *Housekeeper*, Minneapolis, with headquarters in Chicago. Mr. Gauss was formerly secretary of the Searle & Horeth Co. and a prominent member of the Chicago Drug Club.

—J. ELWOOD LEE, of Conshohocken, Pa., for the first time this season, left his team in the Philadelphia Wholesale Drug Bowling League to get along without his assistance last week, owing to the serious illness of his son who was operated upon for appendicitis. Expressions of sympathy and regret on the part of his friends in the league were general.

—CAPT. W. G. THOMS, a member of the Chicago Veteran Druggists' Association, will deliver an address to his fellow-druggists at the celebration of that organization, to be held on Lincoln's Birthday. Captain Thoms happened to be in Ford's Theater at the time of the assassination and the relation of his reminiscences of that eventful night will be one of the features of the C.V.D.A.'s programme.

—W. S. MILLER, of Williamsport, Pa., who has been spending several days in Baltimore each week since the organization of the Williamson & Watts Co. as one of the officers to look after the business of the three stores conducted by the corporation, has discontinued these trips to give his entire attention to the Williamsport business. W. J. Smith, of Holyoke, Mass., who represents the Boston interests in the company, has gone to Baltimore as manager.

### Marriage Mentions.

G. S. BRACE, of Mount Ida, and Miss Della Fields, of Rock Creek, Ark., have been married.

—CHARLES J. KENZ and Miss Gertrude L. Davis, both of Louisville, Ky., were recently united in marriage.

—ED. EARL DELANEY and Miss Louise Adkinson, both of Angleton, Tex., were recently wedded. The groom is a graduate of the Galveston C.P.

JAMES A. HENDERSON, of the Tryon Drug Co., Charlotte, N. C., was recently married to Miss Florence Knight, of Savannah. The couple came north on their wedding tour.

DR. ANDREW E. HIGEMAN, secretary of the Kings County Pharmaceutical Society and a successful pharmacist of Brooklyn Borough, New York City, was married at Mount Vernon, N. Y., on Jan. 28 to Miss Grace Carpenter Reed, daughter of Mr. and Mrs. Eli Harrison Reed.

—EMIL K. ROTH, a druggist of Johnstown, Pa., was married in Philadelphia last week to Miss Lulu B. Fletcher of the latter city and they are enjoying an extended honeymoon in the South. The wedding was the culmination of a romance which started last summer when Miss Fletcher spent her vacation with her sister in Johnstown.

### Ex-President Maher Quits Drug Business.

FORT DORCE, Ia., Feb. 6.—William F. Maher, last year's president of the Iowa State Ph.A., has withdrawn permanently from the drug business and has sold his large drug concern in this city to L. M. Barnes of Delhi, Ia. Mr. Maher will associate himself with the Johnson Bros. Clay Works, a thriving institution, which will increase its capital stock to \$200,000, Mr. Maher owning the increased stock.

### Medicine Maker Opens a Moving Picture Show.

BALTIMORE, Feb. 6.—A rather extraordinary combination of activities is represented in the person of C. Edward Whitehurst, manufacturer of Juniper Tar, who, besides being engaged in a war against sore throats and coughs, not to mention the graver ailments which frequently develop from these conditions, has also opened a moving picture place in Baltimore street, at one of the most frequented points in the city.

### Brooklyn Doctors and Druggists to Have Feast.

A musicale and dance to be followed by a banquet will be given by the East New York Medico-Pharmaceutical Association tomorrow evening at the Knights of Pythias' Temple, 432 Hopkinson avenue, Borough of Brooklyn, New York City. A committee has been in charge of arrangements for several weeks past and have spared no expense.

## NEW YORK BRANCH INDORSES DR. WILEY.

**Favors Paying Mr. Beringer's Libel Suit Expenses. Joint Meeting With Physicians Soon.**

There was a large amount of important and interesting business transacted at the meeting of the New York Branch of the American Pharmaceutical Association last Monday evening.

A resolution recommending that the American Pharmaceutical Association take action to reimburse George M. Beringer, of Camden, N. J., for his expense in defending a suit for slander and libel incurred by the reading of a paper before the association in 1905 was introduced by George H. Hitchcock. The paper attacked the methods used by a proprietary manufacturing firm in exploiting its products.

The motion to adopt the resolution started a lengthy discussion and it was asked why the matter had come up for consideration in the New York Branch instead of the Council of the parent organization or the Philadelphia Branch, of which Mr. Beringer is a member. It was brought out that the executive committee, without the knowledge of Mr. Beringer, had decided to introduce such a resolution because it had seemed that the parent organization and the Philadelphia Branch had either been negligent or thoughtless. The resolution was adopted.

Another resolution, also unanimously adopted, was one indorsing the work of Dr. Harvey W. Wiley and requesting his continuation in office. Copies of the resolution were ordered to be sent to President-elect Taft, the Associated Press, Department of Agriculture and the Washington Branch of the A.P.A.

Jacob Diner, the newly elected president of the branch, made a strong plea to the members for co-operation in regard to increasing the numerical strength as well as interest in the work on papers and lectures. There was no action taken but it was suggested to hire a canvasser and the matter will probably come up at the next meeting.

Dr. George C. Diekmann, chairman of the committee on progress in pharmacy, announced that hereafter the committee would present at the meetings a report that would occupy about twenty minutes time.

A new method regarding the reading of papers was also announced. Each paper to be read will be referred to two or three members about a week before its presentation and then discussed by these members in an official way before the general discussion. This method was applied to the paper presented by Otto Raubenheimer on "Medicinal Earths and Cataplasma Kaolin," at this meeting, it being first discussed by Dr. Diekmann and Dr. Alfred Herzfeld. The plan met with general approval.

Thos. P. Cook, chairman of the legislative committee, announced that the Mann bill was practically killed, and also called attention to the Gluck bill. The committee was instructed to attend the hearings on the Gluck bill and oppose its passage by the legislature.

Geo. H. Hitchcock reported that the correspondence with the committee of the County Medical Society indicated that the selection of a date for the joint meeting of pharmacists and physicians was not far off. J. C. Gallagher and Oscar C. Kleime, were appointed to assist Mr. Hitchcock in arranging details for the conference with physicians in perfecting the plans for the joint meeting.

A tentative schedule as prepared by the executive committee, for the coming meetings, gives the following program: March, commercial matters; April, papers on the Pharmacopoeia, meeting for the pharmacy students; May, paper by Dr. Virgil Colburn; October, paper by Dr. Geo. C. Diekmann; November, paper by Dr. Henry H. Rusby; December, paper by Prof. Geo. A. Egerstrom. Beginning with the 1910 season, there will be papers by physicians, and public men will be requested to lecture and read papers. Among those mentioned as probable speakers were Health Commissioner Darlington, Dr. Takamine, Dr. Houghton and Dr. Scribbler.

## One Management for Two Pharmacies.

WATOMA, Wis., Feb. 6.—E. J. Loew and A. Hunt, druggists, have formed a partnership, to be known as Loew & Hunt, and will conduct both pharmacies under the one management.

## PLEASURE AHEAD FOR GERMAN APOTHECARIES

**Valuable Papers Read at February Meeting and Prof. Remington to Be Present in March.**

According to the present plans of the entertainment committee of the New Yorker Deutscher Apotheker-Verein, the members of the Verein will not lack diversion from routine during the next coming months. Otto P. Gilbert, its chairman, has selected new colleagues to serve on his committee and announced several major events scheduled for the near future, at a meeting of the Verein last Thursday evening. Mr. Gilbert's associates are Paul Arndt, Hugo Kantrowitz, Ed. F. Pfaff, R. S. Lehman and Henry F. Albert.

The first will be the fifty-eighth annual concert and ball at the Terrace Garden on February 25. A. Lederhaus' celebrated orchestra has been engaged for the occasion. An entertainment will take place during April at the club rooms. Features at this affair will be the rendering of German music from imported German records on a Reginaphone, and the appearance of Carl Hauser, the German humorist.

Emil Roller, chairman of the scientific committee, announced that at the meeting in March Prof. Joseph P. Remington, of Philadelphia, would deliver a discourse upon reminiscences of his meetings with eminent German pharmacists.

Last Thursday evening, under the auspices of the scientific committee, Otto Raubenheimer read a paper in the original upon "Medicinal Earths and Cataplasma Kaolin," compiled by Dr. Herman Schelenz, and also an outline of the "History of Pharmacy," written by the same author.

E. C. Goetting, who is organizing a riding club, to be composed of members of the Verein, announced that invitations had been mailed to interested parties requesting them to formally meet and discuss the proposition, and also expressed his appreciation for the support given the plan. This meeting will take place today at Reisenweilers, Fifty-eighth street and Eighth avenue.

Fourteen new members were elected and four candidates were proposed for membership. Charles L. McBride, of Kingston, N. Y., was elected an associate member.

George Kleiman, chairman of the trade and legislative committee, called attention to the Conklin Pharmacy Board Bill and also the Gluck Formula and Labeling Bill which are now before the State Legislature, but no action was taken on either.

President Felix Hirsman appointed a committee of three to report at the next meeting upon a plan to relieve the messenger, Gustav Bischoff, of some of his duties, which had increased so materially that assistance was imperative in his office.

Emil Roller, who has had in charge some matters relating to a druggists' fire insurance plan, reported that the idea had not materialized and the pro rata funds had been returned to those who subscribed.

The report of Paul F. Gebicke, trustee of the mortuary fund, showed that at present there were 118 members subscribing to the fund. During the year the income had been \$755.45 and expenses \$477, leaving a balance of \$278.34, besides 857 in dues still outstanding.

President Hirsman made some interesting remarks about the habit of pasting new labels over old ones. He strongly denounced the practice.

Emil Roller explained some methods used in dispensing nauseating medicines in capsules, also the satisfactory results obtained from his experiments with the dispensing of liquid medicines, such as tinctures, in water proof gelatin capsules. He also explained a method whereby liquors and cordials could be tested as to their quality and constituents, and described in full the testing of persico, a well-known German cordial.

## Druggist's Fine Home Burned—Wife Injured.

BALTIMORE, Feb. 6.—The handsome brick residence of Dr. E. A. Wareham, a physician with a large practice and one of the best-known druggists of Maryland, in Potomac avenue, in the most fashionable section of Hagerstown, was almost entirely wrecked by fire recently, the loss being estimated at \$16,000, with only \$3,000 insurance. Dr. and Mrs. Wareham fled in their night clothes. Mrs. Wareham was burned about the face and hands. She was rescued by neighbors and is suffering considerably from shock.

## More Associations of Druggists Elect Officers—Three Active Organization Men.

CHARLES E. CARTER,  
President Lowell (Mass.) P.H.A.

CHARLES RENNER,  
President St. Louis R.D.A.

THOMAS J. BLAKE, JR.,  
President Hartford (Conn.) R.D.A.

### CHARLES RENNER PRESIDENT ST. LOUIS R.D.A.

Threatened Trouble Over Price Schedules is Happily Averted—Will Canvass for New Members.

ST. LOUIS, Feb. 8.—There will be no differential scale in St. Louis for the advertising stores. When the clans gathered for battle at the special meeting called for last week, there was no battle to be fought. A conference of persons most interested had been held, explanations cleared away some misunderstandings as to the association work and methods, and all hands were satisfied.

The net result of a meeting noted chiefly for the hand-clapping, that followed almost every address and announcement and oftentimes interrupted the speakers, was a feeling that the association was more securely cemented together than it had been for some time and the recruiting of a number of new members. Among the notable additions to membership were the Raboteau Drug Company, represented by James Gibson, president and manager, and E. A. Medler.

Charles Renner, a member of the N.A.R.D. board of directors, was nominated for president and elected without opposition. Mr. Renner is with the Kaltwasser Drug Company, Salena and Pestalozzi streets. Other officers elected were: first vice-president, J. M. Good, Olive street and Jefferson avenue; second vice-president, John A. Fritz, Twenty-second and Benton streets; treasurer, George F. Hansen, Maple and Hamilton avenues; secretary, William Busch, Twenty-third and Dodier streets; directors, James Gibson, of the Raboteau Drug Company, Broadway and Lucas avenue; E. A. Medler, 4300 North Twenty-third street; Martin J. Noll, 925 Goodfellow avenue; Herman Kunz, Twenty-first street and Franklin avenue; A. P. Bentz, 2519 South Broadway. President Johnson and Secretary Judge begged off when named for re-election and also for members of the board.

It is the intention to undertake an active canvass at once for new members of the association. The effort of two years ago to enlist every druggist in the city will be renewed. Another early undertaking will be to revise the schedule, some objections having arisen to the present one.

The meeting was more largely attended than any within a year and was actively participated in by many of those present. Another fact noticed was that none left the meeting until final adjournment. T. F. Meyer, of Meyer Brothers Drug Company, and C. P. Wallbridge, of the J. S. Merrell Drug Company, were interested visitors at a part of the session—and congratulated the association on careful pilot work among the breakers.

### BALTIMORE RETAILERS TO INCORPORATE.

Directors Hold a Meeting and Approve the Committee Draft of the Constitution.

BALTIMORE, Feb. 6.—A meeting of the directors of the newly organized Baltimore Retail Druggists' Association was held last Tuesday evening at the home of the corresponding secretary, R. E. Lee Williamson. At this meeting the articles of incorporation drawn up by a special committee consisting of John B. Thomas, Owen C. Smith and Dr. H. P. Hynson were approved and arrangements made to have the society incorporated. The organization will be known as the Baltimore Retail Druggists' Association, Inc., and the directors will act as incorporators. Two new committees were appointed, as follows:

Grievances—Charles L. Meyer, chairman; William M. Fench and George W. A. Meyers.

Social—J. Edwin Hengst, chairman; David R. Millard, Louis Schulze, Owen C. Smith and H. A. Brown Dunning.

Only drug store proprietors, managers, clerks and relief clerks are eligible to membership in the association under the constitution. Cards were ordered sent out announcing that the next regular meeting will be held Tuesday afternoon, February 9, at Sonnenburg's Hall, Baltimore and Greene streets.

### Druggists Enjoy Banquet and Games.

The Wheeling (W. Va.) Retail Druggists' Association held a very successful outing a few days ago. Bowling was the order of the day and a number of prizes were offered. Super, the best that the country could afford, was followed by a business meeting. Bowling was then resumed for the rest of the evening. Officers will be elected at the next regular meeting.

### St. Joseph (Ind.) R.D.A.

At a meeting of the St. Joseph (Ind.) Druggists' Association held recently at Commercial-Athletic Club in South Bend the following officers were elected: President, Ralph H. Kuss; vice-president, Henry L. Spohn; secretary, Nicholas Schilling, and treasurer, Paul Wolters.

### Lowell, Mass.

The regular meeting and annual election of officers of the Lowell (Mass.) Pharmaceutical Association was held recently. Charles E. Carter was chosen president; A. A. Toupin, vice-president, and Frank P. Moody, secretary and treasurer.

## SO MUCH TO DO P.A.R.D. MUST FINISH FEB. 19.

**Propaganda, Legislation, Etc., Will Be Further Considered at Adjourned Meeting—New Committees.**

PHILADELPHIA, Feb. 6.—Discussion on matters pertaining to the propaganda and to proposed legislation affecting the retail drug trade and which is now before the Pennsylvania Legislature so consumed the time of the February meeting yesterday of the Philadelphia Association of Retail Druggists that it was necessary to continue the meeting until February 19 at 2 p. m., at the College of Pharmacy, where the executive committee also will meet. The proposition made by the N.A.R.D. to the local affiliation will then be taken up again and either disposed of or a counter proposition made.

With a few corrections, the bill to prevent the manufacture and sale of adulterated, misbranded or impure drugs and the one regulating the sale, prescription and possession of cocaine, alpha or beta eucaine, or any patent or proprietary remedy containing cocaine or alpha or beta eucaine to any person and prescribing the penalties for violation thereof, were unanimously adopted. They were read and explained by William L. Cliffe, a member of the legislative committee of the Pennsylvania Pharmaceutical Association which prepared and had introduced both measures.

Chairman J. E. Marsden, for the entertainment committee, said there were two propositions under consideration, one the holding of a monster mass meeting of physicians and pharmacists in the interests of the propaganda and the other a minstrel performance and dance, the talent for the latter to be drawn exclusively from the membership of the association. He said that he thought the get-together banquet should be placed in the hands of a special committee.

Chairman Charles Reiffuss, of the telephone and press committee, asked that all complaints relative to the telephone or newspaper situations be forwarded promptly to him. He was taken at his word and several "kicks" were forthcoming.

Chairman W. T. Burke, of the executive committee, announced that J. H. Barlow, formerly the Pennsylvania representative of the N.A.R.D., had been secured to act as the organizer for the P.A.R.D. in Philadelphia alone.

R. H. Lackey and others discussed the decline in the price of oil of lamp to \$2.18 a pound and suggested that it was not so desirable to stock up with this article as had at first been indicated by the news of the earthquake in the south of Italy.

President Fluck's list of committees is as follows:

Entertainment—J. E. Marsden, chairman; S. B. Davis, vice-chairman; C. S. Cameron, secretary; H. A. Nolte, treasurer; W. H. Sutton, G. E. Weinman, R. H. Lackey, E. K. Boltz, W. B. Reigel, H. C. Comp, E. C. Esbeman, O. Zehn.

Telephone and Press: Charles Reiffuss, chairman; Samuel B. Davis, D. J. Reese, O. W. Osterwald, C. L. Bonta.

Memorial: Dr. C. R. Lowe, chairman; L. S. Sorber, J. J. Steinman, J. Grier Long, A. R. Robinson.

By-Laws: J. B. Haegebach, chairman; W. H. Lacey, W. M. Morrison, L. R. Hofferker, N. F. Weissner.

Auditing: Walter Rothwell, chairman; Clarence Campbell, S. H. Shingle.

Reception: F. R. Keller, chairman; C. E. King, Paul McGonemy, H. L. Hetrick, E. H. Teubold.

Scholarship: C. A. S. Neely, chairman; Josh Marsden, A. Hunsberger, W. B. Ricker, S. E. Betts.

Finance: Samuel C. Henry, chairman; W. H. Gano, James C. Perry.

Legislative: W. L. Cliffe, chairman; Charles Leedom, H. C. Bluff, Theodore Campbell, W. E. Lee.

Commercial Interest: E. R. Gattell, chairman; D. H. Ross, T. Gilbert Ruff, Otto Kraus, A. J. Frankberger.

Membership: W. H. Carpenter, chairman; F. J. Austin, J. H. Bailey, Harry Swain, Nelson Ott, Ralph Haas, C. E. Tolson, A. R. Hesse, H. C. Chapman, H. J. Siegfried, J. B. Reynolds, Russell T. Blackwood, R. F. Krehl, F. P. Streeter.

Ethical Preparations: Christopher Koch, Jr., chairman; W. L. Cliffe, H. L. Stiles, Ambrose Hunsberger, Franklin M. Apple.

### Wedgewood Club Elects Officers.

BALTIMORE, Jan. 30.—The Wedgewood Club, at its annual meeting, re-elected Owen C. Smith secretary and treasurer. John H. Thomas, of the Thomas & Thompson Co.; William M. Fench and David R. Millard, of Morgan & Millard, were elected members of the executive committee. Mr. Thomas being made chairman. Henry P. Baker, president of the Thomson Chemical Works, and Mr. Pierce, traveling representative in this territory of Eli Lilly, were admitted as members, while Miles E. Mixon presided. After the regular business had been disposed of the club sat down to the monthly dinner, which was served in excellent style and raised the spirits of the diners to a high pitch.

## DISCUSS PENDING LEGISLATION.

**Drug Trade Section Takes Action on Gluck Bill—New Committees Appointed.**

Both the legislative committee and its several special committees of the Drug Trade Section of the New York Board of Trade and Transportation presented some interesting reports at a meeting of the section held on February 3.

Thomas P. Cook, chairman of the legislative committee, announced that the Mann Bill recently introduced in Congress would in all probability never come out of the committee room, and consequently needed no attention at the present time. However, in regard to the Gluck Formula and Labeling Bill, introduced in the State Assembly, Mr. Cook advised that vigorous opposition be started against this bill at once, and a resolution was adopted that explanatory letters, together with reprints of the bill, be mailed to all the members of the section so as to procure united effort in holding it down should it come up for serious consideration at Albany. The sentiment of the members who discussed the bills was that there was enough legislation at present on matters contained in the Mann and Gluck measures.

There was also a general discussion on the Crumpacker Census Bill, which recently passed Congress. It was stated that there were still several objectionable features in the bill. Announcement was made that a conference will be held in New York in the near future with the Director of the Census, at which time the provisions would be thoroughly discussed and some definite action taken.

On matters relating to membership, the opinion prevailed that the efforts of the section and the membership committee should be towards retaining present members, because of the fact that about 95 per cent of the firms in the city eligible to membership were now on the membership roll, consequently no urgent need existed for increasing the number in view of the present high percentage.

The names of members to serve on the various committees for 1909 were read as selected by the new chairman, George William Kemp, who presided at the meeting.

### M.A.R.D. ASKS EXPLANATION OF N.A.R.D.

**Big Bills for Dues Cause Surprise—Local Prosecution of Propaganda Work Considered Best Method.**

The annual meeting of the Metropolitan Association of Retail Druggists was held on January 29 at the Brooklyn College of Pharmacy. The main thing up for discussion were two bills for dues from the National Association of Retail Druggists, one amounting to \$798, claimed as back dues for the year 1908, the other for \$2485 for 1909 dues.

As the members of the association understood that payments to the N.A.R.D. were made only according to collections, the sending of these bills to the association was considered to be ridiculous. The secretary was instructed to ask the national secretary for an explanation.

It was decided not to take up the propaganda work as proposed by the N.A.R.D., as similar work was at present being adequately carried out by the several local associations in a manner that was equally if not more effective.

There was no election, the present officers being continued in office by consent. The matter of continuing the association was not discussed. The date for holding the next meeting was left with the officers.

### Druggists' Meetings at Macon.

MACON, Ga., Feb. 6.—Macon Druggists' Association is making arrangements to entertain the State Board of Pharmacy on May 24 and the Georgia State P.A. on May 25-26. The committee is composed of C. T. King, Mallory H. Taylor, Cland H. Murray, Louis E. Pellet and Max Morris. Automobile rides, and other forms of entertainment will be provided and the event promises to be very interesting.

### Lilly and Bruen-Ritchey Teams Bowl Fourth Game.

The bowling teams of Eli Lilly & Co., and Bruen, Ritchey & Co., rolled the fourth game in the series scheduled for the season last Thursday evening at Luhrs' Alleys, the latter winning. They report a very pleasant evening.

## OPPOSE REVISION OF N. Y. PHARMACY LAW.

New York Retailers Consider Proposed Change in Section of Board Members to Be an Insult.

At a meeting of the New York Retail Druggists' Association held on the 29th ult. there was considerable discussion upon the subject of pharmaceutical legislation and matters relative to the Governor's recommendations pertaining to the revision of the Pharmacy Act. While no resolutions were passed, it was the unanimous opinion of the members present that a change from the present law, especially as regards the transfer of the power of selecting board members from the retail druggists to the Governor could only work injury both to the public and the profession.

Members who expressed themselves upon the subject denounced the recommendations, declaring them an insult to the profession, in view of the fact that most of the public health regulations had emanated from the pharmacists, who by this action had shown that they were public-spirited citizens capable of being trusted. The taking away from the pharmacists of the power of selecting parties to enforce the pharmacy regulations was considered a reflection upon the integrity and honesty of pharmacists in general and instances were cited to show that the Governor had been influenced by interests opposed to the retail druggist in forming the opinions reflected in his recommendations.

Another matter that caused a great deal of discussion was an editorial attack made by a New York pharmaceutical journal upon the course taken by the association in disposing of tickets for a ball which the association will conduct for the purpose of raising funds for fighting the "premium evil." A resolution was passed strongly condemning the journal and requesting an apology. The members considered that the object for which the funds were being raised was ridiculed and belittled without just cause, and that the stamping out of the evil was a matter which should interest all branches of the trade, as its accomplishment would mean much toward placing the profession on a higher plane. The entertainment committee reported that the wholesale druggists and pharmaceutical manufacturers had responded liberally toward the cause by the purchase of ball tickets.

It was also announced by the special souvenir committee, which has charge of the campaign of education for the purpose of obliterating the premium evil, that the two monthly issues of the journal which had been distributed to the public in the neighborhood affected had already brought excellent results and the insertions in the daily press had also done likewise. It was decided to continue both the journal and the insertions.

Many routine matters were disposed of besides the appointment of the following members to serve upon the various committees: Legislative, Peter Diamond, chairman; Joseph Weinstein, B. Kolle. Membership, I. Lexvin, chairman; M. Brodtkin, A. H. Koller. Finance, Charles Bernstein, chairman; L. Marmor, A. Katzman. Grievance, S. Rosenthal, chairman; B. Kirschstein, I. Rotkowitz. Trade interests, L. Marmor, chairman; M. Dingash, George J. Ballitz. Press and scientific papers, Joseph Weinstein, chairman; N. Kruskal, B. Kolle.

## More Than a Million Red Cross Stamps Sold Here.

The Red Cross Stamp Committee met January 30 and received the report of its treasurer, Mrs. William K. Draper, showing that 1,548,801 stamps were sold in New York County during the holidays, netting the Red Cross \$11,270.38. The committee has decided to make the Christmas sale of Red Cross stamps a permanent feature.

## DR. MILLER AGAIN CHOSEN PRESIDENT.

Dr. Wiley's Work and Other Timely Subjects Discussed at Annual Banquet to Phila. Drug Exchange.

PHILADELPHIA, Feb. 6.—Every one of the eighty-odd firms comprising the membership of the Philadelphia Drug Exchange was represented at the forty-eighth annual banquet at the Hotel Walton. It was one of the most successful gatherings of the kind that the exchange has ever held. The banquet followed the annual meeting and election of officers.

Dr. A. W. Miller, who was re-elected to the presidency of the exchange, acted as toastmaster, and the other speakers were Judge Howard Carrow, of Camden, N. J.; J. Hector McNeil and Franklin Spencer Edmonds, two leading members of the Philadelphia bar, and Prof. Joseph P. Remington, dean of the Philadelphia College of Pharmacy.

While dinner was being enjoyed, a company of colored musicians and singers, the happy idea of Walter V. Smith, first vice-president of the N.W.D.A., and chairman of the committee of arrangements, kept things lively.

Judge Carrow, in his address, took the stand that notwithstanding the printed reports that might give an opposite impression, the world was vastly better in every way than it was twenty-five years ago. In particular he emphasized the advancement, industrially, politically and religiously, as he knew it. His incidents and illustrations in support of his opinions were founded principally upon the histories of Camden and Philadelphia during the past quarter of a century and were most apt and in many cases amusing.

"The Law of Sales" was the novel subject discussed by Mr. McNeil, but his discourse—couched in the language of the layman and stripped of puzzling legal phraseology—was of vital interest and immense value to those business men who every day have to confront the very problems explained by this attorney.

Dr. Miller took occasion to read the reports of some members or guests who for various reasons were unable to attend the banquet. Among them was one from the veteran secretary, William Gulager, who, on account of poor health, was unable to attend.

The next speaker, Mr. Edmonds, discussed the functions of organizations of business men as related to municipal life. He showed how such organizations and their members were the first to feel conditions which affected an entire community and how necessary it was, therefore, for such organizations to take an active part in the direction of municipal affairs.

Professor Remington discussed reform, as it was being carried on in the drug trade. He declared that there had been, and was tremendous reforms all over

the United States in the character of the foods consumed and the medicines administered for the saving of lives. "I repeat the words of Dr. Wiley," he said, "when I say to you 'God bless the drug trade for the part it has played in the work of reform.'" Continuing, he said: "No body of men has given the department which is so important a part of the Federal Government, more encouragement and more aid and have had less cause to be investigated than the drug trade. I say this not only as a friend of Dr. Wiley's but as chairman of the Revision Committee of the United States Pharmacopeia. Where there has been a difference of opinion, instead of being balked or impeded by prominent drug houses of the United States, their attitude has always been that of letting us know that if there was anything wrong, let them know so that they might help to right it. The drug trade stands at the top in the way of affording material assistance. The Food and Drugs Act is here to stay and I believe Dr. Wiley can count on all of you in the future for any needed assistance in the furthering of this important work."

Referring to recent developments and the finding of experts

Successful Vermont Pharmacist.

WILFRED T. ROOT,  
of Brattleboro, Vermont.

has become by purchase the sole owner of the famous George E. Greene pharmacy in that city, having acquired the same from the Greene estate. He began work in the store twenty-one years ago and for a dozen years or more has been manager. Mr. Root has served as president of the Vermont State Ph.A. and as president of the State Pharmacy Board, of which he continues to be a member.

on the rulings of the Bureau of Chemistry, Professor Remington advised his hearers not to worry over the situation. He said: "If Dr. Wiley has made a mistake in one trifling matter—and I won't give my own opinion now on that matter—remember that he is the best friend of those who want to conduct their business honestly and in compliance with the law."

Dr. Miller expressed the hope that all would help to celebrate the next anniversary of the exchange and called upon Walter V. Smith to lead in singing "Auld Lang Syne." Mr. Smith stepped to the piano and played the famous old air while the assemblage stood and sang the well-known words.

At the election of the exchange the following officers were chosen unanimously: President, Adolph W. Miller, M.D.; vice-president, John Fergusson; secretary, William Gulager; treasurer, Edward H. Hance; directors, Charles E. Ilires, Edward J. Lavino, Mahlon N. Kline, Clayton F. Shoemaker, Walter V. Smith, A. Robinson McIlvaine, Adam Pfromm, Richard M. Shoemaker.

## BALTIMORE APPROVES CHOICE OF LOS ANGELES.

**Suggestion Made That Eastern Members of A.Ph.A. Also Meet at Atlantic City in June With A.M.A.**

BALTIMORE, Feb. 6.—The February meeting of the Baltimore branch of the American Pharmaceutical Association will be held on Thursday evening, the 18th inst., at the rooms of the Maryland Medical and Surgical Faculty, 847 North Eutaw street. The subject of discussion will be "The National Formulary Elixirs," and a number of contributions embodying the personal experiences of those who attend are expected.

The selection of Los Angeles, Cal., as the place for the next annual meeting of the American Pharmaceutical Association is viewed with satisfaction by the Baltimore members. Dr. H. P. Hynson, one of the Council, who had proposed that Cedar Point, off Cleveland, be chosen, expresses himself as contented with the choice of the Council, but apprehends some difficulty of bringing out a large attendance from the East on account of the great distance to be traveled and the expense attached to the journey. In order to keep up the interest of the Eastern contingent and to stimulate an active participation in the affairs of the A.Ph.A., it is suggested that a meeting be held at Atlantic City about the time the American Medical Association holds its sessions there next June. It is urged that the dates be so arranged as to fall in with the proceedings of the Medical Association section on pharmacology and therapeutics, subjects which are of concern to pharmacists as well as physicians. The two organizations could hold joint sessions, in fact, which would not only be of benefit in a scientific sense, but would serve to bring the professions still closer together and improve their mutual relations, an aim that has for some time past enlisted the efforts of leading druggists as well as medical practitioners.

Prof. Charles Caspari, Jr., permanent secretary of the A.Ph.A., said he could see no objection to the plan and expressed the belief that it would do much good. Other Baltimore pharmacists of prominence take the same view.

## Dr. Whelpley to Organize Party for Los Angeles Trip.

ST. LOUIS, Feb. 8.—Dr. H. M. Whelpley has received word that Los Angeles, Cal., was selected for the 1909 meeting of the A.Ph.A. by the vote of the Council. The meeting will take place in July or August, the exact date to be decided later.

Dr. Whelpley is the St. Louis member of the committee on transportation and asked that all of those who wish to make this city the starting point communicate with him at once, so that plenty of time will be permitted in arranging a route to please the majority. Stopovers, the railroad selected and other matters of that kind will be arranged with personal pleasure in view.

Twenty years ago the A.Ph.A. met in San Francisco and for that meeting a party of sixty-five persons started from St. Louis, they having two special cars which were allotted the party for the entire trip. Dr. Whelpley is hopeful of starting with a larger party this year and of securing at least as good accommodations.

## A.Ph.A. Branch at Pittsburg.

PITTSBURG, Pa., Feb. 6.—Prominent pharmacists of this city and vicinity have organized a branch of the American Pharmaceutical Association with twenty-five charter mem-

bers as a result of a meeting held at the Pittsburg College of Pharmacy. The following officers have been elected: President, Dr. J. A. Koch; first vice-president, John C. Wallace, of New Castle, Pa.; second vice-president, John Coleman, Wheeling, W. Va.; third vice-president, John R. Thompson, Pittsburg; secretary, B. E. Pritchard, Pittsburg; treasurer, T. Henry Utech, Meadville, Pa.; executive committee, Louis E. Emanuel, J. H. Beal, Dr. J. A. Koch, B. E. Pritchard, A. F. Judd, W. R. Bell, and J. R. Thompson.

## TIMELY TOPICS TOUCHED ON AT PHIL. BRANCH.

**Propaganda Work, Physicians' Responsibility and Possibility of Two Kinds of Drug Stores in Future.**

PHILADELPHIA, Feb. 6.—The presence of a large number of retail druggists and physicians was one of the features of the February meeting of the local branch of the A.Ph.A.

Dr. J. M. Anders read a paper on "The Efficiency and Sufficiency of the U.S.P. and N.F. Preparations for the General Practitioner." The need of enlightenment on the part of both the physician and the public was emphasized as well as the danger of recommending by druggists of well known preparations.

Franklin M. Apple, in his paper on the "Limitation of the Prescription," gave some of the methods in which physicians that he had come in contact with had endeavored to limit the use of certain prescriptions and how in many such cases the result was likely to react disastrously upon the pharmacist. Mr. Apple declared that the responsibility of conveying such information to the patient or the one who was paying for the prescription should be upon the physician and he showed a sticker which he uses, printed as follows: "Your Physician directs that this prescription is *not* to be renewed without his consent."

The "Past, Present and Future of the Propaganda for Popularizing U.S.P. and N.F. Preparations" was discussed by Christopher Koch, Jr. He predicted that eventually there would be two kinds of drug stores—one in which prescription work predominated and the other where patent medicines were the principal feature of the business.

The suggestions contained in the paper "The Declaration of the Prescription," by Professor L. V. S. Stanislaus, were considered so important that on motion of Professor J. P. Remington, this paper and the subject generally will be made the topic for discussion at the next meeting.

A general discussion of the papers followed. The report of the committee on pharmacy laws of which Professor Henry Kraemer is chairman, comprised the reading of the draft of the proposed cocaine law which will shortly be introduced in the State Legislature. The point was raised that if some of the derivatives of cocaine were named, it was only right that all of them should be or there might at some time be charges of discrimination. It was said that the wording would be changed slightly, although its present meaning would remain the same. It was adopted as a whole.

Another substantial impetus was given to the proposition to organize a chemical section by the contribution of \$25 to the necessary expenses by Professor Remington. President William McIntyre, of the local branch will name a committee to formulate by-laws for the proposed section. Joseph W. England, chairman of the special committee to consider the means for conducting the proposed section, made an interesting report and supplementing this came the suggestion that if the American Pharmaceutical Association would remit one dollar annually for every member of these affiliated organizations to go toward the current expenses of the latter, it would greatly encourage their formation. Officers of the local branch will be elected at the March meeting.

## A.Ph.A. Branch Organized in Denver.

DENVER, Feb. 6.—A meeting of the most prominent druggists in the city was held recently and a branch of the American Pharmaceutical Association was organized for the purpose of uniting all the druggists on the U.S.P. and N.F. propaganda work, which is carried on by the American Pharmaceutical and American Medical associations. The following officers were elected: Charles M. Ford, president; S. L. Bresler, vice president, and W. F. Nirdary, secretary.

The longer a man argues, the less reason he generally uses.

## MODEL PHARMACY BUILT ON RUINS OF GREAT FIRE IN CHELSEA AND ITS ENTERPRISING OWNER.

Boston, Feb. 1.—Lacking only three days of nine months since he was driven from his drug store by the fire which levelled one-third of the entire city of Chelsea, Mass., Charles W. Freeman threw open the doors of his new drug store in his new building in Broadway recently and welcomed a vast throng of customers and friends into one of the most finely equipped drug stores in that part of the country. And when the visitors departed a souvenir of the occasion was presented to the ladies in the shape of a box of confectionery.

The new Freeman building is erected on the site where, in 1858, Samuel Freeman opened the first drug store in that part of Chelsea. At the time of the fire, on Sunday morning, April 12, 1908, it was the site of the largest and best-equipped drug store in the city of 38,000 people. The only things saved from the hungry flames were the file of prescription books, from No. 1 to No. 335,000. Incidentally, this was only one of three drug stores owned by Charles W. Freeman, which went up in smoke that fated day.

On Monday morning, however, Mr. Freeman had engaged a store in the upper part of the city, and by Monday night he was doing business on a small scale, and under tremendous difficulties. The demand for drug store goods and proprietary articles from a population of 15,000 who were homeless and were without even a toothbrush, was enormous, but just as fast as wholesalers and jobbers could ship articles of every description over to the new store and the things could be unpacked and arranged, they were sold. The temporary site was well located, and for the past nine months it has been a busy place.

Meanwhile Mr. Freeman was engaged in planning the new building and in equipping the store upon the most modern and convenient lines. Noted drug stores in various parts of Massachusetts were visited by Mr. Freeman during the spring and summer months, and by mid-summer he was ready to award the contract for the Freeman building, which, while not a high edifice, has a frontage of sixty feet and a depth of one hundred and twenty feet. It is built of Indiana limestone and brick and steel. About every convenience which the drug store furnisher could suggest has been incorporated. White enamel finish for the upper three-quarters of the side fittings, with a quarter base of mahogany line the sides.

Silent salesmen cases extend along three sides of the store, while the rear partition is a series of alcoves in library fashion. A private office for the bookkeeper and the proprietor are on one side, and on the other the prescription room, each of the apartments having a full view of the store, although seventy feet from the front. A laboratory and stock room and receiving room occupy the rear of the store, while ample provision is made for coat rooms and toilet rooms.

On the left side at the front is the big soda fountain, with a front counter twenty-five feet in length and a turn of seven feet. This is the successor of five fountains which have been erected on that site in the past forty years, for Samuel Freeman, father of the present proprietor of the store, was one of the earliest users of a soda fountain, and the first one in-

CHARLES W. FREEMAN, of Chelsea.

stalled was a "gooseneck" a pattern now almost forgotten, at least by the present generation. An ice-cream making plant has been installed, with an electric motor for power and a hydraulic elevator to convey the cream and chopped ice to the fountain on the floor above.

Mr. Freeman has secured as occupants of the second floor of this building a dentist and three physicians, with the apartments in the rear for the Masonic headquarters of the city while that organization is having its new building erected, so that he is drawing about his store an exceptionally select clientele.

"Although ours is the only drug store on Broadway in the burnt district, and we are the only store in

Bellingham square of any kind, the store is thronged more than it was before the fire," said Mr. Freeman to an ERA correspondent.

### Burglaries in Boston.

Boston, Feb. 8. Two Boston druggists whose stores were recently robbed have had the satisfaction of seeing the perpetrators caught. S. A. D. Sheppard of 1129 Washington street, had been missing money from his till for a number of weeks, but not until lately was the guilty one detected. Harry Simonds, a clerk, who until three months ago had been employed in a drug store in New York, was employed as a clerk at Sheppard's, and the loss of money had corresponded with the term of his service in the store. Various attempts to detect the robbery were fruitless for a time, but finally it was discovered that articles worth 75 cents and 81 were being sold and only amounts of 10 and 25 cents were rung in on the register. Simonds was charged with the larceny of \$21.25, was found guilty, and he was sentenced to the house of correction for three months.

Another fellow was in court for breaking into the drug store of Frank E. Ernst, in Jamaica Plain. In this case, however, the crime was far more serious, because the drug store is also a postal station, and among the articles stolen were postage stamps and money order blanks. The break occurred last April, but not until recently, through the alleged confession of the accused man, was he apprehended. He was arraigned before a United States Commissioner and held for the March session of the United States Grand Jury.

### Veteran Druggist Retires From Business.

MILWAUKEE, Feb. 1.—August Von Trost, one of Milwaukee's oldest druggists, has sold his business at 441 East Water street to Peters & Beek, of 2109 North avenue, who will now conduct both stores. A. E. Peters to manage the newly purchased establishment in East Water street, and O. T. Beek to be in charge of the pharmacy in North avenue.

### Improvements in a Washington Pharmacy.

Samuel L. Hilton, Washington, D. C., has recently re-fitted his store with most modern fixtures, all in white enamel. He has also put in a metallic ceiling and side walls and a new soda counter and workboard.

## BOARD EXAMINATIONS

### Indiana.

INDIANAPOLIS, Feb. 6.—A. F. Heinemann, of Valparaiso, secretary of the State Board of Pharmacy, has announced the successful candidates of the examinations held here January 11 to 15. They are as follows:

REGISTERED PHARMACISTS.—Ernest M. Adams, Warsaw; John V. Barore, Farmersburg; Walter Beck, Terre Haute; Harry J. Burring, Vincennes; James M. Casey, Indiana Harbor; Herman M. Cecil, Munice; Boyd A. Davis, Auburn; Walter Day, Rochester; Ira Dungan, Union Mills; John C. Endress, Crown Point; Ida P. Hagan, Ferdinand; George Hickey, Mt. Vernon; Carl E. Jackson, Indianapolis; James T. Jean, Mitchell; Albert H. Joab, Terre Haute; Edgar M. Johnson, Fowler; Charles A. Jones, Perryville; Hugh M. Keene, Indianapolis; Ferdinand M. Murr, Indianapolis; William H. McComber, Elkhart; Thomas M. O'Connor, Terre Haute; George W. Polhaus, Indianapolis; J. Harley Ramsey, Vincennes; Edward Remmiller, Indianapolis; Clyde Ritter, Angola; Glen O. Roberts, Jamestown; W. G. Rogers, Madison; Charles H. Spencer, Indianapolis; Herbert Stadtfeldt, Indianapolis; Walter J. Steinkamp, Richmond; Roger R. Stevens, Indianapolis; Frederick Thorn, Terre Haute; John W. Wilkie, Terre Haute; Claude Williamson, Ft. Wayne; Floyd V. Zimmerman, Marion.

ASSISTANT PHARMACISTS.—E. D. Coyatt, Marion; D. A. Keffler, Indianapolis; Leo Ray Clemmons, Rochester; Sophia G. Dickinson, Richmond; Clara M. Foeter, Wabashville; Lawrence A. Greer, Dunkirk; Valentine Hans, South Bend; Worthy E. Hughes, Ft. Wayne; A. G. Hingworth, Munice; William E. Crick, South Bend; William G. Lay, Columbus; Walter J. Maston, Lagrange; Harry Michale, Logansport; Joseph A. Noel, Logansport; W. H. Ozden, Jeffersonville; Kenneth Perrin, Alpine; Paul Richards, Columbus; Frank Rummel, Cambridge City; George R. Simmons, Munice.

The next examination will be held April 5.

### Minnesota.

ST. PAUL, Feb. 6.—The Minnesota State Board of Pharmacy has re-elected R. L. Moreland, Worthington, Minn., as president, and Charles T. Heller, St. Paul, succeeds C. J. Moos, resigned, as secretary. Mr. Moos, who has made a fine record in the college, could easily have been re-elected, but he has entered the retail drug business in Minneapolis on his own account and desires to give his whole attention thereto. Also present at the meeting were E. C. A. Tupper, Minneapolis; A. Van Rohr, Winona, and C. H. Clark, St. Peter.

Considering the needs of the College of Pharmacy of the State University, the board decided to give over for a time its efforts to secure the erection of a pharmacy building on the varsity campus. While the college has been more crowded than any department of the university, the board is satisfied with the plans of the board of regents for utilizing a part of Millard Hall, the medical building, for class rooms for the pharmacists, until plans for the greater university campus have been completed.

Thirteen of the forty applicants qualified after the regular examinations, which were held daily throughout the week, and the board issued pharmacist's certificates to A. F. Kurth, A. R. Gennell, G. L. Dodds and S. N. Warren, and assistant pharmacist's certificates to E. A. Wahlstrom, M. D. Unland, J. P. McCarter, H. O. Peterson, C. P. Sattlet, C. R. Bell, C. F. Engell, E. P. Jones and M. L. Larson.

### Illinois.

SPRINGFIELD, Feb. 4.—At the January meeting of the Illinois State Board of Pharmacy, 15 out of a class of 51 applicants for registered pharmacist and 16 of the 22 candidates for assistant pharmacist passed successful examinations. Their names follow:

REGISTERED PHARMACISTS.—George J. Alexion, St. Louis; Frank C. Belding, Jansville; George S. Borovik, Chicago; Ray A. Come, Monroeville; John L. Elson, Chicago; James Kamplain, Chicago; Aug. W. Lindstadt, Chicago; John J. O'Connell, East St. Louis; Albert L. Shults, Plano; John V.

Simonds, Belleville; Mark V. Smith, Chicago; Milo C. Taylor, Pontiac; Otto H. Threde, Alton; James Thackeray, Danville; and Walter Wagner, Morris.

ASSISTANT PHARMACISTS.—William B. Atterberry, Springfield; Samuel Bronstein, Chicago; William J. Barrett, Springfield; Alfred Dahl, Chicago; James H. Daly, Rushville; Peter B. Ekstam, Chicago; Edward G. Fingl, Chicago; Simon S. Friedman, Springfield; Theodore H. Hartmann, Collinsville; Ernest T. Kirkland, Decatur; Thomas F. Lazear, Carthage; Igino Monaco, Chicago; Arthur R. Pickering, Chicago; M. Dean Stauffer, Bloomington; Robert H. Stocks, Chicago; and John L. Zukowski, Chicago.

The board will meet in Chicago March 9 for the examination of assistant pharmacists and on the following day at the same place an examination will be conducted for registered pharmacists. The next apprentice examination throughout the state will be held March 5.

### Massachusetts.

BOSTON, Jan. 30.—Thirteen applicants out of a class of thirty were successful in their examinations before the State Board of Registration in Pharmacy. Their names and addresses are as follows: Oliver C. Brightman, New Bedford; Albert A. Cross, Huntington; James G. B. Humphrey, Springfield; Percy A. Leighton, Chicopee Falls; George W. Allison, Ipswich; Walter B. Barrett, Worcester; Napoleon J. Berard, Jr., New Bedford; William F. Doherty, Leominster; James F. Gallagher, Boston; Benjamin C. Hale, Haverhill; George E. Norton, Oak Bluffs; Daniel I. Weston, Boston; Daniel O. Wolff, Boston.

ASSISTANTS.—Charles L. Cordeau, Lowell; Jeremiah M. Nash, Norwood; Hervey D. Parthenais, Lowell; Frank G. Proctor, South Framingham; Edward A. Dervan, Lawrence; John F. Hand, Brookline; William F. Hotherman, Amesbury; Frederick C. Hunter, Everett; George Kramer, Boston; Andrew R. Newton, Boston; Arthur N. Sumner, Marblehead.

### Tennessee.

NASHVILLE, Feb. 8.—There are now over 1200 registered licensed pharmacists and 321 assistants in Tennessee. Among the class of thirty-seven that underwent the regular examination of the State Board of Pharmacy here last month seventeen were granted license to practice. A few others were granted license as assistant pharmacists.

The seventeen passing the examination successfully are as follows: Miss Carrie Nichel, L. W. Gorton, Nashville; F. A. Cleveland, Pleasant Shade; H. M. Rhea, Somerville; E. C. McNeely, Orinda; S. H. Beall and E. D. Taylor, Nashville; Carl Wood, Selmer; H. E. Wright, Orinda; T. L. Mangum, Inka, Miss.; W. E. Everett, Nashville; G. C. Young, Brick Church; W. H. Brigham, Murfreesboro; W. W. Fisher, Atlanta, Ga.; A. L. Binford, Nashville; A. C. Nicholson, Columbia, and J. A. Gentry, Nashville.

### Michigan.

ANN ARBOR, Mich., Feb. 6.—The following have been awarded certificates of pharmacy as the result of the examination by the Michigan Board of Pharmacy here, last month: Harry I. Chandler, Empire; Ray Fox, Reese; W. A. Gardner, Paris; William P. Guley, Holly; Thomas W. Irwin, Polkston; Charles C. Jackson, Vassar; Thomas L. Milne, Jr., Standish; Ralph G. Mitter, Detroit; Oscar A. Moreau, Detroit; John V. Sassaman, Charlotte; Guy R. Stone, Fairgrove.

The following received papers as registered druggists: W. D. Fales, Midland; John G. Foess, Ypsilanti; Justin N. Nelson, Ludington; Victor J. Szmielew, Detroit.

The board will meet in Grand Rapids March 16.

### District of Columbia.

WASHINGTON, Feb. 1.—William Daniel Thorn, Jr., William LeRoy Bond, Joseph Salling Baldwin, and Miss Irene Nellie Richardson, have been given license to practice pharmacy in the District of Columbia.

### Got More Flasks Than He Wanted.

BIRMINGHAM, Mich., Feb. 1.—A local druggist recently advertised that he would give a penny to every boy who brought him an empty whisky bottle. When he found that he had 1200 flasks he withdrew the "ad."

**DR. BARNARD BARS BENZOATE IN INDIANA.****BIG BUSINESS DONE IN NEW YORK POST OFFICE.**

**Even If Labeled It is a Violation of Law to Sell Goods So Preserved in That State, is His Ruling.**

INDIANAPOLIS, Feb. 6.—Indiana, in the center of the Middle West, with Dr. H. E. Barnard, Indiana State Food and Drug Commissioner, a good second to Dr. Harvey D. Wiley, of Washington, D. C., in thorough-going energy and uncompromising belief in his cause, is having a marked influence on neighboring States in the fight for pure food now going on.

A correspondent of THE PHARMACEUTICAL ERA asked him what he proposed to do now that the United States Government is temporizing with the benzoate of soda men.

"You may say for me to your readers," said Dr. Barnard, "that I propose to enforce the Pure Food Law of Indiana, which states that a food product is adulterated if it contains any added antiseptic or preservative substance except common table salt, salt-peter, cane sugar, vinegar and spices. The use of benzoate of soda is directly prohibited under this paragraph of the law and not because it may be, or may not be a poisonous or deleterious ingredient.

"Our law thus prohibits the use of benzoate of soda in food products and it makes no difference whether or not goods are so labeled, they cannot be sold in Indiana except in violation of law.

"The action of Judge Anderson, of the Federal Court at Indianapolis, in denying a temporary injunction to certain manufacturing interests that sought to restrain me from enforcing the provisions of the Food Law has already been widely commented upon and has been received with joy by food commissioners.

"I believe if we work along the lines upon which we have started that we shall stop all food adulteration in this State.

"Indiana has a population of nearly three millions and the people, without exception, including our manufacturers of food products, are with this commission."

**Federal Benzoate Decision Will Decide in Indiana.**

INDIANAPOLIS, Feb. 1.—Dr. J. N. Hurty, secretary of the State Board of Health, says in an interview that the differences in opinion between the State Board of Health and the State Food and Drug Commission regarding the use of sodium benzoate as a preservative will be settled by the decision following the report of the Referee Board appointed by President Roosevelt to look into the matter. He says that the present ban will be enforced until the Federal Government decides that benzoate of soda may be used without being considered harmful or an adulterant.

**Fined for Violating Federal Drug Law.**

DETROIT, Feb. 1.—United States District Attorney Frank H. Watson last week prosecuted the La Cotte Manufacturing Company, of this city, for shipping to a Cleveland, Ohio, drug firm a so-called complexion aid, which proved to be only magnesium sulphate colored pink. The fine was \$10.

**Heineman Company's Troubles Not Over.**

BALTIMORE, Feb. 6.—The troubles of the Heineman-Evans Company, wholesale druggists at 108 South Howard street, which were supposed to have ended when the Forderen Specialty Company several days ago had dismissed its petition asking that a receiver be appointed, have broken out afresh. Today a second suit for a receiver was instituted by Matthews Brothers. An order was issued requiring cause to be shown by February 20 why a receiver shall not be appointed. The company had accepted a proposition from creditors to pay 50 cents on the dollar, the arrangement to become effective February 1, and it was supposed that the plan would go through.

**A. F. Marquier is Again Elected President.**

NEWARK, N. J., Feb. 6.—Officers of the Alumni Association of the New Jersey College of Pharmacy have been elected as follows: President, A. F. Marquier; vice-president, Oscar A. Schraft; secretary, Fred P. Schweig; financial secretary, L. C. Hagney; treasurer, Clyde W. Heberling; trustee, J. C. Nixon. The meeting was held in the Continental Hotel. After the business session the members had a luncheon. Mr. Marquier acted as toastmaster. Speeches were made by Dr. P. E. Hommel, of Jersey City, and Dr. Louis Schneider.

**December Greatest Month in History of Office and January Makes Good Showing—Conditions Optimistic.**

Postmaster Morgan, of the New York Post Office, when interviewed regarding business conditions as reflected through the postal service, was very optimistic on the outlook for the future and called special attention to the prosperity indicated by the December revenue, which was the largest for any month in the history of the office.

The statistics given below apply to the offices under the jurisdiction of Mr. Morgan, which include all branches, substations and the main offices in the Borough of Manhattan and the Bronx.

For comparison the total revenues for the past three years are given and are as follows: 1906, \$17,827,300.98; 1907, \$18,850,220.77; 1908, \$18,898,782.20. The decrease of \$41,509.57 in revenue during the last year was due to the big falling off during the earlier months of the year. The months of 1908 from September to December showed such unusual large increases that a big general decrease was overcome.

January, 1909, has shown the heaviest business of any corresponding month and compares as follows with those of the two preceding years: January, 1909, \$1,640,503.68; 1908, \$1,508,415.70; 1907, \$1,063,619.87. In percentages the business done in January, 1909, was 8.75 per cent greater than January, 1908, and 3.39 per cent over January, 1907.

December, 1908, was the largest month in the history of the office, the total receipts for a month having never before equaled two million dollars. This mark was passed, the exact total being \$2,029,181.24 as against \$1,877,537.05 for December, 1907, the largest previous month. The enormous amount of Christmas business is reflected in the above figures, as is also the large increase in that class of mail over that of 1907.

Statistics relative to New York substations are as follows: total revenue collected for 1907, \$2,679,311.24; 1908, \$2,397,325.79; showing a general falling off as in the case of the other offices. A gradual increase, however, has been noted every month since fall and the number of substations has increased from 234 to 242.

As regards the registry business there was 4,100,268 pieces delivered and 4,291,236 pieces registered, making a total of \$392,294 pieces handled last year. The 1907 figures are higher.

During 1908 there were mailed out 427,030 special delivery letters from New York and 1,068,062 special delivery packages were received from other cities. The figures for last year are higher than those of 1906 but fall behind the totals of 1907.

**Not Victim of Mercurial Poisoning, as Reported.**

In the case of Charles Goeking, fifty-six years old, employed in the laboratories of Schieffelin & Co., New York, and reported to have been poisoned and killed by handling mercury, the autopsy showed that the man died from chronic affections of several vital organs. At the inquest held before Coroner A. F. Schwannecke, the causes of death, as disclosed by the autopsy, were as follows: Chronic interstitial nephritis, arterial sclerosis, myocarditis, chronic cardiac insufficiency, pulmonary edema.

Goeking had been in ill-health for several years and was stricken while standing on an L. station. Death occurred shortly following his admittance to Lincoln Hospital.

**Soda Fountain Talk.**

The American Soda Fountain Company's new models for soda fountains, both "Iceless" and regular ice cooling, are meeting with exceptionally fine reception and large sale. Perfect skilled workmanship goes into all the apparatus manufactured by this company and as they, or their predecessors, have been manufacturing soda equipments for many years, their long experience and reputation proves them competent to make and offer new appliances as soon as changing conditions are ready for them. Dispensers should write the company for a copy of the little book "The Passing of the Ice-man."

Era Price List is indispensable to all druggists.

### ASEPTIC PRODUCTS CO. ORGANIZED.

New York Corporation With \$200,000 Capital; \$150,000 in Common and \$50,000 in Preferred Shares.

The new company to manufacture plasters and surgical dressings which was promoted by C. H. Goddard, manager of the American Druggists' Syndicate, filed its application for a charter with the Secretary of State at Albany on February 3.

This new company is known as the Aseptic Products Company and has a capital stock of \$200,000 in shares of \$10 each; \$50,000 of the stock is in preferred and \$150,000 in common shares. The directors of the corporation are: S. C. Yeomans, of Chicago; A. W. Kiler, of Columbus, Ohio; Reese C. Roberts, of Ambler, Pa.; J. Maxwell Phinglo, of New York City; E. C. Goetting, of New York City; Adrian Paradis, of Brooklyn; Edw. Wolff, of Brooklyn; George W. Luft and C. H. Goddard, the latter two being officials of the A.D.S.

Mr. Goddard stated that the company has rented a large floor with 13,000 square feet of floor space in the new fire-proof Blanchard Building, which adjoins the laboratories of the American Druggists' Syndicate, and expects to be turning out plasters by the middle of March.

He also stated that such of the capital stock as will be sold now is sure to be largely over-subscribed, but the books will be held open until March 31, and in the distribution of this stock preference will be given to the single share subscribers. He estimates that the larger share-holders will have to be content with from 50 to 70 per cent of their subscriptions. The \$50,000 in preferred shares is what the company is selling in advance, and with each share of preferred a bonus is given of one share of common stock. This will leave \$100,000 of the common stock in the treasury to be sold in the future as the demands of the business may require.

### A Fussy Package for Fastidious Folks.

That it is easier to sell a pound package of candy for \$1 than a pound at 80 cents has lately been proved to the entire satisfaction of many druggists who are enjoying a monopoly of the sale of Whitman's chocolates and confections through the manufacturer's exclusive agency plan. Last year The Whitman Agency put out and pushed a very attractive package of selected chocolates under the catchy name of "A Fussy Package for Fastidious Folks" which struck a responsive chord in the hearts or stomachs of candy buyers. These chocolates hit exactly the popular taste, for people who bought them got just what they wanted and they were therefore willing to pay the price. In the attractive advertising the Whitman's are putting out for their agents more emphasis than ever before is laid upon the completeness of their package line, which covers from five-cent goods upward every kind of sweets that the public demands. If you haven't all the facts relating to this proposition handy, write to Stephen F. Whitman & Son, Fourth and Race streets, Philadelphia, for particulars.

### California Fig Syrup Co.'s Special Offer.

The California Fig Syrup Company announces that it has arranged with wholesale druggists to allow a discount of 5 per cent from the list price of 84¢ on all one gross orders. By taking advantage of this offer the retailer can materially increase his profits on the sale of a popular remedy. The California Fig Syrup Company has doubled its manufacturing facilities in order to supply the great output of California Fig Syrup which will be required this year and which is bound to increase, for the manufacturer has inaugurated an extensive advertising campaign which is sure to stimulate sales to the advantage of all concerned. Read the California Fig Syrup Company's advertisement on page 13 of this week's issue of the Era for full particulars.

### Shorter Hours Announced at Banquet.

RACINE, Wis., Feb. 6.—Clerks employed in the several stores of the Real Cross Drug Company here, were banqueted recently by the officers of the company. A supper of ten courses was served and President T. W. Thiesen announced that in the future all the pharmacies would close evenings at 9 o'clock, with the exception of Saturday evenings, when the stores will be open until 10 o'clock.

### CONSTANT TARIFF REVISION DANGEROUS.

Ways and Means Committee Object to Permanent Commission—Mr. Taft Favors Advisory Board.

Advices from Washington state that although there is little likelihood that the Committee on Ways and Means of the House of Representatives will consider any proposition involving a permanent tariff revision commission, it is expected that the coming Indianapolis convention of various National commercial bodies will declare strongly in favor of such a commission. President-elect Taft has expressed himself as favorable only to a commission that should advise Congress of desired changes in schedules and collect data needed for information, but not fix rates, as the latter would be unconstitutional.

Chairman Payne and other members of the Ways and Means Committee are quoted as saying that such a commission is unnecessary, for they assert that the numerous sources of information through Government bureaus are well able to supply all material required. The main argument advanced by them against such a commission, which would have the right to establish rates or even recommend such changes to the House Committee, is that business interests would be severely impaired by the constant uncertainty of tariff rates which would result. Furthermore, capital would not be so freely invested in those industries and trades which are affected by foreign trade and competition.

Washington authorities declare that on account of the stand taken by the Ways and Means Committee there is hardly any possibility that the permanent commission, should one be formed, will take any part in framing the forthcoming tariff bill or that it will supplant the Ways and Means Committee in any way.

### N.W.D.A. Delegates to National Tariff Commission.

President Fred L. Carter of the National Wholesale Druggists' Association has appointed the following delegates to attend the convention of the National Tariff Commission, to be held in Indianapolis, February 16 to 18: William Scott, chairman; William J. Mooney, John N. Carey, G. Barret Moxley, Marion Ward, all of Indianapolis; Thomas P. Cook, New York; James W. Morrison, Chicago; Frank G. Ryan, Detroit.

The purpose of the convention will be to give immediate and adequate expression for the creation of a permanent, non-partisan, semi-judicial tariff commission, which shall collect and study commercial and industrial facts in this and other countries, pertinent to the tariff question, for the information and use of Congress and the Executive Department.

Henry Riesenberg, of Indianapolis, president of the Lemare Pharmaceutical Company, of New York, will be chairman of the convention.

### Drug and Chemical Club Annual Meeting February 18.

The annual meeting of the Drug and Chemical Club of New York will be held in the club rooms next Thursday at noon. Several matters will be brought up for disposition and action taken on the report of the Nominating Committee, which has presented the following names of members to serve upon the Board of Governors for the three years ending February, 1912: Harry C. Larter, George W. Formeyer, I. Frank Stone, William H. Dutcher, A. K. Gardiner, E. H. Reynolds. Members of the board whose term expire this year besides Mr. Formeyer, who has been re-nominated, are: Gustav A. Schwarz, Samuel A. Moneyenny, Hector M. Hitchings, William S. Ginnel, Edward S. Woodward.

### Big Drug Company Orders Six Becker Iceless Fountains.

The Biker Drug Company, which recently opened new drug stores at Fourteenth street and Fifth avenue and Forty-second street and Sixth avenue, New York City, where they installed large Becker iceless fountains, and which also installed large Becker iceless fountains in its Jaynes store, 30 Washington street, Boston, and Brooklyn store, 1273 Broadway, is again opening two additional new stores one in Tremont street, in Boston, and one in Newark, N. J., for both of which orders have been placed with the Becker Company for large iceless fountains. This makes six iceless fountain orders given the Becker Company by the Biker Company in about five months, four of which are in operation.

## PATENTS, TRADE MARKS, ETC.

## PATENTS.

Granted February 2, 1909.

- 911.241—George E. Inman, Chicago, Ill. Label-coating machine.
- 911.258—Richard G. Neumann, Wandsbek, near Hamburg, Germany, assignor to the firm of Kakao-Compagnie Theodor Reichardt, Gesellschaft mit beschränkter Haftung, Wandsbek, near Hamburg, Germany. Sifter for pulverulent material.
- 911.269—Ludwig H. Reuter, Berkeley, Cal. Process for producing certain proteins from buttermilk.
- 911.270—Ada Schneider, Chicago, Ill. Rouge holder.
- 911.277—Edmund S. Smith, Niagara Falls, N. Y. Glue tester.
- 911.289—William A. Bostwick, Rochester, N. Y. Cover fastening for jars.
- 911.292—Charles C. Call, Springfield, Mass. Cork-pulling device.
- 911.300—Eric Erickson, Portland, Ore. Toilet case.
- 911.367—Alexander Berg, St. Louis, Mo. Process for recovering waste alcohol from liquor casks or barrels.
- 911.467—Arthur W. Blunden, Sobastopol, Cal. Kettle still.
- 911.468—Karl Bosch, Ludwigshafen-on-the-Rhine, Germany, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany, a corporation of Germany. Saponification of alkaline earth cyanides.
- 911.523—Charles Piers, Chicago, Ill. Antiseptic syringe.
- 911.556—William H. Froggatt, Jr., Brooklyn, N. Y. Counting and bottling machine.

## Boston Druggist and Wife Escape Earthquake.

Boston, Feb. 6.—Word was received in Boston today announcing the safety in Nice of Mr. and Mrs. C. R. Pollard, whom it was feared were in southern Italy, and possible victims of the Messina earthquake. Mr. Pollard was until recently one of the proprietors of Woodward's Drug Store, at 100 Tremont street. Mr. and Mrs. Pollard, when they left Boston, intended to tour Italy and spend the winter there, but instead of going to south they tarried at Nice.

## TRADE MARKS.

Published February 2, 1909.

- 33,024—Hans Schneider, Hamburg, Germany. Class 6. Disinfectants.
- 33,218—Alfred E. Dahlberg, Chicago, Ill. Class 6. Laxative tablets and laxative quinin tablets.
- 33,717—The Palmerto Chemical Company, Inc., Aiken, S. C. Class 6. A remedy for chills and fever, grip and colds.
- 34,487—Joseph W. Bowles, Normal, Ill. Class 6. A vegetable compound intended to be used as a blood-purifier and tonic for the treatment of biliousness, headache, constipation, etc.
- 36,900—The Johnson-Richardson Company, Ltd., Montreal, Quebec, Canada, and Burlington, Vt. Class 6. Liver pills and dyspepsia tablets.
- 37,563—Peerless Medicine Company, Petersburg, Va. Class 6. Liver pills.
- 37,791—Pharmacie Humanitaire de Paris, San Francisco, Cal. Class 6. Remedy for gonorrhea, gleet, syphilis and spermatorrhea.
- 37,813—Sanative Remedy Company, St. Louis, Mo. Class 6. Foot salve.
- 38,050—Willbur F. Shook, Dallas, Texas. Class 6. Medicinal remedies for diseases of the stomach, liver, bowels, for malaria, colds, catarrh, and diseases of the skin.
- 38,109—Ignatz Palocz, Budapest, Hungary. Class 44. Inhalers.
- 38,159—Samuel Schwartz, Newark, N. J. Class 6. An insecticide and vermin destroyer.
- 38,281—Frank L. Greer, Bloomington, Wis. Class 6. Lotions.
- 38,353—Laura M. Voight, Cincinnati, Ohio. Class 6. Chemical washing compound.
- 38,395—William Cooper & Nephews, Berkhamsted, England. Class 6. An antiseptic ointment for human and veterinary use.
- 38,536—Elizabeth Jensen & Co., Chicago, Ill. Class 6. A remedy for pain in the kidneys, swollen throat, rheumatism, stiff neck, neuralgia, headache, backache, strains, cramps, and mumps.

## Serious Fire in Montreal.

MONTREAL, Que., Feb. 1.—About \$20,000 damage was done recently by fire in the druggists' sundries establishment of L. McEwen & Co., 46 West Craig street.

Copy of any PATENT or TRADE MARK, 10 cents.  
 Author of copyrighted work on Protective Trade Marks,  
 Food and Drugs Act, and Valid Patents.

# THE DRUG MARKETS

## SEASONABLE GOODS IN FAIR DEMAND.

### Business as a Whole Much Better Than a Year Ago. Demand Confined to Actual Requirements.

**NEW YORK, Feb. 8.**—In the drug and chemical market only a moderate movement is noted with the demand confined to actual requirements for consumption; but taken as a whole business is fairly good, especially when compared with conditions existing a year ago. The price changes have been few and unimportant except for the reduction of 1c. per ounce for quinine, as noted in our last report. Opium is firm but quiet. Balsam of Peru is active and higher. Norwegian cod liver oil is selling well with a good demand improving the prices. Ergot, both Russian and Spanish, is higher with the market inclined toward still firmer prices.

**QUININE SULPHATE.**—The decline of 1c. per ounce in this article brings the price down to the lowest on record. Heavy bark shipments and lower prices for Java brand of quinine are responsible for the decline.

**OPUM.**—The demand is for small parcels only and the market has a quiet appearance, but holders are firm in their views and decline to shade their prices. The news from Smyrna give a fairly active market at unchanged prices. The arrivals in Smyrna for the week ending January 15 amount to 1990 cases, as against 1344 cases for the same period last year.

**BALSAM OF PERU.**—Owing to reports from primary markets a sharp advance has taken place in this article, and prices are now \$1.90@82.00 per pound. There is an extreme scarcity and the bulk of the limited stock is concentrated. The principal holders are retaining their supplies, and only a few stray lots are obtainable.

**GRAINS OF PARADISE.**—There has been an active demand for this article and prices have advanced to 35¢@40¢, for the powdered. Foreign markets report great scarcity and prices have nearly doubled in value. Lower prices are not to be expected, at least for some time to come.

**MANNA.**—The shipments referred to in the last report have now arrived and the market is well supplied with new crop.

**VENICE TRENTINE.**—The market is now well supplied with all sizes except stands. The demand seems to be very good with no difficulty in getting full prices. Artificial goods are being offered in this market but are very undesirable and will not answer where true goods are required.

**DIGITALIS LEAVES.**—There have been arrivals of a quantity of prime leaves of good quality. The stock in this market is very small and with the good demand this lot is rapidly being disposed of.

**Mastic.**—A shipment of new crop of very good quality has been received and is rapidly being absorbed by the trade.

**OLIVE OIL.**—The price of Lucca cream salad oil keeps steadily advancing in primary markets, and in the local market a heavy demand is experienced with only limited supplies available to meet the urgent demand. Correspondents write that the entire crop of olives will be secured by the middle of the month and no oil will be left in growers' hands. Further advances may be looked for any time and the trade should keep informed on the article if they desire to realize full value for any stock they may have on hand.

**NORWEGIAN COD LIVER OIL.**—A fair steady demand is reported, and the market has been quite firm at the former range of \$21@825 per barrel, as to brand and quantity. According to cable reports, goods cannot be imported below \$21 @ \$22.50. During 1908 there were over 51,000 barrels shipped from Norway, and the unsold stock in primary markets is said to be at a very low point.

**CANADA BALSAM OF FIR.**—This article is meeting with a fair consuming inquiry and the market is firm owing to light stocks and absence of offers from primary sources of supply. The quoted range of prices is \$5.50@85.75 for large quantities, but there is very little obtainable at the inside figure.

**BAY RUM.**—With a fairly good demand and with the knowledge that future stocks will cost more, the market has been

quite firm. Quotations range from \$1.50@81.60, as to quantity and seller, with no anxiety to sell at the lower figure.

**MENTHOL.**—There is rather more pressure to sell and in the absence of demand the market has been somewhat easier. Quotations for large quantities range between \$2.15@82.20, with most business done at the higher figure, only one seller naming the lower price.

**MESSINA ESSENCES.**—The essences are without any change, and while there is a good deal of bearish talk in some quarters, conditions cannot be considered much, if any better, either here or abroad. The trade in general is still of the opinion that higher prices for oils of lemon and orange will rule later on. Unusually cold weather with severe frost is reported to have destroyed the remainder of the fruit left on the trees in Messina and surrounding country.

**GLYCERIN.**—The market is rather unsettled owing to competition. One Western refiner has offered on the lower basis of 15 3/4¢, for drums, although no contracts are available at this figure. The general quotations are based on 16 1/4¢, for drums.

**QUINCE SEED.**—Goods of desirable quality are scarce on the spot, and holders are again firm in their views, with \$1.00 @ \$1.05 being the quoted range, as to seller and quantity.

**HEXANE LIQUIDS.**—Prime goods continue in good consuming request and firm, with further business in U.S.P. reported at prices within the quoted range of 16¢@17¢, according to quality and quantity.

## London Drug Market

**LONDON, Jan. 30.**—The small supplies of drugs catalogued for Thursday's sale met with a fair demand, notwithstanding the fact that the dense fog which prevailed in the city during Wednesday as well as sale-day rendered it extremely difficult for buyers to form a correct judgment of the samples on view in the broker's offices and at the warehouses. Timinevly Senna was not represented but a fair supply will probably be brought forward at the next auctions. Cape Aloes was in good demand and sold at prices about 2s. 6d. per cwt. higher than at the last sales, good, hard, bright fetching up to 30s. 6d. per cwt. Curacao aloes was steady at 45s. per cwt. for fair liver and Zanzibar was also steady at 80s. for good hard hepatic in skins. Ipocacuanha sold at 5s. 1d. to 5s. 2d. for good Rio. There was a good demand for Sarsaparilla and good grey Jamaica realized 1s. 5d. per pound, and red and yellow native Jamaica 10d. to 1s.; fair Lima realized 1s. 1d. to 1s. 2d. per pound and Honduras was bought in. A few cases of Palembang Gum Benzoin sold at 44s. per cwt. for seconds part drossy; fair seconds realized 47 per cwt.; two cases of Siam sold at £14 to £14 2s. 6d. per cwt. but fine qualities of Siam were bought in. Six bags of Spanish ergot of rye sold without reserve at 1s. 4d. per pound for sifted, slight weevily. For Buchu leaves there was no demand, but some business has been done privately at steady rates. Cardamoms were in good request at 1d. per pound advance. Two tins of Ambergris sold without reserve at 60s. per ounce. Wax was in strong request and realized slightly dearer rates for Zanzibar, up to 46 1/2s. per cwt.

Privately business in drugs and chemicals is far from brisk. Citric Acid is easier and buyers are holding off, not being willing to pay the price asked by the holders of English makes—namely 1s. 8d. per pound. The value of Essence of Lemon has again receded and there are offers at 6s. per pound spot, and 4s. 6d. and 5s. per pound, c. i. f. for shipment. Oil of Bergamot is nominally 35s. per pound spot. An advance in the price of Bromides is anticipated in the near future and a further rise in the value of Glycerin is expected. Opium is firm on the spot, as also are Morphine and Codeine. The price of Quinine Sulphate has been reduced 1/2d. per ounce. Oil of Peppermint is firm at 6s. 3d. to 6s. 6d. for Wayne County oil in tins, but business is quiet at the moment. Menthol is firm at 7s. 3d. per pound for "Kobayashi."

### Will Manufacture Patent Remedy.

**BUFFALO, N. Y., Feb. 6.**—Patent medicines will be manufactured by the Great Northern Remedy Company, which has just been incorporated. The concern is capitalized at \$150,000, but begins business with \$1000.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, FEBRUARY 18, 1909

No. 7

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western office:

Room 500, Dickey Building, 40 Dearborn, Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE.

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

#### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers.  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA.

For Era Album 90 WILLIAM ST., NEW YORK.

## RALLYING TO DR. WILEY'S SUPPORT.

Further evidence that the pharmacists of the country are in favor of the retention of Dr. Wiley as head of the Bureau of Chemistry at Washington can be found in the action of the New York Branch of the American Pharmaceutical Association which has ordered sent to President-elect Taft and other officials strong resolutions calling for a continuance in office of the Father of the Pure Food and Drugs Law, as he is sometimes styled by those who believe he is largely responsible for the enactment of the measure into law. Other associations also have endorsed Dr. Wiley and no doubt more will follow, while at the same time the preponderance of public opinion as shown in influential papers is against any change.

Enemies of the doctor will no doubt carry their fight against him to the last ditch, but it is puzzling to figure out what arguments they can use to further their purpose without placing themselves in the position of defending adulterations and impure food and drug products. Everybody may not agree with Dr. Wiley, but his errors, if they may be so called, have been upon the side of purity in every instance and errors of that sort are invariably condoned by the great mass of the American people.

## THE PENALTY FOR DOING ONE'S DUTY.

While it is only coincidental to the agitation in this State, the effect of placing the appointment of members of boards of pharmacy in the hands of Governors instead of having them elected by the pharmacists is shown in a striking manner in Pennsylvania. In our sister State, Governor Stuart has refused to reappoint an honest, indefatigable and conscientious board member at the behest of politicians who could not persuade him to prostitute his office by granting certificates to incompetent applicants. There is no profession that stands more in need of the vigilant safe-guarding of its portals than pharmacy, for there is not one that offers the opportunities to be found in a drug store for wreaking injury and death to the general public.

Pennsylvania is not the only State where politicians have sought to influence board members to pass would-be druggists through the short and easy entrance to the practice of pharmacy, but with rare exceptions the pharmacists have refused to become parties to such infamous proceedings. Like Mr. Cliffe in Pennsylvania and Mr. Bodemann in Illinois, they have suffered for their zealotness in the cause of clean pharmacy. With the appointive system board members are ever at the mercy of politicians. With the elective system in New York such a condi-

tion is impossible. There is one argument, however, that will appeal to many pharmacists in connection with the appointive method, for the higher and better class of men are sure to incur the ill-will of the politicians and thereby provide rotation in office. The politicians hope, besides securing revenge, to obtain pliable tools for future use, but men of that stamp are few in pharmacy and they are invariably disappointed.

With a provision in the law that the appointments must be made from lists submitted by State Pharmaceutical Associations there is almost the same protection that is found in the elective system, and safeguarded in that way the appointive idea loses much of its obnoxiousness.

#### EXAMINATIONS AND REJECTIONS BY BOARDS.

Questioning the mental integrity of problems put before candidates for examination to ascertain their fitness to receive certificates for the practice of pharmacy has gained some vogue, particularly in Pennsylvania, but it is doubtful if all of the elements entering into this important duty are given proper consideration by the critics. We do not know of a board member at the present time who is not actuated by complete devotion to the profession and possessing a due regard for the rights of neophytes who seek to pass from the preparatory stage into the inner circle of qualified pharmacists. Some of the examiners may prepare questions which they could not answer in the manner prescribed for examination purposes, but which they believe a student fresh from a college of pharmacy should be able to satisfactorily answer. If the questions were of a character that the expert with years of experience could easily answer it is probable that not every college graduate could obtain a passing percentage, while on the other hand if all of the questions were taken from the books there could be few failures by intelligent students to receive their certificates.

Board members have found, with few exceptions, that the preparation of questions that are fair, qualitative and reasonably conclusive in determining an applicant's fitness is the most difficult, if not the most important duty that confronts him. This subject was discussed in a very interesting paper by Dr. Thrush, of Philadelphia, in the ERA of January 21, page 62, and no doubt there will be further additions to the literature now available.

#### CONTROL OF SALE OF HABIT-FORMERS.

There was much food for thought in the account in the ERA of February 4, page 119, of the discussion on "Regulating the Sale of Habit-forming Drugs" held at the January meeting of the City of Washington Branch of the A.Ph.A. The druggists of the country have it within their power to control the sale of narcotics and many of them use the utmost discretion in limiting the sale to legitimate purposes. Unfortunately all are not so inclined and the result has been restrictive legislation, in some States so severe as to be irksome for conscientious dispensers.

The same rule applies to the sale of liquor. The

inclusion of druggists in prohibitory bills is due almost entirely to the tendency of some members of the profession to make their livelihood through the sale of liquors, rather than by selling drugs. In Alabama this condition has resulted in a prohibition law which the Attorney-General advises prevents even the sale of liquor on a physician's prescription. Closer attention to a higher moral standard would elevate the profession in the eyes of the law-makers and public generally.

#### THE DEVELOPMENT OF DISCOVERY.

Two recent announcements of discoveries in the scientific world are of more than ordinary interest. Although hailed as new discoveries they are really the development of previous contributions to present-day efforts to further harness nature. In Cleveland a torch has been invented which by the use of acetylene and oxygen produces a heat power of 6300 degrees, the most terrific known to science, and makes possible the hitherto impossible feat of welding aluminum. Some idea of the power of this flame is conveyed in the statement that it will eat through two inches of solid steel in less than a minute.

Dr. Baekeland's discovery of "oxybenzyl-methylenglycolanhydride," or as he calls it for short, "bakelite," brings into trade a substance possessing the good properties of celluloid, but cheaper in cost and fireproof as well. The latter quality is of utmost importance, for it enlarges the field in which this improvement upon celluloid can be employed.

There seems to be no limit to the possibilities of discovery by modern alchemists. The two just mentioned, despite their great commercial importance, are merely stepping stones in the path of chemical progress. What will be the next wonder presented to us by science?

#### ANOTHER SWINDLER PREYING ON THE TRADE.

Drug trade merchants, particularly in the East, will do well to read the item on page 171 of this issue of the ERA regarding the exploits of a dishonest salesman who is accused of having defrauded both his employers and their customers without showing either fear or favor. How this fellow obtained the excellent recommendations which paved the way for obtaining his last position is a mystery. No doubt he will beg, borrow or forge new credentials and endeavor to impose upon some other drug house in the same way that he did in Omaha.

The trade should keep a sharp watch for the appearance of this man and promptly turn him over to the police. It would be well to cut out the item and place it where the description of the crook can be easily seen for comparison with any applicant for employment who calls.

A Syracuse druggist has attached to his pharmacy what a local paper calls a "novelty" in the shape of a licensed physician who is constantly in attendance to prescribe for patrons who may desire his services, no charge being made for the same. Some successful druggists have found the plan to work well, but it has never been generally adopted for the reason that ordinarily the pharmacy would lose as much if not more trade through the antagonism of the neighboring

physicians as could be gained through the patronage of free patients. Regardless of the expediency of the experiment in Syracuse the doctors of that city can scarcely call the druggist a counter dispenser.

Optometrists are prosecuting a vigorous campaign for the recognition of optometry as a profession. Bills have been introduced in the legislatures of New Jersey and Tennessee modeled on the law which recently went into effect in this State and other legislatures are to be invaded. The opposition of the medical profession so far has not materialized to an extent that threatens defeat to the enthusiastic advocates of the new profession.

Those who have succeeded best did not choose their tasks, but put all their energy upon the execution of the tasks which were thrust upon them.

Duty to self demands sixty seconds of hustle in every business hour.

The first wholesale druggist, in point of time, in the State of Mississippi, is now one of the foremost wholesale druggists, in point of importance, in the entire South. The druggist in question is F. A. Dicks, doing business at Natchez, Miss., and he is now the chief executive of Finlay, Dicks & Co., one of the largest wholesale drug houses in New Orleans and that entire section.

Between the beginnings of the small jobbing house in the small jobbing city of Natchez and the big establishment which occupies most of the block bounded by Magazine, Canal, Common and Tchoupitoulas streets in New Orleans, within a stone's throw of the same Mississippi River which flower by historic Natchez, there has been many days of planning the display of much business wisdom and the exertion of much energy, but through it all F. A. Dicks has been the one ultimately responsible for the development of the institution.

Although still a young man of 55 years, Mr. Dicks has seen 42 years of service in the drug business. This means that he started early, and he must have started before thirteen had become an unlucky number, because, notwithstanding this was the number of his years when he began his drug career, ill-luck did not pursue him. For four or five years Mr. Dicks worked as a clerk in the retail drug store of W. H. Fox & Co., in Natchez, and then became a member of the firm of George J. Dicks & Sons, another retail drug firm.

In 1875, when he was just old enough to vote, Mr. Dicks went in business for himself, the eight years of experience he had previously had being sufficient to equip him to conduct a retail drug business in his own name and in his own behalf. Since that time he has not taken one backward step, so far as his business is concerned. On the contrary, it has increased in importance and size, notwithstanding the various vicissitudes through which commercial affairs of that section of the South have passed since 1875.

Mr. Dicks' entrance into the wholesale drug business was gradual. He got into it by what may be termed "breaking" into it. As a retailer in Natchez he saw the opportunity of not only selling small customers small doses, but also the opportunity of selling many doses to other retailers. Without relinquishing the paying retail business which he had built up, he added a jobbing department and started on a campaign for business. It came, and then it kept coming until its volume was so large that Natchez could not offer sufficient facilities for carrying it on. Then Mr. Dicks moved to New Orleans.

When he organized his company there he associated with him one of the best-known wholesale druggists in the city, George R. Finlay, who has been senior member of Finlay & Bruns-  
wig. Mr. Finlay became the senior member of the new com-

cern, and remained its president until his death in 1897. Since that time Mr. Dicks has been in name as well as in fact the head of the company. Its vice-president is C. B. Dicks, a brother, who has been a business associate since 1875, and T. J. Ferguson is secretary and treasurer.

In addition to its strictly wholesale drug trade, Finlay, Dicks & Co. have built up a large business in druggists' sundries and soda water supplies, and the catalogue which the company issues in this department is one of the most complete published in the South. C. B. Dicks, while having general supervision over various parts of the business, devotes his particular attention to the sundries department.

Aside from his business, Mr. Dicks finds time to devour a great many books. He is singularly free from hobbies, unless this can be called one. He is a lover of books and his readings cover a wide range. Ergo, he is a domestic animal. Although he belongs to several of the leading New Orleans Clubs, he is not a clubman. As a member of the Pickwick Club he has the entree, socially, whenever he cares for such pastime, and he is also a member of the Chess, Checkers and Whist Club, another leading social organization of New Orleans. But he is rarely at either of these places, and even takes his lunches at his residence in Prytanian street. In the summer, when many other business men find time for a vacation of several months, he is generally at work at his store,

but he takes enough time usually for a flying trip to the North Carolina mountains, or to Colorado or somewhere else. His New Orleans home, however, is both his summer and winter home. Last summer he combined business with pleasure and toured the tropics. As a result he not only saw much new country, but his house is now selling goods in many parts of Latin-America.

Mr. Dicks was for several years secretary of the Southern Drug Club. He is also a member of the American Pharmaceutical Association; the National Wholesale Druggists' Association and the Louisiana State Pharmaceutical Association.

When the Devil makes such a noise with his temptation, it is not to be wondered at that some people fail to hear the still, small voice of conscience.—  
*Hudson Observer.*

F. A. DICKS.  
of New Orleans.

New York's daily newspapers give little idea of the effects on life and limb of the operation of the transportation systems within the city limits. During 1908 there were 444 persons killed outright and 35,000 injured, according to a report made public by the Public Service Commission of the First District, by surface, subway, "L" and steam roads in New York City. A comparison of the figures for five months of the year with the corresponding period in 1907, during which statistics were compiled, shows a decrease in the number killed but an increase in the total of injuries. Of the 35,000 injured, by far the greatest number were passengers. Persons afoot and others not riding on cars came next in the list, with employees of the traction companies last. Accidents of all kinds, including those resulting in no injuries, amounted to 56,481. Of these the surface lines show 42,391, the subway and "L" lines 11,445 and the steam lines 2,645. The steam roads were proportionately much the hardest on employees, the injury list showing 1327 out of 1965 cases to be members of this class. The fatality table shows 107 for steam lines, 89 for "L" and subway and 248 for surface lines.

The gaming tables at Monte Carlo are once again in full swing, says the Dundee *Advertiser*, and the Casino is pouring into its coffers something like £4000 (\$20,000) daily toward the annual million or more it expects to clear before April closes. But, enormous as the Casino's profits are, its expenditure is proportionately great and includes some strange items. Thus it pays about £9000 a year for clergy and schools, £6000 for charity and £20,000 for police and courts. The

maintenance of the Casino runs into hundreds of thousands of pounds. And yet, in spite of these huge disbursements, the shareholders have little cause to grumble, for their pocket dividends something like £500,000 a year; and, even in a poor year, can rely on a return of over 30 per cent on their holdings.

"Nearly everything he touched turned to gold."

"How did he work it?"

"He was careful not to touch anything but greenbacks."

The undress photograph is the latest London society craze. Whether Salome is directly responsible for the daring innovation or whether it is the outcome of a growing contempt for conventionalities is an open question. Only one thing is certain—the undress photograph has arrived. All the London weeklies which devote pages to the glorification of the female form devise now certain photographs which a year ago would promptly have been consigned to the flames. Half the women, theatrical and social alike, photographed seem bent upon showing their figures with as much detail as the flimsiest of wraps permit, or giving the impression that the loose cloak alone hides their complete nudity.

Geraldine—Pa has put his foot down.

Gerald—I know it. I was under it.

The impetus given in England in the last few days to the development of the uses of radium has drawn attention to the great work that is being done by the Paris Radium Institute, where Mme. Curie superintends the extraction of the wonderful substance from pitchblende and other materials. The institute now possesses 15 grains of radium valued at \$85,000. Experiments in the hospital connected with the institute have been so extensive in the last three years that Dr. Degrais, in charge, says: "We in France are no longer in a period of expectancy. We are now in a period of confirmation."

The institute reports 64 cures of surface cancer out of 68 cases treated. Hundreds of cures have been made of cutaneous affections, including tumors, some of great size. Thousands of birthmarks and scars have been removed and remarkable cures of chronic rheumatism, eczema and tuberculosis have been recorded. It is expected that during the present year the laboratory will provide six times the quantity of radium above mentioned.

A recent departure is the application of radium to mineral waters, the efficacy of which will be vastly increased thereby.

Otherwise—And you actually approve of gossiping women?

Wise—Yes, for this reason: I have noticed that a woman who is always talking about her neighbors never has time to complain of her husband.

A number of Indianapolis druggists were talking the other evening at a bowling alley where they go for recreation about the business of other days. Among them was an old-timer, a retired druggist. "You're a lot of live people," said this one, "and you have more attractive places of business than those of my day but you don't know as much about clever advertising as some of us knew years and years ago, advertising that didn't cost us fifty cents a line in the newspapers. I was a boy in a drug store along in the sixties. The beautiful aniline reds Solferino and Magenta named after battles fought by Napoleon III. in Italy had then first appeared in the Indianapolis market. The druggist for whom I worked, John C. Green, had a shaggy coated little white dog. He took this dog, dipped him in a solution of this red aniline, and when he came out he was something gorgeous to behold. That dog was placed on the seat of an open buggy, the sides of which bore the legend 'John C. Green, druggist,' and shown through the streets of the town. The newspapers made features of this display and the red dog was the talk of the town. All at a cost of less than thirty cents."

"I think I can tell you of one that brought an immediate harvest and perhaps didn't cost much more," said another talker. "Opposite the old Indianapolis post office along about the early 80s there was a drug store that had a fairly good soda water patronage for that time. In a front room on the third floor above the entrance to this store was a clairvoyant or fortune teller, a plump and dangerous French woman, with dangerously keen, jet black eyes. She was about forty years

old but she was really handsome—she knew how to make up.

"One hot July afternoon this French lady was noticed by passers-by from the opposite side of the street. They stopped in open-mouthed wonder and admiration and gazed, then gazed again. Soon there was a hundred, then more hundreds, then a thousand or more up-lookers. They blocked the street gazing at that third story window. Elderly citizens mopped the perspiration from their faces and lingered entranced upon the spot.

"There with her feet in the window sat the charming French woman, an immense meerschaum pipe in her mouth from which she blew great clouds of smoke. She appeared to be wholly oblivious of the attention she was attracting and smoked on and on, while the crowd gazed and perspired.

"But the soda fountain was there and the thirsty crowd made a rush for the cooling beverage to the profit of the druggist. I did not know it at the time but later I found out that the druggist furnished the pipe with a lot of dried mullein leaf which made the smoke and paid the lady something for her performance."

He was a good customer, this one, bought straight ten-cent cigars and was a liberal smoker.

He stood before the cigar counter at Ergenbright's Drug Store, Indianapolis, looking through the glass case.

The druggist was ready to wait upon him.

"The name on that box," said the customer, "is misspelt," pointing through the glass.

"Oh, I guess not," said the druggist.

"Well, I don't like to bet on a sure thing. I've traveled in Mexico and Central America and I know some Spanish. Two d's in Eduardo is one too many."

"I guess it's all right on the box," said the druggist.

"Tell you what I'll do. I'll take every cigar in that box and pay you ten cents apiece for 'em if that name isn't misspelt, one d too many; or if I'm right you'll let me have 'em at five cents each."

So the proposition was accepted. The glass cover of the cigar case was opened and to the amazement of the customer the name read E-d-u-a-r-d-o, only one d.

He had been looking through the beveled edge of the glass, which at that particular angle showed double.

And he paid for 47 cigars at ten cents each.

This man came into an Indianapolis drug store, his open hand on the third button of his vest, and said: "What should I do. I've been drinking too much ice water?"

The druggist, loath to prescribe, told him to go to a doctor.

"But," said the sufferer, "I can't take medicine. I'm a Christian Scientist."

"Oh, in that case," replied the druggist, "go to a plumber."

Old Gentleman—And how old are you, my little man?

Little Archie—I'm not old at all, sir; I'm nearly new.

"While I was waiting to take the order of a merchant in a small town in Indiana," said the dry goods drummer, "I went prowling about his store, and a box fell against me. I regarded it as a trifle at the time, but an hour later I felt a severe pain in my side. I have always been afraid of appendicitis, and it occurred to me that it had come on me bigger'n a house. Away I rushed to the village doctor, and he felt of my pulse, looked at my tongue and shook his head and said:

"My friend, you've got it this time for sure."

"And I've got to be operated on?" I asked.

"You shouldn't lose a minute."

"With that I took off my coat and vest to have a look at the spot, and a minute later I was a surprised and pleased man. A splinter from the box was sticking in my side. I looked from the splinter to the doctor and back, and he looked from the splinter to me and back. Then I asked:

"Doctor, how much to pay?"

"Five dollars," he replied.

"But how do you make that out?"

"Two and a half apiece for being the two biggest fools in the State!"

Most of us learn a whole lot more from the mistakes of our own clerks than we do from our own ignorance.

**\$5 Cash Prize for Best Window Display Goes This Week to Providence.**

*In the ERA'S Cash Prize Competition this week the award of \$5 is made to William J. C. Kelly, of the Hall & Lyon Co., Providence, R. I., for the best window display in a retail drug store submitted in accordance with the provisions of the competition as printed on page 38 of this issue of the ERA. The window contains nothing but roots, herbs, bark and drugs in bulk, as received in original packages. This window is in the Westminster street pharmacy of the company and is one of five which are twenty feet long, eight feet high and three feet deep. The company has eight smaller windows which also are dressed up from time to time as required.*

*Druggists should read the ERA'S Prize Offer carefully. It is open to everybody, whether they are subscribers to the ERA or not.*

## Making Sample Cards and Books.

### Selling Helps.

In the majority of drug stores there is a great, though rarely considered loss through the handling of merchandise by both sellers and buyers. In the sale of lead pencils and other goods which may not be easily damaged by handling, there is the loss of time, difficulty of selection and the inducement to theft through spreading a large part of the stock before the prospective purchaser. These evils may be overcome and other advantages secured through the use of sample cards for sales purposes. A few druggists have profitably copied the traveling salesman's display methods and many more should do so. The preparation of sample cards is not difficult as those who will read the following suggestions may easily understand.

The cards themselves should be of stiff, hard cardboard of from one-eighth to three-sixteenths of an inch in thickness. These should be covered on both sides with bright green, glazed paper, because paper of such a color is least likely to fade, is easily kept clean and contrasts strongly with the colors of the goods most likely to be placed thereon. All cards should be round cornered, their edges bound with tape, and have strong but light brass hangers attached. It is advised that the druggist have his cards made at a paper-box factory, but he may purchase the stock and bind the cards with linen (not paper) passe-partout tape, and make his own

hangers of brass or copper wire.

A pencil or pen-holder card should be 10 x 18 inches. This card should be punched with two rows of holes. These rows must run from top to bottom, one row two inches from either of the two sides of the card, the holes being one-half inch apart. Do not make these perforations with a needle or knife. To avoid rough edges and assure neatness and long life to the card the holes must be punched and should be about one-eighth of an inch in diameter. It is better if the druggist will either make or pay some one to make the perforations with an eyelet machine and insert brass eyelets therein.

Through these perforations run good quality round elastic cord, preferably that of a black shade. Pass the cord up through the first hole, down through the second, up through the third and so on to the end of the row. Before the rubber cord is cut or fastened at the bottom, slip a pencil or pen-holder or other sample under each set of two opposite loops, so that the samples are in order, one beneath the other, extending from top to bottom of the card. When all are placed tighten the elastic cord sufficiently and fasten the end.

Now take a strip of light card or heavy paper one inch in width and as long as the sample card. This should be of material having a good writing surface. Run this strip down the center of the sample card between the card and the samples. The pressure of the samples will hold it in place for general handling, but security may be obtained by fastening the strip at the top and bottom with the slightest touch of paste. Upon this strip, between the samples, write the

price, cost and other desired memoranda, each memorandum being directly under the sample above it.

Sample cards should be hung in convenient and yet secluded places, such as at the dead ends of shelving, between sections of shelving or under the counters.

#### Care and Changes.

Cleanliness may be secured by having a curtain of heavy paper or muslin for each card. This can be made of almost any suitable material the size of the card and then fastened at the top so as to fall over the samples when they are not being exhibited. A good storekeeper will not find it necessary to mar his cards with such a cover. If there is a wall space between two sections of shelving a number of cards may be hung thereon by placing a series of screw-hooks in a perpendicular line, about six inches apart. The cards will then hang one over the other, yet by lifting any one the one below it may be readily removed from its hook.

The reader can, of course, readily understand how easily samples may be changed on such a card as that described. Prices and other memoranda may be changed by merely removing the price-strip and substituting a new one, and that without defacing the card.

#### Double Cards.

In making cards like those described the elastic cord loops or stitches are the same, on both sides of the card, an arrangement which will permit samples to be placed on both sides of the card. In this way both sides of the card may be advantageously used for pencils or other samples no thicker or heavier than pencils. Double cards, however, are apt to be cumbersome and the strain of holding samples to both sides shortens the life of the elasticity of the cord. Patrons should be discouraged against attempting to remove samples for inspection, a really useless act. Of course, if the samples are of a permanent stock character, greater strength and permanency may be secured by sewing them to the card with strong linen thread.

#### Suitable for Sample Cards.

Among other lines of merchandise which may be economically, conveniently and attractively displayed on sample cards are pen-points, rubber and steel erasers, camel-hair pencils, manicure instruments, caustic and menthol pencils, inhalers, glass, hard rubber and metal syringes, combs, tooth, nail and all small brushes.

#### A Sample Book.

There is also much damage and loss through the handling of paperettes. This may be avoided by the use of a sample book. While one sheet of paper and one envelope may be profitably taken from a box or package of each line, even though such box or package be sold for a few cents less than the regular price, manufacturers will, upon request, send samples of such goods as have been purchased from them direct or through a wholesaler.

For stationery samples first secure a good strong scrap-book with plain binding. Avoid novelties with "ready-gummed" pages or other ultra-modern innovations.

#### How to Arrange.

Let us suppose that the first page in the book is to hold samples of six kinds of paper and the corresponding envelopes. First, so far as possible, select six varieties of similar sizes and prices. If the envelopes are not all of the same shape and size take the smallest and narrowest, turn up the flap, moisten the gum slightly at the extreme corner of the flap and press it to the page of the book so that the envelope will be fastened at the upper, inner corner of the page with outside surface of the flap as well as the addressing surface of the envelope exposed. In the same manner place the second envelope beneath the first, but in such position that it extends one-half to one inch below the first and the same distance beyond it, towards the outside edge of the page of the book. In corresponding positions place each of the four remaining envelopes, each one beneath the one preceding it. Take the sheet of paper corresponding to the first or top envelope and with a mere touch of paste on the lower corner of its last page fasten it to the lower inside corner of the book page. Place the other sheets beneath it, upwardly and outwardly in the same order as the envelopes have been placed. To secure symmetry endeavor to have the last sheet of paper come close to and in a corresponding position on the book-page with the lower envelope. If care is used in attaching the samples to the

book-page and equal care is given to the removal of samples of exhausted stock the book may be used for a long time. Prices and other memoranda should be placed directly upon the samples.

In addition to paper and envelopes, similar books may be used for samples of legal or other printed forms, visiting cards, playing cards and even for suspensories, plasters and other very thin articles of merchandise.

## LETTER BOX

### Denatured Alcohol and Retail Druggists.

*Editor The Pharmaceutical Era:*

Referring to your editorial "Why Not Sell Denatured Alcohol?" in your issue of February 4, I would say that I believe you are "barking up the wrong tree." The authorities and the newspapers seem to have assumed that the retail druggists would be the natural distributors of this product, because, I presume, the sale of ordinary alcohol and wood alcohol has been confined to them. But when denatured alcohol shall come into general use for heating and lighting, the grocers and not the druggists will supply the demand, and its general use, which will be most desirable will come the sooner if it be understood that the grocer and not the druggist is to furnish it. The reason for this is that the grocer will be in position to deliver it along with other family supplies, just as he now delivers gasoline and coal oil. Most grocers have delivery wagons and certainly very few retail druggists have. Coming into general use the quantity required would be considerable and the retail druggist is not prepared to handle it, nor would it pay him to prepare to handle it, for ultimately he would be in competition with the grocer and would lose out.

As for lamps, the druggist might do something in this line, but the stoves for cooking and heating would better be supplied by the general dealer in stoves. Yours truly,

Harrison, O., Feb. 10.

J. P. MARVIN.

[While Mr. Marvin is probably correct in his view of the ultimate trend of trade in denatured alcohol, his conclusions need not prevent retail druggists from taking advantage of all the trade they can handle up to the point of the bulk being too large for them to handle. In some cases the druggists may be able to build up and keep a trade large enough to deliver by automobile, using the alcohol as fuel.—Ed.]

### No Longer in Employment of S. S. Pierce Co.

*Editor The Pharmaceutical Era:*

In an article in your issue of January 28 regarding a bill introduced by Thomas J. Fay, of the Massachusetts Legislature, imposing a tax of \$10 for each faucet of a soda fountain, the statement is made that Mr. Fay is employed as a salesman with the S. S. Pierce Company, but this is not true. Mr. Fay worked for us several years ago but is not in our employ at the present time. As this article will undoubtedly have a bad effect with the retail druggists who are good customers of ours, we would thank you very much to contradict the same. Yours very truly,

Boston, Feb. 4.

S. S. PIERCE COMPANY.

### International Congress of Applied Chemistry.

The International Congress of Applied Chemistry will meet in London May 27 to June 2. It is proposed to issue an invitation to the London Congress to hold its next meeting (spring, 1912) in New York City. A temporary committee has been formed to consider, first, whether it will be practicable and wise to issue such invitation; and second, if decided in the affirmative, what steps shall be taken to issue it and make it effective; and it has been decided to request all interested to attend a meeting Saturday, February 20, at 8.15 p. m., at the Chemists' Club. The temporary committee is composed of Wm. H. Nichols, chairman; Albert Plant, treasurer; H. Schweitzer, secretary; Charles Baskerville, first vice-chairman; Marston T. Bogert, second vice-chairman; L. H. Baeckeland, Charles F. Chandler, John Hays Hammond, J. H. Hasselacher, Alx. C. Humphreys, W. R. Ingalls, Adolf Kuttroff, Morris Loeb, W. J. Matheson, H. A. Metz, William McMurtrie, T. J. Parker, Cl. Richardson, William J. Schieffelin, I. F. Stone, Maximilian Toch.

## Price Versus Variety.

By Emma Gary Wallace.

Variety may be the spice of life, but spice itself ought to yield considerable variety, and that, too, of a paying kind. Once in a while we see a few printed lines calling emphatic attention to the fact that the spice trade belongs to the pharmacist. Most unquestionably it does, but possession counts for nine if not ten points in the law of cash profit, if some one else has the trade, and he—the pharmacist—makes no systematic effort to regain his just part of it.

The trade in *spices and flavoring extracts* has wandered and must be sought to be recovered. It never will come faring back like the educated sheep of the renowned Bo-

Peep, if left entirely to itself. It must be rounded up by a logical course of reasoning, showing why the pharmacist, and he alone of retail dealers, is a competent judge of the quality and purity of these products; and then it must be corralled by educating the buyer to the point of discriminating between the passably good, the little better, and the superlative best.

### Do Not Know What They Are Getting.

The buyers of ground spices and flavoring extracts are composed largely of housewives, bakers, candy and cream manufacturers, and it is an *exceptional case* indeed where such a purchaser has the least idea whether the condiments purchased are exhausted spices from which the oil has been extracted; blended spices, which bear a close resemblance in appearance to the simon-pure article, or full strength goods of the highest grade, prepared for market according to the most approved methods. In the latter case each kind of whole spice is carefully selected from the region yielding the finest product; it is assayed to determine its actual quality; and while still fresh and strong it is ground in its own separate mill that the delicate flavor may not be contaminated. The next step is to seal the ground spice in air-tight cans immediately, that its volatile oil may not escape.

To the customer, spices are supposed to be just spices, and are so ordered without further specifications. The recovery of the trade is largely a matter of educating the buyer, and that education cannot be accomplished in a day or a week, but a great deal may be done in six months or even three. The average housekeeper sincerely desires to obtain the best for her money and would not knowingly waste her allowance on inferior supplies. The large manufacturer should, from the very quality of seasonings used, recognize quality par excellence as a matter of plain business prudence.

The pharmacist alone is intimately acquainted with the whole spice, its history, care, and the value of its various products, and he is in a position to know what the guarantee vouching for a shipment is really worth. If necessary he can make an assay, himself, or subject the goods to tests to learn what he has bought.

The pharmacist knows this and the dealer, if he has ever given the matter any thought knows it, too, but as long as the former contents himself with an occasional protest to the other members of his profession, the latter will continue selling spices and extracts of varying grades to the trade for good money. The dealer is in no wise to be blamed, he simply supplies his patrons—often numbering druggists' families among them—with the goods for which he receives orders. He has never set himself up as an authority, and in many cases freely acknowledges that he knows little more about the goods than the label tells.

### Enormous Spice Supplies Required.

The demand for spices is simply enormous. They are a class of goods that move rapidly for they are articles of daily consumption by the whole nation. During the year 1907, we are told that 2,677,401 pounds of nutmegs were imported, 23,017,598 pounds of pepper (black and white), and 16,900,644 pounds of other spices considered together; making a total of 42,694,643 pounds.

From Singapore and P'ang alone, there were imported to the United States during 1908 no less than 7840 tons of black pepper, 2050 tons of white pepper and 478 tons of nutmegs. It should be remembered that the last named spice is grown in this country, chiefly in our little "Nutmeg State."

### Poor Condiments a Menace to Health.

It has been commonly supposed that the sole value of spices lay in their property of making food agreeable to the taste. This is but half the truth, for spices have a distinct dietetic value, each climate and zone producing that for which there is a strongly indicated need of its people. Poor condiments are a menace to the health as their essential oils are most valuable castric stimulants.

It is a common saying that we are a nation of dyspeptics. The French people assert that we American housewives do not understand the rudiments of seasoning and flavoring, and there is no denying that there are grounds for such a charge. It is a serious charge, too, for it calls into question the palatability and in a great measure the digestibility of our food. Food gives us our working energy. There is undoubtedly then, a direct connecting link between some of the causes of dyspepsia and the use of impure seasonings.

The American housewife has suffered a great injustice, being made to bear the blame of much in this connection for which she was entirely innocent. She should rise up and demand restitution through her family druggist, her magazines, and her clubs—the restitution of unimpeachable quality of materials with which to produce good seasoning—i. e. good health—results. It is most fitting that the druggist's wife be a pioneer in this much needed field of reform for herself and her sisters. It has been literally demanded of us that we make bricks without straw, for up to the time of the passage of the Food and Drugs Act the chances of being able to obtain seasonings were exceedingly slender. Here and there a druggist carried a line of pure spices, but they were helplessly in the minority.

The goods to be generally obtained were most unreliable. Out of sixteen samples of pepper examined by a noted food chemist, only three were even fairly good; the other thirteen were blends of foreign substances largely. Of twelve specimens of cinnamon, only three contained any cinnamon at all, and even these were found to be mixed with cassia and sawdust. One of the nine specimens was said to contain no trace of any spice whatever of any kind.

Such innocent adulterants as chalk, brickdust, lampblack, linseed meal hulls, burnt meal, red lead, colored sawdust, sandalwood sawdust, mahogany sawdust, lead chromate, oxide of iron, rice, starch, ground talc, rice, old dried and ground turnip, arrowroot, coal tar colorings, plain dirt, olive stones ground, etc., were found! Some of these were added for bulk, some for color and some for weight.

Ye Gods! And we women must continue to bear the world-wide blame for years to come for not being able to season exquisitely and delicately with such truck!

### Conditions Considerably Improved.

Wilful adulteration is now exceedingly rare, and probably a few months hence will be rarer still, when the new wording of the official guarantee comes into effect, making it plain that it is the guarantee of the individual and not of the Government, to which, however, the individual is responsible.

What is more commonly met with now, however, are the inferior and cheaper grades of the whole spice, or mixtures and blends of various qualities resembling to the naked eye, spices consisting wholly of the best and most expensive kind of the respective condiment.

The consumer ought to be still further guarded, as the housewife especially, is powerless unless some competent person comes to the rescue and offers protection in the form of absolutely pure, unblended, full strength goods. This is no side line but a legitimate part of the regular business which has suffered seriously through unskilled handling. The old time spice bag, plaster, and spice poultice, so effective and safe to use fell into gradual disrepute as the quality of the spices that were used deteriorated.

When a real want is filled in the most satisfactory possible manner, a public service has been rendered which soon lays the foundations of genuine business-building. It may take time and work. It will; but what of it? If the farmer failed to plough and to harrow and to plant in season because of the work entailed, he never could reap his golden harvest. It

takes work and waiting and then more work and more waiting. The second crop does not sow itself.

#### Some Means of Public Education.

Every locality will suggest its own best methods of education along these lines. Public education calls for advertising and advertising is largely the science of written salesmanship. Good demonstrating is valuable advertising as well. Almost every little town or city sub-division boasts a Domestic Science Club or a Cooking School or a Class in Home Economics. If so, the task is simplified. These classes naturally consist of the most progressive housekeepers within a certain radius. They would willingly grant an hour of their time for a talk and demonstration on "Spices, Their Selection and Dietetic Value." If such an opportunity could not be obtained, small folders setting forth the main points might be sent for distribution, and one of these should also be given to every woman customer coming to the store. A tray of samples in glass vials, showing spices, oils and extracts could be kept in readiness to show and used to good advantage in a window display.

Another way to create a widespread interest is to offer a weekly or monthly prize—something worth while—to the school children of certain grades for the best essay on one or two spices. The contest should be prefaced by an announcement stating that the growth, history climatic conditions, importations, home productions if any, manufacture and resulting products are expected to be covered. The winning essay of course would become the property of the druggist, and could be used to advantage in the paper having the largest local circulation. It would be tactful to secure a couple of the teachers to assist in the judging. The idea could be continued until the spice list was covered, and in order to maintain interest until the very end an additional prize might be awarded to the best of the prize winning essays. This is inexpensive advertising considering the possibilities it holds.

#### From the Customers' Viewpoint.

Bulk goods of this class never appeal to the customer. It entails trouble, loss, and inconvenience to transfer purchases into unlabeled home containers.

Not long since a druggist made a window display of spice packages neatly wrapped in white paper and arranged on a white window base. The packages were priced and labeled, but the prices were noticeably high without a word accounting for the price. The man stood inside his store with his hands in his pockets and watched the passers-by. The second day it was the same, and the third. It was fly time and yet the window was left to "draw trade" for three weeks. At the end of that time he declared that the spice idea was a failure for his locality anyway—it was a well-to-do intelligent neighborhood of good spenders—and he announced that in his opinion the game was not worth the candle. It was not, played that way.

The spice line is not sufficiently extensive to be burdensome and yet it is varied enough to suit all tastes. Naturally the seeds and whole spices used for pickling and preserving will be called for, and certain other condiments as well that are highly thought of by foreign residents, if there chances to be any number of them in the locality. This stock should be fresh and attractive and be suggestively displayed and not bear evidence of having been in stock when the proprietor was in his pinafore days.

Attention must be gained, a desire for the goods stimulated, the customer convinced that he is getting the finest goods on the market, and that for quality furnished the price is right.

#### The Itinerant Vender and the Extract Trade.

Perhaps in no one line does the itinerant vender take more trade directly from the drug store than by the sale of extracts. There are large manufacturing plants which thrive solely by this outlet for their goods. I have yet to see the advertised or unadvertised ordinary commercial extract that could not be beaten to a finish by the drug store errand boy, with a few directions from the junior clerk. The druggists' best extract of vanilla for example is about as much like the deceptions usually sold under that name as the Fourth of July street-stand lemonade is like the rich product of a first class soda fountain.

One druggist and his wife decided to specialize on extracts, and so they made and advertised a complete line of fine flavorings for cakes, candies and creams. The goods were

the best that could be made. The soda fountain advertised them by calling attention to the flavors used in the syrups. Before long a candy manufacturer began to buy at wholesale, then an ice cream maker followed suit. After that it was astonishing how rapidly the business grew.

In a short time the extract business had outgrown the dark corner of the laboratory, and it was deemed advisable to give it ample space and a better equipment. The file of unpaid bills commenced to dwindle and finally disappeared altogether. All this made possible a better general buying capacity, and the entire business took on an air of healthy prosperity. They could no longer afford to attend to the detail work themselves, for their time was needed for generalship.

Success had entered their doors, taken a place at their council-table and they were determined to make that welcome guest a member of the firm—for nothing succeeds like Success.

Extracts are a joy to make and happily they increase in value with time. The returns from this as from the spice trade are dependent on setting and keeping in motion the right motor power.

The motor power is judicious educational advertising, backed by having quality to justify every claim made. That quality must never vary unless, to be permanently improved, and the advertising must Repeat, Rehearse and Reiterate the important fact of QUALITY until every one knows and recognizes its truth.

### NEW BOOKS.

MINERAL RESOURCES OF THE UNITED STATES, 1907. 2 volumes, 8 vo. cloth. Part I. Metallic products. 743 pages; Part II. Non-metallic products. 897 pages. U. S. Geological Survey, Washington: Government Printing Office.

The arrangement and scope of this report are practically the same as in preceding reports except that it appears in two parts, the first part containing the statistics of the metallic products, and the second part the statistics of the non-metallic products of the country. Each chapter of the report is a census of the productive features of the industry under discussion, the various chapters being preceded by a summary of the principal statistical information presented. Of the chemical materials thus summarized are arsenious oxide, borax, bromine, lithium minerals, sulphur, etc., all products in which the pharmacist as a manufacturer is particularly interested.

REPORT OF THE COMMISSIONER OF EDUCATION for the Year Ending June 30, 1907. Washington: Government Printing Office.

This report shows that material progress has been made in educational matters during the period under consideration. Of particular interest to pharmacists are the statistics relating to schools of pharmacy. 71 institutions reporting an enrollment of 5047 students, a decrease of 98 from the number reported for the previous fiscal year. The number of graduates for the same period was 1386, a decrease of 277. Only one school—the Massachusetts College of Pharmacy—reported a permanent endowment fund.

#### Mr. Howe Wins Honor for Oysterette Formula.

From the Hamilton (O.) Republican-News.

James Shuler Howe, manager of the Howe Drug Company's soda fountain, has received the first prize from *The Soda Fountain* journal, the leading trade paper of the country, of fered for the best soda fountain recipe. The prize was \$ and Mr. Howe won it on his "oysterette" over 25,000 competitors. The prize-winning oysterette formula will be found elsewhere in this issue of the *Republican-News*.

# The Drummer.

By Joel Blanc.

He is either a graduate from the order floor of a wholesale house, a retail drug clerk who pines for excitement and dyspepsia, or a kid fresh from high school who is put on the road because his pa is head of a department in "the house." He starts out with the idea that if he makes a hotel-spread of his samples or poses his prettiness in a hotel window the druggists of the town will flock in like seven-year-locusts and thrust their orders upon him. He returns from his first trip with the consciousness of having had

a real good time and a headache. Half his expense account is deducted from his salary and he starts out to look for another job.

His second trip finds him a wiser and less hilarious man, but however sad he may then be, and for all the years to come, he must hide the scars of his heartaches beneath a cheery smile and voice a jovial word. If he does not do so, people will call him a grouch, and if he does lots of folks will call him a "fool drummer."

He goes into the store of a druggist who blows about his moral courage and when this virtuous bravo catches the first glimpse of the drummer's sample case he flits out through the back door after having instructed his clerk to say that he will not be back for a week, or, if the drummer does corral this morally courageous knight-errant that individual will swear by every page in the U.S.P. that he is only a clerk and that "the boss is out."

If the drummer happens to be a specialty man, the druggist on whom he calls will accept one or two nickel cigars for which he charges the wayfarer a dime each and which straightaway the wayfarer charges to his house as "laundry." When asked to invest in the specialty the druggist declares that he is "stuck on a gross of that stuff," when in fact he never ordered more than seven-twelfths of a dozen of it in his life. At this point a woman comes in and asks for one package of the "stuff" and the druggist blandly informs her that he has not a package in stock. The drummer is expected to be such a self-possessed gentleman or gum-headed guy—take your choice—that he will smilingly stand aside and listen to the druggist abuse his goods from A to Zambesi, in an effort to sell a "just as good." After the woman departs with her "just as good" the druggist who was "stuck on a gross" a few minutes before happens to think that he just "ordered half a gross from the jobber yesterday."

In another store the drummer may be asked why his house does not advertise and create a demand, while on a show-case before his very eyes there rests a show-card which he left on a red with a strip of paper upon which there is lettered the name of the druggist's own substitute for the goods which the ad originally advertised.

After the drummer has sat in the fore part of a four-by-eight store for one hour and seventeen minutes, waiting for the proprietor to finish a game of checkers with Dr. Nodope, he said druggist suddenly appears with hat on head and as he shakes through the front door on "very important business" which consists in going around to the livery stable to (a new colt) he asks the drummer to "come in next week."

In still another store the wanderer may come in contact with an individual who has a front like a Standard Oil Senator and departs himself like the proprietor of a chain of forty-four drug stores. After the drummer has talked himself into the wabbles in an effort to make a sale to his magnificence, the presence person states that he is only a clerk, and pointing to a corner in which crouches a little, shriveled-

up specimen of humanity who looks like a mummified chimpanzee with a grin like a carved coconut, says: "There is the proprietor."

The drummer listens to the call of the wild—African hotel porter who announces that it is three, thirty-seven A. M., and that the bus does not run to the four o'clock train. He dresses in the dark because the electric lights were turned off at midnight, chases the porter through a mile of thick profanity and thin mud only to find that the train is five hours and sixteen minutes late because the cow-catcher has the glanders. Or he may rush from the dining room with nothing to satisfy his appetite but a hot soup burn on his chin, because "the bus is waiting." After sitting in the bus long enough to eat a five-course meal he learns that the bus is being held for Judge Bunn, Congressman Bum or Senator Bung. At last the bum Bung with a bun is thrown in and the bus is rushed to the depot, only missing the train by about eleven minutes.

The drummer writes to his house that there is a salesman just ahead who is cleaning up everything. The house replies that there are ten more salesmen just behind who are doing another clean-up. He gets mad and tries to catch "the salesman just ahead" to jolt his jaw out of joint. Much to his amazement he picks up a bunch of orders, while on the chase. He sends them to the house and asks for a raise of salary. In return he gets word that half the orders are N.G. except on C.O.D. terms and that the other half are underpriced, and he will have to return and fix things with the people who gave him those orders. Disheartened, he dares to refresh himself with one schmit of beer and for which act an old deacon who used to know his grandmother sends his name bounding down the ages as "a dissipated drummer."

Because he keeps his shoes shined and has an umbrella without holes in it, a lot of nanny-kids who are young enough to be his daughters, try to flirt with him, and so he becomes forever known as "a gay old goat."

He sends all but sixteen cents, his order book and his key-ring to his wife to buy winter clothes for the children. He expects to receive a check at the next town. His mileage book gets him to the next town but the check seems to have fallen by the wayside. He wires for money, the house wires the money. The prominent citizen who is combination baggage-smasher, telegraph operator, section hand and church-bell ringer, wants him to be identified. The hotel-keeper meets his request for identification by pointing to the sign "We cash no checks." Having never been in the place before, the only druggist treats him as if he was a Canadian smuggler of German synthetics made in Cincinnati. At last the railroad magnate acknowledges his identity, but states that he will have to stay in town three days to get the money because he, the magnate, will have to get the money from the bank, and the bank is now closed, the next day will be a legal holiday and the following day Sunday. Soon the whole town knows that he is broke and thus he gets a reputation as a "spend-thrift drummer" and it sticks to him for life.

Most of the time the house seems to be "just out of" or "unable to procure" about sixty-seven per cent of the goods it instructed him to sell. But it always fills the orders with "our own brand." So, on the second and all succeeding trips he gets Hail Columbia, hellebore and Helen Devilment from the retailers who object to competition in the working of the substitution racket.

Oh yes, the life of the drummer is one long scream! You bet it is! During the sleepless hours on beds stuffed with unpickled corn-cobs, while the hotel biscuit and mystery pie are raising humors and the gripes within his sacred precincts, he thinks of his wife and children at home. His homesickness is so intense that he thinks he is getting appendicitis on the left side. As for the "long scream" part of his existence, the only screams that come to him are the thought-heard screams of sick loved ones from whom business keeps him.

Because here and there may be found a fool or scoundrel among drummers, men who would have been fools or scoundrels if they had been preachers, civil engineers or anything else, the unthinking public puts down all the men of the road as a lot of sports or idiots. Incidentally the men are also supposed to be a lot of suckers who will furnish liquor, tobacco and show-tickets to all the well-dressed hotel loafers in town.

But there is another and a brighter side. A great majority of retail druggists are big and broad enough to appreciate

that a traveling salesman may be an honorable gentleman. After a man has been on the road for a few years he knows where a good many such retailers are. They draw the clean traveler to them as unerringly as the pole draws the needle. It is simply a case of man meeting, knowing and loving man. So the man wins, on the road or off, in the store or out, even if he happens to be a drummer or a druggist.

## Original and Selected

### OPPORTUNITY OF THE HOSPITAL PHARMACIST IN ADVANCING THE U.S.P. AND N.F. PROPAGANDA.\*

By Jno. T. Harbold, Ph.D., Pennsylvania Hospital,  
Philadelphia, Pa.

"As a tree is bent so will it grow" is a maxim which is capable of application to the animal as well as the vegetable kingdom, and a bend given to the human propensities in the formative period of life is as readily retained in one instance as the other.

We use this maxim as an illustration of our simple theory that the natural inclination of the medical practitioner in the selection and prescribing of drugs is, in a great measure, determined by the nature of his instruction in materia medica, therapeutics and medicine, and the attitude which his professors and instructors have adopted in relation to this branch of his art. The reason for this is obvious. It is within the observation of us all.

The mind in early student life is most impressionable; the imitative and receptive faculties are at their zenith, and the impress made, not merely by the instruction, but by the general demeanor of the teacher, is often indelibly fixed in the characters of the men to whom the tuition is being given. This is an abstract, fundamental principle that is recognized as soon as it is uttered. It is this principle which generally controls in the teaching staff of a college, and the success of a teaching institution is largely dependent on the extent to which this principle is consulted in the appointment of those whose influence on the student body most nearly approximates the standard of an ideal educator, and whose proclivities and prejudices are worthy of imitation and support. But it is no uncommon thing to find in some of the medical schools and colleges of the present day professors whose teaching is modeled entirely upon their own theories, and who are intolerant of the discoveries of their contemporaries, or the results of the experience of their predecessors, when they are at variance with the conclusions which they themselves wish to attain. This attribute in some cases rises no higher than stubbornness, in others it resembles eccentricity, but in nearly all cases it is condoned, if not actually approved, since it denotes originality—that enviable characteristic which even college professors do not always possess. We make these observations with the utmost respect for the gentlemen who help so much to fashion the scientific side of the members of this distinguished profession, and we refer to conditions in which they figure simply to call attention to a fact which concerns the pharmaceutical profession as well.

#### Conditions in Some Medical Hospitals.

The lecturer in materia medica, therapeutics or medicine frequently prides himself upon the originality of his own instruction. In the desire for student popularity, he exerts every effort to make his subject attractive, and he imagines that the substitution of a trite, snappy terminology (even though compiled from the literature of proprietary concerns) for the official nomenclature will achieve the desired result. He will not be contented to the U.S.P. He fancies that it savors of the commonplace if he recommends the strict use of the official preparations, and that he is hampered in the discretion of his office if he cannot suggest the administration of well-known drugs under smart proprietary names. So far he is promoting his own interests, but he forgets that the man before whom he is appearing will unconsciously assume his

attitude of indifference in following the standard text-books (U.S.P. and N.F.); that they will imitate his laxity, and that they will exhibit no more discrimination than he himself between proprietary remedies at exorbitant prices, and official drugs of equal efficacy, and in many cases of identical chemical composition, at much lower cost. The result is quite natural. The young graduate in medicine, when he emerges into practice, will follow the whim of his mentor. He neglects to consult the Pharmacopoeia and National Formulary; he will carry into execution the indiscriminate suggestions picked up in his classes, and the patient for whom he is prescribing, and the pharmacist who supplies the remedy will suffer thereby—the latter will have the trouble of hunting up fancy patent nostrums, and the former will be put to extra expense.

#### Harmonizing the Professions.

This, we contend, is the condition in some of the medical schools of the highest standing, and being beyond our jurisdiction, and not readily amenable to our wishes on such matters, these schools must be left to themselves with the hope that the evolutionary process through which teaching institutions will occasionally pass will yet bring their systems to, at least, a reasonable adherence to the old and reliable standards—the United States Pharmacopoeia and National Formulary. There is, however, a stage in the professional training of the majority of the present-day physicians to which we can turn our attention, and through which, if tactful, we can accomplish much towards harmonizing the professions. We refer to the post-graduate hospital course taken, as we have said, by the majority of the physicians graduating in our time.

#### Duties of the Hospital Internes.

By the average interne in a hospital, the position is regarded as entirely educational. His work and duties are but a continuation of his pre-graduate labors. He is, of course, entitled to a more intimate acquaintance with the prerogatives of the practicing physician than in his student days, but he takes up hospital work in order to perfect himself in his art. It is here that the hospital pharmacist can, and should, play an important part. The patient's treatment as directed by the visiting physician or surgeon, is transcribed in appropriate form by the interne who often uses in this work the proprietary nomenclature acquired in his student days with the acquiescence of his chief, who has possibly overlooked or was ignorant of the existence of a drug with the same chemical composition in the U.S.P., just as efficacious and much more economical than the proprietary preparation with the fancy title. It is the duty of the pharmacist here to point out to the interne, or to have it brought to the knowledge of his chief, that such prescriptions are needlessly expensive, and that a moment's reference to the U.S.P. or N.F. would furnish him with one or more remedies just as effective as the trade preparation, and possessing the advantage at once of being cheaper, and of ingredients of the nature of which he knows to a certainty, and of the effects of which he can find the most definite information.

With the hospital interne the hospital pharmacist is naturally in closer touch than any of his brethren outside, and being in charge of the drug supply of the institution, the pharmacist has a reasonable right to expect that his view on matters pharmaceutical should prove acceptable to the resident medical staff, and that his suggestions for the elimination or addition of such pharmaceutical terms as have been passed upon by the proper authorities, should receive from the interne the consideration they merit and deserve. If the pharmacist has carefully thought out the proposed changes in the mode of prescription writing, and can show conclusively that the adoption of the revised system will make for economy and regularity, he will seldom experience disappointment in the reception his ideas are accorded by intelligent men. By men of capacious temperament his aggressiveness may be temporarily checked, and his motives may frequently be subjected to criticism, but if he casts the bread of an honest purpose on the waters he shall find it even after many days. To his critics in general he can reply that his action is prompted solely by a desire to economize for the institution, and to secure complete uniformity in medication, and the absence of selfish, pecuniary motives on his part must attest to the integrity and uprightness of his plan.

We have been active in the propaganda work for over four years in connection with hospital dispensing, and the results

\*Read before the American Pharmaceutical Association at the meeting in Hot Springs, Ark., 1908.

have been extremely gratifying. The oft-repeated statement that physicians do not want to become posted on these various preparations, and receive suggestions from the pharmacist is erroneous. The experience of the writer leads him to believe that the physician is quite willing to confine his prescribing to the U.S.P. preparations as nearly as possible, and when his attention is called to the fact that he is writing for U.S.P. drugs under fancy names he is usually thankful for the information, and alters the prescription writing accordingly.

#### Opportunities of Hospital Pharmacist.

It is in this way, we believe, that the hospital pharmacist has great opportunities for rendering much valuable service to both professions. By a timely, judicious suggestion he can start a new train of thought in the mind of the young physician. He can turn the latter's attention to the advantage of a uniform system of prescribing, and, if opportune, he may be able to check and discourage the random use of vague and uncertain compounds which lead to empiricism on the one hand, and irregularity and dissatisfaction on the other.

In conclusion, let us express the belief in the ultimate harmonious co-operation of the medical and pharmaceutical professions, and we would not willingly mar this harmony by sounding a discordant note. We must not be taken as alleging that all physicians favor the use of patent medicines, or that in all cases it is easier for the pharmacist to compound the prescription than to hand down the ready-made article from his shelves, but we believe there are many hospital internes who have not learned the formula of the proprietary drugs they order, nor do they know that a little insight on their part would save considerable money to a needy institution, and later in life save drug bills to their patients, whose financial interests they should conserve as carefully as their health.

#### LIQUOR IN MASSACHUSETTS PHARMACIES.

##### State Board Recommends Changes in Law Governing the Sale and Asks for Disciplinary Power.

BOSTON, Feb. 1.—Five important recommendations are made in the twenty-third annual report of the Massachusetts Board of Registration in Pharmacy. Four concern some phase of the liquor law and the recommendations of the board, with their comments, are as follows:

"Chapter 281, Acts of 1906, gives the board the power to grant certificates of fitness to registered pharmacists to sell intoxicating liquor, only on a physician's prescription, in those cities and towns which do not grant licenses of the first five classes to sell liquor. We would recommend that this law be so amended that the board may grant a certificate of fitness to an applicant residing in a licensed city or town should the applicant prefer it to a sixth-class license.

"Chapter 308, Acts of 1907, gives the board the right to revoke, for cause, any certificate which it may have granted to enable the applicant to procure a sixth-class license, but the law does not state that such revocation shall revoke the license granted thereon. We would recommend that the law be so amended that the revocation of a certificate shall revoke the sixth-class license granted thereon by the local authorities.

"We would recommend that druggists holding a sixth-class license should be exempt from giving a bond, and that the fee be made \$5 instead of \$1, as at present, payable to the State.

"We would again recommend that the board have the power to suspend certificates of registration in pharmacy for gross and confirmed habits of intoxication or improper use of drugs, such suspension to take place only after a hearing and the most conclusive evidence."

The fifth recommendation relates to the time at which members' terms expire, and is as follows:

"We further recommend that the term of office of the members of the board be changed to correspond with the fiscal year of the Commonwealth, namely, from December 1 to November 30, inclusive, and that the members of the present board hold over until such date. At present the official year ends October 1."

#### Consideration.

Helen—Mr. Blow says he is a self-made man.

Grace—Very considerate of him to take care to relieve his friends of all responsibility.

## QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

#### Wording of Serial Number Guaranty.

(B. S.)—In further reply to your query, this journal, January 21, 1909, page 63, E. M. Wells, Ph.G., Paris, Texas, calls our attention to the omission of part of the wording of the form of general guaranty as suggested by the Board of Food and Drug Inspection in F.I.D. 96. As corrected the form of guaranty should read:

I (we), the undersigned, do hereby guarantee that the articles of foods and drugs manufactured, packed, distributed or sold by me (us) and consisting of all..... articles which are now or which may hereafter be manufactured, packed, distributed or sold by me (us) are not adulterated or misbranded within the meaning of the Food and Drugs Act, June 30, 1906.

Of course, the signature to this guaranty must be authenticated before a notary or other official empowered to affix a seal.

#### Lightning Renovator.

(E. C. C. S.)—Under this name various formulas have been published for use as a cleansing fluid for removing stains from woollens, cloths, carpets, etc. Here are three from which you should be able to make a selection:

(1)

Stronger solution of ammonia .....	1 ounce.
Soft soap .....	6 drams.
Sodium carbonate .....	2 drams.
Sodium borate .....	2 drams.
Methylated ether .....	1 ounce.
Alcohol .....	1 ounce.
Water, enough to make .....	40 ounces.

(2)

Oleate of ammonia .....	2 ounces.
Solution of ammonia .....	2 ounces.
Ether .....	1 ounce.
Benzine .....	5 ounces.
Chloroform .....	1 ounce.

Mix the solution and oleate; shake well and add the ether; shake and add 5 ounces of benzine; agitate thoroughly. Then add 1 ounce of chloroform and shake well. Allow to stand for a few minutes and shake at intervals, when a mixture having the consistency of a cream and showing but little tendency to separate will result.

(3)

Stronger ammonia water .....	1 ounce.
Tincture of green soap .....	3 ounces.
Sodium carbonate .....	2 drams.
Sodium borate .....	2 drams.
Ether .....	1 ounce.
Alcohol .....	1 ounce.
Water, enough to make .....	32 ounces.

#### Vanillin, Coumarin and Caramel.

(B. H. G.)—"Will you kindly inform me in your next issue what are the incompatibles of vanillin, coumarin and caramel (burnt sugar)? I have had considerable difficulty in using these substances. In the first place I get a continuous precipitate in making a 'compound vanilla,' and I find in making a batch of five gallons and using a tin can container that the can rusts rapidly, so that in a short time the bottom is liable to fall out. I use dilute alcohol as a vehicle."

Your principal difficulty seems to be in the fact that you have used a tinued iron container in which to prepare your solution, which, no doubt, has come in direct contact with the

iron, thereby corroding it and decomposing the vanillin with subsequent precipitation. No incompatibilities are likely to be met with in the preparation of a flavoring solution, such as the above, if the materials used conform to the standard tests for these substances and the preparation be made in a glass container, preferably following the process outlined by the N.F. As will be noted, the latter formula contains glycerin, which, in the experience of many, greatly improves the character of the resulting preparation.

Regarding the labeling of a product so made for sale in this State (New York), see ERA of June 25, 1908, page 814. Under the Federal Food and Drugs Act this preparation would be considered as an imitation product and should be labeled as "vanillin and coumarin flavor," "imitation vanilla" or "vanilla substitute." See Food Inspection Decision No. 47.

#### Acid-Proof Colorless Cement.

(S. M.)—In reality there is no such thing as a colorless cement. However, a writer in a foreign technical journal recommends the following for cementing vessels of glass, china and other containers which are intended for strong acids:

Pulverized asbestos .....	2 parts.
Barium sulphate .....	1 part.
Soluble silicate of sodium (50° B) .....	2 parts.

These materials, well mixed, are claimed to produce a cement which will resist hydrochloric acid. In case of hot acids, a still stronger mixture is recommended, as follows:

Soluble silicate of sodium (50° B) .....	2 parts.
Fine sand .....	1 part.
Pulverized asbestos .....	1 part.

Both cements become solid after standing for several hours. A quickly hardening cement can be obtained by substituting soluble silicate of potassium for sodium silicate.

A cement extensively used by jewelers for mending fine glass and china, although possibly not so "acid-proof" as you would like, is the following:

Isinglass .....	1 ounce.
Water .....	4 ounces.
Alcohol .....	8 ounces.
Mastic, in tears .....	$\frac{1}{2}$ ounce.
Gum ammoniac .....	$\frac{1}{4}$ ounce.

Soak the isinglass in the water for a few hours and stand in a warm place to hasten solution. Then heat up, to evaporate all unabsorbed water. Keep the isinglass mucilage hot so that it will not set solid. Separately dissolve the mastic resin in 4 ounces of the alcohol, to which add the gum ammoniac. When the two preparations are ready, add the other 4 ounces of alcohol to the hot isinglass mucilage and mix with the mastic varnish, heating the whole until liquified by standing the vessel in a water bath. For use, remelt over a water bath and apply hot.

#### Emulsion of Linseed Oil (Thompson's).

(J. F.)—

Linseed oil .....	4 fl. ounces.
Oil of wintergreen .....	$\frac{1}{2}$ fl. dram.
Oil of cinnamon .....	$\frac{1}{2}$ fl. dram.
Acacia, powders .....	2 av. ounces.
Water .....	(112) fl. ounces.
Glycerin .....	$\frac{1}{2}$ a. ounces.
Simple syrup .....	3 fl. ounces.
Dilute hydrocyanic acid .....	45 minims.

Triturate the mixed oils with the acacia, add three fluid ounces of water, triturate until emulsified, add the syrup, glycerin, acid and the remainder of the syrup and mix well.

#### Mother Leaves; Senna Pods.

(R. I.)—"I enclose a sample of what is sold here under the name of 'mother leaves.' Would you be good enough to give me the botanical name and any particulars you may have about the sample. I have been unable to procure the article from the jobber under the name and it is being sold by a competitor."

We recognize the specimens of "mother leaves" submitted by our correspondent as "senna pods." As found in the market they are derived from both *Cassia acutifolia* and *C. angustifolia*, being either admixed with senna leaves or sold separately. As described in the text books they are 3.5 to 7 cm. long and about 2 cm. broad, greenish to dark brown externally

and contain five to seven obovate dark brown, nearly smooth seeds. They contain apparently the same active principles as senna leaves.

#### Interstate Registration Again.

(E. R. K.)—We have repeatedly published lists of the names of the States whose laws permit the boards of pharmacy to register applicant (without examination) who present satisfactory certificates of examination and licensure from boards of pharmacy in other States which accord reciprocal privileges. As a general proposition the boards of pharmacy constituting the active membership of the National Association of Boards of Pharmacy all maintain reciprocal relations. The States and Territories are Alabama, Arkansas, District of Columbia, Florida, Georgia, Indiana, Louisiana, Maryland, Massachusetts, Maine, Michigan, New Mexico, Oregon, Vermont, Virginia, Texas and West Virginia.

We cannot give you the amount of the several fees charged for such registration and would suggest that you correspond directly with the secretary of the board in the State you wish to locate for full particulars.

#### Coloring Wax Flowers.

(J. B. D.)—We have had no practical experience in either coloring or making wax flowers, but wax may be satisfactorily colored by using suitable aniline dyes of the desired shade, such as are employed for dyeing wax tapers, the dye known as ceresine red or red B, extra concentrated, being especially recommended for tinting wax red and induline 6 B for tinting wax blue.

The wax for making the flowers, according to the Scientific American Cyclopaedia of Receipts, is prepared as follows: Use only the purest virgin wax, entirely freed from extraneous matters. Wax that is either granular or friable must be rejected. It is generally melted in vessels of tinned iron, copper or earthenware. To render it ductile, fine Venice turpentine, white, pure, and of an agreeable odor, is added. The mixture is constantly stirred with a glass or wooden spatula. All contact with iron must be avoided, and if the vessels are of that material they must be well and carefully tinned. When stiff leaves are to be executed, two parts of spermaceti are added to eight parts of wax, to give transparency. Much care and tact are needed in coloring the wax. The colors being in fine powder, they are made into paste by adding, little by little, essence of citron or lavender. When the trituration is perfect this paste is mixed with melted wax, stirring rapidly all the while; when the mass is still liquid, it is poured into molds of pasteboard or tinned iron of the shape of tablets and is then ready for use. Sometimes it is passed through fine muslin as it flows into the molds.

Another method is to tie up the color in a muslin bag and wave it about among the molten wax until the desired tint is obtained. To combine colors it is only necessary to have two or three bags containing different colors, and to employ as much of each as shall have the desired effect. These bags, far from being spoiled by dipping in wax already containing other shades, have only to be rinsed in pure water to fit them for coloring other wax. The colors most in use in wax flower making are pure forms of white lead, vermilion, lake, and carmine, ultramarine, cobalt, indigo, and Prussian blue, chrome, Naples yellow, and yellow ochre. Greens and violets are chiefly made from mixtures of the above.

#### Society of Chemical Industry.

New York section of the Society of Chemical Industry meets at the Chemists' Club, 108 West Fifty-fifth street, February 19, at 8.15 p. m. The programme: C. D. Holley, "Manufacture and Properties of Mild Process White Lead"; L. F. Hughes, "Sublimed White Lead"; Herman S. Riederer, "Lithopone"; Jerome Alexander, "Colloid Chemistry and Some of its Technical Aspects."

#### Professor Lloyd Lectures on Indians.

CINCINNATI, Feb. 6.—Prof. John Uri Lloyd addressed a large number of friends recently in the Lloyd Library on the Hopi Indians, whom he studied and of whom he took a great number of photographs last summer while on his trip to the southwestern parts of the country. The stereoscopic pictures of the Indians were greatly appreciated by the audience, as was also the description of their manners and customs.

## PERSONAL MENTION

—WILLIAM C. THOMPSON, of Coatesville, Pa., was a caller upon the trade in New York City last week.

—SAMUEL STRUNK, a well known Philadelphia druggist, visited his old home at Quakertown, Pa., last week.

—SIMON MILLER, of Miller, Lyons & Co., Philadelphia, is spending a month on a business trip through the South.

—A. M. CLEMENS, of Springfield, Ill., who travels for the of Mexico, where he will represent Parke, Davis & Co.

—JULIUS FOERSTER, general New England representative Lilly line, recently visited the home office in Indianapolis.

—HANS HERZFELD will leave this week for the west coast for Sharp & Dohme, was a New York City visitor last week.

—E. G. SWIFT, of Detroit, Mich., general manager of Parke, Davis & Co., was a New York visitor a few days ago.

—CHARLES REHFUSS and wife, of Philadelphia, were recently the guests of John C. Gallagher and family, of Jersey City.

—F. V. PERRY, of Little Rock, one of the Red Lilly Arkansas travelers, was a visitor not long ago at the home office in Indianapolis.

—C. P. DUBOSE, of the Red Lilly sales force in South Carolina, spent a week in the home office of Eli Lilly & Co., Indianapolis, recently.

—HENRY C. BISPHAM, proprietor of the oldest apothecary shop in South Boston, Mass., is improving in health, which has not been good lately.

—L. D. WORDEN, representative in upper New York State for Schieffelin & Co., called upon friends in the New York City drug trade last Saturday.

—O. W. SMITH, manager of the New York branch of Parke, Davis & Co., left a few days ago on a business trip to Florida, where he will spend about two weeks.

—E. B. CONNER has relinquished the management of his drug store at Cedar and Cumberland streets, Philadelphia, and has gone to California for the benefit of his health.

—JAMES R. OWEN, of Morrisson, Plummer & Co., Chicago, was a visitor in the trade last week. Mrs. Owen accompanied her husband and their headquarters were at Hotel Astor.

—O. N. BERRY, Superintendent of Public Instruction of Marshall County, Kan., will enter the drug business in Marysville upon the expiration of his term of office in May next.

—CHARLES A. SMITH, of Reading, Pa., where he has been engaged in the retail drug business for several years, has joined the traveling forces of John Wyeth & Bro., Philadelphia.

—JOHN S. MEAD, a pharmacist of Appleton, Wis., is now employed at the Graham Pharmacy at Portage, Wis. He is relieving Miss Ellen Ogle, who is enjoying an extended vacation.

—R. C. RIELLY has been elected a member of the South Side Mortar and Pestle Club, St. Louis, to succeed E. A. Seunawald, who retired because he had sold his store to his brother Ferdinand.

—DR. H. B. B. POPPE, who recently moved to Washburn, Wis., from the southern portion of the State, is considering the purchase of a half interest in the Fox Brothers pharmacy at Washburn.

—FRANK G. MUMMA, a prominent Philadelphia druggist and a former member of the Pennsylvania Legislature, enjoyed a successful duck hunting trip recently in the vicinity of Anglesea, N. J.

—T. B. HUSTON, of Toledo, president of the Ohio State Pharmaceutical Association, has been in such poor health for some time that he has disposed of his drug business and is going to take a trip South.

—DR. WILLIAM H. WARREN, dean of the Medical School of Washington University, has been selected to deliver the address to the 1909 class of St. Louis C.P. The commencement exercises will occur April 21.

—CHARLES REHFUSS, of Philadelphia, accompanied by his wife and daughter and Miss Lebo, of Tipton, Ind., spent several days recently with his brother, J. H. Rehffuss, president of the Brooklyn College of Pharmacy.

—FRED RUHE is a new member of the Western sales force of the Tetlow Manufacturing Company, of Philadelphia. His brother, Charles A. Ruhe, who is with the same company, has taken permanent quarters in Chicago.

—ANDREW ANDERSON, formerly at the store of the Alex. Krebs, Jr., Drug Company, at Stevens Point, Wis., is again connected with the establishment. Mr. Anderson is a graduate of the School of Pharmacy of the University of Wisconsin.

—CHARLES HAVENS, for six years in charge of the city order department of the Milwaukee Drug Company, has resigned and has been succeeded by Ralph Suckow. Mr. Suckow has been connected with the Milwaukee Drug Company for the past seven years and is exceptionally known to the trade.

—HOWARD B. FRENCH, Joseph P. Remington, Ralph T. Hunter and Charles S. Herron were among the speakers at a banquet given in Philadelphia last week by Epsilon Chapter, Phi Chi fraternity of the College of Pharmacy. C. L. Bonta acted as toastmaster and about 40 members of the chapter were present.

—D. CHARLES O'CONNOR, proprietor of the White Drug Store at Fitchburg, Mass., has returned from Boston, where he went recently to have an operation performed to remove a dislocation of the nose. The operation, which was a difficult one, was successful and Mr. O'Connor is at his home recuperating.

—FRED WEICHMAN, of Wausau, Wis., member of the enterprising drug firm of Weichman Brothers, was a visitor at the establishment of the Milwaukee Drug Company last week. Mr. Weichman is purchasing stock and making preparations for opening the new branch pharmacy which his company will soon establish at Wausau.

—D. M. PENICK, president of the Strother Drug Company, of Lynchburg, Va., recently had a narrow escape from death. While showing the company's new building to a friend he slipped as he entered an electric elevator and fell to the floor. An employee shut off the current in time to prevent Mr. Penick from being crushed.

—DR. GUNNAR HEIKEL, for the past two years chief chemist in the laboratories of the Norwich (N. Y.) Pharmaceutical Company, has accepted the office of State Chemist in Finland, with offices in his native town of Wasa. He sailed with his family from New York on the Campania on her last trip to Europe. Dr. Avid Bengts is his successor.

—THE constitution of the Bodenmann Club says that a session may be held wherever and whenever two or more members meet. Charles Rehffuss, of Philadelphia, and John C. Gallagher, of Jersey City, with their wives, held a jolly session of the Bodenmann Club at the residence of J. Leyden White (Joel Blanc), New York, on February 14.

—EVEN MCINTYRE, honorary president of the New York College of Pharmacy, anxiously awaits the return of his copy of that rather rare old English work "Culpeper's Materia Medica or Complete Herbal," published in London in 1655. The book was exhibited by him at one of the pharmaceutical meetings some time ago and he has not seen it since.

—S. AUSTIN DECKER acted as toastmaster at a dinner given by the senior class of the Department of Pharmacy of Temple University, Philadelphia, at which the members of the faculty were invited guests. Among those who responded to toasts were H. Edward Newton, William Van Reed Seltzer, H. M. Meed, Jr., E. A. Boone, C. Clayton Eberly, E. S. Miriam and E. H. Footlight.

—JOHN B. REYNOLDS, a Philadelphia druggist, demonstrated his ability as an after-dinner speaker last week when he addressed his fellow members of the Kensington Business Men's Association at the annual banquet at the Hotel Majestic on "Organization." Other prominent druggists who were present were Robert McNeil, who is treasurer of the association; Alexander Wilson and P. L. Barlemin.

—MRS. HARRY L. STILES, wife of the third vice-president of the Philadelphia A.R.D., was the chairman of a committee of the Ceramic League which conducted a highly successful euchre at the Plastic Club last week. Otto Kraus, Mr. Stiles and several other well known druggists and their wives assisted and the majority of the players were identified in some manner with the retail trade of the city.

—MAHLON N. KLINE, W. L. Cliffe, H. C. Blair and William E. Lee, of Philadelphia; L. L. Walton, of Williamsport, and John C. Wallace, of New Castle, comprised a group of men prominent in the drug trade of Pennsylvania who last week appeared before the Committee on Health and Sanitation of the Pennsylvania House of Representatives to urge the adoption of the cocaine bill introduced by Theodore Campbell. No opposition to the bill has appeared and it will in all probability be adopted with minor changes.

## SUDDEN DEATH OF GEORGE J. SEABURY.

**Pneumonia Ends a Long and Useful Career—Prominent in Public Affairs and in Pharmaceutical World.**

George J. Seabury, head of the corporation of Seabury & Johnson, and for more than 35 years a resident of Llewellyn Park, West Orange, died on Saturday at his town house, 320 West 108th street, Manhattan, of pneumonia, after an illness of but a few days. The funeral exercises were held there on Tuesday afternoon, the interment following yesterday morning (Wednesday) in Rosedale Cemetery, Orange, N. J.

Mr. Seabury, who was in his 65th year, was born in New York and attended the public schools there. He chose the professions of medicine and pharmacy, but abandoned his studies when the war broke out and enlisted, serving in the Army of the Potomac through the battles of the Peninsular campaign. He distinguished himself in the battle of Jones' Mills and was twice wounded during the war.

Resuming his professional studies at the close of the war, he went abroad. On his return he entered the manufacturing line and subsequently, with Robert W. Johnson and J. W. Johnson, now of New Brunswick, and the late George C. Hallett, of Orange, he formed the firm of Seabury & Johnson, establishing factories in East Orange for the manufacture of surgical and antiseptic specialties. Subsequently the Johnsons withdrew and organized an independent company. Mr. Seabury was an active Republican and an ardent protectionist, writing numerous articles on protection and sound money and taking a prominent part especially in National campaigns. He was also active in various Republican movements in New York and was one of a committee of 30 which organized the party in the various election districts of the old city. He served as a Presidential Elector from New York in the recent election. In pharmacy he was widely known for his activity in professional and commercial matters, holding membership in many scientific organizations. He was a member of the New York College of Pharmacy, a former president of the New York State Pharmaceutical Association and an active member in the American Pharmaceutical Association, serving as chairman of the commercial section of the latter organization for two consecutive terms. He was also secretary of the National Rifle Association at the time that the late Generals Grant and Hancock served in the office of president and a member of the Old Guard of New York.

Mr. Seabury will be best remembered by pharmacists for the advanced position he took at a very early day toward securing the enactment of State pharmacy laws, and many of his plans proposed nearly a generation ago are now in active operation. He was also enthusiastically devoted to art and music and frequently favored his friends with his own rendition of noted musicians. He had many characteristic traits that will long be remembered by those who knew him best. As one who knew him well has said: "Mr. Seabury was a typical New Yorker and one of the characteristic products of self-made metropolitan life."

He is survived by two daughters, Miss Eugenia Seabury and Miss Rena Seabury, the latter now Mrs. David Ely Green, Jr., of Llewellyn Park, N. J.

## Speeding Automobile Strikes Professor Diekmann.

While crossing Broadway one day last week Prof. George C. Diekmann, secretary of the faculty and professor of pharmacy in the New York College of Pharmacy, was struck by the mud guard of an automobile and hurled to the middle of the street, where a wagon passed over his leg and painfully injured him. The machine that struck Dr. Diekmann was being pursued by a bicycle policeman for exceeding the speed limit. Professor Diekmann has since been confined to his home in Flatbush, but is doing nicely.

## LONG DISCUSSION ON PHARMACY BILLS.

**Views Presented Both for and Against an Appointive Board—Will Discuss Bills at Next Meeting.**

The late G. J. SEABURY,  
of New York.

The chief topic under discussion at the meeting of the Manhattan Pharmaceutical Association last Monday evening was pharmacy legislation. No action was taken on the Conklin Bill nor the proposed new bill drafted at the instigation of the members of the legislative committee of the State Pharmaceutical Association, as it was deemed better to wait until the latter bill was introduced in the Legislature.

George H. Hitchcock stated that according to remarks he had heard the present method of selecting the members of the Board of Pharmacy was far from popular, as was also the trial of a man by members of his own profession. Mr. Hitchcock thought that if pharmacy was regulated by State power similar to other professions, a long step forward in securing recognition for pharmacy as a profession would be made.

Joseph Weinstein, secretary of the board, came out strongly in favor of retaining the present law. The pharmacists could better select the members than could a Governor who would not be as well posted as members of the profession concerning the candidates.

Dr. William Muir, president of the board, posted the members on the provisions contained in both the Conklin Bill and the proposed bill. He desired to see the profession stand together for the latter measure as it represented the ideas of competent pharmacists, besides containing the vital features of the Whitney Bill. Dr. Muir advocated the appointment of members of the board by the Governor, not because the efficiency of the board would be enhanced thereby but to satisfy the demands of certain elements who desired a change from the present strict enforcement of the law which the board carried out for the protection and elevation of the profession in general. He dwelt at length upon the experiences of the members of the board in dealing with conditions and reviewed the work accomplished by the board last year. In summing up, Dr. Muir thought that this dissatisfied element as well as all pharmacists would eventually come to the conclusion that the present board was by far preferable to one supervised by State officials and that before very long it would be a case of first missing the water when the well went dry.

C. O. Bigelow, a member of the board, stated that no longer was it a matter of preference as to the kind of board desired. Developments were such that the pharmacists had better submit to an appointive board or action would probably be taken to place the whole matter within the province of the State Board of Health, which would result very seriously for all concerned.

Action was postponed until the next meeting.

Resolutions were passed that a letter of sympathy and condolence be sent to the family of the late George J. Seabury. A letter was also sent to Prof. George C. Diekmann, expressing sympathy for the painful injury he sustained a week ago when he was struck by a speeding automobile.

Lucas Craig delivered an address on "The Value of the Show Window of the Retail Druggist."

The treasurer reported a balance on hand of \$73.40 and the entertainment committee served the usual lunch.

## Alumni Association of B.C.P. Reception on Feb. 25.

The Alumni Association of the Brooklyn College of Pharmacy will hold its second musical and dance of the season next Thursday evening at the college. An unusually fine musical programme has been arranged, including a ladies' quartette, a tenor, a soprano, a violinist and other professional talent are scheduled to appear. There will be dancing and refreshments.

**More Associations of Druggists Elect Officers—Three Active Organization Men.**

G. H. HAYWOOD, Osakis, Minn.,  
President Park Region D.A.

W. P. CLARKE, of Milton.  
President Rock County (Wis.) R.D.A.

JUSTUS J. SCHOTT,  
President Galveston (Texas) R.D.A.

**W. P. CLARKE IS ROCK COUNTY'S PRESIDENT.**

**Pleasant Gathering of Wisconsin Druggists, With Entertainment for Their Wives by Mrs. Heimstreet.**

JANESVILLE, Wis., Feb. 10.—Rock County druggists gathered here yesterday for their annual meeting. In Myers Hotel a long table was spread and all assembled there for dinner. Later the ladies repaired to the home of Mrs. E. B. Heimstreet, where they were entertained during the time the druggists held their business meeting.

W. P. Clarke, of Milton, who has been treasurer of the Wisconsin State Ph.A. since 1882, was elected president; E. B. Heimstreet, secretary and treasurer. The members remonstrated against the passage of the Post-Parcels Bill. They also purchased their fountain and soda syrups for the season. After adjourning until May 1 they went to the home of Secretary Heimstreet, where the balance of the day was spent in a social reunion. A number of prizes were given and a good deal of fun was caused by the nature of the prizes.

The meeting was largely attended. Among those present were J. M. Farnsworth and wife, C. A. Smith and wife, D. H. Pollock and wife, F. Van Wart, Beloit; A. L. Woodward and wife, and Carl Buchta, of Clinton; H. D. Stappenbach and wife, of Edgerton; George King and wife, J. P. Baker and wife, W. T. Sherer and wife, E. O. Smith and wife, Otto Smith and wife, and William Penning, of Janesville; W. P. Clarke and wife, of Milton; Charles Taylor, of Orfordville.

**Lafayette, Ind.**

The Pharmaceutical Society, of Lafayette, Ind., has elected the following officers: President, Shuttleworth; vice-president, Musser; secretary, Stout; treasurer, Cook; sergeant-at-arms, Comfort. After the election S. E. Hartford, traveling salesman for F. Stearns & Co., of Detroit, gave an interesting talk on "Salesmanship." Charles S. Downing, of the Kiefer Drug Company, Indianapolis, also addressed the members.

**Galveston.**

At the annual meeting of the Galveston (Tex.) Retail Druggists' Association the following officers were elected for the ensuing term: J. J. Schott, president; J. Scott Keene, first vice-president, Charles E. Witherspoon; second vice-president; Miss E. Domingo, third vice-president; H. Koester, secretary and treasurer; trustees, Dr. E. B. Kenner, G. H. Wilder and C. Michaelis.

**C. P. THOMPSON HEADS SPRINGFIELD PH.A.**

**Banquet, With Enjoyable Programme, Follows the Annual Meeting of the Association.**

SPRINGFIELD, Mass., Feb. 15.—More than 40 were present at the recent annual meeting and banquet of the Springfield Pharmacists' Association which was held at the Henking Hotel. The new officers are: President, C. P. Thompson; vice-president, John D. Smith; secretary, W. C. B. Merriam; treasurer, W. B. Noble; executive committee, C. V. Ryan, F. N. Wheeler, J. W. Delehanty, Albert E. Lerche.

Following the banquet were speeches and a general good time. The newly elected president, C. P. Thompson, made the opening address, and presented F. N. Wheeler as toastmaster. E. F. Leonard spoke on "The Massachusetts State Association," after which James T. Mommie gave a vocal solo. F. H. Coolbroth as "teacher" made some fun with the little grinds which he called upon different ones to read. D. F. Keefe spoke on "The National Formulary" and was followed by another vocal solo by Mr. Mommie. Albert E. Lerche spoke on "Legislation." Music was furnished during the evening by a small orchestra. The committee of arrangements for the banquet was F. N. Wheeler, chairman; D. F. Keefe, John D. Smith, A. E. Lerche and William C. B. Merriam.

**Denver.**

Edward C. Sætie has been elected president of the Denver (Colo.) Pharmaceutical Association for the ensuing fiscal year. The other officers elected were: L. T. Bontwell, vice-president; Charles J. Clayton, secretary and treasurer, and Robert H. McKenzie, Frank M. Hall and William T. Thebus, trustees. Action was postponed on a proposition to affiliate with the N.A.R.D.

**Park Region, Minnesota.**

At the annual meeting of the Park Region (Minn.) Druggists' Association held at the Grand Hotel in Fergus Falls recently G. H. Haywood, of Osakis, was honored with the election to the presidency for the ensuing year. Other officers are N. P. Wesberg, of Fergus Falls, vice-president; J. H. Beise, Fergus Falls, secretary; G. C. Miles, Fergus Falls, treasurer.

**Cumberland County, Maine.**

The annual meeting of the Cumberland County (Maine) Druggists' Association held at Riverton Park recently was

enlivened with a pleasing entertainment by Augustus F. Howell, of Boston, who told some humorous stories and gave a few dialect readings. The following officers were elected: President, E. M. Brown; first vice-president, Thomas F. Carey; second vice-president, Jonas M. Hammond; third vice-president, Theara Hilton; fourth vice-president, E. C. McDonough; secretary, John Williamson; treasurer, James A. Broe; executive committee, E. W. Murphy, E. O. Tuttle, Charles E. Wheeler, Edward A. Hay and G. H. Wyman. The summer outing will be held at Long Island.

#### Newburg, N. Y.

The annual banquet of the Newburg (N. Y.) Druggists' Association, or the organization that heretofore has been known by that name, was held recently in the Palatine. There were 36 members and guests present and the event was very much enjoyed. During the evening the name was changed by resolution to the Newburg Bay Druggists' Club, on account of the fact that the organization has changed in its character since it was formed and besides taking in druggists in nearby places has resolved itself into what is purely a social club, the main feature being an annual banquet. Speech-making was tabooed, as the druggists were there for amusement and entertainment, the latter being liberally provided.

Among the diners were Francis Nutt, president; Carl Streit, secretary; William Streit, Isaac C. Chapman, Fred V. Carpenter, George H. Merritt, John J. Elliott, Hiram Merritt, Clarence Miller, Ira Caldwell, Isaac B. Lozier, Eugene W. Smiley, Jesse F. Carr, Chester F. Brown, Daniel Coldwell, Frederick Wallace, Elmer Tibbets, Ellsworth Pindar, William A. A. Sloat, George McNutt, Albert Rightmeyer, Harry Rightmeyer, A. J. Dreyer, Arthur DuBois, Charles S. Wallace, of Newburg; Tjerk Rifenburg, of Central Valley, formerly of Newburg; H. N. Clark and John Holloran, of Cromwell; Ferdinand Loughran, Preston Greene and Daniel Merritt, of Fishkill-on-the-Hudson, and Henry Sheldon and Joseph Farley, of Matteawan.

#### Savannah, Ga.

The annual meeting of the Savannah (Ga.) Retail Druggists' Association was held at the De Soto Hotel. It was a very pleasant and profitable meeting and the reports of the officers showed the organization to be in splendid shape. The officers were re-elected as follows: President, W. A. Peman; vice-president, R. A. Rowlinski; secretary, H. C. Shuptrine; treasurer, H. H. Livingston. The advisory board is the same as last year.

One of the results of the organization is that there are now seldom disputes to settle or misunderstandings to adjust between the Savannah druggists. During the past year the advisory board was not called upon to consider a single complaint.

The question of placing pay telephones in the drug stores of Savannah was discussed, but the plan did not meet with favor and no formal vote was taken upon it. The idea appeared to be that the presence of the telephone served to bring business. It was decided to retain membership in the N.A.R.D. for another year. At the conclusion of the meeting a smoker was enjoyed.

#### Wilkes-Barre.

A number of druggists of Wilkes-Barre, Pa., and suburban towns met recently and formed an American Druggists' Syndicate Club for that section. This is an auxiliary organization of the National association, which is merely a co-operative body. The officers of the local club are: President, Henry Merritt, of Plains; secretary, John Lohmann, of Edwardsville; treasurer, W. D. White, of this city; executive committee, W. D. White, John Lohmann and Henry Bossert.

#### Nashville, Tenn.

R. L. Eves presided at the January meeting of the Nashville (Tenn.) Retail Druggists' Association. Propaganda work was discussed and a committee of six was appointed to devise plans to bring the druggists and doctors of Nashville closer together.

#### Davenport, Iowa.

What was one of the most successful affairs ever given under its auspices, was held recently by the Davenport (Iowa)

Pharmaceutical Association at the Commercial Club. There were about 42 Rock Island and Davenport druggists and their clerks present. A banquet was served in the dining room of the club house, after which the druggists were addressed by Thomas H. Potts, secretary of the N.A.R.D., who spoke briefly on matters pertaining to the work of a retail druggist, and by A. J. Reiss, of Rock Island, and Carl Schlegel, of Davenport. William Lage presided over the business portion of the meeting, and J. Klenze officiated as toastmaster.

#### Kansas City.

Ratifying the resolution of the Missouri Pharmaceutical Association, the Kansas City Retail Druggists' Association has appointed a committee to co-operate with the State association in its effort to require annual registration or re-registration of every pharmacist practicing in the State. C. E. Zimm, Joseph C. Wirthman and R. S. Stevens compose the committee.

#### Outagamie County, Wis.

At the meeting of the Outagamie County (Wis.) Retail Druggists' Association recently at the Sherman House, Appleton, the following officers were elected: President, Charles A. Little; vice-president, S. G. McCord, of Seymour; secretary, William Downer; treasurer, Rufus Lowell.

#### CHICAGO R.D.A. TO FIGHT MEDICAL CHARITY.

**Joins With Doctors to Banish Evil—By-laws to be Revised—Superabundance of Drug Stores.**

CHICAGO, Feb. 15.—That the abolishment of abuses of medical charities is only a matter of time and must come soon in Chicago was evinced in a vigorous discussion at the February meeting of the executive board of the Chicago R.D.A. in the Northwestern University building. The entire membership was present and each voiced sentiments and views on this new movement taken up by the Chicago association. The result of the discussion was that the board instructed the president and secretary of the association to co-operate and work with the committee of the Chicago Medical Society for the abolishment of these evils.

Following the "working together" spirit that was so enthusiastically shown in the January "get-together" meeting, the president and the legislative committee were instructed to confer and work with the committees of other organizations in the city for furthering their common interests. That a mild revision of the by-laws of the association will be made, as a result of the proposal of William Bodemann, is almost certain, and a committee composed of Messrs. Avery, Storer and Sandkoetter will report at the next meeting of the board.

Other important measures considered were: ward meetings for the druggists in all parts of the city; protection of retailers in damage suits; the establishment of a "For Sale and Brokerage" agency to show the superabundance of drug stores in Chicago by the number offered for sale and closing out. This was the idea of President Yeomans.

#### Olney & Jerman Co. Getting Ready for Business.

CHICAGO, Feb. 15.—Chicago's new wholesale drug house, the Olney & Jerman Co., which secured quarters at 15-17 Randolph street last December, expects to be ready for business before March 1. The stock is being moved from Clinton, Ia., and is in process of being installed in the new quarters. Charles R. Dickerson, formerly of Lord, Owen & Co., Chicago, is a member of the firm. A. R. Olney, F. L. Hastings and Charles A. Jerman are members of the firm.

#### Chicago R.D.A. is Pushing Propaganda Work.

CHICAGO, Feb. 15.—H. J. Holthofer was elected chairman and Otto Neithammer secretary at a recent meeting of the propaganda committee of the C.R.D.A. recently appointed by President Yeomans. The committee got active at once and is now well involved in a carefully prepared plan for pushing the work.

#### Acquitted of Violating Pharmacy Law.

DETROIT, Feb. 15.—The case against Arch M. Reid, the Gratiot avenue druggist charged with violating the Pharmacy Laws, has been dismissed in police court, he having complied with the requirements of the State inspector.

## THREE PROMINENT ILLINOIS DRUG MEN WHO WILL HELP ENTERTAIN STATE PH.A. AT QUINCY.

A. C. KENNEDY.

F. N. OXLEY.

A. W. HOBART, M.D.

## NEXT CONVENTION OF THE ILL. PH.A. IN JUNE.

Entertainment Committee Plans to Make the Quincy Event More Pleasurable Than Any of Its Kind.

CHICAGO, Feb. 15.—The ERA has printed the half-ton presentations of some of the wide-awake members of the Illinois Pharmaceutical Travelers' Association, three more are printed on this page and others will appear in later issues. These are the men who are shouting already: "All aboard for Quincy!" They are working hard to secure the largest turnout of druggists ever seen in Illinois and they propose to make the event so enjoyable that all will ever afterward attend the annual meetings of the Illinois State Ph.A.

Of the three here bowing to their future guests, Dr. Hobart is the manager of the Chicago branch of Horlick's Malted Food Company. He is an old hand at devising features to entertain druggists and promises to cut new notches in his record. Mr. Kennedy is with Robert Stevenson & Co., of Chicago, and is noted as a singer. Mr. Oxley represents Seabury & Johnson from Portland to Portland, that is from Maine to Oregon and back again, with Illinois as his turning place.

There are more than three; there are 30 or more just like these three, and they are all working to make the First Round-Up at Quincy June 15-17 the greatest ever in the State of Illinois. Dr. Hobart has whispered some of the features to the ERA, but they will be reserved for later use.

The I.P.T.A. will hold its annual informal stag dinner on the evening of February 27 in the quarters of the Chicago Drug Trade Club, 122 Franklin street. An attendance of 100 of Illinois drug salesmen is expected. The purpose of the meeting is to get all of the boys together and help along the preparations for the big round-up at Quincy in June of the association and the entertainment of the Illinois Ph.A.

## Visiting Druggists in Chicago.

CHICAGO, Feb. 15.—The following druggists were in Chicago last week: E. P. Shellabarger, Columbus Junction, Iowa; W. L. Holmes, Williamsburg, Iowa; M. J. Row, Portland, Mich.; C. F. Miller, Peru, Ind.; N. P. Olsen, Grayling, Mich.; W. Rogers, Madison, Ind.; W. E. Shrader, Iowa City, Iowa; H. Weir, Portland, Ore.; M. M. Nye, Nye & Booe, Crawfordsville, Ind.; E. Neurling, Cable, Ind.; O. C. Holmes, W. C. Holmes & Co., Parsons, Kan.; C. F. Scott, Argo, Ill.; C. Schaeetzle, Schaeetzle & Fosselman, Abnook, Iowa; J. W. Mulhern, Keota, Iowa; W. H. Linder, Stearns City, Iowa; J. C. Roushar, Zearing, Iowa; C. C. Bosworth, Madrid, Iowa; J. T. Dana, Dana & Worm Co., Fond du Lac, Mich.; H. M. Richardson, Omaha, Neb.; W. T. Brown, Columbus Junction, Ia.

## CHICAGO VETERANS HOLD LINCOLN SESSION.

Quarterly Meeting of the Old Guard Fixed for Hundredth Anniversary, Whereby "Scoop" is Scored.

CHICAGO, Feb. 15.—The Chicago Veteran Druggists' Association is original as well as old in the ages of its members and it is more enterprising than some of the older youthfull organizations. The quarterly meeting was fixed for Lincoln's Birthday at the Union Club for more than one reason and the association scored a "scoop" on all of the other druggists' associations by holding the first Lincoln celebration ever held by a drug organization. It was in line with the history of the C.V.D.A., which was unique in its inception and which scored another of many records in its tribute to the assassin's victim.

There were 25 members and guests assembled and the room was beautifully decorated with American flags, Lincoln pictures and the ever significant C.V.D.A. carnation pink. After luncheon President Fuller opened the exercises by proposing a toast to the President who had lost his life in the performance of his duty. Tossed off with proper appreciation of the memory of the dead, all of the members and guests were called upon for brief remarks and all responded, each in his own way. Later Mr. Jamieson occupied the chair and in his usual way succeeded in drawing out from the more diffident ones some expressions that were delightful to the appreciative members. Taken in its entirety the occasion was a source of pleasure to all present, for the speeches were eloquent, patriotic and sincere, although a majority of the speakers were not of native soil, but hail from Scotland, Sweden, England, Germany and Milwaukee avenue.

"Lincoln belonged to the 'drug store sitters' class," said Prof. C. S. N. Hallberg. "While in Springfield he spent much of his time in the drug store of R. W. Diller. His name is scratched with pencil in the desk on which he used to sit and discuss the politics of that day. In a sense he belongs to us as druggists. There is no doubt that in the drug store he learned human nature, which knowledge showed so clearly in his later career."

## Druggists Would Like to Be Aldermen.

CHICAGO, Feb. 15.—The druggist in politics is being emphasized by the fact that two members of the Chicago R.D.A. are running for aldermen. These are John J. Boehm, one of the most aggressive men in the city, who is seeking the nomination from the Democrats of the Ninth Ward, and C. G. Foneck, of 556 South Center avenue, who is a candidate for the Republican nomination in the Tenth Ward. Mr. Foneck has served on the City Council and has a record for his term.

## BOARD EXAMINATIONS

### Oregon.

SALEM, Feb. 10.—Governor Chamberlain has appointed Miss Kittie Walker Harbord a member of the Oregon State Board of Pharmacy to succeed herself, her term of five years, beginning in 1903, having recently expired. The Governor has appointed F. H. Caldwell, of Yamhill, to the vacancy on the

board created by the resignation of John M. A. Laue, of Portland, who has retired from the retail drug trade to devote his attention to conducting a preparatory school of pharmacy.

Miss Harbord is a native of Oregon and was born in 1876. At the age of 17 she began the study of pharmacy, later taking a three years' course at the Philadelphia College of Pharmacy, where she graduated in 1901. Miss Harbord is a self-made woman whose collegiate education was obtained through her earnings as a clerk. When appointed originally she was the first woman in Oregon to be thus honored. During her first term she served in rotation in her turn with the other members as president and treasurer of the board. She is a member of the American Pharmaceutical Association.

MISS KITTIE W. HARBORD.

### Ohio.

COLUMBUS, Feb. 10.—The Ohio State Board of Pharmacy has granted certificates to the following applicants, who took the test at the recent examination:

PHARMACISTS.—Harry J. Sand, J. H. Rundle, Henry J. Jennie, Frank H. Landier and Arthur M. Robinson, Cincinnati; Otto A. Koch and Pierce H. Richardson, Columbus; Adele Krebs, Cleveland; Adolph C. Steckel, Bryan; C. F. Assenheimer and Ralph R. Johnston, Bucyrus; George J. Smith, Manatee; Charles A. Lindsey, Toledo; Arthur W. Gillig, Elyria; G. J. Vorkamp, Lima; J. K. G. Given, Zanesville; Harry F. Hipp, Sandusky; Harry H. Anderson, Sardinia; P. J. Falter, Ireton; Merrill H. Mellott, Springfield; Daniel F. Brickey, Findlay, and John Jones, Jefferson.

ASSISTANT PHARMACISTS.—Duke Blacet, George N. Case and F. W. Gehring, Cleveland; Raymond H. St. John, Collinwood; Warren M. Goon, Toledo; Benjamin G. Covert, Loudonville; Ed H. Zulandt, Zanesville; Ora C. Wentling, Wharton; Fred M. Hale, Wilmington.

The following who took the examination for pharmacists, may secure certificates for assistant pharmacists if they so desire:

Carl W. Parker and John E. Barilett, Cleveland; Merritt C. Draper, North Baltimore; Thomas J. McRoberts, Xenia; W. B. Longstreth, Dayton, and John F. Kleiu, Pemberville.

The board filed its annual report with Governor Harmon, showing that during the year there was a total of 128 certificates granted, making the grand total of certificated pharmacists and assistants 4171.

The number of charges filed in the courts during the year for violation of the laws governing druggists was 39, of which 36 were tried and 29 were fined. The total amount of fines was \$1320.

The first prize for the highest average secured on examination was awarded to Percy P. Craine, Elyria, who will secure a membership in the American Pharmaceutical Association. A. A. Oppet, Toledo, was awarded the second, consisting of a membership in the Ohio Pharmaceutical Association.

### New Mexico.

SANTA FE, Feb. 10.—B. Ruppe, president, Albuquerque, and A. J. Fischer, secretary, Santa Fe, announce that a meeting of the Territorial Board of Pharmacy will be held at Santa Fe on Monday, March 8. Candidates for examination

must report promptly at 9 a. m. at Secretary Fischer's drug store.

All violations of the Pharmacy and Poison Laws should be reported at once either to the secretary or president, so that they may be investigated before the meeting.

### New Jersey.

BRIDGETON, Feb. 13.—Secretary Henry A. Jorden, of the New Jersey State Board of Pharmacy, announces that the following candidates were successful at the January examinations:

REGISTERED PHARMACISTS.—Harry F. Asher, Brooklyn; Miss Maris Atkinson, State College, Pa.; Abraham J. Block, New York; Henry I. Branower, New York; Morris Herman Burstein, Newark; Ralph Ciluz, Newark; Michael J. Comerford, Jr., Newark; Giambattista Corona, Newark; Charles Jerome Cruz, Fort Lee; Herman Lorenz Doring, Jersey City; Joseph Field Dulaney, Atlantic City; Raffaele A. Farese, Newark; Hugh Frede, Jersey City; Henry Herbert Gladwin, Paterson; Charles Roy Grammer, Asbury Park; Alfred Griggs, Philadelphia; Roland B. Grom, Newark; Emil Matthiessen, Passaic; Joseph Herman Mayzel, Jersey City; Ralph Vincent Muldoon, Freehold; Charles Henry Neff, Trenton; James Charles Nixon, Jersey City; Edward A. Rooney, East Orange; Samuel S. Rubin, Newark; Frank G. Schaefer, Jersey City; Israel Schapiro, New York; Fred C. Schmidt, Jersey City; Fred. Charles Grant Secker, Newark; Clarence R. Shryer, Scranton; Morris Teplow, New York; William Madison Walsh, Plainfield; Frank Lair Wilson, Belvidere.

REGISTERED ASSISTANTS.—Morris Herman Burstein, Newark; Henry Range, Newark; Ambrose William Coleman, Trenton; Charles V. Dempsey, Paterson; Mulford Ludlam, Jr., Millville; George Mazzer, Jr., Jersey City; Benjamin Road, Passaic; Samuel S. Rubin, Newark.

Messrs. Burstein and Rubin took both examinations, which were held on separate days, passing both successfully. While other candidates have taken both examinations this is the first time that any one has passed both at the same meeting of the New Jersey Board.

### Kentucky.

LEXINGTON, Feb. 12.—At the meeting of the Kentucky Board of Pharmacy held in Covington, January 13, a class of 38 was examined, the following of whom passed: William H. Davis, Jeffersonville, Ind.; Thurman Drane, Louisville; Miss Ethel Duval, Savage, Ky.; F. O. Heberlein, Covington, Ky.; Charles Jewell, Bardwell, Ky.; Joseph A. Teipel, Covington, Ky.; Judson T. Wilkes, Charleston, W. Va.; L. L. Carpenter, Owensboro, Ky.; Theo. Buschmeyer, Louisville; Edward J. Gibbons, Cincinnati.

The next examination will be held in Louisville, April 13. Applications should be filed with the secretary, J. W. Gayle, Frankfort, Ky., at least ten days before that time.

### South Dakota.

DELL RAPIDS, Feb. 10.—The result of the recent examination of the winter class by the Board of Pharmacy at Pierre is as follows:

REGISTERED AS LICENTIATES.—M. Goebel, Sioux Falls; A. J. Kohler, Sioux Falls; August Hoffmann, Watertown; Howard Dakin, Britton; C. D. Flannery, Elk Point; E. F. Shimerda, Howard; H. J. Peterson, Sturgis; Grant Vicker, Carthage; W. N. Walker, Lemmon; H. A. Peabody, M.D., Webster; J. J. Fletcher, Fort Pierre.

ASSISTANTS.—W. C. Voigt, Corona; B. T. Dott, Salem; Mrs. J. M. Kenaston, Bonesteel; C. B. Lillibridge, Lemmon; J. W. McCarthy, Meadow; F. R. Gibson, Esmond; J. L. Magennis, Pierre; H. C. Trowbridge, Pierre; I. E. Hamby, Miller; W. F. Albery, Spears; William Tollefson, Webster; C. A. Steen, Miller.

The next regular meeting of the board will be held at Brookings College, April 21.

### New Pharmacy for Atlantic City.

J. G. B. Newhard, who for several years was with Charles L. Keeler, proprietor of two retail drug stores in Atlantic City, is arranging to open on March 15 a handsome store at Boardwalk and Brighton avenue, Atlantic City. Mr. Newhard will make a specialty of soda water and has purchased a fine apparatus.

## GOVERNOR REJECTS HONEST BOARD MEMBER.

**No Objection to Mr. Koch, But Politicians Did Not Want Mr. Cliffe Because He Offended Them.**

PHILADELPHIA, Feb. 15.—The appointment of Christopher Koch, of this city, to a place on the Pennsylvania Pharmaceutical Examining Board, announced last week, to succeed Wm. L. Cliffe marks the close of one of the most interesting chapters in the pharmaceutical annals of the State. The outcome was rather a surprise and by some this result is looked upon as a compromise on the part of the sorely-beset Governor. Mr. Koch is well and favorably known to the trade, particularly in connection with his consistent and vigorous support of the propaganda movement which locally and as the chairman of the U.S.P. and N.F. propaganda committee of the N.A.R.D., he has helped to bring to its present eminent position among the issues which confront the retail drug trade.

The term of Mr. Cliffe, who was the treasurer of the board, expired in June of last year, and shortly before that time political interests which, it is generally understood, had tried in vain to have certain henchmen registered when they were not entitled to registration, aimed to have appointed as Mr. Cliffe's successor, a man whom they could control. Mr. Koch's name had been mentioned by retail interests for another vacancy on the board, since filled, but practically the entire retail trade of the State endorsed Mr. Cliffe for reappointment. Delegations from all over the State and representing the majority of its drug organizations called upon the Governor in the interests of Mr. Cliffe's reappointment. Endorsements of his work appeared in the newspapers while letters, petitions and resolutions were forwarded steadily to Harrisburg.

Mr. Cliffe continued to serve while the contest for his place was waged. Several names were mentioned and politicians of prominence sought to have certain druggists come out as a candidate, but the opportunities were refused. The Governor declined to commit himself until he named Mr. Koch to succeed Treasurer Cliffe.

But now new complications have arisen which promise to keep the matter before the public for some time to come. Governor Stuart, in a statement to the newspapers in reply to a charge by Mahlon N. Kline in which the latter said Mr. Cliffe had been dropped for political reasons, is credited with stating that his reasons for not reappointing Mr. Cliffe were not political in any way, but that if Mr. Kline would call at the Executive Department he will give him his reasons for not reappointing Mr. Cliffe, "which reasons," the Governor is quoted as saying, "will convince him of the impropriety of retaining Mr. Cliffe as a member of the Pharmaceutical Examining Board." The indignation of Mr. Cliffe and his host of friends is aroused over this statement by the Governor and they have demanded an investigation. Mr. Kline proposes to see the Governor and learn the reasons and the entire drug trade of the State is stirred up over the affair.

## Drug Clerk Indicted for Manslaughter.

Noe R. Hirsch, a drug clerk who was in the employ of Charles Frieden, a druggist at 120th street and Amsterdam avenue, Borough of Manhattan, New York City, was indicted by the Grand Jury last week for manslaughter in the first degree, on the charge of having caused the death of Carson Deelwater, an infant. According to the testimony given at the inquest and hearings, Hirsch compounded and dispensed a prescription containing morphine sulphate in place of magnesium sulphate. A chemist from the Health Department testified that analysis showed that the mixture given the child was a solution of morphine sulphate in water. Another clerk who checked the prescription was acquitted. The case will soon come up for trial.

## VALUE OF PHYSIOLOGICAL TESTS OF DRUGS.

**Interesting Papers Discussed by Washington Branch of the A.Ph.A.—Will Visit Philadelphia.**

WASHINGTON, Feb. 15.—At the third meeting of the City of Washington Branch of the A.Ph.A., the general subject was "The need for the physiological testing of drugs and medicinal substances." Mr. Hilton, the first vice-president, presided.

Dr. Milton J. Rosenau, director of the Hygienic Laboratory of the Public Health and Marine Hospital Service, read a paper on the physiological standardizing of sera. He defined micro-organisms that are instrumental in the production of diseases and discussed the tolerance produced by the toxins generated by the proliferation of these organisms.

He asserted that the benefit to the human race from the introduction of antidiphtheritic and antitetanic sera must be classed among the greatest benefits that have been secured through medical science and ranks well with such epoch-making innovations as the introduction of antiseptics, anesthesia and of vaccination.

Dr. Worth Hale presented a communication on physiological testing in the control of drugs. As an illustration of the harm that has been done by the indiscriminate or ignorant use of medicines he outlined the history of digitalis and called particular attention to the at one time widespread use of this drug in cases of aneurism, a condition where it would do distinct harm, and no doubt was the frequent cause of serious complications.

Ergot, another drug that is not susceptible to chemical control, serves to illustrate the need for developing standard methods for the physiological testing of drugs as different methods with different animals give widely varying results. In concluding, Dr. Hale ventured the opinion that the importance of the control of drugs of this kind fully justified the introduction of physiological methods of standardization in the Pharmacopoeia.

Dr. W. Salant called attention to the importance of the study of the action of drugs in pathologic conditions. The several factors that are involved in the action of a drug on the animal organism are more or less influenced by pathologic conditions which may, and undoubtedly do interfere with the ordinary effect of a drug.

Dr. Salant quoted a number of experimenters who had demonstrated the variations in the action of foods and medicinal substances by pathologic conditions. Among the more interesting medicaments the variable results that have been obtained with such drugs as adrenalin, digitalis, strophanthus, antipyrine, quinine, sodium salicylate and salicylates generally all serve to show how differently drugs behave under various conditions and that active new drugs may involve dangerous complications.

Dr. Albert C. Crawford, in discussing "Some little understood phases of biologic testing," demonstrated the importance of biologic control in the separation of active principles of a complicated nature. In connection with the testing of crude drugs he pointed out that the accompanying ingredients may greatly modify the action of the active principle itself.

Dr. Reid Hunt, in opening the general discussion, pointed out that the papers presented fully justified the continuation of animal experimentation regardless of the agitation that is being carried on by overzealous but misinformed objectors to vivisection.

So far as experiments with drugs are concerned, Dr. Hunt pointed out that this does not ordinarily involve the causation of pain and never involves cruelty, as this would absolutely vitiate the results that might be obtained. The greater number of experiments are conducted on carefully anesthetized animals so as to avoid the complicating factor caused by pain.

Dr. John F. Anderson described the nature of the supervision exercised by the Hygienic Laboratory of the Public

CHRISTOPHER KOCH, Philadelphia.  
New Member Pennsylvania State Pharmaceutical Examining Board.

Health and Marine Hospital Service over the manufacture of antitoxins and vaccines. Among the subjects that are particularly controlled under this form of jurisdiction are the nature and the equipment of the laboratory, the correct labeling of the product, the potency, freedom from contamination and the nature of the preservative.

Among the advances that have been made, under this system of control, probably the most evident is the progressive increase in the potency of sera. The subject was further discussed by Dr. Kehler, Mr. Chestnut, Dr. Beyer, Dr. Schultz, Dr. Rosenau and Mr. Parker.

A communication from the chairman of the section of practical pharmacy and dispensing of the A.P.A. was referred to the next meeting, on March 9, when the general subject of revision of the National Formulary will be discussed.

An invitation from Philadelphia Branch to the members of Washington Branch to attend the meeting of the former on April 6 was accepted and quite a delegation is already assured.

## THOROUGH DISCUSSION ON PROPAGANDA.

### Kings County Society Detail Man to Cover Borough Again—Proposed Pharmacy Bill Indorsed.

There was an interesting discussion on matters relating to the propaganda work at the meeting of the Kings County Pharmaceutical Society on February 9, at the Brooklyn College of Pharmacy. A lengthy report was given by Dr. Van Horn, the detail man, who related his experiences and stated that he was now making his second call on a number of physicians. As a rule his reception was cordial and there was still the same interest in the work on the part of the physicians as heretofore. The old complaints from the doctors about the lack of uniformity in color, and other physical variations in some of the preparations were still coming from some quarters, he said, but not to the former extent, and he believed that in most cases the facts were exaggerated. This contention was supported by investigation by the committee.

John G. Wischert, chairman of the trade matters committee, which has charge of the propaganda work, announced that it was the intention of the committee to continue the work and have Dr. Van Horn cover the city again. No deviation from the present methods had been considered necessary and probably no new features would be added.

Dr. William Muir sharply criticized the druggists in certain sections of the city for lack of support in helping the society in pushing the propaganda work, citing a number of instances where a contribution to the propaganda fund had been asked for, but was deliberately refused by the druggist on the ground that the work was of no benefit to him, although it could be proven in most cases, that the N.F. preparations were stocked in the pharmacy and were in good demand. Dr. Muir thought it was about time that the druggists showed their appreciation in a material way.

George R. Christ, treasurer of the committee, announced the list of contributors during the month and took a more optimistic view of the situation, because of the fact that the committee so far had been self-supporting and had a balance in the treasury. The committee was authorized to purchase 200 additional physicians' manuals.

The legislative committee was instructed to oppose the Gluck Bill and the Conklin Bill, both of which are pending in the State Legislature. An outline of the proposed new Pharmacy Board Bill, drawn at the instigation of the legislative committee of the New York State Pharmaceutical Association, was given by Dr. Muir, one of the members of the State committee. This bill was unanimously indorsed and the legislative committee of the society instructed to favor its passage when introduced in the State Legislature.

Otto Raubenheimer read a paper entitled "U.S.P. and N.F. Preparations—Against Nostrums." This paper was a resumé on the use of the official and official remedies by the ancients and the subsequent usurpation under new names of a number of these medicines by certain proprietary interests who claimed originality for the remedy, and charged piracy on the part of the revisors of the U.S.P. and the N.F. Mr. Raubenheimer denied the piracy charge and the members who discussed the paper were in accord with his views on the subject.

Oscar C. Kleine, treasurer, reported a balance of \$303.91 in the society account and \$6203.48 in the college treasury. About ten members, no longer in the retail drug business, were

dropped from the rolls, and nine new members were elected, as follows: H. W. Dulberger, Walter S. Dean, Laurence Zunk, Perry Pick, August Baum, Alfred Hammer, Nicholas S. Gessalde, Adolph W. Moos, Frederick J. Zimmerman. Following are the names of those proposed for membership: Marcus A. Schochter, Louis Gaer, Maurice A. Cohn, Alfred S. Bayles, Toni Santrock and Edwin J. Woelfe.

Announcement was made that the members of the society were formally invited to attend a meeting of the Brooklyn Medical Society on February 19, at Hart's Hall, Gates avenue and Broadway. Dr. Muir stated that at this meeting Dr. William C. Anderson would deliver an address on "The Practice of Medicine and Pharmacy," and that a large delegation of both physicians and pharmacists from Manhattan, besides a number from Kings and Queens Counties, intended to attend the affair.

## OBITUARY NOTES.

—DR. EDWIN C. DENNIN, Brooklyn, N. Y., is dead of pneumonia, aged 40. A widow survives.

—ROBERT W. McLEAN, formerly a well-known druggist at Janesville, Wis., recently died at Chihuahua, Mexico, where he had been conducting a hotel.

—EUGENE WARD, formerly in charge of the druggists' sundries department of Noyes Bros. & Cutler, St. Paul, afterward in business for himself, died recently in Chicago.

—HARRY L. GUTH, Carnegie, Pa., died in the street recently while walking to his store. Heart failure was the cause. A widow and son survive; he was thirty-five.

—LEWIS E. COLLINS, aged 70, is dead in St. Louis. With his brother Henry, he founded the wholesale drug house of Collins Brothers about 40 years ago, but he retired 12 years ago.

—WILLIAM ECKEL, of Brooklyn, N. Y., is dead, aged 45. He was a graduate of the New York College of Pharmacy and for the last eight years had been in the employ of the Department of Agriculture.

—JOSEPH H. LUTZ, of New Britain, Conn., is dead as the result of a fall on an icy sidewalk. He was prominent in public affairs, belonged to numerous societies and was married. He was born in 1853.

—DR. BENNO BRIBACH, widely known in South St. Louis, is dead of spinal trouble, aged 63. He opened a pharmacy in 1880 at Virginia avenue and Stein street. A widow and five daughters survive.

—L. W. DOUGLASS, aged 42, and engaged in the drug business in Minneapolis for 23 years, is dead. A widow and son survive. Mr. Douglass was prominent in Masonic affairs and belonged to other organizations.

—CAPT. CHARLES E. BOND, who was a druggist in Minneapolis prior to the Spanish-American war in which he served with distinction, died recently from an operation made necessary by injuries received in the service. He was 38 years old and was raised in Bucks County, Pa., where his mother survives him.

—MRS. J. EDWARD HOWARD, wife of the secretary of the Drug Merchants of America, died suddenly at her residence, 2400 Seventh avenue, Borough of Manhattan, New York City, on January 17. The funeral took place in Detroit, her former home. Mr. Howard is well known in the drug trade and has a large circle of friends and acquaintances who will be grieved to learn of his bereavement.

### "Straight Whisky" is Crooked in Washington.

WASHINGTON, Feb. 6.—Wholesale prosecutions of saloon keepers will probably result from investigations which Dr. Wiley has just conducted. His inspectors went out recently and bought "straight whisky" from twenty-four saloon men and hotel keepers.

"Out of the entire lot," said Dr. Wiley to the ERA correspondent, "but three samples were pure whisky. Twenty-one showed adulteration."

"What are you going to do about it?" the government chemist was asked.

"Send them to the district attorney for prosecution."

Dr. Wiley has so far resisted the clamor of an interested public for information as to who is who in his directory of dispensers of pure and of adulterated liquor to the Washington populace.

## PATENTS, TRADE MARKS, ETC.

## TRADE MARKS.

Published February 9, 1909.

24,034—Max Elb Gesellschaft mit beschränkter Haftung, Dresden, Germany. Class 6. Perfumes, toilet creams, toilet powders, toilet powders in tablet form, face washes and medicinal preparations for aromatic and carbonated waters.

32,956—Charles E. Farnum, San Francisco, Cal. Class 6. Liniments for external use.

34,859—Howell M. Strange, Woodlawn, Ala. Class 6. A remedy for rheumatism.

36,172—Schimmel & Co., Miltitz-Leipzig, Germany. Class 6. Violet perfume.

37,063—Samuel D. Darris, Newellton, La. Class 6. Healing salves.

37,098—Lambert Benoit, North Yakima, Wash. Class 6. A remedy for rheumatism.

37,548—Orlando Bennett Baker, Savannah, Ga. Class 6. A liniment for internal and external use.

37,679—W. D. Fitzpatrick, Yorkville, W. Va. Class 6. A vegetable compound used as a catarrh remedy.

38,163—Chester Products Company, Baltimore, Md. Class 6. A remedy for coughs, colds, hoarseness, bronchitis, irritation of the throat and a tonic aromatic solution of syrup of hypophosphites compound.

38,584—Hutson Tonic Company, Savannah, Ga. Class 6. A tonic medicine for chills, fevers and colds.

38,616—Dike Drug Company, New York, N. Y. Class 6. Baby-cough-syrup, peptonized beef, iron and wine, blackberry compound, blood and skin remedy, etc.

38,640—E. B. Hall, Charleston, S. C. Class 6. Liniments.

38,968—Ernst Bischoff, New York, N. Y. Class 6. Anti-septic salves.

38,984—Osborne, Bauer & Cheeseman, London, Eng. Class

6. A preparation for softening and improving the skin and for allaying irritation and roughness.

39,053—L. & M. Rubber Works, Carrolton, Ohio. Class 44. Hot-water bottles and fountain syringes.

39,415—Robert Low's Son & Howard, New York, N. Y. Class 6. Hair-tonic powders.

39,430—Elam Ward Olney, New York, N. Y. Class 6. Antiseptic tooth powder.

39,436—Richmond Pharmaceutical Laboratory, New York, N. Y. Class 6. A cough remedy.

39,440—Gurdon Potter, Buffalo, N. Y. Class 6. Powder for the face and body, foot powder, remedies for diseases of the scalp, skin, etc.

39,491—Lambert Pharmacal Company, St. Louis, Mo. Class 6. Talcum powder.

39,511—Clarence T. Tuttle, Boston, Mass. Class 6. Tooth powder.

## PATENTS.

Granted February 9, 1909.

911,682—Ewald Scheunert, Silver Creek, Wis. Filter.  
911,635—Gilbert E. Bailey, Los Angeles, Cal., assignor of one-half to Archie Stevenson, Los Angeles, Cal. Process of making borax.

911,724—Frederick S. Honsinger, Syracuse, N. Y., assignor to Solomon L. Weisberg, Syracuse, N. Y. Syringe.

911,735—Chester W. Lyman, New York, N. Y. Process of making sulfur dioxide.

911,809—Conrad M. Conradson, Madison, Wis., assignor by mesne assignments to Precision Glass Grinding Machine Company, Sioux Falls, S. D., a corporation of South Dakota. Art of grinding interchangeable ground-glass bottle necks and stoppers therefor.

911,859—George W. Weber and George F. Miller, New York, N. Y., assignors to American Can Company, New York, N. Y., a corporation of New Jersey. Sheet metal caddy for spices and other articles.

912,001—Carl F. Kohler, New York, N. Y. Toilet article.

912,024—William M. Parks and Burwell B. Cross, Gas

Copy of any PATENT or TRADE MARK, 10 cents.

Author of copyrighted work on Protective Trade Marks, Food and Drugs Act, and Valid Patents.

G. H. DAVIS, Attorney, 908 G St., Washington, D. C.

City, Ind. Medical implement.

912.085—Albert N. Davis, New York, N. Y., assignor to Charles K. Volkening, Brooklyn, N. Y. Mounting for bottle-washer brushes.

912.109—Harry Gehman, Philadelphia, Pa. Non-refillable bottle.

912.156—James J. O'Grady, Chicago, Ill. Bottle stopper.

912.236—James M. Falls, Louisville, Ky., assignor to Louisville Filler Company. Bottle filling machine.

912.252—Leavelle McCampbell, Louisville, Ky., assignor to Louisville Filler Company. Bottle filling machinery.

### DR. SWETT CO. INCREASES CAPITAL.

#### New Charter Gives It Power to Buy Drug Stores and Operate Large Enterprises—Drinks an Adjunct.

BOSTON, Feb. 8.—The Dr. George W. Swett Company, of Boston, has been organized under Massachusetts laws to carry on a general drug business, with a capital of \$250,000. The new company succeeds a company of somewhat similar name whose capital was only one-fifth as much as that of the new company. The officers of the new corporation are: President, Dr. George W. Swett; Ora A. Atkins, vice-president; Patrick J. Flynn, treasurer and clerk.

In speaking of the new corporation, Mr. Flynn said the business of the Dr. George W. Swett Company was growing so rapidly that more capital was necessary, and broader rights were needed. The charter as now framed will permit the company to swing large enterprises, to buy out drug stores and to run them, with the beverage end as an incident, if need be, or it may enable the company to swing as big an undertaking as a summer amusement park, with the dispensing of temperance beverages again as an incident. The headquarters of the company will continue in the new building at 57 Albany street, Boston, which were occupied a few months ago.

#### Dinner to General Manager Lynn.

PHILADELPHIA, Feb. 6.—Charles J. Lynn, secretary and general manager of Eli Lilly & Co., with some of the company's sales representatives from this section, were pleasantly entertained at the Drug Club Thursday by Frank W. Smith, the Philadelphia manager. The other members of the party were W. L. Pierce, of the Baltimore branch; W. P. Ireland, of Reading, Pa.; J. O. Hancock, Wilmington, Del.; H. D. Baker, the New Jersey representative; Frank W. Smith, J. J. McCullough and George L. Hill, of the Philadelphia branch.

Chas. J. Lynn, secretary and general manager of Eli Lilly & Co., entertained a number of the Greater New York salesmen of the firm with a dinner at the Waldorf-Astoria on February 1. The dinner was followed by a theater party. Among those present were Martin H. Kleine, S. W. Abel, S. T. Douglas, A. M. Hopper, H. L. Winner, L. G. Carroll, and C. R. Cosby, manager of the New York branch.

#### Change in Mansion House Pharmacy, Buffalo.

BUFFALO, N. Y., Feb. 6.—A. B. Strobe, who has for the last quarter of a century been in the drug business in this city, has disposed of his store at Main and Exchange streets, in the Mansion House, to Grove & Linger. S. A. Grove, the senior member, has been manager of the Merchants' Exchange, the co-operative organization of the retail druggists which was started about six years ago. He will retain that position, devoting a part of the time to the new store. The junior member, Merton D. Linger, has been for the past six years chief clerk in the store of W. H. Sheehan & Co., of Utica, N. Y.

#### Metropolitan Druggists Organize Riding Club.

The Riverside Riding Club of New York, composed of members of the German Apothecaries' Society, has been organized by E. C. Goetting and arrangements have been made to hold regular meetings at the Central Park Riding Academy every Thursday at 3 o'clock. Mr. Goetting is very enthusiastic in his praise of horseback riding as a means of physical exercise and believes that druggists who once learn the art will be loath to give it up. There is still room for more members and those interested are invited to address Mr. Goetting, 820 Amsterdam avenue, for particulars.

### SHIPPED GOODS UNDER FICTITIOUS NAME.

#### Maker of Cancer Remedy Prosecuted by Federal Authorities for Alleged Misbranding of Goods.

ST. LOUIS, Feb. 1.—A suit has been brought in the Federal courts here alleging that Dr. Dennis Rupert Dupuis, of 2813 Pine street, violated the pure drug laws when he shipped a preparation known as Radol to F. G. Henson, a food inspector, at Washington, D. C. The petition alleges that the bottles were misbranded; that the preparation had no radio-activity and that the dealer prepared the goods under a fictitious name.

The preparation is for the cure or alleviation of cancer. The law provides for a fine of not more than \$200 for the first offense.

William D. Becker, attorney for Doctor Dupuis, says that his client has taken the name of Doctor D. Rupert Wells because his original name is difficult and the word Dupuis means Wells in the English language; that his change of name is known and approved by the State Board of Health, the Prosecuting Attorney's office in this city, and that no attempt has been made to conceal the name.

### DECISION ON LABELING OF PHENACETINE.

#### Attorney-General Rules That Its Derivation From Acetanilid Must Be Stated, Even if Not So Made.

WASHINGTON, Feb. 1.—Attorney-General Charles J. Bonaparte has rendered a decision upholding the contention of the Department of Agriculture that phenacetine should be labeled as a derivative of acetanilid, notwithstanding that it may have been produced from an entirely different substance, and in fact may not be commercially manufactured from acetanilid.

The Attorney-General holds that the term "derivative" as used in the Pure Food and Drugs Law must be given a narrow technical meaning, embracing theoretical derivation rather than the derivation of current industrial practice. Applying this construction to phenacetine, he holds that inasmuch as this substance can be chemically made from acetanilid, the regulation of the three Secretaries of Agriculture, the Treasury and Commerce and Labor, requiring phenacetine or acetphenitidine products to be labeled as such, is in accordance with the letter and spirit of the statute.

#### Annual Meeting of Parke, Davis & Co.

DETROIT, Feb. 1.—"We are well satisfied with the year's business," said Ernest G. Swift, secretary and general manager of Parke, Davis & Co., following the annual meeting. Directors were elected as follows: Frank G. Ryan, David C. Whitney, H. M. Campbell, Ernest G. Swift, George Hargreaves, Charles Stinchfield and Willis E. Buhl. The officers are: President, Frank G. Ryan; vice-presidents, David C. Whitney and H. M. Campbell; secretary and general manager, Ernest G. Swift; treasurer, George Hargreaves. The directors and officers were all re-elected. The executive heads and the branch managers of the big drug corporation were entertained at dinner in the Hotel Cadillac Wednesday evening by President Ryan. Tuesday night General Manager E. G. Swift gave a dinner to the branch managers at the Detroit Club.

#### For Purity of Horticulturists' Drug Supplies.

GRAND RAPIDS, Mich., Feb. 6.—Local fruit growers and general horticulturists hail with delight the introduction in Congress of the Lowden Bill framed to restrict the manufacture of quack insecticides and fungicides. The bill patterned along the same lines as the Pure Food Law will eliminate much faking among the manufacturers of horticulturists' drugs, the proposed act providing against the manufacture, sale or transportation of adulterated or misbranded fungicides, paris green, lead arsenate and all other insecticides. Interested in the movement in this city are Charles W. Garfield, R. D. Graham and John B. Martin.

#### Veteran Druggist Will Retire.

The Union Drug Company, at Appleton, Wis., has been purchased by C. W. Behrens, of Oshkosh, Wis. A. C. Newmeister, manager of the Union Drug Company since its organization, intends to retire from active business owing to failing health.

## CHAPTER 6 CELEBRATES ANNIVERSARY.

**Prof. Remington Pays Graceful Compliments to Members and Officers—Dancing Follows—Future Events.**

PHILADELPHIA, Feb. 13.—Chapter 6, W.O.N.A.R.D., was two years "young" last night and more than 200 members and friends assembled at the College of Pharmacy and celebrated the long-looked for event in most appropriate fashion. Never did the work of the chapter shine more brilliantly. Its activity, loyalty, strength and its aims were emphasized not only by the number and prominence of those in attendance but also by the addresses of Prof. J. P. Remington and Mrs. William E. Lee, the National president, and by the interesting review of the accomplishments of the chapter since it was organized, prepared and read by Mrs. William T. Burke, the secretary.

Professor Remington paid a graceful compliment to the chapter, its officers and particularly to Mrs. Lee. He dwelt upon the loyalty of the graduate body of the college and told how these principles were being carried out by the wives and daughters of the graduates.

President Lee had personally greeted practically every guest, but her address of welcome was none the less cordial. She reported the improved condition of ten members who were ill and unable to be present.

Mrs. W. H. Gano, on behalf of the chapter, presented Mrs. Lee with a handsome bouquet. Another interesting number was the announcement that the beautiful banner, presented last year to the local chapter by their friends in Washington Chapter, would be suspended from the walls of the college museum. The vocal solos by Miss Helen MacNamee and the rendition of two difficult piano solos by Otto Kraus, Jr., were enthusiastically encored by the delighted audience.

Then Mrs. Lee called upon Charles Rehfuess to act as floor manager. In this feature, too, the majority of the guests entered enthusiastically and it was after midnight before the orchestra swept into the familiar waltz "There's No Place Like Home."

The training received in the druggists' semi-monthly dancing class—also a project of Chapter 6—was evidenced in the barn dance which was participated in by fully 50 couples. Announcement was made of the coming entertainment February 25 of the chapter and of the dancing class in Bank Hall on Friday evening next.

On Thursday afternoon Mrs. Lee entertained the members and friends of the chapter at a tea at her home, 823 North Twenty-fourth street. It was very largely attended.

## Complaint Made of Alleged Candy Trust.

WASHINGTON, Feb. 15.—The Department of Justice was today presented with evidence of an alleged candy trust. Several New York confectionery supply firms were named as parties to a conspiracy to blacklist and boycott Frederick C. Fox, a manufacturing confectioner of Boston, the complainant in the case, because he declined to become a member of the Confectioners' Association. Among the New York firms Fox says refused to sell to him were the Gardner Lucas Company, Henry Heide Company and A. Slauson & Co.

Wade H. Ellis, assistant to the Attorney-General, said the charges would be investigated and if the facts justified it prosecutions would be started.

## Hampton Agency's Successor.

The Hampton Advertising Company, 7 West Twenty-second street, New York, has been succeeded by Biggs, Young, Shone & Co., Inc., Mr. Hampton having severed his connection with the business and entered the publishing field. H. A. Biggs, who has been treasurer and general manager since the agency started, becomes president of the new corporation, the directors, in addition to Mr. Biggs, being G. C. Young, E. H. Shone, J. H. Gallagher, H. H. Walker, R. T. Allen, H. J. Prudden and E. T. Carswell, Jr. The new corporation will continue the business so successfully followed by its predecessor.

## Sunday Closing Agreement at Sheboygan.

SHEBOYGAN, Wis., Feb. 6.—Druggists here have entered into a new arrangement in regard to Sunday closing. The store or stores whose turn it is to be open the entire Sunday will, in the future, be the only one or ones to be open on Sunday evenings. The agreement will also hold true in regard to legal holidays.

## WHOLESALE SMUGGLING OF CODEINE.

**Three Arrests Made in Connection With Operations of an Alleged Gang—One of the Accused Confesses.**

Wholesale smuggling of codeine and the ramifications of a system for its sale which met a serious setback through the suicide of the alleged principal agent six months ago, were revealed to Gen. James S. Clarkson, Surveyor of the Port of New York, on Monday, after his special deputy, George J. Smith, had extracted a confession from Herman Ebert, a steward aboard the Kronprinzessin Cecilie, of the North German Lloyd Line, who was arrested last week.

As a result, Adolph Bunneberg, for 22 years a steward on North German Lloyd steamships, and Gunther T. F. Schmidt, a steward and bartender on the Kronprinzessin Cecilie, were arrested, charged with smuggling, and Alfred E. Willembricher, of Westwood, N. J., outside salesman for a drug house and brother-in-law of Schmidt, was arrested, charged with disposing of the stolen drug.

Codeine is assessed \$1 an ounce for customs and is largely used in the preparation of various alleged cough cures.

Mr. Smith explained that confessions had been obtained from all of the prisoners, which involved the statement that Willembricher was operating in codeine without the knowledge of his employers and was drawn into the alleged smuggling conspiracy only when George Von Derschulenberg committed suicide.

Von Derschulenberg was a druggist and had a small office in Nassau street. The men arrested, Mr. Smith says, confessed to him that for years they had been smuggling codeine and Von Derschulenberg had been distributing it at a large profit, but that when Willembricher was drawn in to take the dead man's place affairs did not go well and discovery came at last.

Willembricher gave bail in \$3000, but Schmidt and Bunneberg were unable to procure bondsmen and were committed by Commissioner Shields.

## DRUG TRADE WARNED AGAINST EMBEZZLER.

**Accused Man Has Brother Holding Public Office in the City of New York—Wanted in Omaha.**

The drug trade is warned to be on the lookout for a swindler by the name of Otto N. Frankfort, alias Frankforter, recently in the employ of the Richardson Drug Company, of Omaha, Neb., as a traveling salesman, by which concern he is wanted for embezzlement.

His method consisted in borrowing money from the customers of the house besides making sight drafts on the firm and in other ways securing all the cash on which he could lay his hands. His bills in Omaha also remain unpaid. The firm states that it has no hesitancy in pronouncing him an unprincipled scoundrel and one of the smoothest types of individuals which the trade has been up against for some time.

His recent position was secured by the means of excellent references and it is stated that he has a brother in New York City filling a public office. The firm states that he was a very capable man, well posted in the drug business and had a future before him had he been honest.

Following is his description. Age, 32; height, 5 ft. 8 in.; weight, 135 lbs.; complexion, fair; eyes, hazel, rather small; hair, dark; smooth shaven, long prominent nose; nationality, German-Jew; speaks German and Spanish fluently.

## Jury Acquits Druggist in Wart Death Case.

J. S. Higdon, a druggist at 116th street and Park avenue, Borough of Manhattan, New York City, who was charged some weeks ago of causing the death of R. S. Irish, who died on January 12 from septicaemia, was acquitted by a coroner's jury of the charge last week. There were several hearings on the case and a number of physicians testified that blood poisoning developed as a result of an operation on some warts which it was charged Higdon removed with an acid and a pair of unclean scissors, but at the trial before the jury last week the widow of Irish gave testimony that conflicted with that given at the inquest, and the jury rendered a verdict that Irish had died from septicaemia contracted in some unknown manner.

If you want anything use the ERA's Want Ads.

# THE DRUG MARKETS

## TRADE IN GENERAL LINES FAIRLY GOOD.

**Impression That Trade Is Dull Due to Conservatism. Messina Oils Still Being Attacked.**

NEW YORK, Feb. 15.—Some complaints are being made throughout the trade on the failure of business to improve more rapidly, but investigation proves there to be a fair amount doing in general lines; conservatism is still noticed, however, which gives the impression that trade is dull. A few new features have developed, the principal one being the decline in manufacturers' prices for citric acid and citrates. Ergot, both Russian and Spanish, is more active with sales of large lots at high prices. Opium and quinine are without any material change, but firmly held at quoted prices. Cardamom seed is higher in primary markets with a good demand, and this has increased interest in our market with the price of all the different qualities advancing. Norwegian cod liver oil is very active and is bringing full prices. Jalap root is slightly easier. Oils of bergamot, lemon and orange are unsettled and easier owing to competition and bearish influences. Refined camphor, in good demand at this season of the year, is bringing good prices with a firm tone existing in the primary markets.

QUININE SULPHATE.—The bark shipments for January amount to 1,020,000 pounds, quite a large amount, but smaller than for some of the previous months. If the shipments for February should show a falling off, which is probable, an advance in the price of quinine would not be surprising. The present price is the lowest on record and would induce buying of quinine as an investment on the least grounds pointing to an advance.

OPTUM.—There is no material change in prices, but the market is firm at \$4.37½ for case lots and \$4.40 for lots of 25 and 50 pounds, and the usual advances for smaller quantities. The market in Smyrna shows a strengthening tendency with a sale of 88 cases for the week ending January 22. Eighty-three of these cases are coming to our market. The weather conditions are reported as more or less favorable for the sowings, but more cold and less rain would have been much better. January has been too mild and wet thus early in the season to remove all anxiety from the growers' minds of apprehension of future damage to the poppy plant. The arrivals in Smyrna for the week ending January 22 amount to 1999 cases, as against 1347 cases for the same period last year.

GINGER ROOT.—It is reported that the crop of Cochbin root is a failure and if such is the case there will be a large increased demand for the Jamaica variety, of which a good stock of both bleached and unbleached is at present obtainable among the trade in this city.

HOEBOUND LEAVES.—Owing to a good demand the stocks in our market have been considerably reduced and prices are hardening in sympathy.

BALSAM OF FIR.—The market for the Canadian article is very firm at \$6.00 per gallon in barrels and \$6.10 in 5 gallon cans. The cheap sellers are now entirely out of stock and there is not any to be obtained in Canada, so the present prices will undoubtedly rule for the coming year. The Oregon balsam is unchanged and the demand is not brisk for this quality.

CHAMOMILE FLOWERS.—The Hungarian variety of good quality is becoming very scarce in our market, and the new crop will not be available for some months hence. The Belgian variety is in better supply and lower.

CITRIC ACID AND CITRATES.—Prices on both the acid and salts have been reduced 2 cents per pound by the manufacturers.

BAY RUM.—This article is in a very firm position, with higher prices looked for in consequence of the tax on the Porto Rican product. Quotations last week were \$1.50@ \$1.60, as to seller and quantity, with little available at those figures.

CASCARA SAGRADA.—The market is somewhat steadier, the cheap lot recently offered at a material concession from quoted figures having been sold. The quotations are maintained at

\$1¼@9c., as to age, quantity and seller. The Pacific Coast market is reported firmer.

BENZOIC ACID.—Owing to lack of important demand and a consequent heavy accumulation of stock in first hands, quotations have been reduced to 26@27c. as to quantity.

ARNICA FLOWERS.—Goods of good quality are meeting with a fair seasonable consuming demand and prices are steadily maintained at 12@13c. for prime flowers, sales being reported at these figures.

ANGOSTURA TONKA BEANS.—Some important transactions have been consummated, and available stocks are temporarily under better control with the inside quotation advanced to 50c. per pound in large quantities.

JUNIPER BERRIES.—In foreign markets the stock has been reduced very materially, the total being stated as only 600 bags, which is a very small quantity. The quality is reported as ordinary. There is still some stock obtainable in our own market, but prices are hardening up very fast.

OLIVE OIL.—The ordinary yellow olive oil is now being held in barrels at \$1.65 per gallon. Supplies of green oil are now due and will be offered at slightly lower prices than those prevailing for the yellow oil. Prime salad oil in primary markets is eagerly sought for and prices are steadily advancing, as the supplies are decreasing. The trade may expect a considerable advance in the price of this article in the near future.

## London Drug Market

LONDON, Feb. 6.—The optimistic feeling which prevailed early in the year is in danger of being replaced by less hopeful views unless a change for the better speedily makes its appearance. Business in drugs and chemicals is lagging behind very badly and transactions continue to be limited to a very small scale. During the week things have been dull almost to a point of depression and apart from orders which involve the filling of immediate requirements, very little else has happened.

Citric Acid is attracting little attention, the prevalent idea being that prices will recede. English is nominally quoted at 1s. 9d. per pound, but no business of any magnitude has been done. Essence of Lemon is also quiet and buyers are holding off for the moment, although there are spot offers at 5s. 6d. per pound, while for shipment from Sicily offers are as low as 3s. 6d. per pound, c. i. f. A small business, more of a retail character than otherwise, has been done in Essence of Bergamot at 25s. per pound. Camphor continues quiet but the market is steadier at 135s. per cwt. for China crude; Japan refined is obtainable on the spot at 1s. 4d. per pound for 1 ounce tablets; a good business has been done for America in Japanese refined from Japan.

Wayne County tin oil is quoted at 6s. 3d. per pound and H.G.H. 8s. 4d. Small sales of Star Anised Oil have been made at 4s. 5d. per pound. A fair business has been done in Menthol for American account; on the spot the price of "Kobayashi" is 7s. 3d. per pound. Quinine is dull and German brands are quoted 7d. per ounce from second hand. Business has been done in Gamboge at £14 per cwt. for fair blocky Siam, being a lower basis than prices last paid. The position of Bromides is unchanged. Japan Wax is easier at 52s. per cwt. New Norwegian Cod Liver Oil is offered at 65s. per barrel, c. i. f.

### Fear Prohibitive Tax on Olive Oil Foots.

At a meeting of a number of soap manufacturing interests in Hotel Astor, New York, on February 2, it was decided to petition the Secretary of the Treasury asking that "olive oil foots" be classified under Section 568 of the tariff schedule as "grease and oil used in soap making." The manufacturers contend that "olive oil foots" do not contain the least particle of olive oil, being a sulphur oil. While the article is imported duty free at present under the olive oil regulations, which provide for no tax on oil that costs less than 60 cents a gallon f. o. b. European ports, there is a strong likelihood that the price on the "foot" will soon rise above the present price of 56 cents and possibly rise above the figure allowed by the statutes for free importation. In this case the tax will amount to 40 cents a gallon on the foots.

W. Crawford Hirsch, representing the textile, green and castile soap manufacturers, will present the petition this week.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, FEBRUARY 25, 1909

No. 8

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn St., Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

#### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers,  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

## EXPOSING EVILS IS A PUBLIC DUTY.

While the ERA has never hesitated in its duty to the drug trade in exposing swindlers or calling attention to evils which deserved publicity there has always been the danger of libel suits. Litigation of this sort is annoying, sometimes expensive and never desirable. For these reasons the ERA has always endeavored to be sure of its facts to the extent that no injustice would be done to any honest business man. Of other people, the crooks and swindlers, once knowing them to be such, threats of libel suits have rather hastened and intensified the exposures than otherwise, for no honest business man has anything to fear from the exploitation of his methods.

Libel suits against reputable journals invariably result in favor of the defendants, as was the case recently in the suit of a druggist in this city against the New York Times for \$60,000 damages for an article printed away back in 1904 under the caption: "Another Fake Drug Raid." The article and the circumstances at the time undoubtedly warranted the druggist in taking the action which he did. The actual facts probably justified the jury's verdict of "no cause of action." The grievance of the druggist was more against the manner in which the alleged facts were stated than as to the materiality of the issues. However that may be, without going into the rights or wrongs of this particular suit, the following ruling by Mr. Justice Guy, of the Supreme Court, is interesting as showing the duty of public journals:

*"While newspapers should be held to strict and severe accountability for unjustifiable and untruthful assaults upon private character, upon business standing and credit, they deserve, not punishment and rebuke, but public approval and commendation where \* \* \* they truthfully, and in strict conformity to facts, call public attention to those who are engaged in nefarious practices, injurious to the public welfare."*

## NEW YORK BOARD NOT A POLICE COURT.

Pharmacists in New York State may change their minds somewhat concerning the advisability of taking away from the State Board of Pharmacy the control of examinations for admission to the profession and vesting it in the State Board of Regents as proposed by the pharmacy reformers. Complaints against the pharmacy board have been that the members were too strict, that they investigated the antecedents of applicants and rejected them when found wanting. One of the allegations made regarding the retention of fees paid by improper candidates is that the board considered such action sufficient punishment without prosecuting the offenders

for technical violations of the statutes in the matter of forgery or perjury that would have involved prison sentences, or penalties much more severe than the loss of the examination fees.

As a matter of fact and justice the board erred in assuming in this way to act in criminal cases which should have been turned over to the police, or certified to the county district attorney. The consideration shown by the board to young men whom they conceived were not likely to offend again has been repaid by attacks by some of the offenders who are not at all appreciative of the clemency of the board. The New York State Board of Pharmacy would have done better not to have permitted the philanthropic feelings of its members to undertake the functions of justice which ordinarily originate in the police court, or come within the province of the criminal courts. The few beneficiaries of the miscarriage of justice have been extraordinarily active at Albany in trying to obtain a change in the law creating and perpetuating the present State Board of Pharmacy.

#### SELLING NEW YORK REGENTS' CERTIFICATES.

A flood of light is thrown upon the attacks made at Albany on the present State Board of Pharmacy by five arrests which happened in one day in New York City last week of persons who held law, dental and medical school certificates which they had not earned. These all were Regents' certificates and they had been paid for by obvious incompetents at prices ranging from \$300 to \$1000 apiece. With Regents' certificates for sale at these prices the confiscation of an examination fee by the State Board of Pharmacy for offenders who are in the business and find the Regents' examinations an easy way to a means must have seemed to some of them, if not all, like inflicting a puerile punishment. The newspaper stories show that there has been an organized gang at work dealing in examination certificates to an extent which the District Attorney of New York County has not yet been able to fathom.

Under Assemblyman Conklin's bill to reorganize the State Board of Pharmacy this same system permitting impersonations and the sale of certificates would doubtless be in full force and effect, for in his bill the examinations are turned over to the State Regents and the members of the Board of Pharmacy are secondary, if not merely incidental figures. The pharmacists have neither creative nor final power. The questions propounded must be "approved" and the results and conclusions must be "approved" by the Regents. Changing from a system that has been absolutely honest to one that is under indictment by the criminal authorities does not mean much for the elevation of the profession of pharmacy or for its proper development along business lines.

#### FUTURE OF THE NEW YORK PHARMACY BOARD.

Outside of the misguided leniency which the New York State Board of Pharmacy has shown to crooks who have been unable to make its examinations the source of profitable revenue that has gone to them through the conditions applying to the examinations of the State Regents the only attack upon the board

that has any merit is the contention of Governor Hughes to the effect that the board is not responsible to the State executive, or the people. Considering the matter from the standpoint of Mr. Hughes, the lawyer, that is a point which would appeal to anybody. It is a strong point. As a matter of fact if the present elective system could be spread over the entire State to the extent of making each registered pharmacist a voter all opposition to the present system of election would undoubtedly disappear. Without going into the question of the constitutionality of the present Pharmacy Law it might be advisable to amend the law to provide for the continuance of the present system, *appointments to be made by the Governor from a list submitted by the New York State Pharmaceutical Association*. While the ERA does not see any important advantage to be derived from the change it would probably set at rest the ever present "constitutional" question and no lawyer-Governor would feel inclined to meddle with the pharmacy law outside possibly of attempting to do something in a trade way.

We do not advise the pharmacists of New York to turn over their elective rights to a Governor. We are of the opinion that a law which would give every registered pharmacist a right to vote would be much better than a restrictive law. It is up to the pharmacists of the State to decide what they want. The whole subject is present in such shape that it ought to be disposed of for the best interests of the drug trade.

#### JUST TWO POINTS REALLY AT ISSUE.

There are really but two vital points at issue. One is the enactment into law of the provisions of the Whitney-Wainwright Act which failed of executive approval last year. The other is whether the members of the State Board of Pharmacy shall be elective by pharmacists or appointive by the Governor. There can be no question of the proper use of appointive power by Governor Hughes, but there can be no guarantee as to what may be done by subsequent governors, especially accidental governors. A bill ought to be prepared and presented to the Legislature revising the Pharmacy Law and first of all including the Wainwright-Whitney legislation, thereafter providing

(1) for the appointment of the members of the State Board of Pharmacy from a list provided by the New York State Pharmaceutical Association; or

(2) the election of the members by vote of all registered pharmacists of the State, making no restrictions as to their eligibility to vote beyond their certificates.

Either innovation involves the abandonment of a present right of membership in incorporated pharmaceutical bodies in the State. The franchise is restricted and it cannot last for any length of time. The problem of the moment is for the pharmacists of New York to decide which of the two alternatives we have just mentioned is the better one to accept and settle the question of "constitutionality" for all time.

In any bill that is pressed for passage there should be a provision that the penalties are to be turned in

to the State treasury and the salaries and expenses paid by the State.

Governor Hughes has shown a spirit of fairness in his conferences with the representatives of pharmacy which gives promise of the approval by him of any legislative act which may be presented to him that will place the Board of Pharmacy upon a constitutional basis, from his view-point as a lawyer, and which will at the same time better protect the public in the integrity of pharmacy as practiced by the retail druggists of New York.

Answering a query, the thirteen States and Territories referred to in a recent issue of the ERA as possessing optometry laws are Arizona, California, Idaho, Indiana, Minnesota, Montana, Nebraska, New Mexico, North Dakota, Oregon, Tennessee, Utah and New York.

Hon. William F. Craig, formerly druggist, then chemist, then State Senator, and now postmaster of Lynn, has just added another occupation to his already long list. This month he was admitted to the bar as an attorney at law. For a man of 42 that is a rather busy professional career. Mr. Craig was born in Digby, N. S., September 15, 1866, where his father was for 40 years the town postmaster. At the age of 17 he went to Lynn, entered a drug store, and in 1890 got his degree of Ph.G. from the Massachusetts College of Pharmacy. Then he took a course at Harvard University in advanced chemistry.

Two years later he established himself in the retail drug business in Lynn with ex-Mayor Bessom of that city, and in 1896 sold the business to become chemist for the Lynn Board of Health. In 1902 and 1903 he served in the House of Representatives, and both years was a member of the committee on public health. This service was followed by two years in the State Senate, which under the Constitution gives him the title of "Honorable." Upon the completion of his last senatorial year, he was appointed postmaster at Lynn, one of the most responsible postal positions in this part of the country, and while filling that position he has been studying law, so that the indications are that pharmacy will lose what law will gain.

Mr. Craig's pharmaceutical and public experience will not be valueless to him in his newer profession. In fact, while a member of the Massachusetts Legislature Mr. Craig attracted considerable attention by his parliamentary ability. His place on the committee on public health, first as clerk and afterward as Senate chairman, threw upon him the responsibility of conducting in the respective branches the progressive legislation which year by year has made Massachusetts conspicuous for its advanced position.

Mr. Craig was never verbose. He never attempted the grandiloquent. But he was careful in statement, bold in insistence because of his absolute knowledge, and scientific in thought because of his scientific training. His knowledge of matters affecting the public health was not pedantic. He was calm and sane on "pure food" questions when agitators were inclined to be hysterical, and he was able through his knowledge of facts and faculty of expression to lead the houses along straight ways.

Mr. Craig is a modest man and is disinclined to talk about himself, but when he was asked the other day about his early experience in the drug business, he replied: "My early drug experience differed little probably from that of every other regular druggist. Yet there is this one feature of it which should aid one in starting right. We were compelled, as Lord Eldon said, 'To scorn delights and live laborious days.'"

The smallest trolley system in Philadelphia, a system that

boasts of only one car, two motormen, no conductors, and on which travelers ride free, is in operation at the League Island navy yard. It is the only street car line that Uncle Sam owns. The car is run for the convenience of the officers and their friends, and holds a score of passengers. The motormen are detailed whenever their services are required, and no transfers or tickets are issued.

Following the announcement in the ERA of February 18, a meeting was held last Saturday in the Chemists' Club in this city at which it was unanimously decided to take measures to bring the International Congress of Allied Chemists to New York for its next convention in the spring of 1912. The unanimity of sentiment in favor of the movement must have been as gratifying to the originators as it will be to the guests who no doubt will accept the invitation.

Faith is a belief in that which is not understood. This accounts for the public's faith in patent medicines, the physician's faith in ready made prescriptions and (sometimes) the druggist's faith in the N.F.

The French expedition into unknown parts of northeastern Japan has sent the first authentic news of the Ainos, a small tribe which is fast dying out. The Ainos resemble Russians more than the Japanese, but very little of their early history has been discovered so far. A peculiar custom is reported by Professor Mayr, a member of the expedition. He says that among this strange tribe married women are easily distinguished, because custom wills that they wear a mustache.

"Dobbins has a grand idea for a new game."

"What is it?"

"Play baseball on the ice in an auto."

"If smallpox or yellow fever was causing a thousand deaths a year, you'd be holding special sessions of the Legislature to devise means to be rid of the scourge. And yet I tell you that tuberculosis is no longer a burden to be borne unquestioningly, no longer a cross that must be unprotestingly borne. It is an epidemic that must be met and conquered." This strong statement of the case was made by Bishop Codman, of the Episcopal Diocese of Maine, on an appropriation for \$130,000 for the next two years for the Hebron Sanatorium.

If one would be familiar with all the latest electrical novelties, says the London *Globe*, he must make a tour of the kitchen of a big Atlantic liner. The automatic egg boilers, like those on the Lusitania and Mauretania, are able to cook 200 eggs at once, a clock arrangement causing the basket containing the eggs to hop out of the water at any half minute up to six minutes. Another novelty is a self-dumping oyster cooker for stews. At the expiration of a given time the cooker pours its contents into a soup plate.

The ancestry fad is raging in Indianapolis, chiefly among the women who are "proving up" claims that make them eligible as Daughters of the American Revolution and Colonial Dames. Some of the men have it, too. The other evening, in a small company in which was a young druggist named King, the subject of ancestry came up. One after another boasted of illustrious ancestors. Not a word from the young druggist. He was finally asked what were his claims to noble lineage. "I don't need to make any," was his modest answer. "I come of a race of Kings."

Frozen Chinese pork is to be imported into England, which recalls to a writer in the London *Chronicle* the fact that the frozen meat trade is nearly a century old. On January 30, 1816, three Esquimaux arrived at Harwich, England, by the packet from Gothenburg, bringing five sledges packed with

Hon. WILLIAM F. CRAIG,  
of Lynn, Mass.

ptarmigan, blackcock and other game, frozen and packed in airtight cases. The enterprising northerners had to pay over \$250 duty on the consignment and \$50 for carriage from Harwich to London; but as the game was in excellent condition it found a ready sale and brought high prices.

"So you think you would like to make a journey to the North Pole?"

"Yes," answered the city official. "It must be restful to get to some place where nobody cares whether the snow is cleaned off or not."—*Washington Star*.

A three-year-old "wonder child" has been amazing the musicians and savants of Leipzig. Pillar Osorio, a tiny girl, whose baby fingers cannot span an octave, is able to play on the piano difficult classical pieces with accuracy and spirit, although she performs entirely from ear and memory. The prodigy is puzzling the scientists as to how her three-year-old brain can possibly grasp and interpret the intricacies of the music she plays. The mystery is not explained by the heredity theory, for none of Pillar's parents or grandparents has shown any unusual musical talent.

When you hear a man say the world owes him a living, just tell him to "dig for it."

So great is the number of Alsatians and young men from German Lorraine wishing to serve under the French flag, that the Minister of War has decided to form a second Foreign Legion to serve in Africa. Most of the Germans going voluntarily into French service are the descendants of French patriots unwilling to recognize the annexation of Alsace-Lorraine to the German Empire. It is estimated that every family in the provinces secured by Germany in the Peace of Frankfurt, has, or had, at least one relative doing military service for the old country, France.

Mr. Younglove—What do you do when your baby gets sick at night?

Mr. Oldpap—I generally lie still and wait to see if my wife isn't going to get up and attend to it.

Catching fish by telephone is the latest invention of a Norwegian, which is now employed by the fishermen of his nation. A microphone which magnifies submarine sounds is shut up in a thin water-tight steel box and kept in communication by metallic wires with a telephone receiver installed on the fishing boat. Each kind of fish gives in the instrument a particular sound. The arrival of herring, for example, is signalized by a sort of whistling; the codfish announces its arrival in the neighborhood by a sort of grunting.

"Napoleon's Writings and Sayings" is the title of a little book which has just been published in Paris. On the subject of suicide, Napoleon wrote at St. Helena: "Has a man the right to take his own life? Certainly, as soon as his death would be an injury to no one and his life a burden. When is life a burden? When it offers only tribulations, but as these may vanish at any moment there seems to be no moment in one's life when he has the right of self-destruction. There are not many men who have not felt at some time the impulse to end all through death, but a few days later there comes a change and the cause for self-inflicted death is gone, and the man who succumbs to the impulse on Monday, could he undo his work, would be sorry for it when the week-end came."

Howell—It is hard for a woman to understand statistics.

Powell—I guess that is so. I told my wife that for every passenger the railroads of this country transported that tons of freight, and she wanted to know why the passengers were allowed to carry so much baggage.—*Harper's Weekly*.

An unusual short-course student has entered Cornell in the person of Mrs. Olive Brown Saare, a wealthy woman past middle-age, who has taken up college work because of her interest in raising chickens. Mrs. Saare owns a large estate in the Catskills and her home is known as Yanno Uchi. There are a large number of Japanese servants on her estate and her chicken houses are designed as Japanese pagodas. She is an authority on Japanese architecture and a woman of considerable intellectual attainments. Every morning, in

company with several score strapping young farmer boys, who are studying scientific poultry, she goes out to the university houses and feeds the chickens. She says she prefers to manage her own estate, and, therefore, decided to learn how to take care of her chickens. Farming, she says, is more important than tariff or the trusts, and she asserts that she never had so much fun in her life as when she feeds the chickens at the Agricultural College.

What joy one little baby brings!

When he his nightly squall begins

You hug him to your breast and bless

Your lucky stars he isn't twins.

"Ring out the old, ring in the new," for the passing of the Teddy bear seems imminent and the coming of the Billy 'possum is predicted! Already a company has been organized to manufacture the Billy 'possum. It is fondly hoped by the directors of the company that before many months Billy 'possums will be perched on automobiles, victorias and baby carriages and will have become an essential of every well appointed nursery. A woman well known in society in New York gave her views on the Billy 'possum question to a reporter for the *Herald* recently.

"Do you know," she said, "I think the scheme is a scream. I've ordered two dozen of the little dears."

A business man with a large family and many daughters was not quite so optimistic. His sentiments were something as follows: "I'm sick of these peripatetic pests."

The originator of the plan to adopt the little animal as the new national pet is Mrs. De Forest Allgood, of Atlanta. Soon the manufacture of the toys will begin, and if they "catch on" in popular favor it is believed that the Teddy bear will be ousted from its present aristocratic berth.

Gladys—My brother is just awful. He can't save a cent.

Harold—He has saved a ten spot of mine for the last eight months.—*Browning's Magazine*.

"Chameleon" floral decoration is the latest idea for dinner-parties in London. Lilies and other white flowers placed on the table are scientifically made to assume gradually varicolored tints before the eyes of the guests. The table vases are filled with colored solutions of gelatine. The stems of the flowers are slit and placed in the liquid, which is gradually absorbed by the flowers. Blushing lilies and jaundiced camellias are the result.

There was a young fellow named Syd,

Who kissed a girl on the eyelid;

Said the girl to the lad,

"Your aim's very bad;

You should practice a bit"—so he did.

—*Lippincott's*.

The true function of the clergyman is to teach the ethical and spiritual doctrines of Christianity, and as an under shepherd, to visit the flock committed to his care, is the stand taken by Dr. James M. Buckley in the February *Courier*, in a discussion of the "Dangers of the Emmanuel Movement," and the reasons why it should not be generally adopted.

In the discharge of this duty he should maintain an individual acquaintance with members of the congregation, listen to whatever they communicate, and by counsel assist them. He should be accessible to all, sympathize in sorrow and in joy, and help them bear their burdens. Scrupulous attention should be given the poor and the sick, and the clergyman should be in such relation to reputable physicians and surgeons as to direct those who require advice; he must also have the entree to hospitals. His prayers and communings in the sick room will sink into the depths of the mental and moral nature of the sufferer, cheering, comforting, strengthening and reinforcing every effort to cure or mitigate his malady, inspiring him with hope of recovery or of immortality. All else the pastor should leave to the physician.

Gyer—There goes a man the weather seldom agrees with.

Myer—So? Who is he?

Gyer—He's a Government weather forecaster.

Charge a nickel more and say "Thank you"—cordially.

## "Drug Clerk's Duty" Wins Cash Prize in Era Competition This Week.

*In the ERA'S Prize Competition this week the Cash Prize is awarded in Contest No. 4 to A. T. Nicholson, of Tarboro, N. C., for the best article of practical helpful value to drug clerks. Mr. Nicholson's identity was not known to the judges, for in these contests every precaution is taken to obtain unbiased judgment as to the relative merits of articles or photographs offered in competition for the various prizes. Full details regarding the Competition will be found on advertising page 38 of this issue of the ERA and it should be remembered that the contests are open to everybody.*

### A Drug Clerk's Duty, Often Overlooked—

#### And a Drug Clerk's Remedy.

There are certain duties that the drug clerk owes his employer that are in too many instances disregarded. Among the first of these duties, which is not always heeded as it should be, is the proper treatment of that employer's patrons, possession of whose confidence and good will and consequent patronage are essential to any degree of success to which the business may attain.

"A pleased and satisfied customer is the best advertisement."

The truth of that oft-repeated phrase has been demonstrated time and time again, and respectful attentiveness and courtesy to customers surely work together to that end.

So, I say, of first importance, the drug clerk's duty toward his employer—and incidentally toward himself—is unflinching and indiscriminating politeness and courtesy to every one who visits the store. Unfailing, because he should want to get the habit; indiscriminating, because he should want to be equally gracious and obliging to every one, rich and poor alike.

There is quite a large class of drug clerks who seem to think that they should have two sets of store-manners. A *de lute* set, so to speak, for use only while serving the more wealthy patron; and a second or indifferent set for the large, though less fortunate, majority.

Every man, woman or child who enters the store—whether to make a large purchase or a small one, to buy a \$10 toilet set or a 1 cent postage stamp—should be met with the same equally courteous reception and treatment, regardless of whether his position be high or low, or whether or not he makes any purchases whatever.

So far as his demeanor towards his customer is concerned, this side of the matter should in no way influence the man behind the counter. Nevertheless, if he is a wide-awake one, he will see to it that it is no fault of his if the customer gets out without having made a purchase.

The drug clerk's early training, behind the counter, determines to a great extent the degree of attention, courtesy, etc., that will be bestowed upon his future customers, for it is then that he gets the HABIT which plays so great a part in his future career. Then, it is here the two-fold duty of the man higher up to see to it that his customers are properly treated—for the good of the clerk, as well as himself—it's a duty the boss owes the boy, for the boy's future benefit. For if he is started right, he is apt to continue so. If he is started upon the habit of courtesy and attentiveness to patrons, it will become of incalculable value, and he will not fail to realize, sooner or later, its great importance.

The point is that HABIT, in this connection, to a certain extent, makes or mars the salesman. Whether good or bad, the habit, if unhampered, will grow and flourish as seed sown in fertile ground, and will produce results, good or disastrous, as the case may be.

Some will, doubtless, argue that one cannot always be agreeable and obliging so long as toothaches and headaches, and various other aches and ailments continue to infest the drug clerk, who is still human, notwithstanding the evident idea of some to the contrary, for at such times he will get out of sorts, become ill-tempered and grouchy, and that, in this condition, it is next to impossible for him to be even civil to a customer, much less agreeable. Ordinarily, that is true, but right here is where the man who has the "HABIT" gets the advantage over the other fellow.

In consequence of having trained himself in the habit of

courtesy to his customer, under such conditions, involuntarily he will realize the great necessity of keeping the customer in ignorance of any distress of mind or body from which he may be suffering. In other words, he will keep his wits about him and be constantly on guard for just such an emergency, and will exert himself to be equal to it, realizing at the same time that his customer is in no way responsible for, and should be allowed to suffer no inattention or discourtesy, not to say insult, as a consequence of his personal feelings, as innocent patrons so often do.

Under these circumstances, in many instances, a good customer would be won or lost, accordingly, as the clerk could or could not be master of his own feeling.

As a result of this simple matter of self-training in everyday dealings with your customer, courtesy and affability of manner, in all circumstances, will become a force of habit, almost of second nature. And the more persistently practiced, the more completely will it dominate the man's personality. The possession of such a disposition is positively of great value to the man of business, who is so largely dependent upon a fickle public for its patronage.

"While a Smile may put but a Dime into your strong-box—  
a Frown may mean Dollars taken out."

### WOMEN TO CAMPAIGN FOR SHORTER HOURS.

Each Member of St. Louis Chapter Appointed a Committee of One to Act—New Constitution Ready.

ST. LOUIS, Feb. 20.—St. Louis Chapter, W.O.N.A.R.D., has taken a decided stand for shorter hours for the druggists. The subject was brought up at the recent meeting of the organization at the Southern Hotel by Mrs. J. V. Calver, of Washington, general organizer, who had been working in the city for some time. Mrs. Calver's suggestion was that the wives undertake a campaign for shorter hours and closed Sundays.

The first suggestion met with instant response from those present, but the Sunday idea was not encouraged. Mrs. Calver's expressed idea was that the long hours were the fault of the public, but that a campaign of education would have excellent results. Mrs. Richard Kring, secretary, took issue on this point, expressing the belief that the public simply knew the drug stores would remain open late and that this fact was taken advantage of. If the druggists wanted to close, they could easily do so and the public would not blame them, but would come earlier for the small wants which now make the late sales. Mrs. Claus, the president, took a similar position.

Each member was appointed a committee of one to undertake the working out of the campaign with at least one store, that in which she was mostly interested.

The committee on constitution reported that document ready to be sent the general offices for approval. Mrs. Calver urged the members to build their organization in such a way that if for business reasons the druggists' organization should disband, that their society could be held together. The meeting closed with a programme for which Miss M. Jende rendered a very pleasing piano solo and Miss Corolee Siebly entertained with several recitations, which were well received and appreciated by all present. Then a game of "physiology" was indulged in by all present. Mrs. J. V. Calver won first prize; Miss Mollie Jende second and Mrs. J. P. Methudy third.

### Study of Browning Entertains Chapter Members.

CHICAGO, Feb. 20.—The Chicago Chapter of the W.O. N.A.R.D. at its regular January meeting voted unanimously to remain in the present quarters at 70 Adams street during the year. A pleasant hour was spent in the study of Browning. At the next regular meeting the members will be entertained by a lecture on "Woman Suffrage." Plans are being made for a card party during the early part of March.

### An Up-to-Date Pharmaceutical Journal.

"I have read THE PHARMACEUTICAL ERA since its first issue and regard it as being the most up-to-date pharmaceutical journal published."—HENRY F. LACKEY, President Tarrant County R.D.A., Fort Worth, Tex.

## A Successful Experiment.

By Emma Gary Wallace.

The graduated Woman Clerk in the exclusive Hurlburt Square Pharmacy was an experiment and she knew it. Her engagement was not only an experiment with her employer but with the customers, and she fully realized that in order to be an all-around success she must demonstrate her business value as well as her professional ability.

Certificates of qualification testified to what she was supposed to know, but so did those of the other clerks, and every little while one of these was dropped and a new one put in its stead. There was always some one ready to take the newly vacated place, and

she knew that if she failed to make good it would be so in her own case and she recognized the justice of it. It was the survival of the fittest, or as her old college professor used to say, the survival of the fittest, and she recognized the philosophy of that version of the saying as well.

As she took mental stock of her equipment she was forced to acknowledge that she—Asenath Esther Vail, was not a genius, except as she fulfilled the definition for one, by being possessed of infinite capacity for taking pains. Her chosen occupation had been mastered by hard study and close application, and she was determined to hold what had been thus gained and to steadily increase her fund of knowledge.

In one corner of the Woman Clerk's sleeping room an inexpensive but generous sized book-rack was installed. It was large enough to hold the dog-eared, text-book friends of her college life, the steadily increasing files of the pharmaceutical magazines which she could not afford to be without, and as much new professional literature as could be made of daily use. A well-bound blank-book was also provided in which to make notes of the new and practical ideas of more experienced workers, discoveries of her own, business pointers, and any valuable observations which from time to time might be the result of contact with others. She called this book her business diary, and tried to have something worthwhile to record every night.

Some of the other students who had graduated in her own and earlier classes boasted that they had not opened a reference book, except as absolute necessity demanded, since their closing finals. To the Woman Clerk this seemed like cultivating and planting a valuable piece of land to a promising crop and then sitting calmly back to watch the weeds choke the young plants. It was incomprehensible to her, how an apparently well-balanced individual could so utterly disregard his present welfare and his future prospects. Her life-field of activity had been carefully chosen and she meant that a harvest of usefulness to others and a competency for herself should be the outcome of a definite system of action toward that desired end. In her experience, random shots that hit the bull's eye were the decided exception and not the rule.

On her first half-day off she made a tour of observation among all classes of stores employing women clerks, and she was strengthened in her belief that when a woman becomes a successful part of business life, she must be attired in business-like fashion and be the possessor of an alert, yet modest manner. It was surprising how few women clerks whom she saw were irreproachable on the simple points of immaculate neatness and careful grooming. That night an entry in the note-book read: "The woman in business must give careful heed that the details of her toilet receive daily attention. Occasional care is not sufficient. Simplicity and neatness are the key-notes of a suitable appearance in business life. A plain tailored shirt-waist with spotless collar and cuffs is infinitely more attractive than a dingy garment of expensive material with elaborate trimmings of doubtful suitability."

The laundry bill might be a bit appalling but Miss Vail reg-

istered a vow to make herself valuable enough to her firm that the question of laundry would be a mere bagatelle. At present she regarded it as too sure a thing in the line of profitable investment to disregard.

While on this tour of investigation she could not but note the different manners of the various clerks and the immediate effect upon the customer. A much-rouged woman of uncertain age replied to every would-be purchaser with a studied and patronizing sweetness that was decidedly offensive; others were condescending with an accompanying air of resigned martyrdom; still others visited together while customers waited, or continued their conversations as they gave indifferent service; and a few were earnest in their endeavors to do their best.

Miss Vail was finally rewarded, however, by discovering her ideal woman-clerk behind the counter of an uptown apothecary store, and she extended her purchases almost to the point of bankruptcy to have an opportunity to study this gentlemanly young woman. She gave respectful and willing attention to every one, and while she spared no effort to please, or to show and if necessary to explain the merits of her stock, the element of quiet dignity was not even tinged with undue familiarity. Never once did she permit herself to say, "I haven't it," or "I will get it for you," or "I have so and so," as though she were the head and front of the whole concern, it was always the impersonal but inclusive "we." There was no attempt to air her technical knowledge to the discomfort of the customer, but there was a perfect willingness to render genuine and legitimate assistance. So great was Miss Vail's admiration for this unexpected "find," and right in her own line of business, that she determined to go to that store occasionally and to cultivate a possible friendship.

Somewhere she had read or heard that a woman who cultivates her spiritual nature only, is, as a rule, a pious freak; one who attends wholly to society is a butterfly; and one who gives her entire attention to her mental development is a book-worm. The business woman was not catalogued, and as the Woman Clerk thought it over, it seemed to her that she was a happy blending of the integrity of one, the human interest of the second, and the specialized knowledge of the third.

Miss Vail realized, perhaps for the first time fully, that in one respect she had a heritage for which to be deeply thankful. For generations back her ancestors had been men and women of honor and principle. They had not left her wealth, but they had done far better. They had given her a fair share of brains, reliability, and the ability to accumulate wealth. Reliability to her meant punctuality, faithfulness in the performance of every duty, honesty, and loyalty to her employer provided that loyalty did not conflict with her own ideas of right. In that case there could be but one solution of the difficulty, and that was the ending of the relations of employer and employed.

Her attitude toward her fellow workers was also the subject of some thought, and she decided that she owed it to them to be uniformly sunny and cheerful, to expect no special consideration or gallant attention because she was a woman, to keep in mind that her employer's best interests must be her first thought, and that occasions frequently arise in a drug store where the loss of a sale is much more profitable than making it.

She was confronted by the somewhat consoling fact that while there were some of the heavier parts of the business that required a man's strength, yet that the great bulk of it could be attended to as well by one as the other—all things being equal. That still left a balance on the man's side that the Woman Clerk felt an individual responsibility to even up. If she was to succeed as a woman pharmacist—and she never allowed herself to doubt for one moment that she would succeed—she must discover, systematize, and specialize on those very points.

It was astonishing how many of these particular parts of the business she found after she began to keep watch for them. They threatened to use up all the spare room in her business diary and so she devoted another book entirely to them, giving each idea plenty of room for additional notes as the subjects developed with time and experience. As the months passed by and rolled up into years the note books have become of untold value, and from time to time we may be permitted to gleam some of the ways and means which have been tested and found good.

Miss Vail was early impressed with the value of attractive

sign cards for interior advertising. These she discovered, frequently would be changed and new ones put up, were it not for the trouble, expense and delay in obtaining them. The delay was a most important item. When it rained in the shopping district, the man who had umbrellas to sell, put his sign out while it was still but threatening a storm. He did not wait to advertise until he could go to a sign maker and have one prepared, at which time the storm might be all over and the sun shining brightly.

Although having no special talent for brush work, she knew that mastery of the simple details necessary was but the matter of a little spare-time application on the subjects of lettering and easy, effective decoration. Inquiry revealed that the cost of a practical working outfit and a few lessons was trifling, and so without saying a word to anyone of what she proposed to do, she went to work, and when her employer casually remarked one day that he was to open an invoice of brushes of all kinds next day, she came gaily to work in the morning, with several attractive signs, which caught and held attention, and started the brush sale in fine shape. From that day on, as long as Miss Vail held her position in the Hurlburt Square Pharmacy the store revelled in artistic, timely and telling show cards. They gave point to many a window display, and were constant revenue pullers.

Even the customers noticed this evidence of an up-to-date individuality, and when one of the best patrons the store ever had, openly acknowledged that it was the live advertising that had first attracted him, Miss Vail felt amply repaid for any extra work it might have caused her.

"You see," the customer explained, "when I go into a store and see a sign or an advertisement that was out of date weeks before, or the announcement of a fair or a dance over days ago, taking up valuable space, I at once say to myself, 'the boss here is either too forgetful or too careless to take down the dead matter that lingers up his place of business, and if he is careless about his own interests he will be equally careless about mine. If I brought a prescription in here like as not, he would forget an ingredient or two, or put in a near-kind variety.' No thank you, the man for me, is the man who looks out for his own interests carefully. If will not do any better for me than he does for himself."

All that was some time ago. The Woman Clerk now owns a prosperous store of her own, and her old employer—she never had but one—frankly says she was the most valuable all around help he ever had. He emphasizes the fact that one of her strong points was her poise, and another her resourcefulness. She never allowed herself to be hurried unduly, never became impatient, and was too self-reliant and high-minded for anger and the disturbance of trifling annoyances, and too brave to shrink from needed action.

The very qualities which made her valuable as a clerk have made her successful as a proprietor. As a plant sends out tendrils after tendrils so this enterprising pharmacist ventured into various unexplored fields, and in every case her employer and later she herself, were the gainers, because she never allowed enthusiasm to run away with her judgment. Then, too, she always had in mind some point at which her knowledge gained could be profitably hitched on to the drug-store business. The sign work soon led to the study of another subject, which promptly placed her worth to the firm away beyond that of the ordinary clerk—but that, too, is another story.

### Northwestern University School of Pharmacy.

Despite a most disagreeable storm, students and alumni to the number of 300 or more turned out to the dance tendered recently by the students of Northwestern University School of Pharmacy in Chicago to the Alumni Association of the School. The music was fine, the refreshments were excellent. Assembly Hall had been tastefully decorated with banners and pennants of the university and a number of other universities and colleges, and altogether the affair was one of the most enjoyable ever given in any department of the university. The students speak in the highest praise of the committee of their fellow students who had charge of the preparations and entertainment and they are anxious for at least two more such dances during the present school year.

A visit was made during the evening by all the participants to the School of Pharmacy on the fourth floor where the friends of the students found plenty to interest them.

## Rocking Backward.

By Joel Blanc.

You have probably noticed when rocking backward and forward in an ordinary rocking-chair that, little by little, the chair moved backward until it brought up against the wall. This double motion of the rocking-chair is very much like what some men call "progress." Moreover, the man whose life is largely spent in this sort of rearward progression is one of a lot of old grannies who, as they swing backward and forward and yet ever backward, loudly protest against the men who move steadily forward. It is from this rocking-chair brigade that there comes a constant refrain of disjointed words such as: "Can't, impossible, return to first principles, good old times, established business practices, commercial rules, without precedent," and similar expressions.

Let a competitor enter the field of one of this woolen-sock aggregation and the chorus breaks forth with an increased volume of sound. It was such a hobby-horse cavalry that looted in Stephenson's locomotive, Fulton's steamboat, Morse's telegraph, Bell's telephone, Edison's phonograph and Marconi's wireless, and today, within the drug world, a part of the same old chorus continues to rock backward towards the dead wall of self-encasement. As it does so it repeats the words of the same old refrain and flings them at the army of its fellows who march by in double time or fly overhead. This sullen chorus is composed of retailers, wholesalers and manufacturers in about equal numbers.

One who has friends in the rocking-chair brigade as well as among the marchers and flyers may watch and listen to both classes. He may conscientiously believe that some of the marchers move too rapidly, that some of the flyers are too daring and that some of the rocking-chair brigade are not zetting a pebbly square deal. Of course this impartial watcher is knocked by both sides—and the knoockee probably enjoys the knocks more than the knockers do. However, as the knoockee watches the hobby-horse knights rock back and forth and listen to their everlasting cant about "can't", he at last becomes tempted to join the flock of high flyers even though he believes that some of them may be using imperfect flying machines. He feels just as safe in the company of possible Darius Greens as among those who persist in rocking backward until they crack their craniums against a wall of concreted "can'ts."

Just at present the favorite words of the woolen-sock superiors are, "return to first principles," "established business practices," and "commercial impossibilities." The retailers of the rocking-chair brigade would go back to goose-grease and rhubarb methods by a "return to first principles." A corresponding class of wholesalers would keep their grip on best quality discounts with "established business practices," and the manufacturers would kill the Pure Food and Drugs Law with "commercial impossibilities." True, in the rocking-chair brigade there are only a limited number of each of these classes; but they have so spread out their chairs that the progressive man must either fly over them or trip over the rockers and break his blooming neck.

I can imagine that millions of years ago some ring-tailed Darwin may have informed the other members of the Simian family that monkeys would eventually be evolved into men. If such was the case, we can rest assured that throughout the primeval forests there was a chattering protest and that as our four-handed ancestors rocked back and forth on the limbs of the trees they screamed "can't" and demanded a "return to first principles" and a jelly-fish state.

The general commercial structure is undergoing a grand rebuilding and yet some men who are watching the rebuilding and occasionally catching a stray brick on the jaw, will continue to twitter: "It can't be done because it never has

been done." About the safest bet I know of is to wager that everything the grannies say "can't be done" will be done within the next five years. Of course, some of the mercantile aviators will come down with a hard chug and break their legs; but it is not safe to bet which of them will make the unlucky descent. When one of the Wright boys was falling on America and breaking his bones, the other was soaring over France, breaking records.

I am willing to concede that with every step of progress there may be some loss of good, but such a loss is usually followed by a gain of the better. The advent of the railroad threw a good many stage-drivers out of work and they could no more foresee the better fields of employment the railroads would open than we can foresee details of our own business future. However, intelligent comparison of the present with the past seems to prove conclusively that the rapidly developing commercial changes are not destructive, but reconstructive. If the changes in alignment take certain customers or lines of business from me, the conditions are, of course, bad for me, so long as I do not attempt to adjust myself to the new order of things. Bad cannot be made good by joining the rocking-chair chorus in the old refrain of "Can't be done" and "Return to first principles." Some of the "can't-be-done" things are not only being done, but are already done, and it is up to me to change my commercial practices so that what was lost to me from an old source shall be regained from a new one.

Sitting in my office or store figuring out why the other fellow "can't" do business on a certain margin is not going to help men when the other fellow is actually *doing* it. It is up to me to find out *how* he does it and then go and do him one better.

Another funny thing about the rocking-chair rubes is their utter disregard of the general public. The few hundred thousand which includes every man, woman and child in the drug world do not create the conditions which control that world. The public creates the conditions which the retailer is forced to pass on to the wholesaler, the wholesaler to the manufacturer, the manufacturer to the original producers and then the circle is completed because the original producers are the public and the consumers also. No one class within the trade is responsible. Self-preservation demands that each class shall adjust its contribution of changes to each condition as it passes it on; that is all.

It is time for each man to be up and doing for himself, instead of wasting so much time rocking back and forth and moaning, "back to first principles" and "a violation of established business usages." The fellow who does do that is not doing for himself, nor is he doing the other fellow—unless he is doing him a lot of good.

Instead of trying to put the retailer, wholesaler, manufacturer, or buying or manufacturing combination out of business, the wise man will put into his business the business of every man who tries to put him out of business. Of course, the new conditions will put some men out of business for keeps, and it is not difficult to tell who those men are—look in the rocking chairs and listen to the dirge.

Oh for a breadth of mind that would stop this wailing about things that "can't be done because they never have been done!" Oh for a vigorous, hearty, manly competition that would accept the new without rocking-chair moanings and evil prophecies, without the narrowness of personal invective and the pettiness of personal greed! Oh for a competitive spirit in which true co-operation would be born through the realization that conditions within the drug world are molded by influences from without!

I plead for a broader mental horizon for every man within the world of drugs and pharmacy; for less isolation in thought and practice; for a clearer conception on the part of every man toward united human effort; for a willing acknowledgement of the right of all and the interdependence of man on man!

I plead for progression in place of retrogression, for a creation of new principles instead of a return to the old; for a highway leading to the mountain tops of the future instead of a by-path leading to the grave-valleys of the past; for life instead of death!

#### Inadequate to the Occasion.

Golf Girl—Dear me! How annoying!

Caddie—Gee! If that's all she's got to say when she breaks a stick, it's hardly worth while talkin' about.

## Original and Selected

### KATAPLASMA KAOLINI, U.S.P. 1900.\*

By Dr. A. A. Herzfeld, New York.

It has been my earnest endeavor for the last 15 years to try and convince the medical profession that the prescribing of proprietary medicines is not only detrimental and unethical, but also unnecessary.

I have tried to bring about a change in all possible ways. Six years ago I examined 50,000 prescriptions and found at that time over 25 per cent of them were orders for proprietary mixtures, and I have recently been informed by good authorities that today this percentage is still higher, over double the amount. What do we understand by the term proprietary medicine or nostrum? All preparations consisting of one or more chemicals or pharmaceutical products brought into the trade under a new name which, when the formula is known, can be easily compounded by the pharmacist. Name and composition are as a rule protected by law. This definition excludes all chemical and pharmaceutical products, which, even protected by law, do not represent mechanical mixtures, but products of pharmaceutical and chemical research, as all coal tar products, many iron preparations and all such chemical and pharmaceutical mixtures as bear their accurate formulas on the label. The proprietary medicines owe their existence to the physician exclusively, for the average physician is not sufficiently educated in materia medica or pharmacy, and to hide his ignorance he is compelled to prescribe proprietary mixtures, the composition of which he knows very little; hence he depends entirely upon the impression of the eloquence and the small favors of the patent medicine agent who has left him a sample of "our latest c. q. d. combinations." So it happened, that in the year 1894 of the Christian era a well known M.D., attending physician to several hospitals, professor in a post-graduate medical school in this city, wrote a prescription which is certainly *hors de concours* in the history of pharmacy. The prescription reads as follows:

"R—Remedium spontaneum, Radway.  
D.S. Use as directed.

Dr. D."

This prescription came under my own personal observation.

One of the latest addenda to the physicians' index of nostrums are the kaolin pastes in all their different varieties and forms. All these have been brought to his patent medicine memory by the frequent advertisements in our medical journals. This recent discovery of, I might say, an antediluvian preparation, sailing under a new flag, was a boon to our Doctor and came to his aid like a "*Deus ex machina*," curing all diseases, particularly those which enjoy a suffix of "itis."

The panacea to cover a part of his ignorance had been discovered, and an endless number of prescriptions calling for "pasta argyllacea glycerinata odorata," appeared in our pharmacies, this "golden medical discovery" becoming our Doctors' "favorite prescription."

So it happened that the Committee for the Revision of the U.S.P. of 1900 deemed this preparation worthy of a place in the Pharmacopoeia, with the intent that our medical brothers should prescribe the official preparation in preference to the proprietary. This committee did not know our Doctorus Medicina very well, otherwise it would have been acquainted with the fact, that as soon as the preparation makes its appearance in the Pharmacopoeia he does not know it any longer, and woe to the pharmacist who tries to give him the official instead of the patented preparation: "*Substitution!*" On the other hand, the manufacturer of the patented clay paste boasts, that the committee deemed his formula worthy of adoption in the U.S. Pharmacopoeia, a book which Dr. Schlenz calls "an aristocrat amongst all the pharmacopoeias." Hence, the manufacturer claims that his paste is as valuable in the treatment of diseases as is opium, quinine, arsenic, iron and mercury, facts to which I alluded in a paper read several

\*Paper read by invitation before the American Pharmaceutical Association, New York Branch, February 7, 1909.

# INTERIOR VIEW OF SUCCESSFUL PHARMACY IN DOUGLAS, ALASKA—GOLD NUGGETS AS SIDE-LINE.

Herewith is presented a view of the drug department of the Douglas store of J. Heubner, Ph.G., who also has stores in Haines and Skagway in far away Alaska. The picture gives an idea of the development of the retail drug trade in our most Northwestern possession. From the letter head of Mr. Heubner it will be seen that druggists in Alaska deal in side-lines unknown to many in other sections of the country:

"Drugs, Curios and Musical Instruments. Alaska and Yukon curios, nugget jewelry, souvenir goods, Indian baskets, etc. Native made baskets, \$1 to \$50; beaded moosecans, 50c. to \$3 per pair; totem poles, 50c. to \$12 each; native engraved copper spoons, paper knives, paper weights and bracelets, 75c. to \$5; gold nuggets, loose, \$1 to \$50 each; stick pins, nugget charms, lace pins, cuff buttons, rings, beauty pins, \$2 to \$15; nugget chains, ladies' and gentlemen's, \$12 to \$200; bracelets, \$10 to \$100 each. All goods guaranteed as represented. Alaska and Yukon gold nugget jewelry made to order in all designs."

years ago before the New York State Pharmaceutical Association (Niagara Falls, 1906).

I would like to say a few words of my experience with the patented clay pastes. One of my first observations was that of a child suffering with a severe broncho-pneumonia, who was wrapped up with a heavy layer of the best known of these Western muds. The already seriously impaired respiration was still more impaired by the heavy layer of clay. Furthermore, the pores of the skin were closed and the paste interfered with the free access of air to the body, an essential factor in the treatment of any disease, particularly in fevers. I saw it applied to corns, bunions, ingrowing toe nails, typhoid fever, spinal meningitis, miliary tuberculosis, varicose veins, appendicitis, swollen testicles, and even to open wounds and ulcers, causing severe irritation due to its active principle the glycerin. The paste covers a multitude of complaints.

Dr. Reich, of this city, witnessed a case of erysipelas which could be traced to an application of one of these celebrated pastes. Through the frequent use of the clay pastes by the physician, the laity knows the doctor's pharmacopoeia as well as the physician himself and provides for the paste before our M.D. has a chance to prescribe it.

Closing my remarks, I would like to say, that our U.S. Pharmacopoeia contains a sufficient number of counter-irritants and rubefacients. There is no need for a clay paste and no necessity for canonizing such a preparation by making the formula official.

## A QUESTION OF LIABILITY.

By Charles M. Woodruff, of the Michigan Bar.

*Is the druggist liable in damages to one injured by a mistake in a physician's prescription, especially where the druggist has received the physician's confirmation of the prescription?*

Recently one pharmaceutical journal answered the above question affirmatively; another took issue and replied negatively; now I am called upon for my views.

I can readily answer: He is and he isn't, thus satisfying both contestants or neither. The question is one of fact.

Under some circumstances the act of the druggist in filling the physician's prescription, even when confirmed by the doctor, would be negligence for which the druggist would be liable if damages resulted; under other circumstances the druggist would have done all the situation required in asking the physician writing the prescription to confirm it. Still other circumstances might not require the druggist even to consult the physician.

The practice of law consists in the application of established principles to given facts. The substantive law applying to the question comprising the caption of this article may be concisely stated:

By the common law, from the very nature of his vocation, the druggist is required to exercise the skill ordinarily possessed by druggists operating under similar environment and conditions; he must compound prescriptions *secundum artem*; and he is under obligation to the public to exercise an extraordinary degree of care. This duty to the public involves liability for damages resulting from even slight negligence.

The question in every such case then is: Do the facts constitute such negligence? This, as a rule, is a question of fact for the court or jury to determine. Everything depends upon the nature of the prescription. If it was such that the druggist should have anticipated the results complained of, the fact that a physician wrote the prescription and afterwards confirmed it ought not to and probably would not excuse him. Few druggists would fill such a prescription, independent of any knowledge of their legal liability. On the other hand, if the nature of the prescription was such as simply to create a suspicion in the druggist's mind that the physician had made an error in writing it, he would probably be held to have performed his whole duty in directing the matter to the physician's attention and giving the doctor an opportunity of correcting or confirming it.

An affirmative answer to the question comprising the title of this article, therefore, would probably be correct in a few cases of actual occurrence; while a negative answer would more likely fit the large majority of such cases; but, after all, the question is one of fact and cannot be answered by any general rule of law.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Orange Coloring.

(H. H. H.)—This query, requesting a formula for "orange coloring," is rather indefinite, as we are not informed of the use to which the coloring is to be put. However, orange tints for beverages, toilet waters, etc., are best imparted with saffron, aniline-orange or similar artificial dye-stuffs permitted under the Food and Drugs Act. The phosphate that requires to be darkened with caramel. Chrysoidine is a darker color and is obtainable freely soluble water. Many other orange colors are available in the dry state. One ounce of the dry color should for factory use, be dissolved in a gallon of water, and a sufficiency of this added to the syrup to give the tint desired. Some orange and yellow colors become pink in the presence of acids and should be avoided.

## Lead Acetate and Quinine in Suppositories.

(G. A. L.)—"Will you publish a method for filling the following prescription?"

Lead acetate ..... 3 grains.  
Quinine sulphate ..... 15 grains.  
Cacao butter ..... q. s.

Make into one suppository. Send XV such.

We are subscribers to the *ERA* and ask your opinion."

Two difficulties are presented in attempting to compound this prescription. The first and most important one to deal with is that of size, the large quantity of quinine sulphate prescribed for each suppository making it impossible to keep the size down to the normal standard. The second difficulty is the reaction between lead acetate and quinine sulphate, insoluble compounds being formed when these salts are rubbed together. However, this may be practically ignored by rubbing the lead acetate with an equal quantity of cacao butter and mixing it with the quinine sulphate previously rubbed down with a few drops of water and about 15 grains of cacao butter. The cacao butter should be grated or reduced to fine shavings before the operation, a sufficient quantity being taken to make 15 suppositories. The mixture, to which a few drops of expressed oil of almond is added, is reduced to a plastic mass in a mortar, then transferred to a pill tile, rolled into a cylindrical form and then divided into the required number of parts, each being pressed into form in a suitable mold.

## Axle Grease; Lubricant.

(J. W. D.)—We cannot give you the formula for the proprietary article. However, heavy, slow-moving machinery, wagons, etc., require thick oils or greases for their lubrication, the hard oil greases being composed of one or more of the following substances: Tallow, palm oil, degrass, rosin oil, and lime, petroleum or solid mineral oil, and soap. The principal methods for preparing these lubricating greases are as follows:

(1) Aqueous solutions of ordinary potash or soda soap are precipitated with salt of lime, magnesia or alumina. The precipitated soap containing the heavy metal is washed, dried, and dissolved in hot petroleum.

(2) The lime soap is prepared in petroleum by emulsifying an aqueous solution of ordinary soap with the latter, and then decomposing with calcium chloride solution. The lime salt is stirred in at the boil, and the soda soap is gradually elutriated into a lime soap, and this dissolves in the petroleum as fast as it is formed. After some standing, the mother liquid which contains chloride of sodium and the excess of chloride of calcium is drawn off. Fresh water is added,

and the soap is once more boiled up. After another period of standing, the wash water is drawn off and the soap is stirred until cold.

(3) A neutral fat is saponified with milk of lime, and the resulting lime soap is dissolved in petroleum.

(4) The lime soap is prepared in the presence of petroleum by melting the latter and a fat together and then adding milk of lime for saponification. The last two methods are the commonest in practice.

Here are four formulas from different sources:

(1)

Mineral oil .....	100 kilos.
Lime soap .....	25 kilos.
Earth nut oil .....	25 kilos.
Lime .....	6 kilos.

Mix the oils together and then heat with the lime under pressure.

(2)

Black oil or petroleum residue .....	40 gallons.
Animal grease .....	50 pounds.
Rosin, powdered .....	60 pounds.
Soda lye .....	2 1/4 gallons.
Salt (dissolved in a little water) .....	5 pounds.

All but the lye are mixed together and heated to about 250° F. (121° C.). The lye is then gradually stirred in, and in about 24 hours the compound is ready for use.

(3)

Dissolve 1/2 pound of common soda in 1 gallon of water and add 3 pounds of tallow and 6 pounds palm oil (or 10 pounds of palm oil only). Heat them together between 200° and 210° F.; mix and keep the mixture constantly stirred until the composition has cooled down to 60° or 70°.

(4)

Tallow .....	8 pounds.
Palm oil .....	10 pounds.
Plumbago .....	1 pound.

Makes a good lubricator for wagon axles.

## Tincture of Star Anise.

(J. S.)—The American Homeopathic Pharmacopoeia provides a formula for tincture of star anise in which work it is official: "The dried powdered fresh fruit is covered with five parts by weight, of alcohol. Having poured the mass into a well-stoppered bottle, it is allowed to stand eight days in a dark cool place, shaking it twice a day. The tincture is then poured off, strained and filtered."

According to other authors the name has been applied to spirit of anise of the U. S. Pharmacopoeia, but this use of the title, of course, would be incorrect.

## Label Requirements of the Various States.

(P. P. Co.)—"We have been thinking that it would be extremely interesting and instructive to your numerous readers, if you would publish an alphabetical list of the States which have adopted the Pure Food Law, at the same time giving a resume of what particular phases of the law have been omitted or altered. During the past year, we believe quite a number of States have fallen into line and we are sure that if an authentic list of these were given in the *ERA*, it would be intensely valuable to many of your subscribers."

Most of the laws enacted by the various State legislatures follow quite closely the provisions of the Federal Food and Drugs Act. So far as we know, all of these require the declaration regarding alcohol content and quantities of narcotic drugs to be stated on the labels of preparations which may contain such substances. The States which have enacted laws with label requirements on the type of the Federal Act are as follows, the exceptions to this requirement in particular States being indicated in parenthesis:

Alabama, California, Colorado, Connecticut (except in case of drugs for external use only); Florida (percentage of alcohol must be stated on patent foods also); Georgia, Indiana, Iowa, Kansas (prescriptions exempt); Kentucky (prescriptions U. S. P. and N. F. preparations are exempt); Louisiana, Massachusetts (percentage of alcohol must be stated on proprietary foods); Missouri (prescriptions exempt); Nebraska (alcohol declaration on goods as well); New Hampshire, New

Jersey (prescriptions, U.S.P. and N.F. preparations exempt); North Carolina, North Dakota (prescriptions exempt); Rhode Island (alcohol percentage required to be stated on patent or proprietary medicines and proprietary foods only); South Carolina (prescriptions exempt); Ohio (prescriptions, U.S.P. and N.F. exempt); South Dakota, Tennessee (U.S.P. but not N.F. preparations exempt); Texas, Utah (prescriptions, U.S.P. and N.F. preparations exempt); Vermont, Washington, West Virginia (prescriptions and U.S.P. and N.F. preparations exempt); Virginia (U.S.P. and N.F. preparations exempt, but only when they conform to official standards).

In Delaware, Montana and Wyoming the Food and Drugs Acts do not require that the name of any ingredient shall appear upon the label.

In a recent issue of *THE SODA FOUNTAIN* a good authority stated that the use of benzoate of soda (subject of course to label requirements) in quantities of one-tenth of one per cent will be permitted during 1909 in the following States and Territories: Alabama, Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, District of Columbia, Florida, Georgia, Hawaii, Illinois, Indiana (?), Iowa, Isthmus of Panama, Kansas, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, Ohio, Oklahoma, Oregon, Pennsylvania, Philippine Islands, Porto Rico, Rhode Island, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin.

In the following States the use of benzoate of soda is prohibited: Idaho, North Carolina, North and South Dakota, Wyoming and possibly Kentucky, the question not having yet been settled in the latter State.

#### Brown and Black Shoe Polish (Paste).

(R. C.)—Various formulas of this character have been published in recent issues of this journal. Here is another one:

##### Brown.

Yellow beeswax .....	1 ounce.
Palm oil .....	1 ounce.
Oil of turpentine .....	3 ounces.

A little oil-soluble brown aniline may be added if the paste is not dark enough. For black, use the same basis, adding a sufficient quantity of oil-soluble nigrosine.

#### Black Leather Shoe Polish.

(J. H. W.)—The following formula is suggested for making a black leather shoe polish:

Rectified spirit .....	1 gallon.
Blue-black aniline .....	20.8 drams.
Bismarck brown aniline .....	31.2 drams.

Agitate occasionally in the course of 12 hours if there is any deposit. This makes what is known as the "mother liquid dye." To complete the blacking take of—

Rectified spirit .....	1 gallon.
Mother liquid dye .....	$\frac{1}{4}$ gallon.

Mix and add the following:

Camphor .....	11 ounces.
Venice turpentine .....	16 ounces.
Shellac .....	36 ounces.

When solution is effected add the following:

Benzine .....	$\frac{1}{4}$ gallon.
Castor oil .....	3.15 ounces.
Boiled linseed oil .....	13.5 ounces.

Shake well to obtain a perfect mixture.

If the product is too thick, add spirit to secure the proper fluidity.

#### Compound Syrup of Hypophosphites (Cloudy).

(A. K.)—See this journal May 28, 1908, page 684.

#### Importation and Ownership of Patented Products.

(E. V. H.)—"Kindly give me your opinion of the buying and dispensing of chemicals imported and sold either under the trade name or equivalent chemical name. I would like to have your opinion from a legal or ethical point of view. Quite a lot of price lists are flooding over sections with low quotations on phenacetin, acetylsalicylic acid (aspirin), nucleic

silver (argyrol), etc. It is the old Canadian "smuggling scheme" in the new form of jobbers buying abroad and paying the duty, etc. In the testing of samples for comparison the products are practically the same."

This query brings to the front the oft-discussed question of the clash between the law governing the importation of patented products and the rights acquired by patentees in this country. In the one instance, the Government will permit any one to import a patented article so long as he pays the duty on it, but the minute it passes into his possession his right to ownership is attacked because he has in his possession a product which was not obtained of the owner of the patent in this country. Numerous attempts have been made to amend our patent laws in this particular, but unfortunately, such a condition is still permitted to exist. This being so, it remains for the druggist, if he would avoid trouble, to buy no such product except that which has been obtained through regular and reputable sources.

In the case of phenacetin, the problem is somewhat different, the patent for the manufacture of this article under the name of acetphenetidin having expired some time ago. The claim is still made, however, that the name "phenacetin" is trade marked, but it is a question whether such claim can be substantiated. It is therefore a debatable issue whether a druggist can justly use acetphenetidin in compounding prescriptions in which phenacetin is ordered. If individual ownership in the word "phenacetin" is admitted, then only that product put out by the owner or owners of phenacetin is "phenacetin." Of course, the courts have held that the name of a patented product becomes public property on the expiration of the patent, and it is our opinion that such would be the case in this instance. Any other admission would be as illogical as to contend that although acetphenetidin is phenacetin, phenacetin is not acetphenetidin. This question would not arise, however, if physicians would prescribe the product under its pharmacopoeial name. The only way for the druggist to avoid trouble, it would seem, is to buy those products which are subject to the patentee's rights from reputable jobbers or from the manufacturers' known agents.

#### New Reaction of Formaldehyde.

On adding formaldehyde to a dilute solution of ammonium sulphide a white precipitate is formed which settles to the bottom. The liquid remains clear and has lost all smell of hydrogen sulphide. Concentrated solutions of ammonium sulphide and formaldehyde interact immediately, giving a tough, colorless transparent mass which is sticky and can be drawn into threads. This hardens under water to a resinous mass which becomes soft when worked between the hands and can be molded into any shape. It melts at 45° C.; after heating to 100° C. for a time and cooling, it becomes transparent. It is soluble in chloroform and hot acetic acid; from the latter solvent it separates on cooling in long colorless needles, m.p. 208° C. The latter substance is also formed on warming the soft compound with 20-30 per cent sulphuric acid (*Chem. Zcit. through Jour. Soc. Chem. Ind.*).

#### Pharmacy College, State University of Iowa.

—William Dolash, '00, of Tama, enjoyed a visit from his father recently.

—On February 22 there was a university convocation. Senator A. V. Proudfoot delivered the address.

—Emil Benesh, '00, and B. E. Barkoll, '02, of Toledo, have purchased the Wilson drug store, of Marion.

—E. M. Wertz, '08, of Davenport, was in Iowa City recently to attend the Phi Chi party and call on old friends.

—O. L. Rogers, '07, has sold his business at Kalona to Otho Grady, '07, and a Mr. Rogers. Mr. Rogers called on friends at the college a few days ago.

—Howard Eddington and W. D. Talston, both of Pringhar; Ulysses S. Cary, of Des Moines, and H. Foster, of Scranton, have registered for second semester work.

—On February 12 the university held exercises in commemoration of Lincoln's birthday. The address was by Charles A. Clarke, of Cedar Rapids, a member of the Board of Regents.

—The members of the Phi Chi fraternity recently entertained their friends at a dance in Red Men Hall. The decorations were of the fraternity colors and college pennants and the effect helped to make the whole a most enjoyable affair.

## Methods of Keeping Up Stock.

### Buying Helps.

If we would carefully note the manner and expressions of our patrons, we would learn of many shortcomings in our storekeeping which otherwise might pass unnoticed and by remedying those faults we would add much to the convenience and time-saving details of system.

One day a patron requested a package of a certain liver pill. The druggist pulled open a drawer, delved through a heterogeneous mass of pills, ointments and powders, and after a vain and nervous search turned and informed the customer that he was "just out." The expression of disgust which the druggist observed upon that customer's face acted as an illuminant which revealed the disorder of the drawer in a manner that had not previously been seen. The druggist remedied the fault by making a very light cross section frame-work of wood which divided the drawer into square compartments of various sizes, from two by four to four by six inches each. This wood partition was of such a depth that it came within one and one-half inches of the top of the drawer. Next, he placed a smooth quarter-inch board, cut so as to fit closely within the drawer, over the partitions. This was ruled in squares corresponding with the partitions beneath and then carefully sawed with a thin-blade saw along all the ruled lines. In this way was secured a cover for each of the compartments, the covers when in place fitting closely and resting properly upon the edges of the partitions and yet in such a manner that each could be readily removed. After the partitions and covers were in place the goods were sorted into the compartments, the goods of most general sale being kept towards the front of the drawer. In a few cases where the packages were very small, or of exceedingly limited sale and consequently purchased in fractional quantities, sometimes two kinds—never more than three, were placed in one compartment. No more than the contents of one original package, and seldom that number, were placed in any one pocket or compartment. The stock packages were kept on a shelf in the rear of the store. After the goods were all sorted the druggist wrote in pencil, on each cover, the name or names of the goods to be kept beneath. This writing was done with a heavy, soft, black pencil, so that it might be readily removed by the use of a bit of sand paper. The next move was to fasten to each cover a sample of the goods to be kept beneath. These samples were fastened on the reverse side from that upon which the writing had been done, the samples being held in place by elastic cord run through perforations in the cover.

### Method of Using.

When the drawer was opened a mere glance would show the druggist or salesman the location of any article he was seeking, the sample itself serving as a handle by which to lift the lid, so that the desired article could be removed from below.

If the article removed was the last one of its kind in the compartment, it was the salesman's duty to place the cover, with the attached sample, upon the shelf-ledge above the drawer; after he had served the waiting patron it was his further duty to go to the shelf stock and procure the goods to replenish the compartment. Should the shelf stock be exhausted or low, he was directed to place at once the name of the article upon the want book. If the shelf stock should be entirely exhausted the cover was to be replaced in proper position, the sample to be sold only in case of a call before the arrival of new goods. In case of the sale of the sample the cover was reversed, so that the sight of the pencil written name denoted at a glance that the article was out of stock. When the compartment was replenished a new sample was invariably placed within the rubber loops and the old one sold, thereby avoiding any loss through shop-worn samples.

### Another "Short" Detector.

How many hundreds of dollars worth of business are lost through the careless handling of shelf stock? Goods are not kept faced, the last package is removed from the back of a shelf and sold without a corresponding entry on the want book, and the first thing one knows there is a call for the article which cannot be supplied and a sale is lost. A druggist who had much trouble with clerks in regard to "shorts" occurring from neglect, such as that described, and who was not himself

blameless, evolved the following scheme to avoid running out of proprietary medicines and similar shelf goods: He cut strips of clean, stiff cardboard one inch wide, the length being one inch less than the depth of the shelf. In this case the shelf was nine inches wide, so that the length of the strip was eight inches. From one end of each of these strips was cut an inch piece which was reattached to the main strip by a bit of muslin, which, at the point of junction, served as a hinge. The upper or hinged half of the strip was colored to conform with the general tone of the shelf, while the lower half was colored a brilliant red.

One of these strips was fastened over each row of goods by driving a thumb-tack through the inch hinge piece and then into the wood itself directly over the spot where the "face" or shelf-edge package of the goods would stand. When the rear package, the one against the wall, was in place it would naturally hold up the free end of the strip because that end would rest upon its top. If there were five bottles in the row the four in front might be removed without disturbing the strip, but as soon as the last one was taken out the strip would of course swing down and hang by its hinge at right angles with the front of the shelf. Thus, a glance along the shelves would disclose the brilliant red ends of the hanging strips and give warning of shelf, if not stock, shortage. On the other hand, the upper part of the strip, being colored like the shelving, made the strips almost invisible until the shelf vacancy caused them to swing down. If the goods were kept faced, the strip would be brought farther forward with each succeeding removal, so that though the last package might be taken from the front of the shelf the warning would be given just the same. The strips could be easily removed or changed about and their cost was hardly calculable.

### To Prevent Over-buying.

In the most orderly and systematic drug stores it is not an uncommon occurrence to buy goods of a line of which there is a forgotten or misplaced stock stored in the cellar, store-room or under the counters. To avoid this, the following system has been successfully used in a number of stores: Within each drawer of bulk goods, attached to the container of small goods which are sold from original packages or upon the bottom of the shelf beneath the proprietary medicines or other shelf goods, is fastened a gummed label upon which is written the quantity and location of the corresponding storage stock. If there is no such ticket it is known that all the stock of the article is in the sales space. When goods are taken from the storage stock to the sales space the quantity so taken is deducted from the quantity already indicated upon the label. By such an arrangement a check is provided against over-buying, and the scheme also serves as an added protection against stock exhaustion.

### "The Look-overs."

The most aggravating case of "outs" arises from the filling of dispensing containers from original packages without making note of the quantity that may remain in an original package. An energetic Virginia druggist prevents much of this trouble with what he calls his system of "look-overs."

In the cellar there is a table and in the back end of the store proper there is a shelf. Whenever any part of the contents of a storage container is taken to fill a dispensing container the person making such transfer is under rigid instructions to place the stock container upon the previously mentioned cellar table or store shelf, as the storage location of the article may indicate. If the transfer is made from a barrel, carboy or other container so large that it cannot be well placed upon table or shelf, then the individual making the transfer is directed to write the name of that substance upon a slate attached to the table or shelf.

Once each day the proprietor looks over the containers placed upon the table and shelf and those whose names are indicated by the memoranda upon the slates, and decides which of them should be placed upon the want list.

### Wonders of Medical Science.

Patient—Can I eat between meals if I feel a craving for the food, doctor?

Doctor—Certainly.

Patient—But last summer you said I should eat only at mealtime.

Doctor—Yes, but at that time you had no craving.

## PERSONAL MENTION

—J. W. NEBLETT, of Riverside, Cal., was a recent visitor in Los Angeles.

—J. C. BAUGH and wife, of Hailey, Idaho, are spending the winter in Arizona.

—GEORGE B. FORSTER, of Yonkers, N. Y., was a caller upon the trade in New York City last week.

—C. W. GREGORY, of the Black Hawk Pharmacy, Waterloo, Iowa, is recovering from a serious illness.

—H. LAPPLEY, a druggist of Mazomanie, Wis., is home after enjoying a few days vacation in Chicago.

—F. F. INGRAM, of Detroit, was a delegate to the National Tariff Convention held in Indianapolis last week.

—CHARLES N. CRITTENTON, of this city, has been conducting a series of philanthropic meetings in Georgia.

—F. A. COLLINS, of Collins Drug Company, of Newark, Ohio, was a visitor in New York drug circles a few days ago.

—J. GILES LOUIS, of Robert Stevenson & Co., Chicago, is spending four weeks at his winter home near Ocean Springs, Miss.

—N. H. KIEN, manager of the special preparation department of Parke, Davis & Co., spent two days in the Chicago branch last week.

—CHARLES A. CURTIS, of West Broadway, Boston, has been suffering from a rheumatic knee for several weeks, but is now greatly improved.

—DR. G. B. SMITHSON, of Wellborn, Fla., was a recent appreciated caller at the store of the Groover-Stewart Drug Company in Jacksonville.

—E. P. SHELLABARGER and wife, of Columbus Junction, Iowa, have returned home from a trip to Chicago, where they attended the automobile show.

—ALLEN KING, a Kewanee druggist, of the firm of Hill & King, was able to return home recently after spending two months in a Chicago hospital.

—CHARLES E. LORING, manager of the New York branch of the Powers-Weightman-Rosengarten Company, is enjoying a brief vacation at Atlantic City.

—GEORGE H. BROWN and wife, of Sheridan, Wyo., are on a trip to New York and other Eastern points, business and pleasure being the joint objects.

—WILLIAM PELLEY, of Mingo Junction, Ohio, was painfully injured in the face recently by a clothes-wringer which flew from insecure fastenings and hit him.

—JAMES P. CROWLEY, executive committeeman of the Chicago Retail Druggists' Association, is the happy father of a bright young daughter, who recently arrived.

—C. P. KALBACH and wife, of Bernville, Berks County, Pa., have returned home from an enjoyable sight-seeing trip which included Washington and other cities.

—E. F. GARDNER, special representative of Parke, Davis & Co. in the Eastern States, has returned from a visit in Pennsylvania to the New York branch of the house.

—JOHN V. EITEL, of Columbus, Ohio, has again demonstrated his popularity by being elected councilman-at-large, thereby smashing the political ring in that city.

—WILLIAM D. MACINNES, of R. E. Willard & Son, Inc., has been laid up in a hospital suffering from the effects of a severe fall. At last accounts he was greatly improved.

—ARNOLD F. GWINNER, vice-president and manager of the Whitteker-Gwinner Drug Company, of Dayton, Ohio, has been appointed a member of the Board of Sinking Fund Trustees of that city.

—M. ROLFE, Wisconsin representative of the Pacific Coast Borax Company, has been elected a director of the newly organized Wisconsin Association of Manufacturers' Representatives.

—G. H. RISLEY and party have been enjoying a period of recreation on his handsome yacht Hurrion in the waters in the vicinity of Old Point Comfort, preparatory to a trip to Key West, Fla.

—CHARLES HEYDEN, of Syracuse, has gone to Marathon, N. Y., to look after the drug store of Milo T. Wooster until the latter recovers from illness. Mr. Wooster has improved very slowly.

—F. C. BARNHART, representative of the Milwaukee Drug

Company in northern Michigan, with headquarters at Escanaba, Mich., was called to Owen Sound, Ont., recently by the death of his father.

—JOHN S. MUTH, of Muth Bros. & Co., wholesale druggists, at Baltimore, is at Atlantic City for a brief vacation, and George G. Muth, of the same house, went to Cincinnati this week to visit relatives.

—AMONG the visitors of the Milwaukee Drug Company last week were: W. W. Albers, president of the Wisconsin Pharmaceutical Association, of Wausau; Ora Hatch, druggist, Bloomington; John Schempf, Watertown.

—G. C. FROELICH, who represents Parke, Davis & Co. in Boston, was in New York City for several days last week renewing acquaintances at the branch and calling upon a number of old friends in the metropolitan district.

—THE following druggists were in Chicago last week: H. L. Speelman, Chadwick, Ill.; Clarence E. Patrick, Kankakee, Ill.; N. F. Reed, Ottumwa, Iowa; F. Emshwiller, Emshwiller Co., Montpelier, Ind.; C. Benesh, Toledo, Iowa.

—P. H. RUTLEY has taken a position as pharmacist for the Robbins Drug Company, at Argenta, Ark. He takes the place made vacant by the resignation of Lem L. Woods, who has become traveling salesman for a wholesale drug house.

—O. D. MARSTON, who for 25 years was a traveling salesman in the wholesale drug business, widely known in Tidewater Virginia, has retired, having resigned his position and will settle with his family in Tappahannock, Essex County.

—TRUMAN H. NEWBERRY is the greatest Secretary the Navy has ever had, and there never will be another like him," said Rear-Admiral Robley D. Evans, U.S.N., retired, while lecturing recently in Detroit, which is Mr. Newberry's home.

—DR. R. STEWART, of Powhattan, Kan., a prominent physician and druggist of Brown County, was recently dangerously injured while driving a team to Hiawatha. The horses took fright, ran away and the vehicle collided with a telegraph pole.

—HENRY MEIBOHM, retired druggist of Milwaukee, was a member of the coroner's jury which investigated the recent fire tragedy at the plant of the Johns-Manville Company, Milwaukee, which caused the death of six firemen and a loss of \$265,000.

—JOSEPH H. LUTZ, of New Britain, Conn., was at last accounts reported in a critical condition as the result of a stroke of apoplexy. A nerve specialist went from New York to aid his own physician in treating the stricken druggist and fraternity member.

—WILLIAM GULAGER, veteran secretary of the Philadelphia Drug Exchange, who was run into by a bicycle more than a month ago and sustained a broken leg, is able to be about again, although he walks with a cane. He spends a short time daily at the rooms of the exchange in the Bourse Building.

—W. J. PETTIFER, L. A. Seitz and J. P. Methudy, three St. Louis pharmacists, are on their respective party slates as candidates for the House of Delegates (aldermen) in that city. Owing to local conditions Messrs. Pfeiffer and Seitz stand a fair chance of being elected and Mr. Methudy an almost certain chance, if the nominations result as expected.

—MISS BLANCHE BOEHM, daughter of Sol Boehm, for many years treasurer of St. Louis C.P., has been selected to be sponsor of a steel lake steamer, United States, to be launched soon at Chicago by the Indiana Transportation Company. Chicago girls have been selected as sponsors for the other boats launched by this company but the leaders in the deep-waterway movement suggested that it was time to recognize other cities. St. Louis came first and Miss Boehm, a tall handsome brunette and quite well known in her home city as a vocalist, was the first to be named. She and her parents will be guests of honor at a banquet after the bottle of wine is broken.

—RICHARD P. WINKLER, of the export department of Parke, Davis & Co., has just returned from an eighteen months trip through Central America and the west coast of South America. In speaking of conditions in a general way, Mr. Winkler stated that a number of transportation improvements are taking place in Peru and Ecuador, railroad connection having been extended to Quito, the capital of the latter country. In Costa Rica floods are prevailing and it is hardly possible to ship goods into the country. No relief is expected for at least four months. With the exception of Colombia and Venezuela, trade in the countries of both Central and South America, Mr. Winkler reports as very satisfactory.

## OBITUARY.

## Two Maryland Druggists Dead.

BALTIMORE, Feb. 20.—News has reached Ridgely, Caroline County, Md., of the death of Howard M. Wilkinson at his home in St. Louis. Mr. Wilkinson was a native of Caroline County and for several years conducted a drug store at Dover, Del. He was a chemist of much ability and is said to have won a number of prizes from medical journals for articles on subjects related to chemistry. He left a large number of valuable formulas.

John A. Schulte, who for years conducted a pharmacy at Canton avenue and Wolfe street, this city, died today after a brief illness. He was 56 years old and a native of Baltimore. After serving an apprenticeship in several East Baltimore stores he entered the Washington University School of Medicine and subsequent to graduation he opened a pharmacy at Gough and Eden streets. He is survived by three brothers and two sisters.

## Charles Garthe, of Chicago.

CHICAGO, Feb. 20.—Charles Garthe, connected with the Chicago wholesale drug trade for over 40 years, died recently of apoplexy, aged 75. His last active employment was as superintendent with Robert Stevenson & Co. four years ago. Born in Germany in 1834, he came to America just before the Civil War and enlisted in an Indiana cavalry regiment, serving four years honorably. Mr. Dawson, of Robert Stevenson & Co., pays the following tribute to Mr. Garthe: "He was the best all around druggist I ever knew."

## DeLancey Bartlett, 53 Years a Druggist.

FAYETTEVILLE, N. Y., Feb. 20.—DeLancey Bartlett, with one exception the oldest druggist in Onondaga County, is dead as the result of an operation. He was 68 years old and had been continuously in the drug business for 53 years, being the oldest merchant of this place. Two sons survive, Dr. DeLancey F. Bartlett, of this village, who will continue the business, and Dr. Fred H. Bartlett, of New York.

## Black Cat Cause of Death of Druggist.

PITTSBURG, Pa., Feb. 20.—John Moerscher, a druggist, objected recently when his family got a black cat, but finally let it stay. Late at night, in the darkness, Moerscher stepped on the cat, fell downstairs, and died next day of a broken neck.

## Obituary Notes.

- C. M. RANKIN, of McLouth, Kan., is dead.
- C. W. CORBETT, postmaster and druggist of Port Orchard, Wash., died recently after a long illness.
- C. ROSS KING, of Corvallis, Ore., is dead, aged 35. He was a thirty-second degree Mason and leaves a widow and two children. He was an active and popular citizen.
- JOHN GUERDAN, aged 65, is dead in St. Louis, where he was a prominent druggist. He served in the Union Army as a pharmacist and later opened a store in St. Louis.
- JOHN HARRISON, until 1903 the financial man in Harrison Bros. & Co., Inc., manufacturers of chemicals, paints and white lead, died in Philadelphia recently, aged 73.
- DR. WILLIAM P. GOOLICK, a well-known druggist of Fredericksburg, Va., died suddenly on February 11 of heart trouble. He was 63 and served in the Confederate Army.
- RUDOLPH PRETZINGER, senior partner of Pretzinger Bros., druggists, Dayton, O., is dead, following a search for health all over the West. He lived for several years on a Western ranch.
- GEORGE C. TAYLOR, manufacturer of proprietary medicines at Fairport, N. Y., is dead, aged 74. He was village president and a member of the Congregational Church. A widow survives him.
- D. CANADAY, druggist, of Gunnison, Colo., died in St. Louis of pneumonia, February 9. He was born in Mayfield, Ky., and spent his early manhood in the employment of Meyer Bros. Drug Company, St. Louis, going in 1882 to Gunnison, where he bought a small drug store.

## Will Occupy New Store in Big Building.

DETROIT, Feb. 20.—The Detroit Drug Company will occupy the corner store of the nine-story building which will be erected at Woodward and Harmon avenues by Frank L. St. Armour.

## LONG DISCUSSION AT JOINT MEETING.

## Brooklyn Medical and Kings County Societies Have Pleasant Time With Propaganda as Subject.

Over twenty-five physicians and about half that number of pharmacists were present at the joint meeting of the Brooklyn Medical Society and the Kings County Pharmaceutical Society, which was held at Hart's Hall in Brooklyn last Friday evening, under the auspices of the latter organization.

The feature of the evening was the paper on "The Practice of Medicine and Pharmacy," which was read by Dr. William C. Anderson, of the Kings County Society. In his paper Dr. Anderson outlined several phases of the history of pharmacy and medicine, showing how by various influences, a wide breach had gradually developed between the two professions, which condition was a great detriment to both. He further went on to explain remedies for this situation which he said demanded immediate attention if pharmacists and physicians wished to maintain the practice of either medicine or pharmacy in the line of professions. Further on Dr. Anderson dwelt upon the matters of prescribing, dispensing and compounding, citing examples demonstrating how the physician as well as the pharmacist benefited by the U.S.P. and N.F. propaganda.

Dr. Barber replied to Dr. Anderson and heartily endorsed co-operation and extemporaneous prescribing. He stated that in his practice the fact had developed that the patient valued such prescribing much more than the simple work of writing for something which bore the ear-marks of the "patent" case, because skill was displayed from all sides by the former method while there was an entire lack of skill shown in the prescribing of semi-proprietarys. Patients as a rule, he said, regard skill very highly and if lack of it came to their attention all confidence would soon be lost in the physician and also in the pharmacist.

That there was great interest displayed by the physicians was evidenced by the number who expressed their views. Those taking a leading part in the discussion for the physicians being Doctors Heidesheimer, Muiet, Scott, Barber and Schneider; while Dr. Muir, Otto Raubenheimer, Jacob Rehfsuss, Charles Heimerzheim, E. J. Hules and Dr. Anderson took the initiative for the pharmacists.

The discussion on Dr. Anderson's paper lasted over two and one-half hours and it was nearly midnight when another paper relating to the practice of medicine was presented and read by Dr. O. L. Muiet. There was only a short discussion on this paper due to the lateness of the hour. Refreshments were served shortly after midnight.

The meeting was very harmonious throughout and members of both the professions expressed the hope that still another meeting could be arranged during the present season.

## Insult Resented by Massachusetts Ph.A.

BOSTON, Feb. 20.—Gov. Eben S. Draper has received the formal protest of the Massachusetts State Pharmaceutical Association against the charges made in the annual report of the Board of License Commissioners of Boston, in which the druggists of Boston were assailed in a sweeping manner. One of the strongest statements in the report was this: "As compared with the methods of many druggists the conduct of a majority of the so-called saloon keepers is highly commendable."

The matter came up at the meeting of the State association at Worcester last week, and the officers were directed to express to the Governor the resentment of the druggists at any such gratuitous insult. The charges of the licensing board are characterized as "reckless, erroneous and absolutely untrue, and which if uncontroverted are likely to work grave injury to the honorable and ancient reputation of our craft, and to that of every individual member thereof." The resolutions then call upon the Governor to request the license commissioners to show incontrovertible proof of their charges and if that is not done, to return the report to the board for correction and for expunging from the public record that part as "the board shall be unable to maintain as true and unimpeachable."

## Colored Druggists in Baltimore.

H. C. Spetzler has sold his drug store at Druid Hill avenue and Oxford street, Baltimore, to Garry & Stokes. The latter is a firm of colored druggists, making the fourth or fifth to engage in business in Baltimore. All appear to be doing well.

## LOUISVILLE PREPARES FOR N.A.R.D. MEETING.

**Committees Appointed at Gathering of the Local Association—Banquets for Guests and Ladies.**

LOUISVILLE, Ky., Feb. 20.—Local retail druggists are enthusiastic over the outlook for a memorable gathering of druggists in this city next September, when retailers from every section of the country will be here as delegates to the annual convention of the National Association of Retail Druggists. Already the local association is disposing of the preliminary arrangements, and if the plans now under consideration work out successfully local retailers will have much to remember when the convention is over. Recently an important meeting of the Louisville Retail Druggists' Association was held at the Board of Trade and a number of important committees were appointed to arrange an elaborate reception for the big crowd of visitors. About 50 prominent local druggists attended the meeting, which was presided over by Simon N. Jones, president of the local organization. The meeting was in session about two hours. The committees that were appointed are as follows:

**Hotel Committee**—Addison Dimmitt, chairman; H. O. Hurley, Ira J. Frick.

**Exhibit Committee**—T. P. Taylor, chairman; B. F. Santer, C. Troxler.

**Badge Committee**—Curt Krieger, chairman; Louis Hertle, J. A. Kregel, Harry Kampfmüller, Otto Dietrich.

**Finance Committee**—F. E. Isaacs, chairman; P. H. Wallner, John Sieberz, E. R. Bell, J. H. Wulff, Otto E. Mueller, I. Witelshofer.

**Entertainment Committee**—H. Baass, chairman; John Krull, Charles Albis, Mack Krieger, Fred Bender, Jr., W. B. C. Yount and G. B. McGinnis.

**Committee to Arrange Entertainments for Ladies**—R. F. Taylor, chairman; F. V. Simms, W. H. Beazley, Charles Bode and Frank Hertle.

**Advisory Committee**—M. Cary Peter, chairman; Charles B. Frick, Roy Bagby, Ed. Kloecheiman and Simon N. Jones.

I. Witelshofer was appointed to look after reception details. He will appoint a number of assistants in the near future to co-operate with him in getting up banquets for guests of honor and women attending the convention.

The meeting will be convened in this city September 6. It will hold forth at one of the local hotels, but it is not yet known which one. The hotel committee has charge of this matter.

## Druggist Gone—Stores Sold.

Adolf Weschler, who operated two stores in Poughkeepsie, N. Y., disappeared to parts unknown about three weeks ago to the disappointment of a number of his creditors. Several attempts which were made to locate him were abandoned last week and the stock and fixtures were sold at public auction by the mortgagee. The funds realized were not even large enough to cover the amount of the mortgage. The supposition regarding Weschler's disappearance is that he felt himself so involved that he decided on this plan to avoid considerable business troubles. He left no explanation and this is the only motive known for his flight. He was unmarried. The stores are now being run as two distinct corporations, having been bought in by the chief clerks employed in each, and they are operating under the names of the O'Hare and DeVassar pharmacies in charge of Milton Sanwood and John D. Sauter, respectively. The absent druggist has not been heard from.

## Only One Store in City Open on Sundays.

SHEBOYGAN, Wis., Feb. 20.—The new programme arranged by druggists of this city which allows only one drug establishment in town to remain open on Sunday evenings is meeting with much success.

## P.A.R.D. WILL CIRCULARIZE PHYSICIANS.

**Propaganda Work to Be Pushed—Doctors Ask for Aid of Pharmacists in Securing Legislation.**

PHILADELPHIA, Feb. 20.—An unexpected feature of the postponed meeting of the Philadelphia Association of Retail Druggists yesterday was the presence of Dr. A. M. Eaton, president of the Philadelphia County Medical Society, and Dr. A. Bern Hirsh, who addressed the members on the necessity of supporting the "one-board" medical bill that is now before the Pennsylvania Legislature. While this innovation interfered to some extent with the real purpose of the meeting—the propaganda agreement with the N.A.R.D.—the latter subject was disposed of for the present.

For a number of reasons, the propaganda issue between the local and the national associations has been an open question almost since the N.A.R.D. convention at Atlantic City. Several weeks ago Christopher Koch, Jr., was sent to Chicago to present the views and the wishes of the P.A.R.D. to the executive committee of the N.A.R.D.

## Enterprising Texas Pharmacist.

HENRY F. LACKEY,  
of Fort Worth.

recently elected president of the Tarrant County R.D.A., was born in Kentucky 34 years ago, but went with his parents to Texas when young and has grown up with the country. He is married, is a graduate of Louisville C.P., is a member of the Texas State P.A.A. and believes in shorter hours and Sunday closing, his pharmacy, one of the handsomest in Texas, being closed every Sunday.

While it was evidently believed by the latter committee that Mr. Koch was empowered to act for the P.A.R.D., it was agreed yesterday that there was no reason for this belief and the plan approved at this meeting in Chicago was considerably modified yesterday, although the motion to do so only prevailed by a majority of one vote.

The necessity of immediate action was emphasized and the wishes of the P.A.R.D., as indicated by the action yesterday, will be forwarded immediately to national headquarters. The entire proposition to advance the propaganda among physicians by sending out circular letters and by distributing printed matter was thoroughly ventilated by President Frank W. Fluck, Charles Rehfs, David J. Reese, Samuel C. Henry, William E. Lee, Harry C. Blair, Harry J. Swain and others. Representative J. H. Barlow was instructed to communicate with every member in good standing and to have him send to Secretary N. A. Cozens a list of eight or ten physicians to whom he wishes this propaganda material sent.

Dr. Eaton, in explaining prior legislation, led up to the necessity of covering certain loopholes by which persons indifferently educated and in no way qualified to practice medicine, had been posing as physicians in Pennsylvania. He said this State was far behind others in this respect. The "one-board" bill whereby all applicants for the right to practice in Pennsylvania should be examined by one board who should work under the same law which contains the definition of the practice of medicine and states what qualifications applicants should have, according to Dr. Eaton, will not only raise the standard of medicine in Pennsylvania but will eliminate the criminal doctors and the otherwise unfit who now are flocking to Pennsylvania from other States where they would be prosecuted were they to attempt to effect a cure.

Dr. Hirsh said that more than 40 other States were ahead of Pennsylvania in the protection afforded its citizens by their medical legislation. He described conditions and urged that the pharmacists use their influence on the ward political leaders of the city so that they would use their influence on the powers at Harrisburg that there would be no question of the passage of the bill when it comes up for final action. Both speakers declared that there was no wish to force legitimate medical schools or responsible practitioners out of business.

There will be a large delegation of physicians and pharmacists visit Harrisburg next week when there will be a hearing on the bill in committee.

For actual service the "old cat" is preferable to the girl cashier with "kittenish" ways.

## ANTI-COCAINE FIGHTERS WIN A VICTORY.

**Persistent Druggist Finally Yields to Heavy Fines and Goes Out of Business—Will Keep Up War.**

CLEVELAND, O., Feb. 20.—The cocaine war waged for nearly two years by the Ohio State Board of Pharmacy against Mark Kline, druggist, 1870 East Sixth street, was brought to an end recently in police court by an agreement according to which Kline is to sell out and retire permanently from the drug business. The agreement was made between attorneys for Kline and the police prosecutor, who has been handling the cases for the State board. It was sanctioned by Police Judge Levine.

According to agreement, Kline is to pay a previous fine of \$500 and costs imposed last December. He pleaded guilty in a case just finished and two other cases not yet tried. Levine imposed a fine of \$500 in each case and suspended them, making a total of \$1500 in fines, which will be imposed if he ever returns to the drug business. He was given six weeks in which to dispose of his store.

Prosecutor Cull may go to Cincinnati to assist the State Board of Pharmacy and the Cincinnati prosecutors in prosecuting cocaine cases which are about to be brought to trial in that city.

"The war in Cleveland is not over yet," he said. "We have so far won only one battle and there are others to fight."

### Judge Called it "Fake Prescription Writing."

ST. LOUIS, Feb. 20.—Dr. Omer Willis, who was recently trapped in a Cass avenue drug store and fined \$300 for selling cocaine, has again been tripped up by the police. This time he also got the limit, \$300, and an expression of regret from the judge that he could not make it more. Dr. Willis' defense in the former case was that he sold the drug as a physician and that it was not necessary for him to go through the form of writing the prescription. The judge held that the writing was the dividing line between the professions and fined him.

This time Dr. Willis was in his newly established physician's office and wrote a prescription for a plain-clothes policeman, marking it "habitual." The policeman said he told Dr. Willis that but the latter made no further investigation and that his statement was untrue; that he had never used cocaine in a single instance.

Judge Tracy, of the First District Court, denounced such prescription writing as a fake, hence the fine. Dr. Willis will appeal on the ground that the judge has no right to go behind the prescription.

### Fighting Cocaine Evil in Three Cities.

KANSAS CITY, Feb. 20.—Harrison Webber, drug store manager, recently sentenced to the workhouse in default of \$9000 fine for selling cocaine, has turned State's evidence against his former employers, the Myers Medical Company. Warrants have been issued.

CHICAGO, Feb. 20.—Joshua Darsey, owner of a drug store at 160 1/2 West Fifty-first street, was recently arrested on a charge of selling cocaine without a physician's prescription.

PITTSBURG, Feb. 20.—Police department here has started a vigorous war against druggists who sell cocaine unlawfully, due to assaults on women by negro "coke" fiends.

### Druggist Sells Ounce of Cocaine to Detective.

Federico Lo Pinto, a druggist at Mott and Broome streets, Borough of Manhattan, New York City, was recently indicted by the Grand Jury on the charge of illegally selling cocaine on January 7. A detective, disguised as a tramp, and carrying a crutch, secured an ounce of cocaine from Lo Pinto, paying for it with marked money. The arrest was made immediately, but release was secured on \$1000 bail which was furnished for his appearance before the jury which indicted him. He will be tried in the Supreme Court in a few weeks.

### Asks More Stringent Anti-Cocaine Law.

BOSTON, Feb. 20.—The State Board of Health, in its annual report, has made another recommendation regarding the sale of cocaine, so that it may be possible to prevent the traffic in private houses. The present law prohibits the sale or gift of cocaine in any "street, way, park, square, or other public

place, or in any hotel, restaurant, liquor saloon, barroom, public hall, or place of amusement, or public building." During the past year, through experience gained in attempting to enforce the law, it was discovered that when the cocaine was sold in a tenement or private house the law was not violated. The Health Board therefore recommends that private houses and tenements be included in the law.

### DRUG CLERKS DID NOT ASK FOR DONATIONS.

**Advertising Man Gives the Michigan Association a Very Unpleasant Experience, But Promises to Settle.**

DETROIT, Feb. 20.—The Drug Clerks' Association of Michigan has just had an experience which caused no end of annoyance. Some time before the annual ball, on January 28, a young man introducing himself as A. E. Coulton, came forward with what seemed to be a fair proposition. For the privilege of getting out the invitations and programmes he offered the association a bonus large enough, those in charge figured, to pay for the decorations.

So the deal was closed. The ball was a huge success and the boys were more than pleased with the programme, except that the amount of advertising exceeded the limit allowed. But when, a few days ago, the association's printer presented a large-sized bill for printing the programme and invitations, the clerks were genuinely surprised. Coulton had learned the name of the printer employed by the association, and had simply had the work charged to that body, regardless of the contract. He also sent out unauthorized letters soliciting donations.

The clerks at once took the matter up with the police, who brought Coulton in and talked turkey to him. He promised to settle and the threatened prosecution has been called off. The association is now seeking to set itself right in the eyes of drug concerns which, without its knowledge or sanction, were solicited to buy tickets. A letter of explanation will be sent to each of them, and those who contributed any money will be reimbursed. Incidentally, the clerks have made up their minds that hereafter when there is any printing to be done they will look after it without outside assistance.

### Missouri Druggist Fined \$6200 for Booze Selling.

OREGON, Mo., Feb. 20.—J. B. Hinde, of the Hinde Drug Company, was found guilty recently on 21 indictments charging illegal sale of liquor under the new local option law, and was fined \$300 on each of 19 counts and \$300 and six months in jail on each of the remaining two indictments, making a total of \$6200 and one year in jail. The judge, however, commuted the sentence, Mr. Hinde to pay in cash \$1200 and all the costs in the 21 cases, surrender his Government liquor dealer's license at once, refrain from the sale of or clerking in a store where liquor is sold, and refrain from excessive use of liquor himself.

### Jury Refuses to Convict "Near-beer" Seller.

BATTLE CREEK, Mich., Feb. 20.—Believing that "Tonica," a beverage manufactured in Indianapolis, is not a real beer, a jury in the Circuit Court here acquitted John Katz, of Burlington, of violation of the liquor law in placing it on sale. Two witnesses swore that "Tonica" was too much of a "near-beer" to admit of dispute, but Toledo and Indianapolis experts swore otherwise.

### Wisconsin Ginseng Growers Organize.

ANTIGO, Wis., Feb. 20.—Efforts are being made for the organization of a State ginseng growers' association, with Peter W. Krier back of the movement. Wisconsin is rapidly becoming a center for the cultivation of ginseng and growers have felt for some time that there was urgent need for organization.

### New Fountain for Jersey City Druggist.

Eugene Hartnett, Jersey City druggist, whose large and increasing soda business demanded greater facilities, has ordered an 18-foot iceless fountain of the Becker Company.

### Quits Bicycles for Drug Trade.

Charles Buersatte, of Manitowoc, Wis., has sold his bicycle business and will now devote his entire time to the drug trade.

## IN ONE DRUG STORE FOR HALF A CENTURY.

**Edwin Sumner Has Been in the Retail Business for Three Years More Than That Period in Wisconsin.**

MADISON, Wis., Feb. 20.—Edwin Sumner, the oldest druggist of Madison and one of the pioneer druggists of the State, has just celebrated the fiftieth anniversary of his location in his present store building at 15 South Pinckney street. The well-known druggist kept "open house" at his pharmacy all day and friends from all over the city and southern Wisconsin dropped in to offer congratulations. Each caller received a card and was assured by Mr. Sumner that he would be in the same location to greet them many years hence.

Mr. Sumner has been engaged in the drug business for nearly 53 years and is still hale and hearty. One of his friends, in congratulating Mr. Sumner, offered the suggestion that judging from his personal appearance, drugs must be a good thing.

"Oh, I haven't been taking them," answered Mr. Sumner, "I've been selling them."

The history of Mr. Sumner's connection with the drug business of Madison is best told in his own words:

"I came to Madison from Tiffin, Ohio, arriving in Madison on May 24, 1856," said Mr. Sumner. "I entered the University of Wisconsin on June 1 of that year and closed my schooling at the end of the university year. After a vacation of about ten days I went to work for Dunning & Paine, who were then conducting a drug and grocery business in the store now occupied by Andrew Mayers, where I continued to work until February 1, 1859, when I came to my present location. I was then a member of the firm of Dunning, Jones & Sumner. After two years Mr. Jones retired from the firm and for 35 years the business was carried on under the name of Dunning & Sumner. In May, 1893, Dunning sold his interest in the business to me, and I admitted to partnership my son, Louis, and from this time the firm was styled Sumner & Son."

## WOULD CONTROL PEDDLERS.

**Bill Favored in Wisconsin Gives**

**Power to State Pharmacy Board.**

MADISON, Wis., Feb. 20.—Druggists of Wisconsin have been lending their support to a bill offered in the State Legislature by Assemblyman Burke requiring peddlers of drugs and medicines to be licensed by the State Board of Pharmacy. General sentiment seems to be in favor of the measure and there is every indication that it will pass both houses. Druggists say that in the past no small amount of competition has come from this "peddler" class of business and that in addition to the ordinary license required for "peddling," vendors of drugs should come under the control of the State Board of Pharmacy as well as the druggists themselves, if for no other reason than as a matter of protection to the public at large. As it is at the present time, a vendor may secure the ordinary peddling license and sell anything in the shape of so-called drugs. It is believed that by putting drug peddlers under the control of the State Board of Pharmacy that the practice of distributing free samples of drugs from house to house will also be curtailed.

## One Drug Store for 1140 People.

The city directory of Indianapolis for the year 1900, just issued, estimates the population of that city at 240,150, as against 236,160 in 1908. The retail drug stores in 1900 number 202, or one drug store to each 1140 of population, which certainly is not an undue proportion when the great variety that now characterizes the business is taken into consideration. The retail drug trade in Indianapolis during the past year has been good.

## MASSACHUSETTS PH.A. ACTS ON BILLS.

**Good Attendance at Mid-Winter Meeting at Worcester Despite Blizzard Weather—Much Business Done.**

WORCESTER, Feb. 20.—The mid-winter meeting of the Massachusetts State Pharmaceutical Association was held at the Bay State House, with an attendance of over 100 druggists from all over the State. It was one of the largest mid-winter meetings of the association, and also one of the most representative. The day was unpropitious, a blizzard of rain and snow prevailing, but it seemed to have almost no effect upon the members, or else to keep away only the less earnest members. A vast amount of business was transacted, the opinion being expressed that the record in this respect was unapproached at any other mid-winter meeting.

The recommendations for legislation made by the State Board of Registration in Pharmacy, and the report of the committee on legislation on bills now pending in the Legislature all came up for action. It was announced that the State board would withdraw its recommendation regarding the extension of the eighth class license, which now applies only to no-license cities and towns, to all cities and towns. The association approved the board's recommendation that the act of revoking a certificate of fitness from a druggist shall also constitute to revoke the license itself, which the present law does not permit.

Most important of all the board's recommendation was that relating to increasing the fee for a certificate of fitness, which is now \$1. The board recommends that the fee be increased to \$5, and that the druggist be exempted from the necessity of giving a bond for the faithful performance of the conditions of the license. Never has it been necessary for any druggist in Massachusetts to pay an indemnity for a bond, yet every year 1600 druggists in the State have each paid \$5 for a bond to the various bonding companies.

One other recommendation that the board shall have power to revoke the certificate of registration in pharmacy for gross habits of intoxication, the association voted to approve, provided the revocation does not take place until after a complete hearing and the vote is by the full board and unanimous.

The legislative committee was requested to prepare a draft of a sixth class license to be presented at the annual meeting in June, for recommendation to the Legislature of 1910.

Action was taken on a large grist of bills. The many Sunday bills providing a fee for keeping open on Sunday will be opposed as regards the imposition of a fee for the purpose.

An amendment to the cocaine law will be opposed, because it would forbid the sale of any preparation containing not only cocaine, but either morphine, opium or chloral.

A bill to place schools of pharmacy under the supervision of the State Board of Education will be opposed.

A bill which would create a State excise board will also be opposed. So will the bill to tax soda fountains and to consolidate the Board of Registration in Pharmacy with other registration boards of medicine, dentistry and veterinary medicine.

## C. S. Thompson Not With Smith, Kline &amp; French Co.

In view of the numerous inquiries which have been received as to whether Carter S. Thompson is now connected with Smith, Kline & French Co., Harry B. French, vice-president, is authority for the statement that Mr. Thompson is not now and has not been for some time past in the employ of their company.

## A Change.

"I remember when she told me he was her ideal."  
"Yes. Now he is merely her husband."

EDWIN SUMNER,  
of Madison, Wis.

## WORKING AN OLD SWINDLE IN NEW YORK.

**Bogus Orders Presented to Wholesalers by Men Pretending to Be Clerks for Retail Druggists.**

The wholesale drug trade is warned to be cautious in filling orders for drugs and chemicals which are written upon the stationery of well rated druggists and presented by persons who claim they are clerks employed in the stores.

Through the investigation of an order which was presented in a wholesale house last week by a person who excited suspicion the fact was developed that the old game of swindling by means of fictitious orders is again being operated in New York City. So far as has been disclosed by the investigations the operations have not been very extensive, but several new cases came to notice in some houses a few days ago when bills were rendered for goods which were delivered to supposed drug clerks, who had orders written upon the stationery of the customers.

No clerks were found in any of the stores who answered the description of the persons who ordered and received the goods. The orders were most of them written upon prescription blanks, but the letter forms and regular order blanks were also used in some instances. The supposition is that there is a gang of unemployed drug clerks who are resorting to this method of procuring money. Once packages of valuable chemicals, codeine and other alkaloids and half-dozen lots of high-priced beef extracts seem to be the favorite articles in demand, and only small lots of convenient articles have been ordered.

No clue exists as to the identity of any of these swindlers but the fact remains that the parties who are working the game are in the possession of stationery of quite a number of retail pharmacies located in New York City and vicinity.

## Drug Salesman Wanted for Passing Bad Checks.

J. H. Whitney, Chief of Police, State House, Boston, Mass., has sent the ERA information regarding the operations of Irving Snow, who is wanted for passing worthless checks and larceny. Snow was formerly employed by Holton & Adams, of New York, and by the F. M. Keeler Company, Boston, as a traveling salesman selling drug supplies. He is 35, 5 feet 4 or 5 inches tall, 135 pounds, smooth face, medium complexion, wears glasses and when last observed wore dark clothing and a fur-lined overcoat. Chief Whitney says that the man is a slick talker who calls on former friends and persuades them to cash checks for him or identify him at the bank. Some of the checks have been made payable to the "Wal. M. Snow Manufacturing Co., Baltimore, Md." but there is no such concern. If found the man should be promptly arrested and word sent to Chief Whitney, or to William G. White, Chief of Police, Pittsfield, Mass.

## Druggists to Aid Anti-Tuberculosis Movement.

PHILADELPHIA, Feb. 20.—With the expectation of enlisting the co-operation of the retail druggists of the city in the efforts that are being made to stamp out tuberculosis, the afternoon of March 11, at 3 o'clock, has been set apart for a discussion on "The Relation of the Druggist to Tuberculosis" at the International Tuberculosis Exhibition now in progress here. This exhibit is being conducted under the auspices of the Department of Health and Charities of Philadelphia and invitations have been sent to every druggist in the city to attend. The list of speakers has not been announced but it is understood that it will include several prominent physicians and pharmacists of the city.

## Working for New Pharmacy Law in Missouri.

ST. LOUIS, Feb. 20.—H. O. A. Ungeel, acting chairman of the Missouri Ph.A. legislation committee, has had copies printed of the proposed pharmacy law as introduced in the Missouri Assembly and sent to each member of the association with a request that the member bring to bear all of the influence he has on the representative and senator from his district. Reports that reach the committee indicate that the druggists will put more enthusiasm into working for this bill than has been aroused for any proposed pharmacy law since 1879 when the present law was secured.

The worst habit some druggists have is telling their patrons about the bad habits they, the druggists, have abandoned.

## DR. SOLLMANN SUCCEEDS PROFESSOR HAAKE.

**Distinguished Author Accepts Position on the Staff of the Cleveland School of Pharmacy.**

CLEVELAND, O., Feb. 20.—At a recent meeting of the board of trustees of the Cleveland School of Pharmacy, Prof. W. H. Haake resigned as professor of materia medica and Dr. Torald Sollmann, of Western Reserve Medical School, was elected in his stead.

This announcement is worthy of consideration from two points. As to Professor Haake, demands of business made it necessary for him to relinquish the position which he has faithfully and ably filled during the past five years and he retired with the warm personal regard of all his associates at the school.

As to Dr. Sollmann, the school has been indeed fortunate to secure his services. As professor of pharmacology and materia medica at Western Reserve Medical School, as author of Sollmann's Pharmacology; as joint author of Hatcher & Sollmann's Materia Medica and as a member of the Council on Pharmacy and Chemistry of the American Medical Association, he has won a national reputation in pharmacology and pharmacognosy.

## Busy Meeting of Northern Ohio Druggists.

CLEVELAND, Feb. 20.—At the February meeting of the Northern Ohio Druggists' Association, which was held in the lecture room of the Cleveland School of Pharmacy, President Schmeurer was in the chair. Letters from Secretary Potts, of the N.A.R.D., and from the National Grange, relative to good roads legislation were read.

Mr. Johnson, Ohio representative of the N.A.R.D., outlined the work of the N.A.R.D. He explained the proposed propaganda work and announced that January was the biggest month in the history of the N.A.R.D.; the collection (\$9000) being twice as much as they were in January, 1908.

Among his recommendations were the securing of a man to do detail work in Cleveland and the vicinity, part of the expense to be defrayed by the N.A.R.D., part by the N.O.D.A.; increased political activity on the part of the druggists; appointment of a committee of five to confer with the Cuyahoga delegation relative to drug legislation.

A legislative committee of five was appointed consisting of Messrs. Selzer, Christian, Tielke, Remy and Hechler.

The secretary was instructed to notify congressmen by special delivery that the association is unalterably and emphatically opposed to all parcels-post and postal checks legislation.

Resolutions endorsing the candidacy of E. Voss, of Cincinnati, as member of the Board of Pharmacy were ordered sent to Governor Harmon and to the secretary of the Ohio Valley Druggists' Association.

## Ohio Drug Clerks Want Representation.

COLUMBUS, Feb. 20.—Ohio drug clerks want representation on the State Board of Pharmacy, and William F. Kaemmerer, of Columbus, in a letter to Governor Harmon, sets forth their claims at length. He points out incidentally that the five druggists recommended by the State Ph.A. to succeed Julius Meyers, of Cincinnati, whose term is to expire soon, are Republicans. The board is now composed entirely of proprietors.

## Ohio Valley D.A. Fights Tuberculosis.

CINCINNATI, Feb. 20.—The Ohio Valley Druggists' Association is now allied with the Anti-Tuberculosis League. The combination of forces occurred recently at the annual election of the league. The league's officers gladly accepted the application of the O.V.D.A. for membership, and the consumption fighters will in the future have strong support by the druggists.

## Chicago Branch A.Ph.A. Election.

CHICAGO, Feb. 10.—The Chicago Branch of the A.Ph.A. has elected the following officers for 1909: President, Oscar Oldberg; first vice-president, C. A. Storey; second vice-president, E. N. Gathercoal; third vice-president, Dr. Bernard Fantus; secretary-treasurer, W. B. Day. Committee chairmen: Membership, S. C. Yeomans; educational and legislative, C. H. Avery; practice, J. J. Boehm; medical relations, C. S. N. Hallberg; public relations, T. V. Wooten.

## DRUG LICENSES "RENTED" IN ILLINOIS—PREPARING FOR QUINCY CONVENTION OF STATE PH.A.

### Pharmacy Board Will Prosecute Druggists for Evading Law.

CHICAGO, Feb. 20.—Twenty or more druggists who, it is alleged, have been evading the State laws regulating pharmacy by illegal use of licenses, will face prosecution next month when evidence now in the possession of the State Board of Pharmacy is turned over to State Attorney Wayman.

A number of men who are alleged to have been operating under licenses issued to pharmacists, who have gone out of business and which have been rented at from \$5 to \$10 a month, will be forced to defend themselves in court to ward off possible fines of \$200 each. This was the statement of Charles H. Avery, of the State board, recently.

"We have found quite a number of 'irregularities,'" said Mr. Avery, "but the fact that licenses must be renewed each year assists us materially in detecting attempts to evade the law."

It is believed by several druggists that the operations of a band of "license dealers" have been unearthed and that at least 20 will be prosecuted.

### Work of the Chicago Retail Association.

CHICAGO, Feb. 20.—The Chicago R.D.A. has succeeded in pushing an itinerant vendors' ordinance through the City Council, which if enforced and the druggists have resolved to see that it is enforced, will clear Chicago streets of this form of drug parasite that have thrived so well of late under the wings of the legitimate drug trade. The text of the ordinance includes all persons selling or giving away drugs, nostrums, ointment or applications unless such vendor is licensed by the State Board of Health. A penalty of not less than \$25 and not more than \$200 will be imposed for each offense. The ordinance as drawn up is the result of much work and care by the attorneys of the C.R.D.A. and is supposed to meet every requirement. President S. C. Yeomans says: "It represents much work and careful consideration and will probably be looked to as a model by other cities contemplating such a law. It covers every phase of the problem."

The Chicago association is showing much spirit and agitation over a letter recently written by J. E. Bartlett, manager of the Chicago Branch of Parke, Davis & Co., which stated to the recipients that if they paid a price he referred to for five grain Cascara tablets they were paying too much and that if they would go to any State street store they could get the same tablets at a much lower figure. When the letter was published the Chicago outlying druggists went up in arms and protested to the president of Parke, Davis & Co. for directing customers of the outlying stores to the big downtown establishments. The protest resulted in repudiation of the sentiments expressed. The writer, it was explained, was not speaking for the house at the time.

Plans are being made for a joint meeting in the future of the legislative committee of the C.R.D.A., I.P.A. and the Chicago branch of the A.P.H.A. for the purpose of getting better drug laws from the Illinois Legislature.

### Chicago Notes.

—Next month the State Board of Pharmacy will check the list of registered pharmacists of Illinois.

—Otto Forges, a prominent South Side druggist, has sold his store at 4300 Grand boulevard to E. Komie.

—Edna Nichols, druggist, formerly at Lexington avenue and East Fifty-fifth street, has resumed business one block east of her former location, 426 East Fifty-fifth street.

—H. P. Swartz, of Crown Point, Ind., and Mr. Leake, of Leake Brothers, Dixon, Ill., were recent visitors in Chicago, spending a larger portion of their time at the automobile show.

WILLIAM G. BAXTER.

A. C. KOCH.

Two more active workers of the Illinois Pharmaceutical Travelers' Association are presented above. Mr. Baxter is the second vice-president and represents Grommes & Ulrich. Mr. Koch is on the press and publicity committee and represents William R. Warner. Preparations for the Quincy meeting, June 15-17, of the Illinois Ph.A. are rapidly progressing. Among the features will be a theater party, steamboat and carriage rides, a shirt-waist ball, as well as sports.

Both are enthusiastic motorists and each purchased a big touring car. Leake Brothers have recently incorporated their drug business under the new name of the Leake Brothers Company.

—F. O. Bailey, the Chicago representative of the J. Hungerford Smith Company, gave a dinner recently to the salesmen of Peter Van Schaack & Sons at the Bismarck Garden. There were 14 present.

—A warrant was obtained last week by the Law and Order League of Englewood, Chicago's southern suburb, for the arrest of John L. Copelin, owner of a drug store at 4198 Halsted street, charged with having a slot machine in his store.

—James E. Bartlett, manager of the Chicago branch of Parke, Davis & Co., recently celebrated the twentieth anniversary of his connection with the company at his home, 50 Aster street. Quite a number of the executive force of the Detroit office attended the celebration.

## DR. WILEY'S WHISKY RULE STANDS.

### President Roosevelt Denies Rectifiers' Petition and Overrules Commission.

WASHINGTON, Feb. 23.—President Roosevelt today denied the petition of the rectifiers which asked for a modification of the internal revenue branding regulations on the labelling of neutral spirits mixed with whisky and colored with caramel. He also declined to approve the recommendation of a commission appointed by himself which reported to him in favor of the rectifiers' request.

The President indorses and makes public an opinion of Attorney-General Bonaparte, which declares the position of the rectifiers and the conclusions of the commission to be an error. Dr. Wiley's views on whisky thus are upheld. The Attorney-General in declaring that "imitation whisky" is the only proper name and in deciding that the terms suggested by Dr. Dunlap are not legal, says: "I cannot fail to recognize in Dr. Dunlap's recommendation a challenge of the correctness of my conclusions." Mr. Bonaparte declares that the terms suggested by Dr. Dunlap and the rectifiers are not only at variance with the opinions of the Department of Justice, but are also at variance with the decision of the courts.

## BOARD EXAMINATIONS

### Oklahoma.

GUTHRIE, Feb. 10.—At the examination held by the Oklahoma State Board of Pharmacy on Jan. 12 a class of twenty-nine was present. The following made grade entitling them to certificates as registered pharmacists:

A. J. Buttery, Fairfax; F. W. Bridgeman, Wakita; T. E. Baker, Fairfax; A. G. Grouch, Oklahoma City; J. E. Fuller, Sayre; E. E. Flagg, Mooreland; William Holmes, Snyder; A. S. Howard, Texola; Lewis J. Jones, Eschite; W. H. Lee, Cheyenne; J. D. Love, Nashville; F. B. McNeal, Wister; E. E. Reynolds, Mountain View; R. A. Ransom, Sewell; O. F. Smith, Blackwell; M. H. Spangler, Canute; S. L. Sieg, Tribbey; J. F. Snyder and A. H. Shoals, Guthrie; C. H. Throckmorton, Wauette; J. C. Watkins, Hallett; S. S. Widener, Jefferson.

REGISTERED ON DIPLOMA.—R. L. Bowyer, Chickasha, Okla., Southern C.P.; W. A. Bade, Oklahoma City, Chicago C.P.; B. R. Britegam, Liberal, Kan., Ohio N.U.C.P.; H. C. Beckman, Little Rock, Ia., Highland Park C.P.; M. W. Carey, Marcus, Ia., Highland Park C.P.; R. C. Cavitt, Colgate, Okla., Northwestern University C.P.; Walter H. Dippel, Sag Harbor, N. Y., New York C.P.; Martin R. DePauw, Latonia, Ky., Cincinnati C.P.; J. J. Drisko, Bartlesville, Okla., University of Kansas; E. E. Eubanks, Topeka, Kan., Highland Park C.P.; Frank P. Fry, Altoona, Kan., K.C.C.P.; Harry L. Fleming, Gibsland, La., University of the South; Frank H. Foster, Maywood, Ill., N. W. University C.P.; R. C. Garland, Gaffney, S. C., South Carolina C.P.; Lucien R. Herbert, Belmont, Ia., Highland Park C.P.; Clarence D. Highfill, Gentry, Ark., Ohio Institute of Phar.; F. E. Hottiger, Howard, Kan., Highland Park C.P.; John C. Johnson, Oklahoma City, Northwestern U.C.P.; W. W. Joachins, St. Louis, Mo., Valparaiso University; William C. Jenkins, Cozeta, Okla., Northwestern U.C.P.; A. V. Johnson, Cunningham, Kan., Scio C.P.; H. C. King, Baltimore, Md., University of Maryland; H. A. Littlefield, Denver, Mo., Ohio N.U.C.P.; L. C. Munch, Whittemore, Ia., Highland Park C.P.; C. M. Mobley, Gainesville, Tex., S.C.C.P.; E. K. Mengel, Stigler, Okla., Ohio Northern C.P.; C. H. Phillips, Sioux City, Ia., Valparaiso C.P.; H. L. Rose, Columbia, Ill., St. Louis C.P.; Porter T. Ragland, Tecumseh, Okla., Oklahoma University; Dr. G. A. Share, Seiling, Okla., Valparaiso C.P.; John I. Wilson, Cambridge, Ohio, Northern University C.P.; H. D. Wilcox, Salem, W. Va., Pittsburg C.P.; J. L. Wilder, Webb City, Mo., St. Louis C.P.; John F. West, Valparaiso, Ind., Valparaiso University; Guy W. Wilcox, Oklahoma City, Oklahoma University; A. H. Wolf, New York City, New York C.P.; A. F. Wilkerson, Marion, Ala., Ohio Institute of Phar.

The next meeting will be held in Ardmore, April 13-14. Applications should be filed with the secretary, J. C. Burton, at least ten days previously. Blanks furnished on request.

### California.

SAN FRANCISCO, Feb. 10.—At the meetings of the California State Board of Pharmacy held in January in Los Angeles and San Francisco the following parties were granted registration as licentiates in pharmacy: Richard Apsley, Otto Elwood Ayres, Emma L. Boyd, William Boeling, Stanley Burr, A. B. Chandler, Robert A. Derick, John B. Downer, Alfred H. Heyne, A. S. Langan, Raymond Glenn Lindley, K. V. Leininger, Lewis A. Lodde, Frank W. Masek, Harvey Buteau Mount, Frederick A. Norwood, Charles J. A. Peacock, J. Walter Rankin, Charles S. Robertson, Ernest Edward Silva, Otto E. Schaich, Aura Estes Snook, Louis Wagner, George L. Wright, Wilfred F. Belcourt, George R. Boman, Alfred S. Brunger, Joseph Roy Campbell, Fred Down, Ella Z. Edmiston, L. M. Fetterly, A. F. Holm, Arthur H. Jackson, Walter McNair, Arthur G. Mallory, Adelaide Midcaif, Bertha Shulman Perison, Stanley Rogers, J. Schunklin, S. J. Terrell, George A. Tilt, Edward Toppeler, Bertha Voekell, A. M. Wray, Edward Dean Allen, Henry J. Angelo, Rufus Sumner Billings, George Bollinger, A. J. Brannagan, John Aloysius Conway, Irvin W. Furl, Parr Goodall, Lambert C. Harris, Willis E. Holden, Oliver M. Johnson, Gustavus Koch, William E. Lowe, George

Miner Leddy, P. Hartwig Middents, A. J. Robinson, Regnar S. A. von Pingel, B. P. Ruiz, C. L. Schmidts, Ignatius B. Salituri, Lauriston S. Smith, Alexander Troughton, Henry Tamm, Sara J. Foote, Henry C. Cox, John P. Herbert, William C. Cooper, A. E. Coles, Margaret M. Evans.

The following parties were registered as assistant pharmacists: H. Edna Byers, John Ernest Dibert, Arthur Filicoff, Oscar W. Heying, Alfred Robert Jorgensen, James N. Patterson, Walter Clifford Johnson, Louis F. W. Winkler, Harry H. Dolley, Ralph L. Northrup, Ichitaro Ono, Leonard Aquilino.

The next meetings will be in Los Angeles, April 5, and in San Francisco, April 12.

### Virginia.

RICHMOND, Feb. 10.—At the recent examinations of the Virginia State Board of Pharmacy the following candidates were successful:

REGISTERED PHARMACISTS.—E. C. Williams, Richmond; Frank W. McIntosh, Farmville; B. K. Winston, Farmville; E. C. Hudgins, Norfolk; W. L. Bond, Fredericksburg; W. P. Hall, Jr., Tazewell; W. B. Trower, Eastville; J. W. Stephenson, Clayton, N. C.

REGISTERED ASSISTANT PHARMACISTS.—A. E. Dorsey, Robert C. Rise, P. P. Hunter, D. L. Lambert, T. E. Doster, J. W. Fox, C. M. Clark, W. A. Maiden and M. E. Bowles, all of Richmond; L. C. Stratton, Newport News; V. C. Cassell, Portsmouth; W. E. Culpeper, Portsmouth; George B. Myers, Big Stone Gap; J. Frank Ewald, Wytheville; R. B. Smith, Petersburg; W. T. Johnson, Smithfield; R. D. Ssheler, Salem; A. L. I. Winne, Manchester, and W. H. Baskerville, Washington.

### Iowa.

DES MOINES, Feb. 10.—The State Board of Pharmacy has granted certificates to the following, who passed the recent examinations: Elmer Dodd, Hitemau; John J. Foley, Davenport; C. R. Garrett, Des Moines; H. Herbert Hough, Fort Dodge; Hattie M. Hutchinson, Buxton; Sanford Johnson, Stratford; A. N. King, Des Moines; James W. Kail, Carlisle; Thomas Keefe, Winterset; H. R. Kruse, Wakefield; George J. Langheim, Charlton; J. Ray, Machesney, Bagley; Floy I. Marshall; Bert W. Miller, Des Moines; Wilber H. Orris, Lehigh; L. M. Prime, Des Moines; F. L. Pratt, Burt; G. Romanetti, Des Moines; A. L. Roberts, Cantril; A. Sarles, Des Moines; A. D. Severe, Downs; F. L. Shaffer, Malvern; George R. Saffley, Cushing; John F. Schorf, Waverly; Fred O. Thelander, Sioux City; Herbert G. Wolfe, Red Oak, and Leon D. Wallace, Independence.

### Ohio.

COLUMBUS, Feb. 20.—There are 3535 registered pharmacists and 636 assistant pharmacists practicing in Ohio, according to the annual report of the State Pharmacy Board, made to the Governor. During the year 128 pharmacists certificates and 50 assistant pharmacists certificates were issued, 141 applications being rejected. There are fewer pharmacists and assistant pharmacists registered now than a year ago. The receipts were \$6016.25, of which \$510 was from fines and the rest from fees. The expenses were \$5302.62. The balance on hand is \$3778.22. One certificate was revoked, that of John S. Greenwood, of Columbus, convicted of selling cocaine illegally.

### Banquet of East N. Y. Medico-Pharm. Association.

About 300 physicians and pharmacists were assembled at the banquet of the East New York Medico-Pharmaceutical Association on the evening of the 12th at the Knights of Pythias Temple in Brooklyn. The forces of the two professions were about equal in numbers.

The chief topics dwelt upon by those who spoke were the grievances the professions had against each other, interspersed with the grievances the members of each profession had among their own members. However, the harmony at the affair was most sincere and those present expressed it as their opinion that a long step forward has been made in creating a better feeling between the two professions in that action of the city.

Among the principal speakers were Dr. Louria for the physicians and Dr. W. C. Anderson for the pharmacists.

## PATENTS.

Granted February 16, 1909.

912,532—Heinrich Brat, Charlottenburg, Germany. Combined respirator and inhaler.

912,539—Vernon Campbell, Altadena, Cal. Can-capping machine.

912,581—Willy Lazarus, Kiel, Germany. Quick-silver closure for fermentation vessels.

912,663—Patrick C. Nestor, Germantown, Pa. Dispensing apparatus.

912,622—William E. Ridenour, Philadelphia, Pa. Manufacture of hydrated sodium carbonate.

912,634—Charles Warburton, Pawtucket, L. I. Percolator and extractor.

912,733—Friedrich J. H. Reower, Hamburg, Germany, assignor to the I. E. Du Pont Powder Company, Wilmington, Del., a corporation of New Jersey. Process of densifying a nitrohydrocarbon composition.

912,742—Peter W. Shute, White Pigeon, Mich. Inhaler.

912,887—John F. Pool, Philadelphia, Pa., assignor to the American Sugar Refining Company, Jersey City, N. J., a corporation of New Jersey. Apparatus for making sucrose of lime.

912,892—George Rommel and Edmund R. Nebeling, New York, N. Y. Non-refillable bottle.

912,959—Samuel T. Hensel, Denver, Colo. Apparatus for the manufacture of simple syrup.

912,987—Otto Quaresima and Joseph Voll, Hazelton, Pa. Non-refillable bottle.

To Make Hair Tonic in Canada.

DETROIT, Feb. 20.—The Herpicide Company, hair tonic manufacturers, will locate a branch factory in Windsor, Ont.

Copy of any PATENT or TRADE MARK, 10 cents.  
Author of copyrighted work on Protective Trade Marks,  
Food and Drugs Act, and Valid Patents.

G. H. DAVIS, Attorney, 908 G St., Washington, D. C.

## TRADE MARKS.

Published February 17, 1909.

34,651—Antonio Carino, Boston, Mass. Class 6. Salves.

35,273—Schimmel & Co., Miltitz-Leipzig, Germany. Class 6. Synthetic oil of violet.

36,410—George D. Snyder, Brooklyn, N. Y. Class 6. Talcum powder.

36,728—Albert L. Calder Company, Inc., Providence, R. I. Class 6. Tooth powder, tooth paste, and tooth soap.

37,693—Purity Laboratories, New York, N. Y. Class 6. Tooth powder.

38,100—Charles H. Keith, Cleveland, Ohio. Class 6. Liver pills.

38,174—Abraham L. Johnson, Augusta, Me. Class 6. Horse powders.

38,357—The Warner Chemical Company, Carteret, N. Y. Chemical washing powder.

39,539—Harry Matusow, Philadelphia, Pa. Class 6. A specific for rheumatism, gout, liver, kidney and bladder troubles, uric acid solvent, etc.

39,557—Walker Chemical Company, St. Louis, Mo. Class 6. Antipyretics, narcotics and soporifics.

39,602—Pearson's Antiseptic Company, Ltd., London, Eng. Class 6. A disinfectant for use for agricultural, horticultural, veterinary and sanitary purposes.

## Receiver Appointed for the Peptol Company.

BATTLE CREEK, Mich., Feb. 17.—A receiver has been appointed for the Peptol Company, in the person of H. V. Barbour, of Detroit. The company recently figured in several suits brought against W. K. Kellogg, one of the promoters, by St. Louis parties. These suits were successful in the Circuit Court, verdicts for damages aggregating several thousand dollars being awarded the plaintiffs. The cases were then appealed to the Supreme Court, where they are now pending. It is understood that several creditors of the Peptol Company in Philadelphia have petitioned the courts to have the concern adjudged bankrupt.

## CUSTOM CHARGE IS CALLED UNFAIR.

**Importers Protest Against Having to Pay for Errors Made by Public Officials—Committees Appointed.**

BALTIMORE, Feb. 20.—The executive committee of the Baltimore Drug Exchange, at the last meeting, discussed the Virginia law relative to the sum to be paid by the retailer for selling broken packages of drugs, such as blue stone, coppers and other compounds. It was stated that the Attorney-General had given an opinion holding the law invalid in so far as it stipulated that dealers may not sell such articles as those named, and which are used for spraying fruit trees and for other similar purposes, except in original packages. The exchange has been endeavoring for some time to have the provisions of the statute modified or obtain some competent ruling, and the attitude assumed by the Attorney-General is therefore very gratifying. The following standing committees were appointed:

**Transportation**—J. M. Bellamy, Thomsen Chemical Company, chairman; J. Emory Bond, Parke, Davis & Co., and James Carey, James Baily & Son.

**Legislation**—A. C. Meyer, A. C. Meyer & Co., chairman; J. F. Hinds, Emerson Drug Company; R. A. McCormick, McCormick & Co.; Dr. A. R. L. Dohme, Sharp & Dohme; Horace Burrough, Jr., Burrough Bros. Manufacturing Company; G. Frank Baily, of James Baily & Son; A. E. Mealy, Gilbert Bros. & Co.; Allan L. Carter, Resinol Chemical Company, and Simon Loewy, Loewy Drug Company.

**Membership**—Horace Burrough, Jr., chairman; J. Emory Bond and James Carey.

**Public Improvements and Trade Interests**—G. Frank Baily, chairman; Parker Cook and Horace Burrough, Jr.

**Collections**—Joseph A. Owens, Carr-Owens Drug Company, chairman; Harry C. Brawner, Swindell Bros. Glass Works, and C. L. Crawford, Rumford Yeast Powder Company.

**Publishing**—A. E. Mealy, chairman; J. A. Yaker, Kohler Manufacturing Company, and A. C. Meyer.

Another matter taken up was the charge to be imposed by the customs authorities for each claim which an importer puts in for a rebate. It makes no difference whether the claim is granted or rejected, or whether it arises from an error of the customs officials or through some fault of the importer or shipper, the charge of \$5 is made in every instance. Some of the importers receiving large quantities of goods may make a number of claims in the course of a week, yet no matter how they are decided, the importer must pay the fixed charge for making the claim. This is regarded by the importers as unjust. They could not complain at being mulcted for their own mistakes, but, as is often the case, the mistake is made by the customs official, and the importers regard it as a hardship to have the additional charge imposed upon them for no fault of theirs. The matter was referred to the legislative committee. President Henry F. Baker occupied the chair and W. M. McCormick was secretary at the meeting.

## New Members and Committees for Phila. Drug Club.

PHILADELPHIA, Feb. 20.—Twenty-eight new members were elected at the February meeting of the board of governors of the Drug Club and it is evident that by the time the period for admission without the payment of the initiation fee closes on March 15 the desired quota of 300 will have been reached. President William L. Cliffe announced the committees for the year as follows:

**Finance**—Walter V. Smith, chairman; John Jolley, Jr., David J. Reese, Charles Rehms and George D. Feldt.

**Membership**—Otto Kraus, chairman; P. P. Brown, Ellsworth Hiltz, Jr., Clifford S. Gill and J. W. Cooper.

**Entertainment**—D. E. Bransome, chairman; George H. Benkhart, W. C. Fleck, George W. Fehr, J. H. Jolley, Otto Kraus, Clayton E. French, O. W. Osterlund, Samuel C. Henry, Josh E. Marsden, H. A. Nolte, W. A. Johnson, Samuel B. Davis.

## Drug Exchange Committees for 1909.

PHILADELPHIA, Feb. 20.—Dr. Adolph W. Miller, president of the Philadelphia Drug Exchange, has named the following committees for the ensuing year:

**Legislative**—Mallon N. Kline, chairman; Clayton F. Shoemaker and E. J. Lavin.

**Publishing and Trade Interests**—John Fergusson, chairman; Charles E. Hires and Richard M. Shoemaker.

**Membership**—Clayton F. Shoemaker, chairman; Walter V. Smith and Adam Pfriem.

**Room**—Edward H. Hume, chairman; A. Robinson McIlwaine and William Gulager.

## OLD WHOLESALE HOUSE IN NEW HOME.

**Daniel Stewart Company, of Indianapolis, Occupies Model Building of Improved Construction.**

INDIANAPOLIS, Feb. 20.—The wholesale drug house of the Daniel Stewart Company, known as "The Old Gibraltar," the oldest drug house in Indiana, which had its beginning in 1840 under William Hannaman, and which next year will celebrate its 70th birthday, has gone into the new building from which it was driven by fire on July 7, 1907. This building, at Meridian and Maryland streets, is in the very heart of the Indianapolis wholesale district and is of slow-burning mill construction, with six stories and a basement and mezzanine floors, affording in all a floor space of nearly 50,000 square feet.

The company has been incorporated, as recently announced in the ERA, with William Scott, president and treasurer; Martha Stewart Scott, vice-president; Henry L. Brown, secretary. The glass trade, for which this house has been famous for 40 years, has been made a separate concern, but is still "in the family," being incorporated with John N. Carey as president, his wife, a daughter of the late Daniel Stewart, being a stockholder.

The new building is one of the most complete and best equipped in the United States. Among the new features in the equipment is an outside elevator for basement use. Another is a gravity chute from the sixth floor to the first for conveying packages.

The house is known far and wide for the fidelity of its employees and the current saying is that when a man gets a place in the Old Gibraltar he is good to hold it until the funeral director calls for him. Of the thirteen traveling men of the house the following have been longest in service: Charles A. Humphrey, 35 years; E. R. Robbins, 25 years; Jefferson McDonald and Charles B. Ward, each 24 years; Bert O'Leary, 21 years; John R. Miller, 20 years.

Among the house men those longest in service are: Henry L. Brown, who has been bookkeeper and cashier 24 years; E. L. Olcott, 30 years; Hugh Johnston and William Dobell, each 21 years.

## NEW YORK WHOLESALE BUY PROPERTY.

**Britt, Loeffler & Weil to Have Two Large Five-story Buildings to Meet Big Increase in Business.**

Britt, Loeffler & Weil, wholesale druggists, located at 255 Canal street, New York City, have purchased the five-story and basement building at 269 Canal street to meet the demands of an expanding business. The building, which is only a few doors away from the present home of the concern, will be used in conjunction with the older quarters. Only a year ago the firm was forced to move to its present location from 37 Bowery on account of pressure for room, but it was only a matter of a few months when it was found that two five-story buildings would be none too large.

The new building is the larger of the two, containing 15,000 square feet of floor space against 11,000 square feet, which is the area of the older structure. Arrangements are now under way to get possession as soon as possible, pending adjustment of some old leases.

Jacob Weil, in speaking of the business in general, stated that the firm could not complain in any way as to business having been poor, and that a fair proportion had come its way, even during the past depression, was evidenced by the necessity of doubling its facilities with which to transact business.

## New Home for Milwaukee Drug Company.

MILWAUKEE, Feb. 20.—The work of breaking ground for the new building of the Milwaukee Drug Company will begin on March 15. The structure, which will be erected at Jefferson and Michigan streets not far from the present location, will be five stories and basement and constructed of reinforced concrete with vitrified brick facings. The equipment will be of the latest and most modern type and it is expected that the Milwaukee Drug Company's new home will be one of the finest establishments of its kind in the country. Present plans are that the building will be ready for occupancy by January 1, 1910.

**WAMPOLES INVADE BALTIMORE.****NEW ENTERPRISE OF AMERICAN DRUGGISTS' SYNDICATE.**

**Philadelphians Acquire Controlling Interest in the Heineman-Evans Co.**

BALTIMORE, Feb. 20.—An invasion of the wholesale drug trade of Baltimore by the Wampole interests of Philadelphia is the latest and most engrossing development in the business here. Henry S. Wampole, a son of the late H. K. Wampole, of the well-known Quaker City firm, has acquired a controlling interest in the Heineman-Evans Drug Company, 108 South Howard street, and the name of the concern has been changed to The Henry S. Wampole Company of Baltimore.

The change also necessitated another reorganization. Henry S. Wampole was elected president and general manager; M. O. Blount, Bethel, N. C., vice-president; Albert K. Wampole, secretary and treasurer. C. J. Heineman, A. T. Evans and R. R. Fleming resigned from the board of directors and the Messrs. Wampole, together with Mr. Donaldson, were elected in their place. The other members are J. L. Fountain, J. T. Thorne, John T. Mason, J. W. P. Summerville and T. J. Downing.

The suit for the appointment of a receiver, brought by Matthews Brothers, manufacturers of paper boxes, has been answered, and it is stated that the litigation will be disposed of in short order. All the other claims have been adjusted on the basis agreed upon, which is 50 cents on the dollar in cash. The company will continue to occupy the warehouse now tenanted, and business, it is said, will go on as before. The capital stock of the reorganized company is fixed at \$100,000.

Above is a picture of the advertising Pullman car of the American Druggists' Syndicate, which will leave Long Island City March 1 for a year's educational tour of the country east of the Missouri River, visiting towns of 2000 population and over. The car will carry exhibits of the products made in the A.D.S. laboratory and by various manufacturers. This method of advertising is decidedly unique, and the results will be watched with interest by the drug trade and the mercantile world in general.

Sending out this car is a daring and original stroke of enterprise such as has characterized the management of the Syndicate since its organization three years ago with one thousand members and no capital save the faith, energy and determination of its founders down to the present time when the organization has a membership of ten thousand, a capital of half a million dollars, ten flourishing branches in large cities of the country, a business of two million dollars a year and a high credit rating with the best commercial agencies.

**Marriage Mentions.**

—ARTHUR A. KREIBHIL, of Dayton, with Miss Bessie M. Holmes, of Hamilton, Ohio, recently visited Covington, Ky. While there they were married by a Methodist clergyman.

—A. A. BERGER, a druggist of 5100 Ashland avenue, Chicago, was married February 18 at Omaha to Miss Lillian McMullen, who had spent several years in study preparatory to going on the stage.

—ABRAHAM GOODMAN, a partner of Goodman Brothers, Carlisle avenue and Smith street, Cincinnati, was married February 18 to Miss Jennie Cusher, a niece of Dr. Cusher. They are spending their honeymoon in the East and will live in Walnut Hills when they return home.

—THEODORE H. WURMB, of 1323 East Grand avenue, St. Louis, who long ago was counted out of the matrimonial possibilities by his professional friends and marriageable customers, surprised everybody by taking a wife February 16. The bride was Mrs. Ida Hoevel Simon, a neighbor. The bridegroom is 50, the bride 32. Plans for a neighborhood celebration, at last account, had been delayed a week because the couple had not taken possession of their flat at the store.

**Favorable Report on Pharmacists' Bill.**

WASHINGTON, Feb. 15.—While the House Committee on Interstate Commerce has reported favorably the bill to increase the pay of the officers of the Public Health and Marine Hospital Service Corps, a minority report, signed by two democrats, Bartlett of Georgia and Russell of Texas, who are joined by Representative Mann of Illinois, has been reported to the House opposing the increases on the ground that the prospective national deficit of between \$120,000,000 and \$130,000,000 makes such increases at this time unjustifiable.

**Pleasant Musical Held by Boston Chapter.**

BOSTON, Feb. 21.—The February meeting of the Boston Chapter of the W.O.N.A.R.D. was held Thursday afternoon at the Hotel Brunswick and took the form of a musical afternoon. Miss Jessie Fisher spoke on "Home Life in the City," and musical selections were rendered by Miss Alice Fortis, Miss Cecile Chapin and Miss Emily Burbank. Mrs. Adelaide Goddard presided.

**BIG PROPAGANDA MEETING FOR BUFFALO.**

**Arrangements Also Being Made for Rochester, Suffern and Other Points—All to Be Joint Sessions.**

A banquet and joint meeting of physicians and pharmacists of Erie County is scheduled to take place in Buffalo on March 9. According to advices from Buffalo druggists, over 300 members of the professions are expected to participate and a number of speakers have also been engaged. The meeting is under the auspices of the Propaganda Committee of the State Pharmaceutical Association, and will be the first of several that are to take place in various parts of the State within the near future.

Arrangements are also in progress to have a meeting in Rochester, and efforts are being made to have it follow closely upon the Buffalo affair, but no date nor details have as yet been discussed or decided. The third meeting will probably take place at Suffern on April 14, where the pharmacists of the district have been invited by the County Medical Society. Details are also meager as to the programme that will be carried out at this meeting. However, it is expected that Dr. William C. Anderson, of Brooklyn, chairman of the Propaganda Committee, will be present at all of the meetings and deliver addresses upon the propaganda work in the interests of the pharmacists and at the meeting in Buffalo he will talk upon "The Relation Between Pharmacists and Physicians."

**University of Illinois School of Pharmacy.**

The senior class of the University of Illinois School of Pharmacy gave a reception and ball at Grand Boulevard Hall, 47th and Grand Boulevard, Chicago, on the evening of Feb. 5. The entire class, many juniors and quite a few alumni were present with their ladies and a most enjoyable evening was spent. The affair was so successful that it is planned to make it an annual affair.

The members of the Beta Chapter of the Phi Gamma Sigma Fraternity, the chapter which was inaugurated two years ago at the school and which has been successful, are planning a dance to be held in the near future.

# THE DRUG MARKETS

## CONDITIONS IN MARKET UNCHANGED.

**Tendency of Prices for Most Articles, However, Is Upward, With Firmness Prevailing in Staples.**

NEW YORK, Feb. 22.—Market conditions are practically unchanged being about the same as noted for several weeks past, while the movements of drugs and chemicals into channels of consumption continues steady. Changes in value show a slight improvement with the advances outnumbering the declines. Norwegian cod liver oil is more active. Ergot is higher. Porto Rican bay rum shows a further advance. Canada balsam of fir is much higher; citric acid slightly lower, while Angostura tonka beans are firmly held after the recent decline in price. Opium and quinine are steady without any changes in value. Sicilian essences are still unsettled. Luca cream salad oil in bulk is higher and Hungarian chamomile flowers scarce and in good demand at quoted prices.

**OPIMUM.**—Our market is firm with more inquiries for case lots. A shipment is in port of ten cases of extra fine Karahissar, testing 11 to 11½ per cent of morphine, and will no doubt be readily taken up. Smyrna again reports large purchases for the United States. The weather in Turkey has turned bitterly cold and severe frosts in the upper country are reported. In consequence the position in that market is strengthened very materially and much higher prices will undoubtedly prevail in that section of the country. In Constantinople there is practically no stock and also but little in the interior of the country. Smyrna has the principal stock upon which the whole world will have to depend. Two-thirds of the crop in Smyrna is reported to be below 10 per cent morphine strength, and much of it below 5 per cent. The arrivals in Smyrna to January 29 are 2003 cases, against 1347 cases for the same period last year.

**QUININE SULPHATE.**—The market is reported quiet and featureless, with the limited movement in progress wholly of a routine character; manufacturers' prices are unchanged on the basis of 14@15c. per ounce in 100 ounce tins. At the recent auction sale in Amsterdam 1400 kilos were sold at florins 10.50, and at the bark auction in London on the 16th inst. the average unit was without material change. The price at the previous sale was 9-16d. Cables report the bark shipments from Java for the first half of February as 550,000 pounds.

**NORWEGIAN COD LIVER OIL.**—The demand has improved and prices for some of Devold's brands have advanced to \$22.50 per barrel, and \$12.75 per half-barrel. Cable reports give the result of the fishing up to the middle of the month as follows: Lofoten, 500,000 fish, producing 660 barrels of oil, and the total of all Norway fisheries for the same period is 3,400,000 fish, yielding 3230 barrels of oil. The weather is reported as stormy and the fish not quite as fat as last year and thus yielding less oil.

**HUNOARIAN CHAMOMILE FLOWERS.**—There is an exceedingly active demand and the market continues very firm under light available supplies. Quotations have been marked up to 36@38c. per pound in large quantities with prime goods very scarce even at the outside quotation.

**BALSAM OF FIR.**—Owing to a depleted stock in our market and none obtainable in Canada it is now impossible to obtain any prime goods under \$6.50 per gallon in barrels, with the corresponding advances for smaller quantities.

**CACAO BUTTER.**—While quotations are nominally unchanged at 34@35c. per pound for wrapped fingers, the general undertone of the market is firmer and a rise in price would not be surprising. Some of the manufacturers abroad have refused to enter contracts for forward delivery.

**ALTHAEA ROOT.**—The demand has been very good and owing to a scarcity of stock on the spot has been very firmly held. A shipment of a very handsome white quality is now in port, which will probably have a tendency to relieve the market somewhat.

**OLIVE OIL.**—Owing to the steadily increasing prices in the producing markets and the rapidly depleting stocks in our own market prices have been advanced on the average of 25c. per gallon on bulk packages and large cans of Luca cream salad oil. The news from the producing markets is not very

encouraging, the producers stating that owing to the severe drought and the fact that the crop of olives has been much smaller than usual, the yield of oil is correspondingly less, with a possibility that the high grade oil will not be at all obtainable.

**BAY RUM.**—There has been a good business in this article, and with all the cheap lots now out of the market, prices have been advanced to \$1.60 per gallon in barrels, with the tendency still upward.

**CASCARA SAGRADA.**—Reports from primary sources of supply state that the prices there have been advanced one-half cent per pound. There is no change in the local situation, however, except a slight increase in firmness and the quoted range is still 8½@9c. per pound, as to quantity and seller.

**GLYCERIN.**—The market for this article is still somewhat unsettled by competition, although prices have been without quotable change. As a rule, the quotations for C.P. have been based upon 16c. per pound in drums, but prompt deliveries have been available in some quarters of late at slightly lower figures.

## Four New Interpretations of Inflammables.

The Committee on Transportation of Explosives of the American Railway Association recently issued Circular 902 which contains interpretation Nos. 17, 18, 19, 20 and a supplement to interpretation No. 10 relating to the transportation of inflammables.

Interpretation No. 20 is of especial import to the wholesale drug trade and relates to the change in the wording upon the red and yellow diamond labels from which the words "inflammable liquid" and "inflammable" have been stricken out.

Another important change also comes under interpretation No. 19, according to which it is now permissible to ship any quantity of paints or varnishes without regulation labels in hermetically sealed tin or other metal vessels, not containing over five gallons in any one vessel, and packed in strong boxes or barrels. A shipper's certificate and notation "no label required" must, however, still be furnished for each shipment. Interpretations Nos. 17 and 18 relate to the proper position and use of the labels.

A number of the interpretations were secured through the efforts of the committee on regulations for transportation of inflammables of the National Wholesale Druggists' Association, which has secured a number of concessions from the regulations since they were first issued some months ago. The circular is being mailed to the trade this week.

## Two New Chemical Companies Formed.

HARTFORD, Conn., Feb. 20.—The United Oxygen & Chemical Co., of Simsbury, has filed with the State Secretary a certificate of incorporation for the purpose of conducting a general chemical or any other business. The incorporators include A. E. Lerche, Springfield, Mass.; L. C. Fay, of Chicopee, Mass., and F. W. Clifford, New York City.

CINCINNATI, Feb. 20.—The M. & I. Chemical Company, of Cleveland, has been incorporated at Columbus, with a capital stock of \$10,000, by P. J. Mock, L. F. Shaw, R. E. Hyde, C. J. Neal and M. L. Quilly.

## Texas Concern Had a Prosperous Year.

HOUSTON, Tex., Feb. 20.—The Southern Drug Company held its annual meeting recently and the following officers and directors were elected for 1909: B. B. Gilmer, president; C. F. Carter, active vice-president; J. W. Lester, manager; G. F. Stone, treasurer; W. C. Guschardt, David Rice, J. W. Cleveland, R. W. Wier, J. S. Rice, W. T. Carter, Thomas H. Ball, William M. Rice, Dr. O. L. Norsworthy. President Gilmer reported a prosperous year despite the panic conditions, and a substantial dividend was declared, payable at once.

## Porto Rican Bay Rum Tax Regulations Promulgated.

Secretary of the Treasury Cortelyou has issued T.D. 1462 formulating the regulations for enforcing the Act of Congress approved February 4, 1909, to impose a tax on alcoholic compounds coming from Porto Rico and for other purposes. Provision is made for tax-paid stamps and the collection of the \$1.10 duty, which latter must be paid at once, as no provision is made for the bonding or warehousing of taxable articles brought from Porto Rico.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, MARCH 4, 1909

No. 9

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn St., Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

90 WILLIAM ST., NEW YORK.

## THE NEW REGIME AT WASHINGTON.

With the usual ceremonies at Washington today Theodore Roosevelt lays down the reins of government and William Howard Taft becomes President of the United States. The opportunity is strongly present for an administration of peace and prosperity, with but one disturbing element in the horizon, the talk of tariff revision. The new executive finds the country practically recovered from the effects of the recent artificial depression, with business going forward in most lines in a normal manner, except where the prospects of tariff revision have had the effect of renewing the feeling of fear for the future which not long ago possessed many manufacturers and other employers.

The new administration is committed to some readjustment of the tariff, but it does not seem probable that any radical changes will be made. No tariff was ever enacted in this country, or in any country, which was absolutely just to everybody. A perfect tariff schedule is an impossibility. With the present tariff there are inequalities which ought to be adjusted, but many shrewd business men are disposed to favor leaving well enough alone, for tariff agitation always has a depressing effect upon the trade and the employment of labor, so it is to be hoped that whatever is done at Washington by the new Congress under the guidance of the new President will be accomplished speedily and with as little disturbance of general conditions as possible.

## REGENTS' CERTIFICATES AT \$125 APIECE.

College professors are no more immune from charges of fraud than other people, but it is very seldom that any of them is accused of such an offense as "railroading" no fewer than thirty-five students through the New York State Regents' examinations at the price of \$125 per man. Two professors, Charles G. Christie and William J. Kearney, were locked in jail at last accounts on this specific charge.

In the last issue of the ERA we noted five arrests of persons who had bought Regents' certificates for prices varying from \$300 to \$1,000 apiece. Now the price seems to have slumped, if the charges are true. The accused professors are said to have officiated at the Regents' examination in a way which gave them the opportunity to falsify the records and one is alleged to have confessed his guilt. It is not unusual for outsiders to try to fool examining boards, but it is extraordinary for officials to violate their trust. Little except gross laxity on the part of the New York Regents' system could permit such wholesale traffic in certificates. Something must be wrong with a system which cannot preserve the integrity of

or Era Album

examinations and the conclusiveness of its certificates.

The present New York State Board of Pharmacy has never permitted one of its certificates to issue unlawfully and it has maintained precautions against impersonations. It has investigated the preliminary qualifications of candidates and has been most exacting—too exacting for some people. In this respect all boards of pharmacy throughout the country are acting likewise. The proposition at Albany is to turn the control of pharmacy examinations over to the machinery of the State Board of Regents. How do the druggists who may have to employ the products of the Regents' examinations feel about the possibilities? There is no "short cut" to pharmaceutical knowledge and even a Regents' certificate will not make a poison harmless, nor prevent a damage suit.

#### LINCOLN'S CENTENARY ALSO DARWIN'S.

Public appreciation of great men is notoriously variable and sometimes offers strong contrasts in the exhibition of recognition of achievement. The newspapers have been overloaded with stories regarding the celebration of the birth of Abraham Lincoln. Few of them have even mentioned Charles Darwin, whose birth centenary occurred on the same day. One was the liberator of slaves, the other was the liberator of thought. It cannot detract from the popular appreciation of Lincoln to say that Darwin in his own sphere was worthy of general public recognition. It is a remarkable coincidence that the two men should have been born on the same day, both destined to become notable figures in history, yet widely apart in their lines of action.

So much has been printed about Lincoln and so little about Darwin that in a near issue of the ERA we will print Professor Kraemer's address upon Darwin's centenary which he presented at the February Pharmaceutical Meeting of the Philadelphia College of Pharmacy. As Darwin received his first recognition in Philadelphia it is especially fitting that Professor Kraemer should prepare such a concise and admirable tribute to the departed scientist as will be perused by our readers.

#### DRUG STORES IN SMALL COMMUNITIES.

Questions like the following frequently are asked by projectors of drug stores in country towns and villages where none exist and where there appears to be sufficient demand for a pharmacy to make a success:

*Editor The Pharmaceutical Era:*

Can you tell us what size room would be necessary for a drug department with a registered pharmacist in a store having a country trade from 5000 people? Would it be necessary to use more than one room? What is the usual salary of a registered druggist in the country?

R. & K.

ERA subscribers who have had practical experience are invited to send us for publication the conclusions which they have reached in establishing drug stores under conditions similar to those mentioned in the query. So much depends upon the size and shape of the available store room and the extent to which the druggist proposes to go into side-lines that the best answer to these questions will come through the

narration of the experience of those who have gone through the same.

A majority of druggists consider it advisable to partition off the prescription department from the main sales room, although some use transparent partitions of glass, so that their patrons can see the operation of compounding the ingredients called for in prescriptions. Salaries also vary a great deal. Competent registered pharmacists in the country may be had for as low as \$10 per week, while others are paid as high as \$30 or \$35 a week. In this, as in the question of size, etc., the best teacher is the example of others who have had experience and no doubt some of our readers will be able to furnish some interesting letters on the subject.

#### A NEW FREE SERVICE FOR ERA SUBSCRIBERS.

Pursuing our policy of making the ERA useful to our subscribers we have begun with this issue a new department which ought to add to their profits by enlarging the radius of their purchasing sphere for articles not directly advertised in our columns. The plan, which is fully explained on advertising page 23, including a preliminary lot of announcements, will be known as the "ERA Want List" and in its operation will afford the retail druggists of the country means to supply their wants in purchasing supplies in and out of the drug trade that cannot be excelled, while the cost will be nothing to our subscribers.

Careful perusal of the instructions will easily show that in the course of a year a judicious subscriber, buying fair sized quantities of goods out of the regular run of strictly pharmaceutical supplies, might easily save several hundred dollars. With the obvious opportunities which are presented by this free service it will only require a few trials to convince our readers of its advantages to them and make it one of the popular features of this journal.

#### WORK OF THE OPIUM CONGRESS.

According to the report cabled from Shanghai by Bishop Brent, the International Opium Conference after carefully considering the subject of suppressing the evil took action in that direction, going so far as the delegates could proceed. The conference appears to have been a success and to have paved the way for the ultimate banishment of opium for uses other than medicinal. We have not space to print the resolutions in detail, but the following summary indicates their scope:

It is the duty of all the countries to adopt necessary measures in order to prevent shipment of opium and derivatives to any country prohibiting entry of opium and derivatives.

The commission recognizes the sincerity of China in its efforts toward suppressing the use of opium. It recommends that each government investigate from a scientific standpoint anti-opium remedies and properties and the effects of opium and its products.

It recommends each government to take measures for the gradual suppression of opium smoking in its own territory.

It urges the governments possessing concessions in China which have not yet taken effective action toward closing opium divans to act as soon as possible.

It recommends each government to apply its pharmacy laws to their subjects in concessions in China.

Upon the question of the liability of a retail druggist for damages through errors in physicians' prescriptions a valuable opinion is given by Charles M. Woodruff, a leading member of the Michigan bar. This opinion, which appeared on

page 181, of last week's ERA, gives the crux of the situation in the exercise of common sense in considering the problem presented by individual cases, for no general rule of law can be laid down which will apply to all cases of this nature.

President Taft's expectation that the tariff tinkering will be finished by June will be good news to business men and it will be sincerely hoped by everybody that Congress will arise to the occasion. The drug trade is less interested than most other branches of business, but in the event of a long continued tussle among the lawmakers it must necessarily feel the effects eventually. If the operation is quickly and scientifically performed an early recovery of the affected interests may be expected, while others will escape entirely.

"Well," said the first physician, "what has that new patient of yours got?"

"I don't know," replied the other, "but I'm trying to turn it into typhoid fever. I'm great on that."

Among the younger members of the wholesale drug trade in Baltimore, G. Frank Bailey, of the firm of James Bailey & Son, 28 South Hanover street, holds a prominent position. Especially since the death of his father, James Bailey, some four years ago, has he come to the front, and at the present time he is looked upon as one of the foremost men in the business. He is vice-president of the revived Baltimore Drug Exchange, a member of the Merchants' and Manufacturers' Association and of the Board of Trade, leading commercial organizations, and can be depended upon to take an active part in any important movement designed to promote the interests of the city.

Born 53 years ago in Baltimore, he attended public and private schools, also going to the City College. When only 17 years old, he entered as clerk the house founded by his father in 1866. As his experience expanded he was intrusted with other more responsible duties. Step by step he rose, acquiring a thorough knowledge of the details of the different departments, and proving his mettle not only on the road as traveling salesman, but in various other capacities.

He applied himself with such diligence that at the age of 27 years he was admitted into the firm as partner, and the confidence then reposed in him has been amply justified by his subsequent career. He is not lacking in progressiveness, though conservative withal, and he has contributed largely to the success of the firm in late years, much of the credit for the big strides made being due to him. At the present time he has charge of the general office work, which has been systematized under his direction and modified, so as to meet the greater requirements of the house. The firm was for years located in Pratt street. After the retirement of J. J. Thomsen's Sons from business, James Bailey & Son moved into the warehouse occupied by this firm, in German street, near Hanover, where the new tenants enjoyed far larger facilities than ever before. The great fire of February 7 and 8, 1904, swept away this warehouse, along with hundreds of others, and the firm was forced to seek temporary quarters. As soon as the present commodious five-story warehouse in Hanover street was erected, James Bailey & Son moved into it, and the change proved a fortunate one, for in the new location the business has grown more rapidly than ever before.

Mr. Bailey is quiet and unobtrusive in his methods, but at all times manifests an affability which constantly adds to the host of his friends. He is readily accessible, notwithstanding the pressure of duties, which is at times very severe, and his deliberate manner gives him the appearance of a person of leisure rather than that of the man of business he is. Of medium height and stocky build, he possesses great reserve force, and the amount of work he does shows that he draws freely upon this stock of energy. Mr. Bailey is regular and methodical in his routine. He gets downtown at an early

hour and works rapidly, so that no time is lost. He has few diversions, holding membership in the Merchants' Club only, and devoting more time to his family than a majority of other merchants. If he may be said to have a hobby, it is that of hunting and fishing, which he gratifies by going to Canada every summer. He holds membership in the St. Joseph Hunt and Fishing Club, of River Deseret, Quebec, and on the grounds of that organization he finds not only recreation, but that wholesome sport which enables him to stand the drain upon his powers during the rest of the year.

He closely follows developments in the drug trade, both wholesale and retail, and everything calculated to advance the interests of the business, either from the scientific or commercial standpoint, receives from him liberal encouragement. As a member of the Drug Exchange he is giving careful attention to pure food and drug legislation, and co-operating earnestly with those who aim to abate abuses as well as secure for the trade those rights which it can conscientiously assert.

Mr. Bailey may be said to have inherited his predilection for the drug business, as not only his father was engaged therein, but his grandfather also. The latter established a firm as early as the year 1800. The family, therefore, has been identified continuously with the trade for 109 years, a record sufficiently rare to deserve special attention.

G. FRANK BAILEY,  
of Baltimore, Md.

An historical art treasure has just come to light at Versailles. It is an important portrait by Nattier of Marie Leczinska, the wife of Louis XV. For many years it had hung, covered with dust, in the Versailles Lycee, where no one knew or cared what its value was, who painted it or whom it represented. Recently, however, the curator of the Versailles Museum had the picture removed and cleaned, and then it was identified as a Nattier.

According to the estimate of the Health Department the population of New York City is now 4,422,685. The city thus contains half a million more people than were in the United States when the Constitution was adopted. Its population is greater than that of Ohio or of the four New England States Massachusetts, Connecticut, Rhode Island and Vermont.

It has a larger population than England had under the great Elizabeth. It is six times the size numerically of Paris under the Grand Monarque, four times as big as London when George III. was King, more than four times greater than Rome under Augustus. There are Senatorial districts in Manhattan more densely populated than was Athens, "the eye of Greece," in the age of Pericles.

It was said of the Romans by one of their historians that they "had made the world a city." New York has become a civic commonwealth greater in numbers, in wealth, in social, artistic, moral and all but legislative influence than any of the States of the Union. It added to its population last year a city the size of Denver. At the same rate it will add every decade the population equivalent to a Boston and Baltimore combined, or three cities of the rank of Cincinnati. Where is the end to be? Superlatives lose their force when employed to express the wonderful growth of New York City.—*New York World*.

"The earth has two motions. Do you know what 'they are'?"  
"No, I don't, but both of them shake money out of my pocket."

Saratoga Drug Association is making an active and energetic campaign in favor of the appropriation by the State of all mineral water rights in the famous Saratoga region, to protect the springs from further invasion by the carbonic acid gas companies, which, it has been charged, have been destroying the springs through excessive pumping. Prominent in the movement is Charles F. Fish, former president of the New York State Pharmaceutical Association. The State has acted along somewhat similar lines in the preservation and resto-

ration of Niagara Falls, in establishing forest reserves and in other directions, so that those interested have precedent and argument to offer to the legislators.

A quaint touch of oriental ingenuity to harass the persistent users of opium has been invented by the superintendent of police at Canton, says the London *Lancet's* correspondent in China. This official has issued 20,000 wooden licenses ten inches long by eight inches broad and three-fifths of an inch thick.

On the front of these boards are characters giving the smoker's name and address, and the quantity allowed him per diem, and on the back are the opium regulations. The licensees are not allowed to cover their boards when going to buy opium, but must wear them conspicuously so that all may see them.

Next year these wooden licenses are to be two feet long by one and a half broad and three-fifths of an inch thick.

To say that Mr. Taft looks upon life as a process of self-adjustment, and upon government as a reconciliation of conflicting aims and interests, would, I think, express his attitude fairly, says a writer in the *March Century*. To him a person is not wholly good or wholly bad, a course of action is not perfectly ideal or utterly to be condemned. He has no such crude view of men and measures. He knows that every man is a mixture of good and bad, with one or the other perhaps predominating.

Little Lester Livermore—Papa, what is the difference between a vision and a sight? This book says—

Mr. Livermore—The difference between a girl before and a girl after she is married.—*Puck*.

"Clergymen, lawyers, doctors, claim not to advertise, but somehow or other we see their advertisements occasionally," said Parker M. White, an advertisement writer of Pittsburgh.

"The millionaire proprietor of a patent tonic called on a well-known doctor one day.

"Look here," he said, "you are the Dr. Lacey Fisher who is attending Senator Stoxton, are you not?"

"Well, sir," the physician answered.

"I," said the tonic man, "what'll you take to put on the daily bulletins that you give out about the Senator this sentence: 'Use Blood Bitters. They Ward Off Disease'?"

"Why, man," said the famous doctor, indignantly, "I wouldn't do that for anything. Those bulletins are not advertisements."

The other chuckled harshly.

"Aren't they?" he said. "Then take your name off them."

Why does the cat ignore a mirror and appear not to notice the reflections, while a canary almost invariably gets excited and wants to fight its mirrored duplicate. Some dogs seem to take notice of the reflection in the glass while many others do not. Nearly all monkeys enjoy looking at themselves in a mirror, but a fish, frog, or snake will butt their heads against it as if it was clear glass. A racoon looking at a mirror will invariably turn it over to see what is behind it. A goat usually tries to smash it and a leopard or tiger pays no attention to it.

Los Angeles *Herald*, in trying to be hospitable to the pharmacists who are going to the next A.P.A. convention, is treading upon dangerous ground, for its editor declares that they "will find the air of Los Angeles stocked with a more valuable remedy than all that are in the Pharmacopeia—a veritable panacea—good health-giving California ozone." Past visitors to Southern California will not, however, consider this superlative comparison to be in any sense akin to blaspheming the druggists' Bible, for it is often difficult for the thoughtless Profane to praise a good thing with sufficiently strong adjectives.

According to a district manager of one of the telephone companies, the stereotyped "Hello" as a method of opening up a conversation over the wire is doomed to go. "It is really a waste of time to haul out 'Hello' over the wire," said the manager, "and I think people are beginning to realize it. The line of least resistance is a very good one to follow in telephone talk, and so why encumber your conversation with unnecessary words? You will find that those in the telephone business have cut out 'Hello' entirely. Take, for

instance, the operator. See how they've cut out the unnecessary talk. It is simply 'Number, please,' with them, and that's all there is to it. Now, the proper way to talk over the telephone is to establish your identity at once and then get right down to business. Personally, I always answer the telephone with a 'yes,' as I think that is the most direct means to the end of finding out what's what. Some people answer the 'phone by giving their name. In speaking you can give a certain inflection, which answers the purpose of a half dozen words. For instance, let us say that a Mr. Smith is called. He answers the telephone by saying, 'Smith.' Then, the other fellow can plunge right into his business without wasting time by asking who is on the 'phone or other needless questions. It is a great time saver, and a great many business firms have issued rules to their employees never to say 'Hello!' but to give the firm name upon answering the telephone, so you can readily see that 'Hello!' is doomed to leave us. It is already old fashioned."

Some drug clerks know so much that realizing that they will not live long enough to use all their knowledge, they decide not to use any of it.

A souvenir of the Civil War came into the hands of a delicatessen merchant in New York a few days ago which showed how scarce small change must have been in those days. It was a green 3-cent postage stamp, encased in a thin metal frame the size of an old copper cent. The face of the stamp was protected by a disk of mica. On the reverse side the improvised coin was stamped "Good for three cents." This queer substitute for money was given along with other small change by a woman who said it was the last of a number of similar pieces which she had owned for many years, and the man who took the combination stamp, mica and tin for three cents, in speaking of it, said: "The woman looked as if she was prosperous once and was sorry to give up the piece."

Druggist in small New England town advertises: "One of our Never Let Go porous plasters guaranteed to last all winter and stick like a brother until you take a bath next spring." Is it to be inferred that people in that town go all winter without a bath?

A Chinese served as a juror in Suffolk County (Mass.) before Judge Bond recently, this case, so far as known, being the first that one of his nationality has been drawn in the Massachusetts courts. This unusual experience has come to Henry S. Ar Foon, who is a clerk employed in Boston and residing in Chelsea. Mr. Ar Foon is 37 years old and was born in this country. His title to citizenship is strengthened by the fact that his father was naturalized. Mr. Ar Foon has been a voter in Chelsea for 16 years.

Druggist who was arrested for selling whiskey to a woman claimed that it was "bust" developer.

Marriage in the British navy will be facilitated by the act which came into force with the new year, constituting a warship a church or chapel for the purpose of publication of banns, says the London *Express*.

The Admiralty has issued a circular to commanding officers calling attention to the act and to the order by the King in council sanctioning rules for the carrying out of the act.

Hitherto any officer or man in the navy has been compelled to have the banns published in the ordinary way ashore, after qualifying by residence and this has frequently caused much inconvenience. In future the ship may be regarded as a church, as well as the man's place of abode, whether the ship is at home or abroad.

All that is necessary is that the man shall give notice to the commanding officer of his desire to have the banns published. The banns will then be read out by the chaplain or commanding officer on three successive Sundays at morning service, and a certificate of publication will be issued to the man. The new act will render it possible for a commanding officer, who has no chaplain aboard, to publish the banns of his own marriage if he desires to do so.

It is mighty funny how some people seem to take pride in blowing about the things they claim to be ashamed of.

## Easter Window Wins \$5 Cash Prize This Week in Era Competition.

An enterprising druggist in Kansas wins the \$5 cash prize this week in the ERA'S Cash Prize Competition for the best photograph of a druggist's show window or any display of goods in a drug store. A check will accordingly be mailed to Harry M. Curry, who is in the pharmacy of W. E. Sherriff, secretary of the State Board of Pharmacy, of Kansas and a prominent pharmacist of Ellsworth.

The winning display on this occasion is particularly timely and offers a basis of suggestion for pharmacists who are accustomed to take more than ordinary notice of the advent of Easter, a time when so many people emerge from Lenten gloom into Springtime life, activity and gaiety. Pharmacists with soda fountains who have made special displays in the past at this time have found the same entirely satisfactory. Care of course should be taken not to anticipate the festival, but preparations for quick action in the window at the right moment must necessarily be made in advance. The display here shown was made on Easter Sunday, 1908.

Practical benefit to druggists and their clerks is one of the chief objects of the ERA'S Prize Competitions and in this instance there can be no question of the utility of the idea embodied in the illustration which is reproduced herewith. It should be remembered that the contests are open to all, without restriction as to whether the competitors are subscribers to the ERA or not. Full particulars will be found on advertising page 14 of this issue of the ERA.

### Easter Window for W. E. Sherriff, Druggist, Ellsworth.

By Harry M. Curry.

This window has a wood frame back of it 5x10 feet, made of 1x2 lumber, from the top of which is hung a wall paper border, cut out, representing lace hangings with rose garlands. The uprights were covered with wall paper also, representing a rose and ribbon effect. The columns are paste-

board, made from the tubes that come in linoleum and can be procured from any carpet house. They have wood bases, and tops, made so that they fit inside the tubes and nailed there, then the whole is painted with white Alabastine. The "Easter Greeting" is painted on cardboard and cut out to represent scrolls. A small round picture is hung in the center. The background is painted in distemper water color on cardboard cut out and fastened about a foot in rear of the columns, then a background of shaded blue back of them about a foot against which is the large cross, made of pasteboard and gilded. Shaving covered with white tissue paper, holds miscellaneous Easter goods, candies and perfumes. The cards are special aids, for perfumes and confectionery.

The two large ferns complete the display, and add to its beauty. In photographing my windows I use a large black cloth to shut off reflections, as can be seen in photo, which I consider a very good idea.

### NEW BOOKS.

- FRIEND, J. NEWTON. *The Theory of Valency*. New York: Longmans, Green & Co. 14+180 p. figs. D. ed. by Sir W. Ramsey. cl. \$1.00.
- GILL, A. HERMAN. A short hand-book of oil analysis. 5th ed. rev. and enl. Philadelphia: Lippincott. c. '97, '00, '03, '05. 179 p. figs. tabs. O. cl. \$2.
- HANSON, E. KENNETH, and Hodgson, J. Wallis. *An Intermediate course in laboratory work in chemistry*. New York: Longmans, Green & Co. 6+124 p. figs. O. cl. \$1.20.
- HILL, ALEX. *The body at work: a treatise on the principles of physiology*, with 46 illustrations. New York: Longmans, Green & Co. 11+448 p. pt. figs. O. cl. \$1.50.

## Public Spiritedness.

By Emma Gary Wallace.

In many parts of the country the elections have recently taken place to decide the question of local option and much hitherto moist territory has gone dry.

Here and there a town, in which the no-license element was strong, greatly surprised its residents by registering a deciding vote in favor of license, even when the balance of public sentiment was known to be in the opposite direction. If this had occurred in a single place the estimate of the general inclination might be charged up to an error in judgment, but the same condition and result prevailed in so many places that a common or related cause is indicated. What

was it? Were there dark and mysterious forces subtly at work?

No, it was simply a lack of public spiritedness. The people who believed in temperance were so busy attending to their own private interests that they did not stop to consider the public good until it was too late. A public reform of any nature cannot be worked in a month or many of them. It means a long, steady pull against some condition which is at work seven days in every week. It often means making honest mistakes, the stick-to-it-iveness to correct them, and the ability to keep the ultimate end continuously in view.

Private interests are always directly dependent upon the welfare of the surrounding public interests, so that one cannot be neglected without jeopardizing the other. It is a deplorable fact that every little while some sensational newspaper item gives forth to its readers the damaging impression that a large percentage of the drug stores are merely respectable cloaks for an illegal liquor business. There is no doubt that the daily press, as a rule, intends to stand for fairness and public spiritedness, but misrepresentation of facts is not public spirit, it is straight injustice. It would seem that they have harped on this one string until they have come to believe its tune themselves. It is the regret of the great mass of high-minded men and women connected directly or indirectly with the business, that such cases are to be found, even if infrequently. They realize too well, the discredit such individuals bring upon a most honorable calling. There is no occupation which in its entirety represents perfection. It is right and fitting that the wrong-doer should be punished, but it is wrong and manifestly unfair to raise a cry branding the majority of those of the same craft as presumably guilty also.

If the situation were not exasperating and serious it would be almost funny that the great thinking American public can be so easily led to regard a false idea as a truth. It reminds one of the man who presented himself before a fur-dealer and offered to furnish him with a *million* black cat skins at a very reasonable figure. The fur dealer was skeptical. "That is a good many black cat skins," he returned dubiously, as he reckoned his possible profit on such a deal.

The cat-skin salesman assured him most earnestly of his ability to furnish the goods and finally received an order for a carload. The fur dealer hastened to place the coming consignment of near-seal in various quarters where it would net big returns, promising later delivery.

Some time after the cat-skin man appeared with the winter overcoats of seven lusty Toms, which he carried by the tails in one hand.

"There they are," he remarked gloomily, as he flung them upon the counter.

The fur dealer was indignant. "But, sir," he protested, "you promised me a whole carload."

"I know it," the man replied dejectedly. "I was just positive that there were at least a million of them by the catering-wauling they kept up nights, but there's the whole crop, Boss, and three of them I had to coax in from the next street and trap at that."

The hue and cry about the liquor-selling druggist can generally be made to dwindle down to a mighty few skins, and too often, part of them are trapped with baits which have excited their humanitarian sympathies. If proof of damaging statements were demanded very often it would transpire that the news-broker had sold short.

More than one conscientious young woman has hesitated to link her fortunes with those of some suitor within the ranks, being alarmed by the jokes and insinuations of her well-meaning but humorous friends. Not so very many moons ago a bright young woman consulted an elder friend on this very subject. "It would look," she argued, "that 'where there is so much smoke there must be a little fire,' why even the newspapers talk about it."

Right here is a chance for an exercise of real public spiritedness. If every man and every woman, who sees such an item in which the profession as a class or even a portion of it is made to suffer an injustice, would immediately write and mail to the editor of the publication containing the offending article, a courteous protest, it would do a world of good to awaken a sense of fairness and it would have a strong tendency to lessen the constant repetition of charges which prejudice the unthinking. Never mind if there is not time to pen a lengthy production. The shorter the better after the ground is covered. Do not hesitate to sign it in full. It is an honor to stand in defense of a worthy cause.

After that editor has received several hundred such protests a number of times, he will begin to sit up and think the subject out, not only in relation to the subscription list, but as to the justice of the charges. There is no use to argue that it is none of our business, because it is. What affects one affects all whether we recognize it or not. A stone dropped on the earth starts vibrations which encircle the globe.

In a small city the water supply was drawn from a river polluted by mills and villages above. Many people complained about its impurity but no one was public spirited enough to undertake to bring about a change in the condition. Some said, "It is no affair of mine," others said "If the rest can stand it we can," and one wit declared "He hadn't time to bother, besides it wasn't his funeral."

Men came and went to their business and women worked or visited or neighbored without a thought of danger, until an epidemic of typhoid broke out, followed by a more deadly scourge of diphtheria. Business was paralyzed, homes bereaved and lives sacrificed. The wit was the first victim. What a lot of unnecessary suffering and all because of the lack of a little public spirited enterprise, and the pioneers needful to set the ball rolling. *General welfare means individual safety.*

In one of the largest cities of the country, a hold-up took place in a darkened stretch of street. The nearest druggist to the scene tried to interest his business neighbors in an effort to have a light placed at the junction of two streets, by which means the dark place would be sufficiently illuminated. They all shrugged their shoulders. "Folks must look out for themselves," they said. The druggist alone made application to the city for extra lighting. He took time off and went to see about it. He was openly called a fool for his pains.

Elections intervened, and the light was not granted. Another administration came into power and the work had to be all gone over again. At the end of about fourteen months, a powerful light was placed right where the public spirited man wished it.

About one year after that same druggist's wife was hurrying home one foggy evening with medicine for her sick baby, when just beyond the reach of that light she was accosted by a villain—he was in the clothing of the guardian of the law at that—who familiarly took her by the arm. For a moment her heart stopped beating, then came the thought of the light and its supposed protection. It gave her courage. With one desperate effort she broke away and in another instant was within its misty beams, and a moment later was back at her husband's store. If that man never has any other monument than that light post, he ought to be satisfied. Public spiritedness is often a boomerang of good works which returns to the sender bringing capital and accrued interest combined.

A Danish inventor has just perfected an instrument for typesetting by wireless waves, and he shows that the time is not far distant when a correspondent in London may transmit his news directly to the New York printing press through the

Marconi operator. Once that man would have been burned at the stake for being in league with the powers of Darkness. Today people marvel at his mastery of Nature's forces.

That man might have said: "What is the use, I shall never be a newspaper correspondent!" But instead of that he possessed the splendid public spiritedness of a Citizen of the Universe, and that spirit actuated him on to wonderful accomplishment.

The greater the enlightenment the more public spirited we become, because we learn to look at people and things through the eyes of a broader understanding, and with feelings of larger sympathy.

We are in a continual stage of progression. Even when we seem to be sliding backward, it is often the means of arousing us to a sense of our dangerous situation, and of awakening us to a consciousness of latent possibilities. We have had the day of the pill, the capsule, the tablet triturate, and the secret mixture, when each was used in distinct preference to the others, and now we are getting back to the first principles of good, stable U.S.P. and N.F. preparations.

We have also had the day of the wild-cat stock scheme—a bitter pill to many—the day of public graft, the extravagance of advertising regardless of merit, and market products of all kinds which might or might not be what they claimed, but again we are getting back to the first principles—the principles of honesty and truthfulness. And these first principles are going to make life vastly more worth while, for they will re-establish our confidence in our fellow man.

What has done it? What has turned the wheels backward until they reached solid ground? Nothing if not the broadest kind of public spiritedness.

Occasionally some interest which is being forced to give up questionable practices raises a cry of selfishness, and utters a warning that a reform is being pushed to benefit a certain class. If no one was to be benefited, or no condition improved there would be small use of reform, and no reform was ever accomplished without opposition on the one hand and true public spiritedness on the other.

We may not all do great things, but we may with a true spirit of unselfishness perform willingly that portion of the world's work which comes knocking at our own door. Sometimes "silence is golden," and sometimes judicious silence is the real radio-activity of public spiritedness.

## FOR MARYLAND BOARD OF PHARMACY.

### Vacancy to Occur Next May Gives Rise to Speculation and Wire Pulling.

BALTIMORE, Feb. 27.—Considerable speculation is indulged in among Baltimore druggists over the vacancy in the Maryland Board of Pharmacy which will be occasioned next May by the expiration of the term of Ephraim Bacon, the secretary of the board. There are those who believe Mr. Bacon will be appointed to succeed himself, while others are inclined to take a different view.

One of the questions that will probably enter into consideration and may decide the issue is that of residence. The law on the subject provides that two of the members of the board shall be residents of Baltimore, one shall come from the Eastern Shore, another from the central part and a fifth from the western part of the State. The two members credited to Baltimore are John A. Davis and Louis Schulze.

Mr. Bacon has been credited to Baltimore county, and therefore to Central Maryland. Since his appointment, however, Mr. Bacon has become to all intents and purposes a resident of Baltimore, owning a store in the city and conducting it, whereas at the time he was named he was a member of the firm of Truitt & Bacon, of Roland Park, a northern suburb, just a few squares beyond the city limits. If it is decided that Mr. Bacon, by the transfer of his business activities to Baltimore, has become a citizen of the town, he will be ineligible for reappointment under the law, the city already having two representatives on the board.

From now until the appointment is made, the Governor will doubtless be bombarded with petitions in favor of the various candidates for the position.

### Impaired by Torture.

Lawyer—Isn't your memory good?

Witness—Well, not when I'm on the witness stand.

## Peanuts.

By Joel Blanc.

It was during the quiet, collarless and slipper time that I tried to get the mind ready for rest by thinking of many things in general and nothing in particular. On that particular night there came first an unwelcome and then a welcome inspiration. This is the way it happened and an explanation of the occurrence may give you a wee insight into the way a writer follows out the thoughts he transfers to paper.

The family had taken the Morpheus Limited to Shumderland while in a luxuriously comfortable negligee I sat in the big chair in my den with pipe-born clouds surrounding me. Nonchalantly I took from the table beside me a copy of the "Congressional Record" and idly turned its leaves. On one of them my roving glance was for a moment held by the words, "The peanut industry." This was a lengthy, statistic-filled address by a Southern congressman. "Peanut politics" gave an half-uttered expression to my thought and the "Record" was laid aside. Then, in the rolling smoke-clouds, a fifteen-year-old memory took mind-pictured form and I saw myself strolling along the streets of Petersburg, Va., the greatest peanut market in the world. Before my mind's eye passed many great wagons loaded with peanuts. Again I seemed to see the great warehouses and so-called "peanut factories" and to hear the rumble of the noisy machinery as it was used to cleanse and otherwise prepare the nuts for market. The first wreath of smoke-clouds passed and in the folds of a new one I beheld a corner at the junction of two Petersburg streets. Seated at this corner was an old, shriveled negro. Before his box seat was another box on which rested two baskets and a glass jar. Laboriously his trembling old fingers moved as he took the peanuts from one basket, shelled them and dropped the shells into the other basket and the hulled nuts into the jar. For five cents the old man sold me as many hulled nuts as would have cost three times as much in the North. In a critical tone I remarked that the nuts were very small. Uncle replied that small nuts were best and bid me taste for proof. A taste brought the proof, such toothsome proof that I gladly listened while the old negro talked of peanuts. Before that day all peanuts looked about the same to me and they looked far from dignified, but since that time I have looked upon and eaten them with very great respect.

That old negro could neither read nor write. To a Northerner who had spent less time in the South than I had, the negro's language would have been almost unintelligible; but he knew peanuts from P. to S. One might have called him a peanutomaniac, for throughout his life he had raised, sold, eaten, and it seemed, lived, breathed and thought peanuts. He told me more about peanuts, fact and tradition, agriculture, art and indigestion, than I had ever previously imagined. Yet, he knew nothing but peanuts. Upon any other topic he was mentally as a little child.

Again the smoke-clouds changed and with their rolling, thought rolled onward also. Again the copy of the "Congressional Record" was taken in hand and I read with interest, the speech on "The peanut industry." Of course, the speech gave me added information about peanuts. It impressed upon me the greatness of the peanut industry and from its perusal my store of general knowledge was increased; moreover, it proved that what the old negro told me about peanuts was true. It also proved that the old negro knew more about peanuts than the congressman did.

The poor old peanut peddler has probably passed to his reward long ere this, and I can think of him only as a human atom transferred to another state, a black dot erased from a page of humanity's history and yet, before its earthly obliteration it served its purpose and served it well. In his line,

old Uncle Carbon was a disseminator of knowledge of no mean ability. Who can tell how much fruit may have been born on trees of knowledge grown from seeds of thought planted by the poor old black. After fifteen years of forgetfulness, a fleeting memory of the old colored uncle led me to profitably read, digest and enjoy a congressional speech which I had once thrown aside with contempt. It was he who gave me the inspiration to write what follows:

In every walk of life, in every business and profession there are the peanut peddlers, men whose knowledge has developed into a monomania, whose lives hold no music but that which comes from the vibrations of a monochord, who paint no pictures except in monochrome. We pass them with a sneer, perhaps pity, or treat them with contempt, forgetting that while we may know many things indifferently these peanut peddlers know one thing well. While it is true that the pressure of the times tends to make such men fewer and that for them the struggle for existence is becoming harder and harder, it is unhappily true that those who *know* one thing well are often unable to do that one thing well. It is not that they are bound by theory, for such is not the case. Theorists are originators, but these mono-mentalists, if I may be permitted to coin a word, are merely gatherers of facts from one tree of knowledge and these individuals of whom we speak are the unthanked, disdained distributors.

In law, pharmacy, engineering, medicine; in the store, office, college, studio and factory are such men found. They are like the earthworms which keep the soil leavened that it may take and distribute the life of the seed, and as we ungratefully tread upon and crush the worms so do we crush the sensibilities of those life-leavening men who gave so much and ask so little in return.

In every excuse there should be at least an atom of reason. As we of a broader horizon often excuse ourselves for our treatment of these mono-minded men by terming them narrow, bigoted or dull, or by the use of other words which are at least expressions of semi-contempt, so must there be with us the atom of reason. It is true that these men retard us by their drag upon us and weaken our collective strength by refusing to walk with our throng upon the highway. It is true that the tools they give us are muzzled and of but little use until sharpened by our own wit. However, better than the lily in its radiance, far better than the sun-scintillating, flying thistle-seed, is the head of wheat that almost hides itself among the brambles, for from it, with diligence and effort we may later harvest enough for a loaf.

These men, who are so often the subjects of our expressed impatience, hold us to wise conservatism by their adherence to fact. They are the masons who build the walls upon which we, the artists, hang our work. They weave the canvas upon which we paint and we who lean upon what their hand-thrown shuttles have woven, owe them more than we can ever pay.

Crabbed or garrulous, fearful or sad, unlovely they may be; but let us remember that their unloveliness may be a heritage of sin and sorrow, the sorrow for the sin of another who took all the light of love and left only the darkness of ingratitude. Or there may be the lack of heritage of breadth of mind. The predecessors of the old peanut man, for many generations may have dwelt in mental shadow. If such be the case, does not the mono-mentalists deserve credit for having learned one thing better than his forebears learned anything?

So let us all learn a lesson from the old, black peanut peddler and may the lesson teach us to humble our own pride, to throw the light of patient love into the dark hedgerows from which these child-minded men hand us good seed for planting within the gardens of our minds. Neither should we forget that after everything is reasoned and said, we will find those whose mental breadth is as superior to ours as ours is to the old Petersburg peanut peddler. There are others whose mental plane is so high above our own that we have as little hope of reaching it, and make as little effort in that direction, as the poor old black man made to reach ours.

#### Hudson River Ph.A. Meets This Evening.

Another monthly meeting of the Hudson River Ph.A., Inc., will be held this evening, March 4, at 8.30 p. m., at the Hostelry of the "Braddock," southeast corner of 126th street and Eighth avenue, Manhattan Borough, this city. Mental acrobatics and culinary luxuries are promised, in addition to valuable pointers by the buying committee.

## THEORY AND PRACTICE

### Detection of Methyl Alcohol in the Presence of Ethyl Alcohol.

As traces of formaldehyde are invariably produced by the oxidation of pure ethyl alcohol, it is almost impossible to detect small quantities of methyl alcohol in ethyl alcohol by any oxidation process; when, however, not less than 5 per cent of methyl alcohol is present, a definite result may be obtained, the following process being the most satisfactory one: One Cc. of the mixed alcohols is placed in a small, round bottomed distilling flask and the oxidizing agent is added; if ammonium persulphate is used, 0.8 gm. of the salt is added, followed by 3 cc. of dilute sulphuric acid (1:5), or, in the case of potassium bichromate, 1.5 grms. of the salt and 1.5 of pure sulphuric acid. In either case, the mixture is diluted with water to 20 cc., and then distilled, the distillate being collected in test tubes in five separate portions of 2 cc. The first two portions, which will contain all the acetaldehyde and formaldehyde (when an aqueous solution of acetaldehyde and formaldehyde is distilled, the whole of the acetaldehyde distills over before the formaldehyde), may be rejected. To each of the remaining portions a few drops of 0.5 per cent solution of morphine hydrochloride are added, and concentrated sulphuric acid is poured into each test tube so as to form a layer at the bottom. In the presence of formaldehyde a violent ring will be found at the junction of the two liquids. The coloration yielded by a mixture containing 5 per cent of methyl alcohol is very decided and cannot be mistaken for the faint reaction yielded by pure methyl alcohol (*Analyst through Jour. Soc. Chem. Ind.*).

### Freezing Point of Calcium Chloride, Glycerin and Alcohol Solutions.

In view of the use of various substances by automobilists for preventing freezing of the water in radiators, the following data will be found useful. It will be noted that a 25 per cent solution of the commercial calcium chloride is necessary to prevent freezing in the coldest weather we are likely to experience. The ordinary commercial calcium chloride usually tests about 75 per cent of the pure salt and the figures are based on the use of a salt of this strength.

Specific gravity of solution.	Number of lbs. of salt to the gallon of solution.	Freezing point.
1.150	2¼	7° F.
1.175	2¾	0° F.
1.200	3	-9° F.
1.225	3½	-18° F.
1.250	4	-33° F.

Glycerin is used for a similar purpose, but has not been found satisfactory and is, moreover, very expensive, 50 per cent being required to resist even a moderate degree of cold. A 10 per cent solution freezes at 30° F., 20 per cent at 27° F. and 30 per cent at 21° F. Denatured alcohol is also used to some extent, and while better than glycerin it is not so good as calcium chloride and, moreover, is much more expensive, owing to its volatility. A 5 per cent solution freezes at 28° F., 10 per cent at 23° F. and 20 per cent at 14° F. (*Drug Topics*).

### Cocaine in Tooth Extraction.

The more recent practice is to employ a smaller dose of cocaine, an eighth of a grain being, according to some authorities, ample for the purpose. The syringe is obtainable at any druggists' sundries house. A solution which is kept ready made is prepared from a receipt such as the following:

Cocaine hydrochloride	1 part.
Boric acid	1 part.
Glycerin	2 parts.
Wintergreen oil	1 part.
Dill water	.95 parts.

Prepare under strict aseptic conditions and filter bright (Ch. & Dr.).

## Original and Selected

### PHARMACY IN GENERAL MERCHANDISE STORE.\*

By F. D. POLLARD, Proctorsville, Vt.

Drug stores run in connection with a general merchandise store, present some aspects different from drug stores *per se*. In order that I may make my meaning clear, I will say that I class as drug stores along with general merchandise stores only such as compound prescriptions to a greater or less extent. Nor am I classing as such the strictly department stores, of which there may be one or two in the State. Drug stores run with a general store have the assortment of drugs displayed in a large room along with dry goods, groceries, boots and shoes, clothing, hardware, etc. This arrangement has some advantages, as well as disadvantages, which I will not undertake to enumerate or discuss.

This class of stores, now under consideration, were quite numerous throughout the State in past times, but since the passage of the pharmacy law the number has been dwindling, and in my opinion, in the not very distant future, will practically become a thing of the past. I cannot but think that the young men, who, either by taking a course in pharmacy or studying at a drug store, are able to successfully pass the examination, will lack either the inclination, the ability or the experience so necessary to make a success of such an undertaking. It is believed there is not one store in the State with sufficient drug business so a proprietor, not registered, would feel warranted in hiring a registered clerk. In fact it is quite certain, if there was no drug line in the store at all, there would still be the same number of people in it at work.

Ask the proprietor of such a store why he does not branch out in some seemingly more profitable line, as for instance, a soda fountain, and he will quite likely reply, "I could not do it without another clerk and that would not pay me."

Thus as the store is under little added expense because of the drug corner and business would go on just the same as if it was not there, the proprietor is sometimes tempted to use the business to draw trade. In other words he cuts prices thinking to get the business more than back in his other lines of goods.

This is quite a prominent feature of the advertising of some of the large department stores in certain of the large cities of the United States at the present time.

Far many years preceding the passage of the pharmacy law and the organization of the Vermont State Pharmaceutical Association, I am sorry to say, this plan was also quite generally adopted in Vermont. As showing how thoroughly the business was demoralized at one time, the writer remembers somewhat over twenty years ago, of a certain dollar proprietary medicine that, because of very successful advertising, sprang into prominence and became in great demand. Every dealer in the vicinity tried to see if he could not sell it cheaper than his competitors, but the writer finally carried off the trophy by selling it at fifty-nine cents. Many times in those days the drug stores as well, tried hard to and usually did succeed in keeping their end up at cutting prices.

Since the passage of the pharmacy law, and the organization of a strong compact State association the writer can see, generally speaking, that a change has gradually come over the trade. All are realizing more and more that in the end such demoralization in prices are no benefit to manufacturer, dealer or consumer. It is the writer's belief that at the present

time general stores have no desire to run their drug departments to the detriment of the drug trade, but on the contrary the proprietors of such stores will be found co-operating with drug stores for the general betterment of conditions.

And right here let me say that I consider attendance to the yearly meetings of great importance to bring about this much desired result. Here we get better acquainted with our neighbors in a day than we would in a life time at home. I do not know the reason, unless it is because the business seems to demand our constant presence and attention, but I believe it to be a fact that druggists generally are less neighborly and less acquainted with one another than any other class of tradesmen. This rule, of course, has some honorable exceptions.

Again, the druggist's liquor license question is one where the general merchandise dealer is apt to look at things at a different angle than does the regular drug store proprietor. Generally he has problems enough presented to him for solution in the sale of extracts and essences without any added difficulties to make things more vexatious, and he is quite likely to decide that he will lose more than he will gain if he takes out a druggist's liquor license. The subterfuges used to get something the user thinks can be taken in larger doses than the directions given are almost without number and some of them really laughable. In this connection, I used to know a man who after standing about the store for a short time would exclaim in the most matter of fact tone: "By the great horn spoon, how my belly aches." It is almost needless to add that he would shortly after call for a bottle of peppermint or checkerberry to allay such a dreadful condition.

#### Pricing of Prescriptions.

Again, the interests of the general merchandise and drug stores are somewhat at variance in the pricing of prescriptions. This is really a more important matter than it would, perhaps, seem at first thought. The profit to a general merchandise store even more perhaps than a drug store is in the reports: "How is this?" you say. Well, in the first place the container is handed in all labeled and ready to fill. No expense there. Then he knows just how to go about putting it up. He does not have to spend time thinking up the proper way to combine the ingredients; nor does he have to be sure the dosage and directions are correct. Another important consideration is that he has all the ingredients to put it up with. Because while there is no drug store that can compound every prescription given it, the proportion of prescriptions a general merchandise dealer has to hand back with the remark, "sorry,

but we have not all the articles called for," is much the greater. But any dealer or druggist either, for that matter, who has to return a prescription unfilled which he compounded before, had better at once overhaul his system of business as there is surely a screw loose somewhere.

#### The Perennial Buyer of Medicines.

Now, bearing the above in mind, along comes Mr. X. You know him. Every druggist knows him. He is a very considerable factor in the trade of every drug store. He is always tight about money matters. He will pinch a cent until almost all the feathers are squeezed off the Indian's head, but he will buy lots of medicine and always pays for it on the spot. Now, to look at Mr. X, he does not appear sickly, but perhaps he has a tickling in the throat, causing a cough and thus fears consumption; or perchance he may have a backache at times and visions of kidney trouble or Bright's disease are before his eyes. Or, again, he may have a touch of "rheumatiz." No matter. It is nothing serious. I never knew of anyone to die of his pet trouble. In fact, come to think of it, I scarcely know one to die at all. It is possible though one might die from old age or accident. Now, Mr. X, has tried and retied all the medicines on your shelves that seem to hit his symptoms. Free samples of medi-

FRED D. POLLARD,  
of Proctorsville, Vt.

\*Read before Vermont Pharm. Ass'n, Burlington, 1908.

cine are always in order and are tried again and again. Nor does he seem to be at all particular that the samples are recommended for his symptoms. "All Cools Look Alike to Me," is the popular song. "All Cools Look Alike to Me," it would really and truly be more near the truth and the whole truth, too.

Now Mr. N., having tried all the remedies he ought to have, of, and not getting the benefit he thinks he ought to have, has, wonderful to relate, gone to the doctor and procured a prescription. Now, if a low price is put on this prescription he will most likely get it refilled many times, as his vanity is touched by the fact that the medicine is compounded to suit his individual needs. I have in mind two cases, one a cough remedy and the other a kidney remedy. Both were expensive to compound and both were priced at five cents advance over the usual price of proprietary remedies of times the same sized bottles. Both have been refilled scores of times to the original patient and many others, because such persons are very assiduous in inquiring after other people's health and prescribing freely. The writer thinks a little care and thought along these lines will repay the investigator.

In conclusion, I wish to urge all, whenever they give a copy of a prescription to note on it the price charged in the cost mark adopted by this society. Such will save the druggists into whose hands it falls for renewal much annoyance. And any such cost mark on a prescription filled by a member of the Vermont State Pharmaceutical Association should be religiously respected.

## PERSONALITY IN BUSINESS.

By Ernest C. Cripps, Berkhamsted, Eng.

It is possible in building a business to work to this end by two different methods, each conducing to a common result and yet distinct, and sharply separate. One may be called the kinetic, active form, and consists of the self-laudatory, self-interest, egotistical method, generally seen in keeping before the public by means of advertising, the other, latent and restrained, which consists of letting actions speak louder than words, and allowing that subtle essence called "personality" to work out its slow, yet sure designs.

It is the fashion in certain quarters to sneer at the "personal equation" in business, but it is manifest to all thoughtful observers that the most powerful asset a business man possesses, unaffected by competition or the march of time, is the impression that he makes and has made, consciously or unconsciously, upon his customers, now, and in the years that have gone.

Vain is all the complaining, especially if we have been successful in our businesses, that the public do not appreciate us at our true worth, or are blind to our many good qualities. "A man passes for what he is worth," and if we have not received our mead of success, the fault is more likely to be at our doors, other things of course being equal, than at those of a discerning public.

### The Personal Equation.

Now there is much in the "personal equation" over which we can exercise no control at all. We are all what we are, in our own individual outlook upon the external world, in our modes of thought, in our moods and feelings, and in many other things, by reason of the subtle impetus of heredity and the molding power of environment, especially this last in our early years.

These influences have stamped us, have made us what we are. We cannot greatly alter our natures along these lines, but in simpler and more practical ways it is possible to develop personality if not there, or change its character if harmful to ourselves, or unpleasant to those around us.

### Courtesy Must Be Accorded to All.

From a business point of view how harmful to us is *boorishness of nature and want of courtesy*, when dealing with others including of course our customers. There are those who pride themselves upon this trait in their character, and boast of their bluntness of speech and general unpleasantness, as distinguishing them from the common herd and endowing them with what they are pleased to call "individuality." Occasionally we find a man, who, in spite of these defects, has built up a successful business, but there are dozens who have come to grief through them, and if we desire to make

our connection with the public firm, strong and lasting, courtesy of manner, a smiling face, gentleness when dealing with children, and deference to the aged, must be strenuously cultivated by us.

Or again how necessary is it to foster the habit of attending to small details of a business. Asked how a well-known pharmacist had built up such a flourishing concern, he replied: "By strict attention to little things!" It should be our aim to be as careful in attending to the goods we supply to the customer who spends but a few cents with us, as to one who spends many dollars. A carelessly written label on a small ointment container, or a label placed on a bottle over an old and dirty one, will be an advertisement constantly and insistently proclaiming to all who see, that we are careless, untidy and unmethodical.

### Taste an Essential Factor.

And surely how careful we should be that our pharmacies bear the stamp of refinement upon them. There are some men in our calling who seem quite devoid of this trait of character and who exhibit in their windows and upon their shelves just those goods that should be relegated to less conspicuous spots. We all know what may be called the "Bed-pan" window with its display of trusses, urinals, suspenders, bed pans and what not. The public knows we keep these things. Why shock the susceptibilities of many ladies by their exhibition and incidentally stamp ourselves as men with no sense of the fitness of things. Our windows and shop should be tastefully arranged, if we wish them to give the impression that they are possessed by men with refined personality. Neatness and order is good, but taste is something more. We all know the appearance of a home devoid of a mistress. It is periodically arranged and managed but it lacks the sweetness of one who arranges and manages upon it her own artistic and tasteful character, and a discerning public will unconsciously judge of a man's personality by the taste he displays in the arrangement of his pharmacy.

### Bad Business to Argue Too Much.

Avoid also forcing our opinions "whether on theology, politics, or what not," upon our customers. We can hold these opinions strongly and tenaciously, but it is bad taste and certainly bad business to argue them out with those who enter our doors. Many a man whose start in business was promising, has made no headway, if not absolutely come to grief, through the neglect of this simple precaution. And in this same connection the pharmacist should be distinguished, so far as in him lies, by the blamelessness of his private as well as public life.

From a business point of view, the man who habitually frequents saloons, gambling houses or even billiard rooms, is doing his connection no good, and sooner or later these habits will tell harmfully upon it. Especially in small towns is this the case, for surely the day is long past, when the drug store in America, or the chemist's shop in England, was generally the drinking shop and scandal center of the community.

### Regard for Others in the Calling.

And the man who values his reputation for fairness and brotherliness should never attack or listen to the attacks of others upon his brother pharmacist in the same street or town, for he should remember that in doing so he would be guilty of attacking his own calling and one who should be, if he is not, a friend.

And in closing this article it is only necessary to add that all the above graces can be cultivated if we wish. They may seem outside the qualifications or even necessities of the average man of business, but if possessed they form an asset, which, as has already been stated, neither time, place or competition, although they may weaken, can never wholly destroy.

### Philadelphia College of Pharmacy Lectures.

Prof. Samuel P. Sadtler announces that the third of the series of special lectures in the food and drug course of the Philadelphia College of Pharmacy will be given March 9 at 3 p. m. in the Philadelphia Museums, 34th street below Spruce, by Dr. W. P. Wilson, director of the Museums, who will speak on "A Few Interesting Foreign Drugs," illustrated by slides and specimens. The Museums will be open to members of the college and others, affording an opportunity to inspect numerous interesting and curious products from all parts of the world.

# QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of *The Era*. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

## Bromo-Chloralum.

(X. Y. Z.)—Trade mark rights are claimed in the use of the name "bromo-chloralum" and we cannot give the formula for the proprietary article. However, a solution belonging to the same type of disinfectants may be made as follows: Dissolve 1 kilogram of alum in 2½ liters of boiling water, and precipitate completely with ammonia. The washed precipitate is transferred to a closed vessel, 30 grams of bromine added, and sufficient dilute hydro-chloric acid (1:1) until dissolved. Finally sufficient water is added to bring the measure up to 4½ liters; filter, if necessary.

## Coloring Liquid Face Powder.

(X. Y. Z.)—"Can you tell me how to color a 'liquid face powder' pink, so that the powder in the bottom of the bottle will be pink?"

It depends considerably upon the character of the powder employed in the mixture, but it is more than likely that the desired result can be accomplished by triturating the powder before suspending it in the solution, with insoluble scarlet lake. The liquid of the mixture may be tinted pink with eosin or any desired soluble coloring substance.

## Baking Powder.

(J. H. P.)—We give below a formula for each of the several varieties of baking powders, although there is considerable objection to alum powders. The amount of starch can be increased in any of the recipes, the other ingredients being left the same. A powder in this way can be made at almost any price desired. The starch is simply used to keep the chemicals in a powder and from acting upon each other:

(1)	
Tartaric acid .....	1 pound.
Sodium bicarbonate .....	1 pound.
Powdered starch .....	½ pound.

(2)	
Cream of tartar .....	2 pounds.
Sodium bicarbonate .....	1 pound.
Powdered starch .....	¾ pound.

(3)	
Acid potassium tartrate .....	19 ounces.
Rice flour .....	1 ounce.
Sodium bicarbonate .....	3 ounces.

(4)	
Acid phosphate of lime .....	1½ pounds.
Sodium bicarbonate .....	1 pound.
Powdered starch .....	1½ pounds.

(5)	
Acid phosphate of lime .....	2 pounds.
Dried ammonia alum .....	2 pounds.
Sodium bicarbonate .....	3 pounds.
Powdered starch .....	5 pounds.

(6)	
Dried ammonia alum .....	1 pound.
Sodium bicarbonate .....	1 pound.
Powdered starch .....	1 pound.

The ingredients, all finely powdered should be first sifted separately, to get rid of all lumps, then the sodium bicar-

bonate and starch should be well mixed together, and finally the acid ingredients should be added, and all thoroughly incorporated, either by rubbing together in a mortar or by sifting at least three times. Flour can be used in place of starch, and is considerably cheaper.

## Phosphorus Paste.

(A. L. P.)—According to the author of "Pharmaceutical Formulas," there are many stupid formulas for phosphorus paste, yet there is perhaps nothing so easy to make as an active and fatal phosphorus paste with phosphorus in a practically unoxidized state. The points to note are that phosphorus readily dissolves in hot fats (1:20 or more) and that the poison should not be present in such excessive quantity to drive away the vermin.

(1)	
Phosphorus .....	1 dram.
Beef-dripping .....	5 ounces.
Wheat flour .....	2 ounces.
Sugar .....	1 ounce.
Powdered biscuit .....	1 ounce.
Water .....	a sufficiency.

Melt the dripping and put it into a wide-mouth bottle placed in a pan of hot water. Drop in the phosphorus (cut small), cork, and shake the bottle until the phosphorus is dissolved (dipping into the hot water occasionally). Place the powders in a warm mortar and pour the phosphorized dripping upon them, mix and add warm water to make a soft paste.

(2)	
Phosphorus .....	1 dram.
Pure carbon bisulphide .....	½ ounce.
Beef-dripping .....	5 ounces.
Biscuit powder .....	3 ounces.
Comp. tragacanth powder .....	½ ounce.
Oil of aulse .....	10 drops.
Oil of peppermint .....	5 drops.
Boiling water .....	3 ounces.

Heat the dripping until it is quite clear, and transfer to a hot mortar; pour into this the carbon bisulphide in which the phosphorus has been dissolved; stir, then add the two powders and the oils, and finally the boiling water all at once, kneading the mass thoroughly until a perfect mixture is obtained.

They are practically alike, but by dissolving the phosphorus in the carbon bisulphide the paste is made much more quickly. The carbon bisulphide must be the redistilled or odorless variety. Most of the bisulphide is dissipated by the hot water, and as the solvent evaporates, access of air, therefore oxidation of phosphorus, is prevented. Another good way to make the paste is to melt lard in a wide-mouth bottle in a water-bath; introduce into it one-half ounce of phosphorus for every pound of lard; then add a pint of proof spirit; cork the bottle firmly, keeping the contents heated to 150° F., and agitate smartly until the phosphorus becomes uniformly diffused, forming a milky-looking liquid. This liquid on cooling affords a white compound of phosphorus and lard, from which the spirit spontaneously separates, and may be poured off to be used again, as it only serves to diffuse the phosphorus in very fine particles through the lard. This phosphorized lard, on being warmed very gently, may be poured into a mixture of its own weight of barley or wheaten meal and sugar, incorporated therewith, and after flavoring with oil of rhodium, etc., the dough may be made into pellets for distribution to the mice. Or mix the lard with powdered cheese (3 and 1), to be spread on bread.

## To Make Labels Adhere to Tin.

(X. Y. Z.)—sends to the Question Box this practical note: The best way to make labels adhere to tin boxes is to swab them over with a solution of one dram of zinc sulphate and one dram of muriatic acid in an ounce of water, practically tinner's "cut zinc." The solution when applied galvanizes the covers.

## Liquid Soap for Toilet Use.

(S. R. P.)—See ERA of November 12, 1905, page 604.

We often envy our competitor the possession of something that we would not pick from the gutter.

## Tooth Topics.

### An Arch of Brushes.

Make an arch of light boards, five feet high and three feet, inside measure. The uprights of the arch should be about fourteen inches wide, but all proportions may be increased or decreased as the size of the window may make advisable. Cover the arch with crimson, crepe paper. It is best that the arch should be so firmly constructed that it may be covered and the brushes fastened thereon before it is erected in the window.

After covering, fasten tooth-brushes over the paper. Double pointed carpet tacks answer very well for fastening the brushes to the arch. Do not use too many brushes. Arrange them according to prices, commencing with ten cent brushes and finishing with the highest priced ones at the keystone. Carry out a general design in the arrangement of the brushes. At the base of each upright arrange the ten cent brushes like the spokes of a wheel radiating from a hub formed of a circular price-card. Above these arrange fifteen cent brushes, radiating in fan form from a semi-circular price-card. Continue upward with the arrangement, as brush stock, taste and dimensions of arch may suggest. When finished, fix the arch perpendicularly in the rear center of the window.

### The Big Tooth.

Take a light wooden box about eight inches square and to it fasten three legs of the same length as the depth of the box. Pad out this tripod with white cotton to give it the outlines of a molar tooth. Set the tooth in front of the arch and upon the top of it display toothache gum, tooth plugs and such other toothache remedies as may be in stock.

Next, make a small, distinctly lettered show-card, to read as follows: "If the ache makes your tooth feel as big as this one, any of these remedies will bring relief." Fasten this card at the top of the tooth, immediately behind the remedies.

With threads of wire which will be as nearly invisible as possible, swing a card from the keystone of the arch so that it will hang suspended over the tooth. Have the card lettered: "But a good brush and package of prevention is worth a pound of toothache cure."

On the floor of the window around the arch and tooth make a general display of tooth powders, creams, pastes, liquids, mouth-washes, dental floss and tooth-picks.

### Simple and Novel.

Suspend a large saw in the centre of the window and across it place a tooth-brush so that the bristles rest upon the saw teeth. Above, have a show-card reading: "You would not think of sharpening saw-teeth with a tooth-brush any more than you would think of cleaning your teeth with a steel file. Yet, a steel file is no more hard and might injure the teeth as little as some of the harsh, acid, gritty tooth preparations that are sold. Try our..... It is mildly strong and gently effective. It cleans the teeth without filing off the enamel." Display any desired tooth-cleaning specialty.

### Three Pillars.

Secure two circles cut from a one inch board, twelve inches in diameter. Around the edges of the twelve inch circles nail thin, stiff, lath-like strips four feet in length and thus form a cage-like, four foot column. In like manner secure two pairs of eight inch discs and with three foot strips make three foot columns. First cover all the columns with heavy wrapping paper to secure a smooth, round surface and then cover the whole with crepe tissue of desired colors. All the columns may be covered with paper of a uniform color or a different color for each may be used.

Around each column wind a narrow ribbon of contrasting color so that the ribbon will form a spiral running from the top to the bottom of the column. See that the spiral lines of ribbon are from four to five inches apart. Fasten the ribbon to the column with small tacks driven through the ribbon and paper into the wood strips. See that the ribbon is left loose enough to permit the sliding of a brush handle between it and the paper at any point between the tacks, and yet tight enough to hold the brushes snugly in place. Slip in as many brushes as artistic judgment may suggest and then stand the columns in the proper positions in the window, the tall column between the two short ones. If handled carefully and stored in a clean, dark place, these columns may be used

repeatedly for the display of tooth-brushes, combs and other light articles. Other display uses will also be found for them.

### Revolving Columns.

If the druggist has a gas, water or electric motor he may double the attractiveness of a column display by placing one or more columns upon a revolving platform. When slowly revolving, the spirally wound ribbon gives a peculiarly pleasing effect.

### Combination Sales.

There is no better way to increase the sale of a tooth preparation than by using it in special price combinations with tooth-brushes. One may secure cheap brushes in job lots or otherwise, so that he can afford to give a brush with each package of the tooth-cleaning specialty he may wish to push. Whether this is good business or not depends upon the character of the druggist's trade. If the greater part of the tooth-brush business is in the cheaper grades, the giving of a nominally ten cent brush is advisable; but with a discriminating patron the cheap brush may have the effect of creating a prejudice against the powder and work a general injury to the business.

In many cases it may be better to offer a twenty-five cent brush and a twenty-five cent preparation for forty cents or even thirty-five cents. Another method which has been used advantageously is to sell any brush that is ordinarily priced at twenty-five cents or more, for five or even ten cents less than the regular price, when purchased in connection with a package of the tooth specialty which is being pushed.

It is questionable business to push a lot of brushes of any single style and texture of bristles, at any price. A tooth-brush should not only be suitable for use upon the teeth of the purchaser, but attention should be given to the peculiar notions the average patron may have as to the nature of the brush which he or she may wish. In the long run it is not good policy either in special sales or regular trade, to endeavor to induce a patron to accept a brush of any particular form or price. In fact, there is no line in a drug store of which so complete a variety should be carried as that of tooth-brushes.

### Outfit Combinations.

Not only may tooth-brushes and preparations be pushed, but a line of practically dead goods may often be worked off with them through outfit combinations. For example, an outfit may consist of a tooth-brush and a package each of a tooth preparation, cold cream, face lotion, face powder and massage cream. Such an outfit may be offered at any price which will make it very attractive to patrons and at the same time yield a good net profit to the druggist; and also enable him to get rid of some dead stock. Of course, only one or two articles of the outfit should be "dead ones."

### Tooth News.

In the preparation of booklets or other printed matter for advertising tooth goods, it is well to put in a few notes of general interest. The following are suggestions which may be advantageously used:

A tooth is merely a development of a part of the mucous membrane of the gum. The enamel of teeth is a calcareous tissue like ivory and while harder, it is of the same chemical composition as the ivory of an elephant's tusk. The enamel of the teeth is the hardest substance in the human body. The teeth of childhood or "first teeth" are twenty-two in number. There are thirty-two of the second dentition or "second teeth." At the age of six years the average mouth holds more teeth than at any other time. Teeth contribute more to the beauty than that reflected by their appearance. They hold up the nose, depress the chin and fill out the cheeks.

### Pharmacists Scarce in Southern Mexico.

OAXACA, Feb. 14.—In the report of the director of the State Institute, which has just been published, public attention is called to the need of more notaries, pharmacists and other professional men rather than lawyers and doctors. It is generally true throughout the republic that both the latter professions are overcrowded. Of the professional graduates of last year fifty-two per cent received titles as lawyers and twenty-three per cent as doctors, for which there is little or no demand, while none of the graduates took the notary course and less than three per cent the pharmaceutical course despite the local demand for men in these professions.

## PERSONAL MENTION

—GRANDIN V. JOHNSON, of Highlands, N. J., visited friends in the trade in New York City a few days ago.

—GEORGE W. TERNES, of the Lilly sales force in Chicago, visited the home office in Indianapolis last week.

—GEORGE S. CAMPBELL, of Milburn, N. J., was a caller upon the jobbing trade in New York City last week.

—IRA ANTONIDES, JR., of Atlantic Highlands, N. J., was a caller upon the trade in New York City last week.

—C. E. WANSLEY will shortly begin his duties as salesman for Parke, Davis & Co., in the Cape Cod section of Massachusetts.

—CHESLEY LASHER, manager of the Catskill (N. Y.) Pharmacy, has accepted a position in the city of Troy and will move there with his family.

—WILLIAM H. LAMONT, manager of Eli Lilly & Co.'s St. Louis branch spent a few days visiting the home office in Indianapolis recently.

—WALTER H. DIPPEL, formerly manager for H. R. Rieman, Sag Harbor, N. Y., has decided to locate in the retail drug business at Clinton, Okla.

—JUSTIN F. BARTLETT, formerly of Chelsea, Mass., is now manager of the Tremont street store of the Theodore Metcalf Company, Boston.

—FRANCIS W. COOK, formerly engaged in the drug trade at Spring City, Pa., has moved to Salem, N. J., where he is engaged in the newspaper business.

—JOHN W. GEIDEL, of Henderson, Ky., while going from his residence to his pharmacy recently slipped and had a severe fall which laid him up for several days.

—DRUGGIST visitors of the Milwaukee Drug Company last week included: F. W. Thiemann, Sheboygan; August Braun and daughter, Merrill; John Kalmes, Clintonville.

—ZENO HABENSCHEID, employed in the pharmacy department of the Gimbel Bros. department store, Milwaukee, made a recent visit to his former home at Jefferson, Wis.

—W. C. VINCENT, druggist at Bedford and DeKalb avenues, Borough of Brooklyn, N. Y. City, will leave on March 9, for Florida, in charge of a "personally conducted tour."

—FRANK SMILEY, city credit man for McKesson & Robbins, of New York City, has just returned from a month's vacation spent at Palm Beach, Florida. Mr. Smiley reports an excellent time.

—MISS ELLEN OGLE, pharmacist in the employ of John Graham at Portage, Wis., is receiving medical care at the city hospital at Columbus, Wis. The recovery of Miss Ogle is looked for.

—B. E. TAYLOR has joined the forces of Parke, Davis & Co.'s salesmen and will leave shortly for Scranton, Pa., to take the position held by Dr. D. Whitney Davis, who resigned a few weeks ago.

—LOUIS C. SEIP, a well known Philadelphia druggist who has done some exceptionally clever amateur photography work, has been experimenting with the X-ray apparatus with very creditable results.

—CHARLES LECOMTE, well known druggist at Green Bay, Wis., has returned from a two months trip abroad. Mr. LeComte visited his old home at Brussels and spent some time in London and other points.

—SAMUEL C. TUCKER, a well known druggist of Champaign, Ill., is a candidate for the Republican nomination for mayor of that city. The local papers speak in high terms of him as a successful pharmacist and active citizen.

—GEORGE KOEHLER, formerly with August Braun, well known druggist at Merrill, Wis., has been made manager of the new branch pharmacy of Wichman Bros., at Wausau, Wis. Mr. Braun was a recent Milwaukee visitor.

—O. W. SMITH, manager of the New York branch of Parke, Davis & Co., has just returned from a two weeks' business trip spent in Florida. Mr. Smith reports conditions very satisfactory as far as his house is concerned.

—ROBERT HALL, for several years employed by Parke, Davis & Co., Detroit, has accepted a position with the Toledo Pharmaceutical Co., of Toledo, O., as traveling salesman. His associates presented to him a handsome traveling bag as a token of esteem.

—CHARLES J. LYNN, secretary and general manager of Eli Lilly & Co., is spending the first week of March in New Orleans in one of his regular visits to the New Orleans branch and Lilly representatives in that vicinity. He is accompanied by Mrs. Lylyn.

—GEORGE W. EVANS, president of the Evans-Smith Drug Company, of Kansas City, Mo., was among the guests at an English pheasant dinner recently given at the Kansas City Club by I. H. Rich, general manager of Swift & Company, to a select party of friends.

—CHARLES ADAMS DREES, JR., son of Charles A. Drees, the druggist of 280 Broadway, Buffalo, N. Y., has been selected as a member of one of the debating teams of the University of Pennsylvania, the first time in the history of the university that this honor has been won by a Buffalo man.

—JULIUS FOLSTER, well-known in the drug trade as connected with Sharp & Dohme, has not made any change of employers lately, nor has he any idea of doing so. This statement is made because an unfortunate typographical error in a recent issue stated that he was representative of another house.

—J. K. LILLY, president of Eli Lilly & Co., spent the latter part of February visiting the Grand Canon of Colorado and Southern California. He is accompanied by Mrs. Lilly and will remain several weeks on the Pacific Coast for rest and recreation. He is now at the Hotel Coronado, Coronado Beach, Cal.

—WILLIAM B. STRONG, vice-president and treasurer of the Milwaukee Drug Company, is a member of the committee of the Merchants' and Manufacturers' Association, of Milwaukee, which is arranging the annual trip of the association. Michigan territory will be invaded this year in the interests of Milwaukee trade.

—J. T. DOSTER, of Doster-Northington Drug Co., Birmingham, Ala., recently spent a day in Indianapolis visiting the plant of Eli Lilly & Co., and calling on Indianapolis jobbers. Mr. Doster was accompanied by T. R. Taylor, of Tuscaloosa, Ala., who has just opened one of the best appointed retail stores in the South.

—DR. H. R. WHITLEY, one of the members of the Dorsett Drug Company, of Douglasville, Ga., besides being a physician with a large practice, has found time to serve in the State legislature, two years as Senator and nine years in the lower branch. He has been the author of several bills designed to improve the health of the State.

A. W. KILER, Ph.G., of Columbus, O., was a recent visitor in New York, having come to the city to attend a meeting of the board of directors of the Aseptic Products Company. Mr. Kiler is one of the leading members of the American Druggists' Syndicate in Columbus and is a new member of the Ohio State Board of Pharmacy.

—DURING the first day of his visit in New York City last week, President Taft was a guest at dinner in the home of Dr. William Jay Schieffelin. President Taft and Dr. Schieffelin are both interested in the so-called "negro problem" and in the evening attended the Booker T. Washington meeting where the President addressed a large audience on the matter of solving the problem.

—DR. HARVEY W. WILEY, chief of the Bureau of Chemistry of the Department of Agriculture and Prof. Charles H. LaWall, a member of the faculty of the Philadelphia College of Pharmacy as well as one of the chemists for Pennsylvania, were among the speakers at the International Tuberculosis Exhibition in Philadelphia. Dr. Wiley spoke on the relation of food to tuberculosis.

—JOSEPH J. CONGER, of St. Paul, has sold his drug store to his clerk, Edward Mierko, and will move to a ranch near Portland, Ore., on the Salmon river, where he will raise apples on a large scale. Mr. Conger has been running drug stores in St. Paul about fifteen years. His brothers Stephen B. and Fred A. each has a drug store of his own in that city, and the three brothers have always acted in partnership.

—THOMAS P. TAYLOR and wife, of Louisville, Ky., are making a short trip through the South and expect to reach New Orleans in time for the Mardi-Gras festivities. Mr. Taylor has large interests in three prominent retail stores in his home city, but as chairman of the committee on exhibits at the coming convention of the N.A.R.D. he will find abundant time to devote to this important part of the work. Mr. Taylor has lots of energy and will make the display at the convention well worth seeing by visiting druggists.

**BALL OF GERMAN APOTHECARIES' SOCIETY.**

Concert, Supper and Dancing, With Larger Attendance Than Ever Before, at the 58th Anniversary.

The fifty-eighth anniversary ball of the New Yorker Deutscher Apotheker Verein, which was held last Thursday evening in the Lexington assembly room of the Terrace Garden, was, as had been expected, the most successful of any ball in the history of the society. There was a big increase in the attendance of the younger element, while the number present from the old guard was also up to the mark compared with former occasions. Nearly every dance selection was encored at least three times. The concert was by Lederhaus' orchestra, which also furnished music for the dancing.

President Felix Hirsman, and his wife, who carried a beautiful large bouquet of violets, presented to her by the entertainment committee, headed the procession in the grand march, followed by a number of other officers with their ladies, there being more than 100 couples in line. The march was directed by floor manager Edw. F. Pfaff, who later led the supper march with Miss Hitchcock, daughter of Geo. H. Hitchcock.

Following the first part of the program adjournment was taken to the supper room, where all were surprised to find that a corresponding style and elegance of decorations prevailed. President Hirsman greeted the members and guests in a speech. Referring to the decorations of the national flags he made timely remarks of a patriotic nature, making half of his speech in German and the rest in English.

A toast was proposed for the ladies by Emil Roller, whose very appropriate remarks were enthusiastically applauded. A communication was read from William Bodeman, of Chicago, an honorary member of the society, expressing his regrets at being unable to attend.

Following the supper, part two of the program, consisting of ten dancing numbers, was carried out, and never at any of the previous events was the number so large as that which departed to the strains of "Home, Sweet Home," at 5:30 a. m.

The entertainment committee consisted of Otto P. Gilbert, chairman; Paul Arndt, Henry F. Albert, Robert S. Lehman, Hugo Kantrowitz, and Edw. F. Pfaff. Present on the reception committee, consisting of the officers of the society, were President Hirsman, Dr. C. F. Klippert, O. P. Gilbert, Edw. F. Pfaff, Robert S. Lehman, Geo. Leinecker, and E. C. Goetting.

Delegations were present from all the local pharmaceutical organizations and the members of the New York Retail Druggists' Bowling Association, with their ladies, attended in a body.

**New Yorkers to Attend Congress of Applied Chemistry.**

Columbia University, of this city, will be represented at the Seventh International Congress of Applied Chemistry in London May 27 to June 2 by the following members of the faculty: Prof. C. F. Chandler and Prof. M. T. Bogert who are members of the advisory committee of honor; Prof. Virgil Coblentz, a member of the committee on pharmaceutical chemistry, and Henry Carmichael, member of the section on the starch industry. The Congress is under the patronage of King Edward and the crown prince of Great Britain, and only the most eminent chemists of the United States and other countries are on the various committees.

**Had Rich Father, But Is a Suicide.**

David Rufeisen, of 828 Cortlandt avenue, New York City, who was employed as a drug clerk, committed suicide by shooting last Friday, while standing in the Bronx Park I. station. He was only 18 years old and the son of a wealthy drug manufacturer of Oderfurth-Nadasch, Austria. According to relatives who identified the body, the youth had always been wayward, and was sent to this country by his father for bad behavior. He left no explanation of his act, but his uncle, R. Rufeisen, said that it was undoubtedly due to worry over his escapades.

**Mr. Plant in Merchants' Association Directory.**

At the recent election of the Merchants' Association of New York, Albert Plant, of Lohm & Fink, was elected a director to fill the vacancy in the board caused by the resignation of Dr. William Jay Schieffelin.

**TRIMMED AT TENPINS—TOASTED AT DINNER.**

Buffalo Druggists Visit Rochester and are Handsomely Entertained—Prominent Men Speakers.

ROCHESTER, N. Y., March 1.—A team of Buffalo druggists came to Rochester recently to defeat a like number of Rochester dispensers at tenpins. The match was rolled on Genesee alleys and resulted in two straight wins for the Rochester team, which included Page, Dempsey, Esterheld, Moore and Peck. For Buffalo there performed Bussel, Waugh, Shick, Fitzmorris and Lockie. In the first game the locals hung up a total of 934 pins against Buffalo's 826, and in the second round Buffalo mustered 815 pins to Rochester's total of 895.

After the match, a dinner was given in the Blue Room of the Hotel Seneca. Seventy persons were present, forty of whom were from Buffalo. After dinner H. B. Guilford, of Rochester, made an address of welcome, and introduced George L. Page, who acted as toastmaster. Those who responded were J. L. Lockie, of Buffalo, who spoke on "The Widow's Mite;" George Hahn, of Rochester, on "The Barge Canal," and W. F. Whelan, of Buffalo, on "Druggists as I Have Met Them."

**Successful Entertainment of Brooklyn C.P. Alumni.**

One of the features of the second musicale and dance given by the Alumni Association of the Brooklyn College of Pharmacy, was the beautiful singing by Master James Brown Tuthill, soprano soloist in St. George's Church, and son of Professor Frederic P. Tuthill, a member of the college faculty. Opening with a piano duet by William C. Hardy and Master Tuthill, the entire programme was well executed. A tenor solo by Harry Konecke also delighted the audience as did the singing of the Interborough Ladies' Quartette. George Lugin rendered a cello solo. Following the musicale, refreshments were served in the lecture room. Dr. Anderson led the grand march, with about seventy-five couples in line. The lecture room and the ball-room were tastefully decorated with the colors of the college, red and yellow, and also with banners of the Pi Theta Sigma and the alumni association.

**New York Section of A.C.S. to Elect Officers.**

After an informal dinner at the Hotel Savoy tomorrow evening, March 5, the New York Section of the American Chemical Society will hold an election of officers at the Chemists' Club, 108 West 53rd street. Subsequently the following programme will be carried out: A. H. Kroppf, "New Aromatic Amino Acids;" R. A. Gortner, "Some New Quinazolines;" F. J. Metzger and C. E. Taylor, "Determination of Niobium in the Presence of Tantalum;" William Foster, "On Tetra-chlorether and Dichlorovinylether;" Elmer A. Sperry, "Industrial Manufacture of Anhydrous Chlorine and Phenomena connected with Chlorine Detinning."

**Two New Chapters of the W.O.N.A.R.D.**

PHILADELPHIA, March 1.—Two new chapters of the W.O. N.A.R.D. have recently been organized. One formed in Kansas City has the following officers: President, Mrs. D. V. Whitney; vice-president, Mrs. R. H. Lee; secretary, Mrs. E. L. Barnes; treasurer, Mrs. C. E. Zinn.

The other new chapter was organized in Mobile, Ala., with the following officers: President, Mrs. J. S. Archibald; secretary, Mrs. Elliott Johnstone; treasurer, Mrs. D. S. Bauer.

**G.A.S. to Hear Address By Prof. Remington Tonight.**

The feature of this evening's meeting of the New Yorker Deutscher Apotheker Verein will be the attendance of Professor Joseph P. Remington, of Philadelphia, who will deliver an address on "Germans I Have Known." A very large gathering it is expected will greet Professor Remington. The usual routine will be passed over as quickly as possible, allowing the greater part of the evening to the address.

**Fined \$500 for Selling Liquor—Prison Next Time.**

FREEMOLD, N. J., March 1.—William R. Ham, of Main street, Asbury Park, a druggist, who was convicted of the illegal sale of liquor from his drug store last summer, was fined \$500 and costs by Judge Foster. He was warned that should he ever come before the court again on such a charge he would be sent to State Prison.

## Probing Ramifications of New York's Drug Trade Swindlers.

**Fly-by-Night "Wholesale" Druggists Have Little Or No Furniture So to Move Quickly—Patronize the Same Printer and Change Only the Names and Addresses on Their Letter Heads—Have Little Fear of Arrest as Authorities Are Apparently Entirely Oblivious of Their Swindling Operations.**

### WILLIAM D. HUDSON

DEALER AND JOBBER IN

**Proprietary Medicines, Drugs, Chemicals, Oils and Druggists' Sundries**

**WHOLESALE**

**60 BEEKMAN STREET**

### GEORGE L. TYNER

**Proprietary Medicines, Drugs, Chemicals, Oils and Druggists' Sundries,**

**WHOLESALE**

**35 & 37 FRANKFORT ST.**

*Reproductions of Letterheads of two Concerns That Have Been Preying on the Wholesale Drug Trade—Note the Similarity.*

Judging from the number of inquiries which have been circulating in the drug trade during the last few weeks requesting information regarding the methods of George L. Tyner, of 35 and 37 Frankfort street, New York City, it appears that this party is bidding fair to even out Hudson, who until a few weeks ago was the most notorious of the gang of drug swindlers that has preyed upon the trade for quite some time. In fact indications strongly point toward a connection between Hudson and Tyner, as their letter heads are printed from the same type and are identical in design and wording, except that the names and addresses are different.

The attention of the trade was first directed toward Tyner about five weeks ago when some few inquiries began coming to town from concerns in various parts of the country. After an investigation the ERA promptly notified the trade, publishing an article on January 21 describing the character of his business and connecting him with a gang of drug swindlers which at present infests New York.

Following the ERA article inquiries for Tyner suddenly ceased for about a week or so, but it was not long before they came thicker and faster than ever before. Comparing his methods with Hudson's it is evident that he intends soon to move, following this great activity. Such an act will be a matter of very great ease as there is not even a chair in the office of the so-called "wholesale druggist and jobber in druggists' sundries, oils, etc., with all goods guaranteed under the pure food and drugs act, and serial number 12,755."

Tyner's office resembles that of the other concerns which have had thirty to sixty days of existence. Not a scrap of furniture, stationery or stock of any kind is contained in the room. The door is always locked, but has the large worn key-hole almost an inch in diameter through which the dirty bare floor can be discerned when the paper which is pasted over the hole, is punctured. Persons are advised by instructions written upon a letter form, which is also pasted upon the door, to leave packages with the elevator man. Tyner never visits his office in the dingy attic on the third floor of the building, according to the statements of tenants in adjoining rooms.

In trying to secure an interview with Tyner some few

weeks ago, a reporter from the ERA waited almost three hours before he put in an appearance to secure his mail which is left on the first floor in a box. When addressed as Mr. Tyner he responded to the salutation, but when informed of the purpose of the interview he at once became elusive, saying that he merely had come down to secure the mail for Mr. Tyner, who was an Eastern business man. While he was employed by Mr. Tyner, he had never seen that gentleman, he said, so consequently he could give no description of Tyner's appearance or tell where that party could be addressed or found. He also explained that the business was not established as yet but would be in about a month. While another question was being asked he abruptly left the building, disappearing in a basement some blocks away.

Besides the resemblance which Tyner's letter head bears to that of Hudson when the latter was operating from 60 Beekman street, there is also other evidence connecting these two parties. Tyner is located in a room which was formerly occupied by the Ashton Press, which name still appears on the door. Hudson, while at 258 Washington street, Jersey City, did his business under the name of W. V. Assheton & Co. Note the striking similarity between Ashton and Assheton.

Tyner is of medium height, stout build and weighs about 175 pounds. He is dark complexioned, has black hair and is smooth shaven. He is always well dressed and wears a black derby hat with a broad band. He talks rather rapidly, but in an impressive manner and in well chosen language.

One of the important developments in the doings of this gang is the discovery that E. P. Helmbold, a drug broker, who is well known in the New York wholesale drug trade, is an acquaintance, if not a friend of Tyner.

Many men in the drug trade with whom Helmbold has attempted to do business are of the opinion that he and Tyner form part of a ring "higher up." Observations on the part of several prominent drug trade men seem to bear out the above supposition, as Helmbold has been seen associating a number of times lately with Tyner. A gentleman who called on Hudson some months ago was also told by Hudson that E. P. Helmbold was his salesman.

Although Helmbold has had quite some business with reputable houses, the buyers of several of these firms are suspicious regarding the sources from which his goods are ob-

tained. In some cases that have been investigated the goods were obtained honestly.

When attempts are made to secure an explanation from Helmholt concerning his methods in securing merchandise the ramifications begin to deepen materially. It has been found in some instances that his trading is legitimate, while at times there have apparently been clever billing schemes involved before goods were finally delivered. It is the prevailing opinion that he has honest as well as dishonest connections and is therefore always able to trade as the circumstances require.

The Union Trading Co., the National Loan & Realty Co., and the Union Sales Co., are all identical and are still doing business at 78-80 Cortlandt street. One William Jacobson, who only calls once or twice a day for his mail, is the ruling spirit in all the above named concerns, besides also Jacobson & Co., which is located at the same address.

Investigation proves that Jacobson has had connection with a number of concerns styled as wholesale druggists and jobbers. A year or so ago he was connected with Clifford L. Turner, who issued a statement showing assets of \$6605 with liabilities of \$434.50. The fact remains that Turner disappeared as soon as accounts were due.

It is also understood that Jacobson had some interest in the Manufacturers' Trading Co., at 14 Church street, and used to spend the greater part of his time in the building at that address. The fact has also become known that the famous Beckett concern, members of which are under arrest in Wilmington, Delaware, secured an outlet in New York through Jacobson's Union Sales Co. Jacobson's stock is also kept locked in a room in the building at 78-80 Cortlandt street. On the door of this room is tacked a card bearing the name of the National Loan & Realty Co.

Strange to note all the orders and correspondence that is sent out into the trade by the gang is typewritten, but no typewriter has ever been seen in any of the offices. This part of the business is conducted by some one who is familiar with the wholesale drug business and understands how to order.

Notorious William D. Hudson, alias Asheton, was seen in the wholesale drug district of the city about a week ago, after being absent for over a month. He has again donned some old clothes in place of the new brown suit and black overcoat which he wore while in Jersey City. His moustache he has also let grow again but keeps it trimmed very short, and he wears a pair of pin-nez eye glasses without rims.

Although the swindlers apparently make good livings out of the drug trade no serious efforts have been made to apprehend those operating in New York City and the men are walking the streets without molestation either by the local police or the United States authorities.

#### Cost Alabama Clerk \$100 to Sell Cocaine.

BIRMINGHAM, March 1.—B. McLauren, who is employed in a drug store on the North Side recently was fined \$100 on a charge of selling cocaine without a physician's prescription. An appeal was taken.

The arrest was brought about by the city health department, which has recently started a crusade to stop the indiscriminate selling of cocaine, morphine, laudanum and other drugs.

#### Doctor and Druggist Arrested in Coke Case.

ATLANTA, Ga., March 1.—Dr. J. I. Griffith, who has an office at 147 South Pryor street, was bound over under a \$300 bond by the recorder recently for furnishing cocaine prescriptions, and J. H. Hamby, a druggist at South Pryor and Garnett streets was fined \$50.75 for the illegal sale of cocaine.

#### Assaulted When Leaving His Pharmacy.

DES MOINES, Ia., March 1.—Fred Gruener, of Gruener Bros., 313 East Fifth street, was knocked down at 10:30 p. m. recently, just as he stepped out of his pharmacy. He was relieved of \$2.55. No clue to his assailant was discovered.

#### Burglars Add Insult to Injury.

CINCINNATI, March 1.—"F.R.E.Z."—was the note left behind by burglars who recently visited the drug store of Henry Bristle, at 3955 Spring Grove avenue. They opened a \$300 cash register, searching about 85.

## CHEATING THE N. Y. REGENTS' EXAMINATIONS.

### Two Drug Store Employees of the Same Name and Address Excited an Inspector's Curiosity and Disclosed Wholesale Fraud—Two College Professors Arrested and Held for Examination.

Professor Charles G. Christie, an instructor in St. Francis College, on Butler street, in Brooklyn Borough, New York City, was arrested recently by Detectives Murray and Roddy, charged with having "railroaded" students through in New York State Regents' examinations at \$125 per head.

Prof. Christie is said to have made a complete confession, in which he stated that he had changed the examination papers of about thirty-five students. He named all of the students and also implicated another professor, W. J. Kearney, who was arrested later. Both of the accused were held for examination in the Adams street court.

The exposure was more or less accidental and came about because two Joseph Schleins, giving the same address and occupation, took Regents' examinations simultaneously in different parts of New York City.

Inspector De Groat was surprised to find that there really were two Joseph Schleins; that they were cousins, and that both worked in a drug store at 207 Smith street. He was putting the elder Schlein through a perfunctory examination when the latter caused him to take notice by confiding casually how easy it is to dispense with the frills attending the obtaining of a dentist's degree if you know how to pass the coin.

Schlein was invited over to the Adams street police court, where he made an affidavit charging Christie with giving him "points" about the Regents' paper in fourth year French. This is a forty weeks course. Schlein says he didn't spend a week at it. Christie says that he gave Schlein the tutoring, for which he paid, but acknowledges prompting him several times during the examination.

Kearney is 38 years old, a professor of mathematics in St. Francis College and the proprietor of a civil service school at 59 and 61 Court street. He is charged with falsely certifying that Salvatore A. de Yoanno, a student of medicine in the Long Island College, was a student in St. Francis College on June 17, 1908, and passed a Regents' examination in intermediate algebra as such. To enter the medical college it was necessary for Yoanno to have a Regents' certificate or pass an entrance examination. It is alleged that Kearney helped him to get the certificate by violating section 33 of the Penal Code.

According to the police, Christie, who is 53 years old and for nine years has been a professor of languages in the Catholic college, is willing to turn State's evidence, maintaining that Kearney put him up to the business. Christie was born in France of Scotch parents. He has borne a spotless reputation and was highly regarded in St. Francis College.

De Groat says that this system of beating the Regents and boosting incompetents into college and the professions has been going on for about a year and that a score of students holding college entrance papers and making use of them will be compelled to give them up.

The Franciscan brothers knew nothing about the swindle that was being perpetrated in their college and assisted De Groat when informed of the matter.

#### Patent Medicine Bill in Wisconsin Legislature.

MADISON, Wis., March 1.—Druggists and manufacturers of Wisconsin are much interested in the progress of a bill which has been introduced in the Wisconsin Legislature by Assemblyman Lehr licensing the manufacture and sale of patent medicine and providing that a complete list of ingredients shall be printed on the wrapper. Druggists and others claim that there is no need for the proposed law since the matter in question is adequately covered by the state and national pure food laws. It seems to be the general opinion that the bill will not be passed.

#### Both His Drug Stores Robbed Same Night.

ALAMEDA, Cal., March 1.—M. B. Sneden, whose drug store at Niles was robbed of \$300 worth of goods recently was also a victim of thieves here. His drug store at Santa Clara avenue and Park street was entered by burglars the same night, but they were frightened away without securing any plunder.

## BALTIMORE PHARMACISTS IN CONFERENCE.

## CHICAGO BRANCH OPPOSES DRAM-SHOPS.

## Committees From the Various Organizations Hold Joint Meeting to Discuss General Work.

BALTIMORE, Feb. 27.—A conference of representatives of the various organizations of druggists in this city was held at the Hotel Junker recently, the following being present:

Maryland Pharmaceutical Association—William M. Fouch and E. F. Kelly; Owen C. Smith, the third member of the committee, being unavoidably absent.

Baltimore Association of Retail Druggists—John B. Thomas, the president; R. E. Lee Williamson, the corresponding secretary, and David R. Millard.

Baltimore branch of the American Pharmaceutical Association—Dr. H. P. Hynson, president; Prof. Charles Caspari, Jr., and W. J. Lowry.

After an exchange of views a decision was tentatively reached to inaugurate a campaign, designed to bring out a large attendance at the annual meeting of the Maryland Pharmaceutical Association next summer. An effort will be made to have all the drug interests represented, the wholesalers, as well as the retailers and manufacturers being urged to send delegates. It was also suggested that the legislative committee of each association in the federation be requested to formulate what it conceives to be the requirements of its respective body in the way of legislation, and that these suggestions be submitted for general discussion at a joint meeting in May. The purpose is to agree upon a programme, so that there shall be absolute harmony and avoidance of a waste of effort.

A discussion as to whether the conference should be made permanent then ensued, a number of those present taking part in the deliberations and presenting their views. William M. Fouch, president of the Maryland Pharmaceutical Association, occupied the chair, and Dr. E. F. Kelly was secretary.

## Baltimore R.D.A. Ready for Work

BALTIMORE, Feb. 27.—At a recent meeting of retail druggists relative to the organization of the Baltimore Retail Druggists' Association, the articles of incorporation, as framed by the committee and as recorded in court were adopted. Chairman John B. Thomas, of the committee on membership, announced that he had appointed David R. Millard and Dr. H. P. Hynson as his fellow members. The duty of this committee is to get retail pharmacists all over the city to join, in order that the organization may become as effective an instrument for good as it can be made. The chairmen of other standing committees were also named, as follows: Legislation, Dr. H. P. Hynson; grievances, C. L. Meyer; fraternal relations, John B. Thomas; social, J. Edwin Hengst; telephones, M. S. Kahn; post-office substations, William M. Fouch.

Mr. Kahn, for the committee on post-office substations, made a preliminary report in which he stated that the committee will act in conjunction with a similar committee named by the Washington Association of Retail Druggists. An effort will be made to concentrate all telephone pay stations in drug stores, this move having the approval of the telephone company, which is said to prefer the arrangement as being of benefit not only to the druggists, but to the company as well.

A discussion ensued on how to get retail druggists, especially pharmacists who are already members, interested in the work of the association. The committee on membership was empowered to enlarge itself and adopt whatever means are likely to promote the end in view.

The association is resolved to proceed with energy in the prosecution of the work it undertakes.

## "Tests for Chemical Products" and "Formulas for Fluid Extracts" Discussed—Joint Meetings Planned.

CHICAGO, Feb. 27.—President Oldberg began the programme of the February meeting of the local branch of the American Pharmaceutical Association by announcing the appointment of a Special Committee on Education and Legislation, consisting of J. H. Wells, C. A. Storer and G. D. Oglesby. Mr. Wells, in acknowledging his appointment, responded briefly by saying that he would undertake to do whatever was possible and that an effort would be made to get together the various committees of the associations interested for a general conference within a short time.

Mr. Hallberg moved that there be added to the other instructions of the special committee on legislation a clause directing the Board of Pharmacy to revoke the license of any registered pharmacist or assistant pharmacist who is employed in a store where a regular saloon license is held.

Mr. Wells said that he thoroughly agreed with Mr. Hallberg in protesting against the attitude of several of the large downtown stores which hold saloon licenses and retail liquors, but he believed it would be better to solve this difficult problem through a change in the city ordinances or through an amendment of the State Act regulating dram-shops. After some discussion the motion was carried unanimously, with the understanding that the special committee should use its discretion in regard to the amendment.

Mr. Wooten referred to the New York law which required every pharmacist to have in his store a copy of the U.S. Pharmacopoeia and the National Formulary. While he thoroughly approved of such a law he believed that it would be unwise to add to the labors of the committee by asking it to secure such an amendment at this time. Mr. Yeomans suggested that the fee for registration as pharmacist should be increased so as to cover the expense of a more extensive and rigorous examination. Mr. Potts stated that the fee in Pennsylvania is \$15. After some discussion a motion was adopted that the fee for registration should be increased to \$25.

In the absence of Professor Gordin, of Northwestern University, Professor Oldberg read Mr. Gordin's paper, "Tests for Chemical Products. How May They be Improved?" In this paper the author made the point that it is clear that the Pharmacopoeia is not intended to be a treatise on analytical or descriptive chemistry. He advocated the omission of cer-

tain tests, as for example, it is quite unnecessary to state under silver nitrate that when dissolved in water it gives a precipitate with hydrochloric acid which is insoluble in nitric acid but easily soluble in ammonia. It would be quite sufficient to state that the silver nitrate must be 100 per cent pure. The quantitative methods for many of the chemicals had long ago been brought to such a state of simplicity and exactness that any chemist who follows them will always get the same results as any other chemist. With such chemicals the Pharmacopoeia should only establish the standard of purity desired, leaving to the pharmacist the choice of methods of valuation.

The conditions are quite different with substances for which no exact methods of valuation are known. In such cases the results obtained by different chemists may differ materially according to the method employed, and when the U.S.P. sets up a standard to which a substance of this class must conform, there should be a detailed description of the methods and manipulations by which the substance is to be identified and valued.

In the discussion which followed, Professor Clark said that

## Likes to Entertain Pharmacists.

CHARLES J. CASTINO.

with the L. A. Becker Company, soda fountain manufacturers, is a member of the press and publicity committee of the Illinois Pharmaceutical Travelers' Association and is greatly interested in plans for entertaining the pharmacists who attend the State Ph.A. meeting at Quincy in June.

since the Pharmacopœia is now a legal standard it is necessary for legal purposes that the tests should be stated and those quite minutely. He believed that it would be possible to group the tests in the appendix and then refer to them in the text, but in some cases the substances present would very considerably modify the tests, so that no such general references would be feasible.

The next paper, by Prof. C. M. Snow, was "The Extractive Preparations: How May the Formulas be Simplified; General Formulas for Tinctures and Fluid Extracts." Mr. Snow advocated the adoption of general formulas for the different classes of galenical preparations, pointing out the advantage that would be derived from such statements; first, in the saving of space, since the processes given in the Pharmacopœia for these preparations are largely repetitions, and second, the standard formulas could be more thoroughly stated, the typical processes probably would be more readily mastered, and the pharmacist would be more skillful in their use, having a more thorough understanding of them than if he tried to follow the great number of individual processes. Prof. Hallberg stated that the plan suggested was followed by all other Pharmacopœias except the British.

A letter from Leonard A. Seltzer, of Detroit, chairman of the Committee on Practical Pharmacy was read, asking for suggestions concerning the coming revision of the National Formulary, the suggestions to come either through individual papers or as facts collected by members of the Branch. It was decided to include in the programme for the next meeting a discussion of the National Formulary.

The Committee on Medical Relations announced a joint meeting of the Chicago Medical Society with the Branch to be held at the Northwestern University Building on Wednesday, March 31st. The chairman of the committee also asked that a committee be appointed to co-operate with the Chicago Medical Society in securing a suitable location in Grant Park for the Guthrie Boulder, to commemorate the discovery of chloroform by Dr. Samuel Guthrie in Sackett's Harbor, N. Y., in 1831.

## ACTIVITIES OF CHICAGO DRUGGISTS.

### Social Drug Club Plans Entertainment and Retail Association Works for Propaganda's Spread.

CHICAGO, March 1.—Two social features of the Social Drug Club, of Chicago, are taking the interest of its members. The first in importance is bowling. The members have divided themselves into teams between which a hot rivalry exists. The Robert Burns team, named after a brand of cigars, is now in the lead. The club's minstrel troupe which is billed to perform at the Y. M. C. A. auditorium, Thursday evening, April 15, is taking the other half of the club's interest. Charles E. Clarke, who is chairman of the entertainment committee says that arrangements have all been made for the show, even to the printing of the tickets, which will cost 50 cents, with 25 cents extra for reserved seats. The able direction given the troupe by Prof. Henry Brown is a matter of much comment by those who have seen the members in their roles.

The advisory committee of the U.S.P. and N.F. Propaganda committee of the C.R.D.A. met recently to formulate plans for a campaign among Chicago druggists, especially to get the lukewarm ones interested. The plan decided upon was to give each member of the committee a district of the city to cover and be in turn was to call on the druggists in that district for assistance. By this method a great deal of propaganda literature will be given to the druggists through the supervisors.

### Chicago Notes.

—The Harding Square Drug Co. has bought the drug store of Charles G. Knight at Twenty-sixth street and Wentworth avenue.

—Chicago Veteran Druggists' Association, at its last meeting, passed resolutions regretting the death of George J. Seabury, of New York.

—Oney & Jerman Co., wholesale druggists of Iowa who are now moving their business to Chicago, have issued a circular letter to the trade stating that they will be ready for business in Chicago by March 15. The firm will have no cigar department.

## BEAUTY IN DISTRESS IN TELEPHONE BOOTH.

### Too Busy Chatting Over the Wire When the Drug Store Closed at 1 a. m. to Notice Lights Go Out.

When Willbur F. Rawlins closed his drug store, 249 West 135th street, New York City, at 1 o'clock in the morning recently and hurried to his apartments on an upper floor of the building, he forgot all about a pretty, well dressed young woman who was talking over the telephone. The woman, all smiles and expectant, had entered the store about 12:30 and she began chatting.

For half an hour she chatted, and she was so busy she didn't notice the lights go out in the store, nor did she hear the front door slam and the key grate in the lock. When she did leave the 'phone and found herself a prisoner she was frightened. She called up "Central" and with a voice quaking, said:

"I'm locked in this store and I can't get out."

"Central" communicated with the police at Headquarters. Over the wire the young woman screamed:

"I'm a young lady, locked in a drug store. I wish you would send around a policeman to get me out. No, I am not hurt, and I'm not a burglar, either. But I'm awfully afraid."

A policeman was sent on the run to the young woman's relief. He didn't run fast enough. Before he arrived she went to the door and began pounding on it, pleading with some one to help her. Rawlins heard the commotion and released her. Just as the policeman came up out of breath the young woman hurried away.

"And she forgot to pay for the 'phone, too," commented the druggist after her departure.

### Silver Loving Cup for G. W. O. Tebbetts.

MANCHESTER, N. H., Feb. 25.—As a crown for his fifty years of active service and as a token of their good will and appreciation for the encouragement extended to many of their members, the Manchester Druggists' Association recently presented to George W. O. Tebbetts on the occasion of his retirement from the drug business, a solid silver loving cup. Lewis G. Gilman, president of the association made the presentation speech in behalf of his associates, and Mr. Tebbetts made response. The presentation took place in Ridgely hall; most of the druggists of the city having assembled to participate in the affair and the brief reception which followed.

The cup was mounted on a pedestal and contained the inscription, "Presented to George W. O. Tebbetts by associate druggists of Manchester, N. H. Commemorating 50 years in active business, Jan 1, 1909."

### The Whitman Plan Against Price Cutting.

Druggists will be interested to know that Stephen F. Whitman & Son, Fourth and Race streets, Philadelphia, are offering their exclusive agents the kind of protection against price cutting that druggists are so anxious to secure. They inform us that they have more applications for the agency than they can grant. They especially desire to obtain in each new field that is not yet granted, the best druggist and the one fitted by location and character to supply the class of people that buys heavily of the Whitman products. If you haven't all the facts relating to their proposition handy, write to the manufacturers for particulars and mention the ERA.

### Commercial Program for N. Y. A.Ph.A. Meeting.

At the meeting of the New York Branch of the American Pharmaceutical Association which will be held at the College of Pharmacy next Monday evening, most of the time will be devoted to the commercial side of pharmacy. The chief feature of the program will be the reading of the following papers: "Business Methods in the Drug Store," and "Card Signs in Drug Stores," by Dr. Julius Jungmann and Caswell A. Mayo, respectively. Following the reading the papers will be discussed.

### Lecture on Michigan's Salt Industry.

DETROIT, March 1.—E. F. Bradt, of the Detroit Salt Co., addressed the Society of Detroit Chemists at the Employers' Association rooms in the Stevens Building, Feb. 26, his subject being the salt industry and the sinking of a shaft for salt rock by his company.

## ACTIVITIES OF DRUGGISTS IN LOUISVILLE.

**Committees Already at Work for N.A.R.D. Convention and Local Association is Spreading Propaganda.**

LOUISVILLE, Feb. 27.—Although it is more than six months before the National Association of Retail Druggists will convene in this city, the committees have been appointed as noted in the ERA and most of them are diligently at work. The committee on hotels and also the committee on exhibits have had several meetings and have been inspecting every available space that in their minds would be suitable for the headquarters and also one that would give the exhibitors an opportunity of displaying their goods and making the investment in a booth remunerative from every standpoint. Both the Seelbach Hotel and the Galt House—the latter known all over the country for its large and elegant rooms—are the two places that are in contest. There is no question but that the former has the call as far as location is concerned, but the latter, on account of its large and roomy halls as well as its capacious lobby, has met with great favor. The committees will doubtless come to an agreement within the next ten days as to which of the two places will be the best for headquarters, all things considered.

The committee on exhibits has not up to this time prepared its circular letter to manufacturers and proprietors who might desire to take space, but notwithstanding this fact eight of the booths have been conditionally engaged and from opinions expressed by the traveling representatives of the firms that visit this territory, every booth will be taken long before the time of the convention. Within one night's ride by rail of this city more than 6,000 retailers are engaged in business, hence low railroad fares are assured, the hotels will surely give rates that will be attractive and every indication points to a record breaking attendance. Cleveland, Detroit, Chicago, St. Louis, Cincinnati, Memphis, Nashville, Knoxville and many other smaller cities where the N.A.R.D. has a large following can be reached in twelve hours.

A trip to Mammoth Cave, one of the great wonders of the world, will be one of the features and if it can not be provided without any cost to those attending the convention, certainly a very low rate is now assured.

Propaganda work in this city has not been pushed as vigorously as it should have been. Only one joint meeting of doctors and druggists has been held but this one has shown such gratifying results that it is strange that more active work has not been continued. Many of the leading physicians are prescribing N.F. and U.S.P. preparations (almost to the exclusion of proprietaries) and consequent increased profits to the retailer.

The Louisville Retail Druggists' Association has issued two letters on U.S.P. and N.F. products which have been mailed to every physician in this city. These letters were issued at the expense of the local association. Some of the druggists have improved this introduction by supplying samples to their neighboring doctors, but no general or thorough distribution has been attempted. There is no city in this country where this work could be conducted more successfully if the proper effort would be made. Very few, if any, of our prominent physicians do any dispensing and they would eagerly fall in line, if properly approached.

## Fine New Pharmacy for a Convention City.

LOUISVILLE, Feb. 27.—A new drug store is to be opened within the next thirty days in Fourth avenue, under the Seelbach Hotel. Frank Hertie who is now the owner of a store at 25 Market street will be the owner. The location is on the busiest retail street in the city. A magnificent soda water fountain is to be installed and all of the furniture and fixtures will be down to date.

## ANNUAL BANQUET OF TROY P.H.A. A SUCCESS.

**Members of State Board of Pharmacy Congratulate the Association Upon its Continued Prosperity.**

TROY, N. Y., March 1.—The Windsor Hotel was recently the scene of the eighth annual banquet of the Pharmaceutical Association of Troy and vicinity. About 200 members and their guests were present. An elaborate menu was served, and during the course of the repast selections were rendered by a graphophone. A quartette composed of John E. Grady, George Thompson, Charles Armsby and S. S. Smith sang a number of selections, the words of which had been written for the occasion and set to popular tunes. At the conclusion of the evening's pleasure all stood up and sang "Auld Lang Syne." Samuel E. Hutton sang several songs and told a number of interesting stories.

President John J. Healy presided, and called upon County Treasurer Arthur MacArthur to speak on Abraham Lincoln, after all present had joined, shortly after midnight in a toast to the memory of the martyred President. Mr. MacArthur

paid a glowing tribute to the character of Lincoln.

Warren L. Bradt, secretary of the State Board of Pharmacy, and Arthur H. Wardle of Hudson, a member of the board, spoke of the proposed plan of Governor Hughes to take out of the hands of the pharmacists the management of the State Board of Pharmacy. Both complimented highly the Troy organization, which they said was the strongest in the State.

W. J. Leonard of New York gave a number of clever imitations and sang excellent dinky melodies, playing his accompaniment on a banjo.

The guests of the evening included the following: Drs. Stannard, DeFreest, McGrane, Conchlin, Gravatt, Baynes, Noonan, Love; William J. Walker and William M. Gibson, of Walker & Gibson, Albany; S. S. Smith, J. W. Rice, W. J. Levard, George Evans, James Fox and Fred Andrews, of Walker & Gibson; D. M. Woodward, Hance Brothers & White, Philadelphia, Pa.; H. J. Barringer, of Mallinckrodt Chemical Company, New York; H. P. Putman, of Troy, a traveling salesman. The officers of the society are: President, John J. Healy; first vice-president, B. L. Shaw; second vice-president, William E. Gray; secretary and treasurer, Lorenzo Strecker.

The banquet committee, to the members of which a vote of thanks is due, was composed of John J. Healy, Ezra Stillman, Robert F. Moncrief, Charles G. Straub and Lorenzo Strecker.

## Minnesota Pharmacists Oppose Three Bills.

ST. PAUL, Feb. 27.—The Minnesota State P.H.A. is working hard against two bills before the legislature, and a circular stirring up dealers all over the State has been sent out by the special committee consisting of Stewart Gamble and Thomas Vogehl, of Minneapolis and C. T. Heller, secretary of the State Board of Pharmacy.

They oppose S. F. 498, by Senator Witherstine, which would allow any licensed physician to compound drugs for other physicians as well as himself, without registering under the pharmacy act, and also condemn H. F. 421, by Mr. Thayer, allowing graduates of the University College of Pharmacy to be registered without examination after two years' practical experience. They also oppose one feature of the pure drug bill, H. F. 516, which places its enforcement in the hands of the dairy and food department instead of the pharmacy board.

## Burglars Tap Drug Store Till.

SPARTA, Wis., March 1.—Burglars recently entered the R. Taylor Drug Company's establishment and tapped the till for a small sum of money. Cigars and other stocks in trade were also carried away.

JOHN J. HEALY.  
President Troy (N. Y.) P.H.A.

## RISLEY DRUG COMPANY DISCONTINUED.

### Sons of Late Owner Dispose of Business Following

#### Sudden Death of Their Father.

Charles I. and H. H. Risley, the two sons of the late Charles Risley, who was the head of the drug company which bore his name and was located at 186 Greenwich street, New York City, have, as executors of the estate, disposed of the business. The greater part of the stock and fixtures was sold to an auctioneer who has been disposing of the contents of the building during the past several months. Practically all was sold to the various jobbing houses in this city at private sale.

Neither of Mr. Risley's sons had experience in the drug business, and being engaged in other pursuits decided to convert all of the assets of the business into cash.

In the fall of 1897 the concern acquired the business of R. W. Robinson & Son Co., wholesale druggists, who had gone into bankruptcy. Risley then moved to the latter firm's building and also engaged in the jobbing line, in addition to the manufacture of proprietary medicines, which he formerly carried on at 62 Dey street.

C. S. Littell & Co., have purchased the trade mark rights and good will of the proprietary preparations which were manufactured by Robinson, but it is understood that the rights to the Risley preparations still remain unsold.

Charles Risley and his wife were found dead at their home in Brooklyn on December 21. It is believed that death was accidental. They had been poisoned by inhaling illuminating gas which was found to be escaping from an open jet when the bed room was entered following an investigation as to Mr. Risley's non-appearance at the store for a few days, without notice to his chief clerk, Henry Sudlow.

### Kimble Glass Co. Reorganized.

Established in 1895 the Kimble Glass Co., of Chicago, manufacturers of homeopathic vials, graduates, glassware for scientific purposes, druggists' sundries, etc., has enjoyed a steadily growing trade in its products, and now it has found it necessary to reorganize its business under the charter laws of Illinois as an incorporation with a capital of \$300,000. The officers are Evans E. Kimble, president and Louis F. Nafis, secretary, both of whom are thoroughly familiar with all the details of the business which is now one of the most successful institutions of its class in this country, as is evidenced by the fact that the company is extending its lines all the time, and will soon open a Philadelphia factory and office in order to better accommodate and handle Eastern trade.

This substantial advancement has been brought about by the effort and business ability of the officers above mentioned, and the volume of resources now back of the company is proof that its affairs are in the right kind of hands. This concern manufactures a number of specialties, among them being the only machine-made vials on the market. If you are looking for a uniform vial ask your jobber to supply those made by the Kimble Glass Co., whose advertisement appears on page 33 of this issue.

### Inside Service Advertising Brings Results.

W. D. Stewart, manufacturer of Stewart's Facial Cream, Waterbury, Conn., has projected an introductory advertising campaign throughout the Eastern United States which is sure to increase the sales of this well-known specialty. His plan consists of mailing to about ten thousand druggists an elaborate piece of advertising and following it with a reminder every month until the general sales of Stewart's Facial Cream is established. In this advertising he offers a special price of three bottles free with every dozen offered at \$2 per dozen, a price which affords the druggist an opportunity to make over 100 per cent on his investment.

Mr. Stewart will further supplement this service by taking each large city and sampling it by the "inside service" method through a distributing agency. This, according to Mr. Stewart, is the best kind of advertising for a new article, as it is the highest kind of personal service, and, in his experience, it has brought the quickest returns. The distributor visits each house, rings the front door and hands to the lady who answers the call a sample saying, "I would like to have you try a free sample of Stewart's Facial Cream." In this way

many persons are induced to try the sample who will afterward buy the article regularly. After the city is sampled an advertisement is placed in the local paper which still further helps sales, the catch phrase, "Tell your friends about it," having been effectively used in this connection. Druggists will do well to investigate this proposition for it has much to commend it. Stewart's Facial Cream is guaranteed under the Food and Drugs Act and is sold at a price that will enable the druggist to make some money. Read the advertisement on page 29 of this issue of the ERA and write to W. D. Stewart, Waterbury, Conn., for free goods offer.

### Bohner Bowl in Harmony With Pure Food Law.

Now that the pure food authorities have accomplished the Herculean task of enforcing manufacturers to supply what they claim to furnish, and the druggist can buy without fear of prosecution for the faults of the manufacturer, a rap is being taken at the purveyor who dispenses the goods. The enforcement of the law requires that service of fruit syrups, juices and beverages at soda fountains must be protected from deterioration and defilement by dust, insects and souring, etc., and here is where the Bohner Sanitary Crushed Fruit Bowl comes to the rescue of the druggist. If the Bohner Bowl had been especially designed for the particular purpose it could not have been in more perfect harmony with the object of the Food and Drugs Act.

### Wheeling Metal Ceilings for Drug Stores.

Nothing adds so much to the attractiveness of a drug store as an artistic ceiling. The experience of hundreds of druggists bears out this statement. If your pharmacy is not equipped with such a ceiling you should write to the Wheeling Corrugating Co., Wheeling, W. Va., manufacturers of the Wheeling Metal Ceiling which, when put in place, not only adds to the beauty of the store but offers the fullest measure of protection to your building and stock, being fireproof and permanent, as well as attractive and economical. In their advertisement on another page they ask you to send them a diagram of your store and let them figure on the expense.

### H. Planten & Son's Special Offer.

H. Planten & Son, 93 Henry street, Brooklyn, N. Y., call attention to their "special offer" announcement which appears in their advertisement on page 15 of this issue of the ERA. Here is an opportunity for the druggist to make a satisfactory investment, the offer including some regular goods and some special formula goods in bulk, the terms being cash with order, the manufacturers prepaying the cost of delivery. The Capsules made by this house are well-known for their reliability and their quality is guaranteed. Read this "Special Offer" and send in a trial order.

### Club Design Metal Furniture.

The Metal Products Company, Shelby, O., is equipped with the most modern and perfect facilities for manufacturing its particular line of work, the production of Metal Furniture under ideal conditions. The line includes their famous "Club Design" which represents the highest development in metal furniture, chairs, tables, stools, etc. This furniture is especially designed for the equipment of drug stores, ice cream parlors and cafes, and is made in all of the prevailing styles and finishes. Read the Metal Products Co.'s advertisement and write for full particulars, mentioning the ERA.

### Rotograph Company's View Post Cards and Novelties.

The Rotograph Company has every facility for producing View Post Cards and Novelties from any photograph. These Post Cards and Novelties represent the highest type of workmanship and embrace all new styles, perfect finish and latest colorings. It will pay you to read the advertisement on page 27 of this issue of the ERA in which the Rotograph Company, 684 Broadway, New York, offers to send free, twenty samples of post cards and novelties, which include styles you have never seen before.

### Safe in Pharmacy Rifled to Get Plunder.

DETROIT, March 1.—Max Magdalener's drug store at 327 Dixie avenue, was robbed of \$100 in cash, two checks valued at \$15 and two blank money order books belonging to the American Express Co. The safe was rifled to get the loot.

## PATENTS.

Granted February 23, 1909.

913,182—Benjamin Adriance and Amos Calleson, Brooklyn, N. Y.; said Calleson assignor to said Adriance. Bottle capping machine.

913,184—Charles L. Alexander, Charlotte, N. C. Tooth Brush.

913,214—John L. Kivlan, Boston, Mass. Jar closure.

913,293—Julian R. Holley, Bristol, Conn., assignor to The Bristol Brass Company, Bristol, Conn., a corporation of Connecticut. Perculator.

913,311—Bruno R. Seifert, Rad-beul, near Dresden, Germany, assignor by mesne assignments to The Firm of E. Merck, Darmstadt, Germany. Manufacture of new stable iodine compounds of fats.

913,426—Wilhelm Osborne and Heinrich Schupp, Munich, Germany, assignors to Ludwig Sensburg, Munich, Germany. Process of converting catechin into catechu-tannic acid.

913,544—Herman W. Noetbig and Michael C. Bourgo, San Francisco, Cal. Combined bottle-draining and box-cleaning device.

913,572—John J. C. Smith and Michael Smith, Passaic, N. J., assignors to Smith's Patent Compound Cork Company, Passaic, N. J., a corporation of New Jersey. Cork compound and process of making same.

913,653—Franz Aigner, Potsdam, Germany, assignor to the firm of Dynamit-Actiengesellschaft vormals Alfred Nobel and

Co., Hamburg, Germany. Process of manufacturing nitroglycerin.

913,656—Pierre Giron, Paris, France. Apparatus for charging capsules with liquefied gas.

## DESIGN.

39,840—Ralph B. Annis, New York, N. Y., assignor to Alart & McGuire, New York, N. Y., a firm. Ornamental design for bottle.

## TRADE MARKS.

Published February 23, 1909.

21,942—Mabel M. Leddon, Baltimore, Md. Class 6. Cough medicines.

34,901—Robert S. Ferrell, Fort Worth, Tex. Class 6. Vegetable preparations for remedies for blood diseases, rheumatism, gout, indigestion and Bright's disease.

36,484—The Queens Pharmaceutical Co., Elmhurst, N. Y. Class 6. Corn plasters, bunion plasters, cough and lung balsam and toothache gum.

38,699—Paris Medicine Co., St. Louis, Mo. Class 6. An antiseptic powder to be mixed with water for relief of eruptions and inflammation of skin.

39,223—Cratt Remedy Co., Chicago, Ill. Class 6. Salve for protruding, itching, bleeding and blind piles, eczema and all skin diseases.

39,400—Marietta Stanley Co., Grand Rapids, Mich. Class 6. Toilet cream.

39,402—Same as preceding.

Copy of any PATENT or TRADE MARK, 10 cents.  
Author of copyrighted work on Protective Trade Marks,  
Food and Drugs Act, and Valid Patents.

G. H. DAVIS, Attorney, 908 G St., Washington, D. C.

## DECLARES FOR PERMANENT TARIFF BOARD.

### Delegates From More Than Two Hundred Organizations at Meeting in Indianapolis.

The National Tariff Conference which recently held a convention in Indianapolis adopted a number of resolutions crystallizing its plans for the creation of a permanent tariff commission and also made provisions for a permanent organization. A committee of one hundred was appointed to carry out the plans laid by the convention.

Among the resolutions adopted, the first demanded the immediate creation by Congress of a permanent tariff commission for the purpose of collecting data and making an intelligent and thorough unprejudiced study of tariff facts. Other resolutions demanded trade agreements and the adjustment of tariff schedules so that they will affect all interests equally.

While there was some discussion concerning present tariff revision, it was decided to dispel any idea that delay in action by Congress on the pending tariff was the object of the convention; so a provision was added to the resolutions urging Congress during the special session to prepare and adopt a revised tariff to the best of its ability under present conditions.

A number of speakers were on hand but Senator Beveridge of Indiana and Congressman Fowler of New Jersey, stirred the delegates to many outbursts of enthusiasm during the debates on several resolutions.

There were delegates present from 42 states, representing 223 organizations. The delegates from the National Wholesale Druggists' Association were as follows: William Scott, chairman; John N. Carey, W. J. Mooney, G. Barret Moxley, Marion Ward, all of Indianapolis, and Thomas P. Cook, of New York. Mr. Cook was also a delegate from the New York Board of Trade and Transportation.

"The business men of Indianapolis," said Mr. Cook, "especially those connected with the drug trade, were active in making the affair an enjoyable one for the visitors. A number of private dinners and luncheons were given, and a feeling of general good fellowship prevailed at these affairs as well as making itself evident at the sessions of the convention."

### Original Ideas in Harmonicas.

The Hohner Harmonica, an illustration of which appears herewith, is constructed upon original lines and differs materially from the ordinary instruments of this character by being compact and especially well-shaped for the month, and while it is only of full concert size, it constitutes two perfect harmonicas in different keys. The reed cells are constructed upon entirely new lines and are original with the Hohner Harmonica. As a good playing side-line,

the sale of this instrument offers many inducements to druggists. M. Hohner, 475 Broadway, New York, manufacturer, has a special proposition by which you can secure a show case absolutely free and make a profit of 50 per cent. See advertising page 15 for particulars.

### A Banner Year for Post Cards.

James H. Weaver, of the National Colortype Co., of Cincinnati, makers of view cards, reports that the past year has been the most successful in their history, notwithstanding the hard times of 1908. The business outlook is exceptionally bright for the coming year and the orders already booked indicate a banner season. Many customers of the Colortype Co. state that the profits from the sale of post cards actually pulled them through the hard times of 1908.

Mr. Weaver also states that German manufacturers are complaining of the post card business in the United States, that they only get thousands when they formerly got orders for millions. The reason for this, he says, is not because business

has dropped off, but it is because "millions" are made in this country. The American business man is too full of energy to wait months for cards when he can get them at home in from two to four weeks, even if he has to pay a dollar or two more for the home cards. By placing your order early with the National Colortype Co., of Cincinnati, you will receive prompt attention, artistic cards and at prices that will enable you to make money. See the National Colortype Co.'s advertisement in this issue for particulars.

### Pape's Diapepsin to Lead List.

Pape, Thompson & Pape, of Cincinnati, proprietors of Diapepsin, are demonstrating the faith they have in their product by spending nearly eighty thousand dollars per month for advertising in the newspapers, leading magazines and street cars of the United States. They advise druggists to stock Diapepsin at once and order at least three dozen from any wholesaler so as to get the best possible quantity dis-

count. The manufacturers' publicity campaign is now well under way and is sure to create a demand for this specialty. Although launched only a year ago, during a great business depression, Diapepsin has become so thoroughly established that the manufacturers say its position as a leading staple is assured while it is bound to head the list of stomach proprietaries.

### The Hilbert List of Perfumes Most Complete.

With a plant second to none and equipped with the best of machinery built expressly for the purpose by experts in this country and France, the house of A. J. Hilbert & Co., Inc., of Milwaukee, has an enviable reputation in the manufacturing of perfumes. The business was established in 1865 under the name of D. Fisher & Co. In 1885, A. J. Hilbert became identified with the concern which shortly afterward went out of existence, being succeeded by A. J. Hilbert & Co. In 1894 the concern was incorporated under the present title of the A. J. Hilbert & Co., Inc.

Since that time its progress has been continuous and its trade already extends over more than two-thirds of the country in addition to some export business. It sells practically no bulk goods under \$4.50 per pound and from that up to \$15. The Hilbert list of perfumes is most complete both in the quality of the goods and the style of the packages. The "De Luxe" line is claimed to be finer than any other at that price, while the more expensive odors listed as "Concrete Essences," such as Rex Violet, Beauty Ends, Mascot, Special Franjipanni, etc., are said to be not surpassed by the most expensive foreign or domestic products. Dealers who handle Hilbert perfumes have the reputation of doing the business of the town in perfumes and the consumer who uses them gets the full value of his money. Druggists who desire to handle an exclusive line, and one which will net good returns, should read the advertisement of A. J. Hilbert & Co., Inc., which appears in this issue of the ERA, and write to them for trade price list and further information. By referring to this notice in the ERA your inquiry will be sure to receive prompt attention.

### Unique Fixtures for Displaying Side Lines.

In the advertising pages of the ERA the Gier & Dail Manufacturing Co., of Lansing, Mich., reveal to the drug trade a unique line of fixtures for displaying magazines, stationery and post cards. These fixtures possess many original features and are revolutionizing the display of side lines in drug stores. Among the specialties named are seven different sizes of revolving Post Card Racks, and Dail's Sectional Revolving Magazine and Table Cabinets. See their advertisement for further particulars.

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

**Supplement to The Era Druggists' Directory.**

**ALABAMA**—EPES—Dr. J. H. Reed has opened a new drug store here.

**UNION SPRINGS**—TURNIPSEED Drug Co. incorporated as the Dean-Turnipseed Drug Co.

**ARKANSAS**—FORREST CITY—C. H. Dunavant & Co. has been succeeded by City Drug Store; O. N. Warren, proprietor.

**COLORADO**—DENVER—Cunningham Bros. have opened a new drug store at 34th and Franklin streets.

**HOLLY**—Ikelman Bros. have been succeeded by the Holly Pharmacy; F. D. Baird & Co., proprietors.

**CONNECTICUT**—GUILFORD—A. C. Roby has been succeeded by John T. Howe.

**MERIDEN**—Central Pharmacy, 17 East Main street, store damaged by fire; loss on stock and fixtures, \$1,500.

**GEORGIA**—PAVO—J. D. Gardner has bought the Pavo Drug Co.'s stock and will continue at the old stand.

**ILLINOIS**—CHICAGO—Artzel Drug Store, 864 Claybourn avenue, has been succeeded by H. G. Seyfarth.

**DECATUR**—Hilligoss Bros., 243 North Water street, store destroyed by fire; loss, \$9,000; insurance, \$6,000.

**INDIANA**—HUNTINGTON—Jesse Hardman has opened his new drug store here.

**VINCENNES**—L. E. Townsley has opened a new store corner Eighth street and Fairground avenue.

**IOWA**—CLINTON—J. B. Wright has been succeeded by Chas. B. Hull.

**FOSTER**—W. H. Rowe, it is reported, has opened a new drug store here.

**SHANNON CITY**—George W. Logan has been succeeded by W. T. Smith.

**MASSACHUSETTS**—NEWBURYPORT—Bartlett Pharmacy, School and Lime streets, has moved stock of drugs to the new store corner Purchase and Lime streets.

**PEABODY**—G. S. Curtis Co., incorporated; capital stock, \$8,000.

**MICHIGAN**—BERRIEN SPRINGS—Harry Barnard has opened a new drug store here.

**CHESANING**—C. C. Tubbs, style of firm changed to Tubbs Pharmacy.

**GAWN**—Dr. C. A. Clark & Co. have bought the C. Hathaway stock of drugs and will continue the business.

**MANISTEE**—A. H. Lyman Co. has not been succeeded by Clark & Co. as we recently reported. The old house of Lyman Co. continues to do business at its old stand, notwithstanding all rumors to the contrary.

**MINNESOTA**—CHRISTOLM—Hayes & Casey, who have been in temporary quarters since their store was destroyed by fire, have moved to the new Hayes Building in Lake street.

**GRANITE FALLS**—B. E. Nelson, store badly damaged by fire.

**HOLDINGFORD**—George R. Douglass has opened a new drug store here.

**MISSISSIPPI**—SUMNER—J. D. Biles, store destroyed by fire.

**MISSOURI**—CARL JUNCTION—J. W. Jamison has been succeeded by George Fugitt.

**KANSAS CITY**—Linwood Pharmacy, 31st streets and Brooklyn avenue, store destroyed by fire.

**TRENTON**—A. G. Kathau has bought the C. A. Foster stock and will combine the two at the Foster location, 310 Water street.

**NEBRASKA**—SO. OMAHA—E. L. Melvin has sold his store at 36th and Q streets to Forest & Fenton and opened a new store at 24th and F streets.

**NEW JERSEY**—ATLANTIC CITY—James G. Newhard will open a new pharmacy at Brighton avenue and Boardwalk on March 15.

**PATERSON**—Edward W. Braecklin, 581 River street, has moved his stock of drugs to 624 River street.

**NEW YORK**—BROOKLYN—Peire's Pharmacy, 995 Flatbush avenue, is now located at Gates avenue and St. James place.

**NAVY CITY**—Gittes Drug Company, S Ludlow street, incorporated; capital stock, \$1000.

**NORTH CAROLINA**—MIDDLESEX—Middlesex Drug Co., incorporated, is the style of the new drug store here.

**NORTH DAKOTA**—GRANDIN—Hoson & Fisher have been succeeded by J. E. Elliott.

**OHIO**—AKRON—F. A. Bähler has formed a partnership with August Warner at 42 East Market street; style of firm to be Warner & Bähler.

**COLUMBUS**—L. Steinfeld, for many years located at Long and High streets, will move his stock to the Normandie Building in East Long street.

**LOVELAND**—John J. Schnessler has been succeeded by L. A. Becker.

**ROSEVILLE**—T. O. Stine has become proprietor of the Roseville Drug Co.; style of firm to be the same.

**OKLAHOMA**—CUSTER CITY—Harman Drug Co., store destroyed by fire; loss, \$1000; insurance, \$5000.

**PENNSYLVANIA**—EASTON—William W. Maddock, 901 Ferry street, has been succeeded by Crayford's Pharmacy.

**MACUNGIE**—J. H. Laudenslager has opened a new drug store here.

**PHILADELPHIA**—W. P. Bender, 21st and Fitzwater streets, out of business.—E. B. Connor, Cumberland and Cedar streets, has been succeeded by L. F. Segrest.

**PORT CARBON**—W. Ellsworth Gregory has opened a new drug store here.

**SPRING CITY**—Francis W. Cook has been succeeded by F. C. Hutchison.

**SOUTH CAROLINA**—INMAN—Inman Drug Co. is the style of the new drug store here. Dr. J. S. Clark and L. B. Jumper, proprietors.

**TENNESSEE**—DICKSON—Diamond Drug Store has been succeeded by the L. & M. Pharmacy.

**TENAS**—CRUMBY—H. B. Taylor, store destroyed by fire; loss, \$3,500, with \$2000 insurance.

**VIRGINIA**—NORFOLK—Gatling's Pharmacy, incorporated; capital \$10,000 to \$25,000.

**SUFFOLK**—J. W. Risen & Co. have incorporated as the Nansmond Drug Company; capital stock, \$10,000.

**WISCONSIN**—MILWAUKEE—A. Von Trott, 441 East Water street, has been succeeded by Peters & Beck.

**ONTARIO, CANADA**—GANANOQUE—Clifford Sine, store destroyed by fire; loss, \$15,000; insurance, \$5000.

## Profit in Handling Hydrox Peroxide.

Elsewhere in this issue of the *Era* the Hydrox Chemical Co., of Chicago and New York, calls the attention of druggists to its "prodigal profit propelling proposition for cash," or its great 1909 offer. In this offer, the company announces that from March 1 to March 31, inclusive, it will, on receipt of your check of \$100, credit your account with \$130 worth of Peroxide of Hydrogen which may be all taken at once or at your convenience during the year 1909. This offer should appeal to druggists who wish to save money and at the same time secure one of the most popular brands of Peroxide of Hydrogen and one that answers every test as to strength and reliability. The Peroxide may be put under your own label, if desired, thus permitting you to make your own retail price, and insuring you a good profit. Read the advertisement of the Hydrox Chemical Co., and then proceed to take action.

## Kraemer's Botany and Pharmacognosy, New Edition.

When one takes into consideration the legislation and other developments affecting the professions dealing with vegetable drugs, he cannot but appreciate the aid that Kraemer's Botany and Pharmacognosy will give to the retail and manufacturing pharmacist, especially as these dealers are required to be familiar with the genuineness and purity of the drugs they must sell or which may enter into their preparations. The book will enable the pharmacist to so qualify himself as to be able to comply with the requirements of the Food and Drugs Act. If you are interested in this latest and most reliable guide on the subject, read the advertisement of J. B. Lippincott Co., Philadelphia, Pa., on another page.

# THE DRUG MARKETS

## CONDITIONS QUIET WITH SMALL DEMAND.

### Business Backwards in Some Articles, But Total Volume for Month Expected to Be Normal.

**NEW YORK, March 1.**—There have been only a few features of new interest since our last report and business in some articles is rather backward, but a steady movement for jobbing quantities has been in progress. Notwithstanding the two holidays which have intervened most houses anticipate that business in the aggregate will amount to very near if not up to normal. Opium has been steady at the quotations ruling, with some business and inquiries for case lots. Quinine is quiet at unchanged prices and lycopodium has been active at much higher prices. Norwegian cod liver oil is in good demand from different sections of the country.

**QUININE SULPHATE.**—The monthly sale of cinchona bark was held at Amsterdam on February 25. The average unit price was 3 Dutch cents, which was about the average figure realized at the January sale. The offerings were small, aggregating only \$224 packages and nearly the entire quantity was sold. The sale has made no change in the situation of quinine. Manufacturers have done a moderate to fair business in small lots needed for current requirements.

**OPPIUM.**—There is more inquiry for case lots and sales have been made of several cases at the regular quoted prices. There is also some demand for 25 and 50 pound lots which are being filled at prices only slightly above those for cases. The Smyrna market is again reported as being very active with large transactions. The arrivals in Smyrna for the period ending February 5 amount to 2000 cases, as against 1347 cases for the same period last year.

**NORWEGIAN COD LIVER OIL.**—The demand has improved very materially and sales for the month will show a very satisfactory result. Cable reports received on February 25 give the fishing statistics up to that date as follows: Lofoten, 1,000,000 fish, yielding 1355 barrels of oil, and all other districts, 4,800,000 fish, yielding 5000 barrels of oil. For the corresponding period last year the figures are: Lofoten, 1,000,000 fish, yielding 1420 barrels of oil, and all other districts, 4,300,000 fish, yielding 5180 barrels of oil. This comparison shows that while the catch of fish was about the same the production this year was less owing to the leanness of the fish.

**LYCOPODIUM.**—This article after a long period of dullness has become very active owing to unfavorable reports from producing districts in Russia. The price of the article in this market has moved up in sympathy and the tendency is for still higher prices. The spot stock of Russian (no label) is limited, but there seems to be a better supply of the Politz brand.

**ERGOT.**—The market is very firm at 40¢@45¢. for Russian and 45¢@50¢. for Spanish in large lots. The stock of Russian here is small but there is a fair stock of choice Spanish obtainable. The reports from primary markets are unfavorable and the supply in sight will not cover current requirements.

**AGAR AGAR.**—There is an active demand for this article and at the moment the local market is bare of stock. Shipments which are expected in the course of ten days or less are being held at 50¢. per pound by the bale of about 220 pounds.

**VENICE TURPENTINE.**—Owing to this season's small crop and also to the large demand which has set in from foreign markets, the stock of Venice turpentine has been considerably reduced and there is now very little obtainable. New stock will not be available for several months. Prices here have advanced about 2¢. per pound in original packages.

**OLIVE OIL.**—Lucca cream salad oil has again been advanced slightly so as to meet the situation in consequence of the increased cost of producing the best quality of this article. One-half gallon cans are now held at \$3.20 per gallon, one gallon cans at \$3.10, three gallon at \$2.55, and six gallon at \$2.75 per gallon.

**BICCHU LEAVES.**—Both the long and short are without quotable change, but all the cheap lots are said to have been

cleared up. Further advances are therefore expected, as available stocks are light at all distributing points both here and abroad.

**CALABAR BEANS.**—In sympathy with higher markets abroad, prices have been marked up to 15¢@15½¢. per pound in large quantities, with the market here very firm.

**CASTLE SOAP.**—Conti's green castle soap is scarce on the spot; in fact the market is said to be entirely bare of stock in first hands, and for parcels to arrive importers are asking 10¢. per pound. There is no material change in mottled or white.

**CASCARA SAGRADA.**—As the cost of laying down the bark in this market is now about 8¢., dealers are not anxious sellers at 8½¢@9¢., but some stock is yet available at the outside figure. The tendency, however, is upward, and in some quarters the price is held at 10¢. The market is showing increased firmness.

**REFINED GLYCERIN.**—This article is easier to the extent that manufacturers have modified their views regarding values, and open quotations have been reduced to 15½¢. for C.P. in drums or barrels, and 16½¢. in cans. It is also intimated that these prices might be shaded on a firm offer.

**BUCKTHORN BARK.**—A moderate consuming demand is in progress and the market is steady at 4½¢. per pound in large quantities.

**DAMIANA LEAVES.**—There is a somewhat staid tone in the market for this article and a fairly good business has been reported at the quoted range of 7½¢@8½¢. per pound, according to grade, quantity and seller.

## London Drug Market

**LONDON, Feb. 20.**—The most noticeable feature of the drug and chemical markets at the present time is its dullness to which there appears to be no end. Week after week improvement has been expected but as yet there are no signs of it except in the case of two or three articles. Manufacturers of quinine seem to be doing a fair business at the recently reduced price but no speculative buying is being done. Buyers of Cod Liver Oil are inclined to hold off in the hope that prices will recede, although the present quotation for finest Norwegian, non-freezing oil—which is round about 62s per barrel—may be considered justly low.

Bromides are still unchanged in price; the drug papers here report that the Chamber of Commerce of the Duchy of Anhalt has presented petitions to the German Government on behalf of the bromine and bromides syndicates respecting the question of the abolition of United States import duty on these products or the imposition of a similar duty on such imports into Germany. Glycerin continues firm but makers seem to be able to deliver more freely. Citric Acid is quiet, makers quoting 1s 8d per pound, and second hand holders 1d below this price. Essence of Lemon is still offered from Sicily at prices down to 3s 6d per pound and on the spot 4s is quoted. There is talk of a probable advance in the price of cocaine and there appears to be very little left in second hands. Ergot is firm and 1s 5d per pound is asked for Russian. Higher prices are asked for Orris Root, fine Florentine being quoted 37s 6d per cwt. and Verona 25s.

Camphor is firmer, holders of China Crude now asking 135s per cwt.; a fair spot business has been done in 2½ pound slabs at 1s 5d to 1s 6d per pound and in 1 ounce tablets (Japanese) at 1s 6d to 1s 6½d per pound. A fair business has been done in Opium on the spot at firm prices. At the auctions of Vanilla held this week there was a fair demand for the small offerings at steady rates. At the Cinchona Bark sales 484 packages were offered and the bulk sold, the average unit being 9-16 of a penny per pound being about equivalent to last Amsterdam sales. American Peppermint Oil continues quiet at 6s 3d per pound for Wayne County oil in tins, and 5s for H. G. H. Menthol is firm at 7s 2d for "Kobayashi."

### Canadian Proprietary Law Effective April 1.

**WINDSOR, Ont., March 1.**—Windsor druggists are reminded that on April 1 the Canadian Proprietary or Patent Medicine Act goes into effect. It compels all manufacturers of medicine to send the formula to the Department of Inland Revenue, to receive a serial number whereunder the preparation always must be sold.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, MARCH 11, 1909

No. 10

D. O. HAYNES & CO. - Publishers  
90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dicker Building, 40 Dearborn St., Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album" Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers,  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to be each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA.

90 WILLIAM ST., NEW YORK.

or Era Album

## PROMULGATION OF THE BENZOATE DECISION.

After considerable delay the verdict of the Referee Board of Experts in favor of the use of benzoate of soda in small quantities as a preservative of food has been promulgated by the secretaries of commerce, agriculture and the treasury. For the time being this settles the question for inter-State commerce, but it will not finally dispose of the subject of the use of preservatives, for, whether Dr. Wiley remains in the Federal employ or not, the movement against preservatives has gained such impetus that it cannot subside. Everybody hopes that Dr. Wiley will not retire and most people would regard such action on his part as akin to a public misfortune. Interests opposed to him would like to see him remain for the reason that they might hamper him in his pure food and drugs campaign through the application of official red-tape, while as a citizen relieved of official thralldom there could be no possible check upon the utterances or efforts of the Father of the Federal Pure Food Law.

The Era believes that Dr. Wiley's usefulness will be better sustained for a longer time in his present sphere of public duty. The benzoate problem is only one of the many that have come up and in a majority of them his course has been sustained, notably in the whisky cases, reported in the Era. A man possessing the courage and pertinacity of Dr. Wiley is imperatively necessary as Chief Chemist of the Department of Agriculture.

## RESTRICTING THE ITINERANT VENDORS.

Bills are pending in the legislatures of Ohio, Texas, Wisconsin and New York and other States designed to regulate the vending of medicines, nostrums and appliances for the treatment of disease, injury or deformity. The purpose is to place these vendors under the control of the State boards of pharmacy in the matter of licensing and the fees vary from \$25 to \$100 annually. There is absolutely no reason why medicine sellers should not be subject to control by the boards of pharmacy, whether they be retail druggists or vendors who carry their drug stores around in wagons. The question of the amount of license fee is a matter for the various States to decide, but in fixing it the legislators must take into consideration the rights of local retail druggists with whom the itinerants compete.

The druggist with a store must pay rent and taxes and carry a much more diversified stock of goods than the wagon man; the local man is subject to calls at practically every hour of the day and night, while the itinerant comes and goes to suit his pleasure, being without local responsibility and contribu-

ting nothing to the support of the local government in his wide range of travel, outside of the comparatively insignificant taxes he may pay at his home. The itinerants must eventually retire from business in favor of the local retail druggists. Meanwhile they should cheerfully submit to regulations which are enforced upon all druggists and pay the license fee which offsets the taxes paid into the public treasuries by all retailers operating drug stores. The pending bills which we have seen come closer to giving fair play to the parties affected than others we have inspected. They are of the "live and let live" variety, but if anybody gets the "short end" it is the local retail druggist who suffers from wagon competition.

#### PHARMACY LEGISLATION IN NEW YORK.

Assemblyman Brown, of Cortland County, has introduced in the House at Albany the revised bill reorganizing the New York State Board of Pharmacy and as it has the approval of Governor Hughes and of the Legislative Committee of the State Pharmaceutical Association its chances of enactment seem to be more than ordinarily good. The bill is comprehensive, meets the Governor's requirements and includes the provisions of the Whitney-Wainwright Act which was passed last year, but then failed of executive approval.

A separate bill to transfer Westchester County from the Eastern to the Middle Branch also has been introduced, but probably will never see the light, for, if we remember correctly, the proposition was voted down by the State Ph.A., at the Catskill meeting last year and as the average legislator looks upon Westchester as being part of the metropolitan district some powerful argument would have to be advanced to persuade him that the public good would be served by divorcing Westchester from the Eastern Branch. About the only arguments that we have heard advanced in favor of the change have been strong reasons for not making it. If there are any others they ought to be made public.

#### NEW PROHIBITION LAW IN KANSAS.

In Kansas, the latest State to go dry, the new law is so stringent that a druggist may not sell liquor even on the prescription of a physician. In fact so prohibitory is the law against alcoholics that it has been found necessary to introduce an amendment to permit the use of alcohol by wholesale druggists in the preparation of medicines and the preservation of drugs. The only exception at present is the sale of wine for communion purposes. The penalties are fines of \$100 to \$500 and imprisonment of from thirty to ninety days for each offense. The law becomes effective when published in the statutes, which will be about June 1.

Kansas has tried various forms of checking the sale of intoxicants, but heretofore the restrictions have not been properly effective. Under the latest system of granting permits to druggists it was found that some of the holders carried on a regular saloon business. Of course these men will bemoan the passage of the law, but the majority of Kansas druggists

will be heartily glad to be relieved of liquor patrons, who are nuisances to pharmacists who do not want their trade.

#### GETTING BUSY AT WASHINGTON.

President Taft's inaugural address was a straightforward, judicial document and his appreciation of the necessity for promptly disposing of the tariff menace has since been further and fully shown in his utterances, particularly in the suggestion that at the special session of Congress beginning next Monday the legislation be limited to the tariff. While the preparation of a tariff schedule is slow work at best, the subject has for some months been under consideration by the House Ways and Means Committee and there seems to be no legitimate reason for unnecessary delay.

The proposition to have an elastic schedule, with maximum and minimum rates of duty, will no doubt be elucidated by its advocates, but at first thought such an arrangement does not seem likely to effect the necessary degree of stability that is essential to American business prosperity.

#### SALVATION OF THE SMALL DRUGGIST.

In the ERA's Cash Prize Competition this week the award of the judges in Contest No. 1, as reported on page 224, will be observed with interest by both friends and foes of co-operation in the form of buying clubs. There can be no questioning the fact that the future of the small druggist is of paramount importance in the drug trade, but views differ a great deal regarding the best method to be pursued for his preservation from destruction.

The winner of the \$10 prize has taken a position which agrees with the ideas of many in the trade, but there are others who will maintain that the essentials of success are by no means limited to mere membership in buying clubs, or other forms of co-operation. The competition is open to all who have any thoughts worth while that they care to express.

#### ENTERING WEDGE FOR PARCELS POST SCHEME.

Persistent and insidious is the element that is endeavoring to saddle the parcels post on the Post-office Department, as is evident by the exploitation of the idea for "individual rural delivery routes," which some country merchants in Vermont and probably elsewhere are advocating. The plan is to confine the use of the parcels post to business originating in and terminating in each route, thereby preventing the mail order houses in the large cities from competing with the local country merchants on equal terms. This scheme looks very alluring to the buccolic business men, but after all it is the same old serpent in a new dress. It is only an entering wedge for the original plan.

The mail order houses would like nothing better than to have a restricted law of this description enacted by Congress, for it would be a comparatively simple matter to upset the restriction in the courts as being a violation of inter-State rights and therefore unconstitutional. With a parcels post law on

the statute books and the one objectionable provision declared illegal the mail order houses would be able to do business in competition with the country merchants, the latter being "hoist with their own petard." Retail druggists who are opposed to the parcels post should not relax their efforts, for the friends of the measure are at work all the time, planning all sorts of entering wedges to obtain what they want and their failure to secure legislation in the recent Congress will not prevent renewed efforts in the next session of the National Legislature.

Government chemist says that many so-called rat poisons are not poison and that some "stock foods" are poison. Why not give the stock food to the rats and the rat poison to the stock. Seems to be an easy way to restore the equilibrium.

Harry T. Carver was a school "kid" in knee breeches when he started out to learn the drug business in 1881. He is now in his forties and still learning, but few can tell him anything about the jobbing end of it. As a member of the wholesale firm of Farrand, Williams & Clark, Detroit, Mich., he is well known to the trade and has done his full share in the building up of a magnificent business.

It was on a bleak day in January, 28 years ago, that the schoolboy, Carver, "took his pen in hand" and, with laborious effort, ground out a formal application for a job in the wholesale house then known as Farrand, Williams & Co. He didn't expect to land any more than the proverbial rabbit, and he looked upon the stamp he placed on one corner of the envelope as two cents wasted. But, to his surprise, the very next day came a post card bearing the drug concern's signature. He hardly took time to read beyond the second word, but as near as he can recall it now, the message ran something like this:

"Please come down and see us at once."

The message came about noon. Young Carver didn't even go back to school to get his books and rushed through his dinner like a cyclone through a Kansas prairie, lest the job get away before he could grab it. But it was there, waiting for him, and he's got it yet. Not the same job, of course, but everything must have a beginning.

Mr. Carver's earliest recollections of the drug business have to do with the putting up of a blue seidlitz powder. Then he was set to washing bottles, and after eleven months in the laboratory, doing all sorts of odd jobs, and incidentally picking up the rudiments of the business that were to stand him in good stead later on, was transferred to the office on the main floor. He proved as adept at making out invoices as at washing bottles or putting up seidlitz powders, and it wasn't so many years before young Mr. Carver found himself in charge of the firm's city department.

In this capacity he remained more than a dozen years, and when John J. Dodds died, five years ago, Mr. Carver was assigned to look after the country department. Now he is a sort of "all around man," but his chief cares are the druggists' sundry department and the travelling salesmen. Beginning at "salary" of \$2.50 per week, he is now a sharer in the profits his energies have helped to create. With his wife and son, Crichtell, he occupies a pleasant home at 468 Putnam avenue, and to his other comforts expects soon to add an automobile.

Mr. Carver has been too busy in the last 28 years to acquire any especial hobby unless it is one for making friends and keeping them. He is not given much to sports, not even to bowling. The nearest he ever came to active participation in athletics was when he joined the Shrine. Once he tried to be a hand as a speculator, but never again will he flirt with the fickle dame.

It was this way. Cinchonidia had been at a low ebb for

some time (this was some years ago) and when everybody, including Carver, thought it had reached rock bottom, he purchased 100 ounces of the stuff as an investment, figuring that he would at least double his money when the price went up again. But after that the price remained stationary, moving neither up nor down, and after holding his cinchonidia for a year, the aspiring young man decided to put his money back in the bank where it would at least draw interest, and disposed of his 100 ounces at the same price he had paid for it. That was his first and his last speculation.

Mr. Carver relates an interesting experience of the days when he was connected with the city department. Competition was very keen among the jobbing houses, and it was often a race between the salesmen to see who should reach a certain customer first, and they made daily calls. One druggist especially claimed their attention, the late William H. Burke, who at that time conducted a store in Grand River avenue. In the hope of beating out "the other fellows" each salesman fell to calling on Mr. Burke a little earlier every morning. Arriving one morning just a trifle too late to be first, Mr. Carver made up his mind then and there to take no further chances.

"I slept that night with my watch and a handful of matches under my pillow," Mr. Carver related. "I say 'slept,' but it's mighty little sleep I got. The first time I woke up I lit a match and by its light saw that it was 12 o'clock. When I awoke the second time it was 2 o'clock and I decided that it would not be safe to risk another nap. So I hustled into my clothes, jumped on my bicycle and was off to Mr. Burke's store with my order book in my pocket. I knew the night man well and had no trouble getting in. I stretched out in a chair by the stove to finish my sleep in peace. Along about 5 o'clock in the morning one of my rivals came drifting in and he was thunderstruck when he found me sitting there. But I was first and I got the order when Mr. Burke came down."

And it is this habit of being on time that has contributed in no small measure to Mr. Carver's success. He is rather proud of the fact that he was never "docked" for being late when he was working just for wages. The firm had a rule that any one reporting 15 minutes late would be docked an hour's time. On one occasion young Carver arrived just 14 minutes after starting time, but as he still had a minute to spare his tardiness did not count against him, and his record remained unbroken.

Mr. Carver has been a member of the company since it incorporated about ten years ago. Previous to that time the business was conducted as a partnership. The present officers are: R. P. Williams, president; P. E. Bogart, vice-president, and Jacob S. Farrand, Jr., secretary and treasurer.

It was the end of everything. The last living human being gazed over earth's chaos and smiled. "Gee! I've got a day away from the store at last." He was a druggist.

Michigan Ph.A. and Wisconsin Ph.A. are making a vigorous fight for the bills regulating itinerant medicine vendors. Druggists in those States are urged to write letters to their Senators and Assemblymen in favor of the measures and the effect ought to offset the lobbying of the vendors.

To be called "a man about town?" Get dyspepsia and lose your job.

The editor of the Brookhaven (Miss.) Leader is a subject for congratulation by his brother editors throughout the country who do not enjoy prospective immunity from stomach troubles, for the Brookhaven sage records that "we welcome him (an up-to-date pharmacist) to our midst and wish him success in his new field of business."

HARRY T. CARVER,  
of Detroit.

## Era Cash Prize of \$10 Awarded for Paper on Co-operative Buying.

In the ERA'S Cash Prize Competition this week the judges have awarded the prize to Dr. Charles Nathan, of Brooklyn Borough, New York City, for the paper which is printed on this page. The prize is \$10, coming in the No. 1 contest class, which is "for the best article on any subject of value to retail druggists." The conditions of the contest will be found on page 14 of this issue of the ERA.

### Meeting Corporation Competition by Co-operative Buying.

By Charles Nathan, M.D., Brooklyn, N. Y.

The individual druggist is today confronted with the problem of how he can exist against "The Retail Drug Stores' Combine," whose stores are spreading over the entire country, threatening the smaller stores with annihilation.

These corporations, by means of their unlimited capital are able to acquire the most desirable location for their stores, and to buy their goods direct from the manufacturer and importer in large quantities, eliminating the profits of the "middleman," which profit is necessarily added to the cost of goods purchased by the small retail druggist.

The "combine," by means of this saving is enabled to undersell its smaller competitors and still reap a good profit.

The problem, therefore, is: How can the small retail druggist successfully compete with these conditions? How can men with small capital buy goods in large quantities and thus save the "middleman's" profit? How can the small drug store sell goods at the same price as the "combine" and still make a living profit?

These problems which confront us can be successfully solved in only one way and that is by organizing "co-operative buying clubs." These clubs consist of a number of individual druggists organized for the purpose of buying their drugs, chemicals and sundries direct from the manufacturer and importer, placing them on the same buying basis as the "drug stores corporations."

The saving effected by this method of buying can be readily appreciated when we take into consideration the fact that the manufacturer allows the middleman or jobber a discount of 10 per cent, 5 per cent, and 2 per cent on proprietaries, of 50 per cent on crude drugs and chemicals and of 75 per cent to 100 per cent on sundries. From this profit the middleman deducts all his business expenses of rent, clerical hire, delivery, salesman's commissions, etc., which, under the present conditions, are all included in the price of the goods sold the retailer.

A co-operative buying club is formed by as many druggists as can be induced to join in the various villages, towns and cities. The greater the number of members the greater will be the benefits derived, for the larger number will necessarily buy larger quantities of goods, thus gaining the best discounts. Each member subscribes from \$100 to \$200 to form a capital for buying. Stock or receipts may be issued for money subscribed.

In the conducting of a club all that is necessary is the delegation of one or more members for the purchasing of goods, which members shall also act as distributors of goods to the individual members according to their needs.

Practically the entire expense for buying and distribution may be figured at 4 per cent, which is about equal to the cost of distribution to the "drug stores combine" for its various stores. This shows conclusively that the buying and distributing can be done by the co-operative clubs just as cheaply as by the "corporations."

Under this system the members who conduct small stores can buy small quantities at the same rate as the largest buyer. They are also enabled to keep a larger variety of goods on hand, because of their increased purchasing power.

Another good feature of these clubs is the fact that druggists being associated in clubs of this kind for mutual protection in buying and selling will naturally have a tendency to prevent cutting of prices.

These associations will bring about a better understanding among the members and lead to more cordial relations, all of which will tend to advance the interests of the profession

for the truth of the saying "in union there is strength" would be amply illustrated.

Co-operative clubs are now being successfully operated in New York City, Brooklyn, Baltimore, Buffalo and various other cities throughout the Union.

In concluding, let me sound a note of warning. If the individual retail druggists throughout the United States do not wake up to the advantages of this co-operative buying, to resist the inroads of the drug store octopus, it will be too late, for when its chain of stores shall be complete and the public becomes educated to its low prices and trade methods, organization on the line of co-operation will be impracticable.

The principal advantage of the "combine" lies in direct buying of large quantities of goods at the lowest prices, whereas the individual druggist placed on the same buying basis has the additional advantage owing to the fact that he comes in personal contact with his customers and can cater to them more successfully than the ever-changing and as a rule disinterested clerks employed by the corporations.

In these days of concentration and combination, it behooves the retail druggist to adopt modern business methods and to wage the fight against the ever-growing drug stores corporations by co-operative buying.

### ERA COURSE IN PHARMACY.

Graduates for February, 1909.

Matriculation No.	Examination Grade, p.c.
4681. Joseph Salling Baldwin, Washington, D. C.	98
5605. Albert L. Kohlman, Dubuque, Iowa	95

5725. Mrs. Theodosia H. Jones, Dublin, Ga.	98
5783. Sister M. Agnes, Alton, Ill.	98
5845. Irving Eisler, New York, N. Y.	98
5954. Frank P. Barber, Danville, Vt.	98

The above graduates will receive diplomas within a short time. A large and very handsomely engraved diploma, printed on artificial parchment, with the graduate's name engrossed, especially suited for framing, will be furnished to all those who request it for the sum of \$2. Those desiring the latter should forward the necessary fee to THE PHARMACEUTICAL ERA.

### University of Illinois School of Pharmacy.

CHICAGO, March 6.—The Beta Chapter of the Phi Gamma Sigma Fraternity gave a reception and dance to the members and their friends at Grand Boulevard Hall recently. In spite of rainy weather the attendance exceeded anticipations and the handsome hall was well filled. The students and their guests spent a very pleasant evening and the affair was voted a great success. The committee of arrangements consisted of H. W. Smith, S. Mottar and L. D. Goveia.

Arrangements are being made to have the students of the School of Pharmacy well represented in the *Illio*, the annual publication of the Junior classes of the University. Views of the classes at work in the laboratories of the School of Pharmacy were recently taken and it is the expectation that these will be used in the *Illio*. H. W. Smith has charge of the *Illio* representation of the Senior students.

### Druggists Interested in Municipal Affairs.

PHILADELPHIA, Feb. 27.—Three prominent druggists of this city are now members of City Councils, a fact that will indicate that the policy of the P.A.R.D., to urge its members to take an active interest in politics, is being carried out. At the recent Spring election, John H. Hahn and Dr. John H. Locke who had made enviable records as members of the lower branch of Councils, were returned by their constituents with comfortable majorities. A new councilman-druggist is Dr. J. Frank Meade.

### License for Medicine Venders in New York.

ALBANY, Feb. 27.—Itinerant venders of medicines must pay a license fee of \$100 and be licensed by the State Board of Pharmacy if a bill introduced recently by Assemblyman Lowman, of Chemung, becomes a law.

## An Idea and Where it Led.

By Emma Gary Wallace.

Never mind what his real name was, we will call him Richard Homo, because he was that finest of God's creations—a lion-hearted man; and to us she shall be Margaret, for in spite of the loss-freshness of youth, she was that priceless pearl—a good woman.

He was middle-aged, fearfully lame, and rheumatic to an alarming extent. That was why he sold his modest holdings in Ohio and went to Florida to live. He took with him his good wife, his entire cash capital, and a disposition to look on the sunny side. He was accustomed to argue laughingly that worry was a sign of mental poverty, for what a man could improve

by his own efforts he had no need to worry about, and what he was powerless to chance, he certainly was foolish to fret over. Then, too, he had never quite gotten away from the happy satisfaction that the woman who was growing old by his side was the best and truest woman in the whole world.

Maybe that was why he could still smile bravely when the Big Freeze came and he walked over his sandy property to view the rows of shrivelled trees which looked as if a breath of flame had robbed them of their verdant life. As he looked down over the winding course of the glorious St. John river, which sparkled as merrily in the sunshine as it had done the day before when all the world was fair, he wondered dimly into what sort of a future, the current of life's events was bearing Margaret and him.

On all sides the people were hastily packing or taking hurried flights without packing at all, and already the busy, thriving little town began to look like a veritable "Deserted Village."

Richard Homo did not allow the hopelessness of despair to overwhelm him, or the weakness of self-pity to unman him. He went along on the river bank and sat down beneath the long swaying streamers of hoary moss. There was nothing to disturb him except now and again a few stray razor-backs that grunted disapprovingly and scuttled away into the underbrush. The expenditure of the few remaining dollars must be planned with thought and care.

### A Drug-Store Memory to the Rescue.

From somewhere out of the experience of the past must come the hope of the future. He travelled that Backwards Road with painful minuteness and yet it seemed utterly barren of suggestion.

Ah! there was his experience of a couple of years in a country drug store, when he was a young man. That had been almost forgotten. How long the days had been, and in fancy he could still see the quiet streets on a drowsy afternoon, the white roadway winding over the hills, the back-room with its rows of bottles and its modest equipment. His "boss" had loved his chosen business and had taught him the science of applied concentration.

Homo remembered the absorbing interest with which they had worked on a series of experiments in setting colors in different fabrics and in removing stains from different colors and goods. His old employer had long since crossed the Great Divide, but somewhere among his own papers the note books of those experiments had been preserved.

Homo sat up very straight. A brilliant blue bird and a gaudy red one flashed very near to him unnoticed. He was no longer in Florida among the palmettos. He was at the turning point in the Backwards Road of Long Ago.

### No Longer Becalmed.

Homo had the power—the rare power—of being able to take the initiative. A man with this power does not hesitate to enter unbeaten paths if they give promise of leading Somewhere. He dares to act on his own wisdom and has

faith in his own ability to overcome obstacles. He does not wait for favoring circumstances, for he masters the circumstances themselves. He is not an imitator, but an originator.

The next day the lame man and his wife turned the lock in the door of their little home and bought a ticket for a town in Georgia where every year the beautiful winter climate lures large numbers of tourists to come and tarry awhile. A couple of rooms were rented, a stout negress hired to render necessary service, and a supply of mysterious bottled compounds prepared and labelled.

With a clean new market-basket the man went from house to house and solicited fine laundry, new goods to shrink and in which to set the colors, and any article from which to remove obstinate stains.

A few patronized the cherry-faced lame man. He told no hard-luck tale, but offered to render a valuable service for a fair compensation, and Margaret, her delicate face aglow with the joy of a new-born hope labored at home, assisting, superintending and directing. The accounts were small at first, but she kept them with as great care as if they represented a mighty business.

The idea of setting colors, shrinking goods and removing stains was new and it appealed at once. A real want was revealed and the work was well and reasonably done. The Northern tourists were delighted to be able to have the colors in delicate fabrics rendered non-fading, and their goods shrunk and returned to them with the finish uninjured and the new creases in the exact center of the yards of uncut material. The local merchants saw their advantage and promptly advertised the new corner freely.

Soon a boy was hired to collect and deliver and of necessity the working quarters were enlarged. A telephone became indispensable. Little by little as time went by The Unique Laundry reached out as the funds permitted until a fine steam plant took the place of the two wooden tubs on the rickety porch. A competent book-keeper in charge of a well-furnished office relieved the patient helpmate, and many men, women and girls performed efficient work under the directions of Richard Homo and the old negress.

No wonder the genial proprietor continued to smile broadly. The plant was paid for, his patronage most satisfactory, and his help cheerful and contented. His prosperity was theirs; and the whole establishment enjoyed an atmosphere of sunny content.

Richard Homo had made more out of life for himself and for others from his days of trial and adversity than he had ever been able to make from his years of comfortable prosperity.

### Because of Exact Knowledge Success Was Possible.

The experience of the ruined orange grower proved conclusively that there is a field for much work in the manufacture of such special preparations as made his fortune. Richard Homo was the only one out of many thousands who possessed such knowledge. It came to him through his chance experience in a drug store.

The druggist is the one to whom people naturally go if such a want is realized. The average housewife has to deal weekly with tea, coffee, cocoa, oil, fruit, ink, or medicine stains. When there is a woman in the drug store she is frequently appealed to, for assistance in these difficulties. Every woman reveals in snowy linen and spotless garments. In the late winter and early spring the thrifty housewife prepares for summer, and preparations that would set the colors in summer wash goods would find ready sale, and could be made as seasonable as moth balls or holiday goods.

It is a satisfaction worth paying well for, to know that the dainty garments being made with such care will retain their original freshness after being tubbed. The housewife readily welcomes assistance in ridding herself of unsightly stains and discolorations upon various household articles. She looks upon the one who can make blemishes of this nature disappear, as gifted with that which is little short of magic.

The French woman does much with Javelle water, but even that is almost an unknown quantity to her American sister. The laundries would welcome color-setting fluids, and the one in each locality that could advertise the setting and non-fading of colors would readily repeat the success of the man who was not discouraged by the frost of defeat.

It may take thought and time, but as that is the largest

part of the capital involved the profits are highly satisfactory. One enterprising druggist paid his rent—city rent at that—on the profits of a cleansing fluid sold to tailors, dressmakers and home cleaners.

The preparations must be right and the claims for them must not be more than their merits will warrant. Extravagant advertising not backed by facts is nothing if not dishonest and no business builded on such a sandy foundation can prosper very long.

Well-worded sign cards and cleverly thought out window displays, together with a successful woman demonstrator will start the business merrily along, and once it is started it is too useful a line of preparations to be allowed to die out, and the best of it all is, that it is a line which ought to be held and controlled exclusively by the pharmacist.

Some one has said that advertising is creating new wants. It is rather the calling of attention to what there is on the market to supply existing wants.

There was no call for automobiles until they were completed and their usefulness demonstrated. Not because there was no need of rapid means of transportation, but because there was nothing available with which to fill the want. When automobiles were placed on the market, then the call for them began. Do not wait for calls for color setting compounds and stain removers, the calls will come fast enough when people know that such preparations may be purchased.

#### Playette and Musicales for Anniversary.

PHILADELPHIA, March 6.—Chapter No. 6, W.O.N.A.R.D., recently completed the celebration of the second anniversary of its organization by giving a musicale and playette which lacked none of the delightful features of the many successful social functions that have marked the growth of the chapter. It was held at Mercantile Hall and the large attendance and the evident enjoyment of the excellent programme, was a guarantee of the hearty interest and appreciation of the chapter's friends, even if the receipts at the ticket office had not run into a good sized sum.

Nowhere outside of grand opera could one have enjoyed the quality of music such as was included in the programme. The reputations of such stars as Mr. H. A. Nolte, soprano; Miss Bearrice Waldron, contralto; Howell Zulick, tenor; Harry Saylor, baritone, and Mrs. E. W. Gebhardt, pianist, are well known to the music lovers in Philadelphia and the announcement that they would all appear was a strong drawing card. The quartette from "Rigoletto" and the solos from the various operas, brought forth prolonged applause which was generously responded to by the artists. Following this first part of the programme, the playette, "Too Much Married" was cleverly acted by the Featherbrain Club.

#### Washington Chapter Entertains Visitors.

WASHINGTON, March 8.—The ladies of Washington Chapter, W.O.N.A.R.D., were very active during inaugural week. On the evening of Wednesday, March 3, Mrs. W. H. Bradbury tendered a reception to National President Mrs. Nellie Florence Lee, at the Bradbury home in Park Road. The blizzard weather kept many anticipated guests away, but those who were present had a most enjoyable evening. On Friday afternoon Mrs. Charles Joseph Fuhrmann gave an "At home" in honor of Mrs. Lee, who was greeted by many of the Washington ladies.

Friday night, in the study room of the Carnegie Library, George Dexter Khoe, Ph.D., gave an illustrated lecture on foreign lands, under the auspices of the Chapter.

#### Card Party to Be Given by Chicago Chapter.

CHICAGO, March 6.—The local chapter of the W.O.N.A.R.D. is making plans to give a card party to its husbands and friends on the evening of March 12 in the Northwestern University building. An open meeting has also been arranged for March 9, the time of the regular meeting, at which a larger representation of druggists' wives is expected to attend. A musical programme will be given.

#### Bill to Transfer Westchester to Middle Branch.

A bill to amend the pharmacy law, transferring Westchester county from the jurisdiction of the Eastern branch of the State Board of Pharmacy in to that of the Middle branch of the board has been introduced in the Senate by Mr. Wainwright. It is known as Senate Bill No. 449.

## Raw Hide.

By Joel Blanc.

When Senator Borland entered the store I noticed that his lips were just the least bit curled by a gentle smile and his entire expression and demeanor indicated composure and perfect peace. My thought was, that the peculiar vernacular of "Mike the grafter" was far from my friend's tongue at that time and apparently there was little probability of his becoming sufficiently excited to drift into that weird language of his truck-driving days. The Honorable Mike's greeting bore out my conclusions, conclusions which

were later proved to have been erroneous.

"Joel, I have been taking a stroll in the crisp, pure winter air, beneath this sky of cerulean blue. The tang of salt is in the atmosphere and the invigorating exercise has made me feel as though I was seventeen instead of seventy-one.

"By the way, I met one of your friends, Harkinson, the druggist to whom you introduced me at that meeting to which you so kindly took me. He was the one who spoke on 'Secrecy in medicine.' He asked me to express a candid opinion of that address. He said that he had been told that I had been in politics and he therefore concluded that I must have made and listened to many speeches, so he wanted to know what I thought of him as a speaker. As I did not have the least idea of what his speech was about until you later tried to explain it to me, and then only after you had proved by your explanation that the speech had been almost Greek to you, I hardly knew what to say to him. So I told him that it seemed like a very good speech, but that it may have been a trifle long, just a trifle. My mild criticism must have been slightly unwelcome to Mr. Harkinson, for he immediately started in to roast every other speaker of the evening, winding up by informing me that he did not believe I knew a good speech from a bad one. 'Poor, dear man! Possibly I did hurt his feelings, disturbed his equilibrium, as it were.' After thus speaking, the Senator calmly and deliberately removed his gloves and coat, seated himself with the utmost composure and then glanced at me with a countenance as placid as the surface of a lakelet beneath the June sunshine.

"Harkinson is a very sensitive man," was my comment. "So I perceived," replied Mike. "All too sensitive I fear, for success in public life. Really, I believe that he insulted me. I really do. But, as he is a sensitive man, I will overlook it. The incident reminds me of another. You were too young at the time to have much reminiscence of the Philadelphia exposition of Seventy-six. Anyway, in one of th' exhibits there was a pair of boots and a saddle made out iv fine human hide. Ye wud not have known it from th' finest iv pig skin. Th' leather was as thick an' soft as cud be. Whither th' finest gentlemn who contributed th' hide was African savages or highly refined murderers, I feel sure that at one time they had been in offus. Only successful politicians cud have hides loike that.

"Joel, ivra man what has a raw hide what is raw because it is so thin that aven a new safety razor scrapes it, is sensitive. And ivra wan iv thim same raw hides acts loike they tink th' ivra ither man's hide is as thick as sole-leather an' so foinely tanned that th' devil's own pitchfork—that same bein' a venom-pointed tongue—won't scratch it. Th' felley what succeeds in politics—an' politics is iv ivra thing from th' nursin' bottle to th' bottle iv imbalmin' fluid—has a hide as thick as an elephant an' as smooth as a baby's, an' it's with pity that th' owld ilphants loike meself an' th' young rhinosyruses loike you, shud look upon thim foine, sensitive sows with such delicate feelin' that they think no one ilse aint got no feelins at all.

"Another thing about th' sensitive man; especially if th' dear felley happens to be a druggist; he is always a patriot. Whither his gang is fightin' fer price protection on naws-

trums or fer ethics what will kill th' privies an' th' nawstrums too, he is always patriotically a standin' in th' front rank ten moiles to th' rear an' ivra toime he hears that one iv his gang on th' ither soide iv th' continent got hit wid a brick th' poor sensitive divil is deeply wounded an' at once commences to call names at th' jobbers in South Africy an' at th' manufackshurers in th' Peg Leg Islands. Poor divil, he can't help it, he's got sich foine, diligente feelin's.

"Whin th' sensitive druggist wants to get in wan iv th' offices iv th' Nardy, Phardy, Philardy or Chieardy he shows his foine feelin's by goin' around puttin' th' hooks an' gaff into ivra tiner man. With th' lection is over an' th' sensitive gentleman don't come no nearer bein' elicited thin to be put on a committee to burn th' old ballots, his feelin's are deeply hurted an' he is r'aly grieved; he is so. On his way home he shows his foine feelin's by callin' th' conductor out iv his name an' steppin' on th' toes iv all th' women in th' car, an' whin he gits home ze gintly sobs himsilf to sleep, after kickin' th' cat out iv th' windy, pinchin' the baby an' pushin' his woife out iv bed. Poor b'y, he is so sensitive! If ye were to cover ivra inch iv him (except his mouth) wid six thicknesses iv eight ply roofin' paper an' pour tar over that, th' raw hide iv th' delicate bein' wud still be irritated by what th' *Daily Bugloo* iv Singapore said about buyin' chubs.

"I'm not sayin' that th' sensitive man aint a hard fighter. He can spind his whole loife a throwin' rocks at ivra wan ilse an' have nothin' but th' kindest feelin's in his tinder heart. While he is tossin' thim tokens iv love right an' left, tears is pourin' from his eyes. Naw! He aint weepin' about what he done to ither. He's weepin' over th' cruel wounds what he gets ivra foive seconds or whiniver annie wan neglects to tell him that he is brilliant as Cicero, warlike as Napoleon, ban'some as Appolo Boulevard, or as kind hearted as General Booth.

"Whin a sensitive man joins an organization, his gintle, sympathetic ways leads him to start in to impeach th' presidint, change th' constytushin, decrease th' dues, change th' obje' iv th' organization an' give it a new name. If ara wan iv th' mimbers is so unkind, so harsh an' unsympathetic as to make th' laste objection to th' sensitive party's plans, th' blushes on his cheeks looks loike two smears iv ketchup on a plate iv beans an' in a gintle, beseechin' tone, wid words as mild as a dynamite explosion, th' poor, sensitive darlin', tears up th' past, prisint an' fucher iv ivra man prisint, just to let it be knowed that his own delicate feelin's have been sloightly abraded.

"Ye wud think that th' sensitive man wud kape his raw hide thin miles from ivra tannery, ye wud so. But does he? Bliss his tinder, sensitive sowl, he does not! 'Sid iv spendin' th' days down cellar a sortin' moth-balls an' havin' his clerks to come in contact wid th' crowd, crowd worruld, he goes tearin' around a lookin' fr' foires an' listinin' fr' riot calls. 'Sid iv stayin' home a drinkin' cambric tea an' eatin' crullers, he goes around sprinklin' th' milk iv human kindness over ivra wan— an' he uses it scaldin' hot. But if annie wan spatters a drop iv picklin' vinegar on him, he howls loike he has cut his thumb on somethin' as sharp as his own tongue.

"Th' sensitive man gintally has a woife so big that she wud give him a bad case iv galvanized liver if she wud sit on his lap, but she niver does—she's afraid of hurcin' his feelin's. Th' dear sowl strands loike a billboard betune th' poor, sensitive husban' an' th' storms an' buffers an' cafes iv th' crowd worruld. Her lanwidze is confined to 'sensitive', 'tindil', 'gentle', an' sichloike words, an' she applies thim all to th' gintle old ram what kicks about her cookin' an' th' meat an' grocery bills; finds fault wid her clothes an' won't give her money fr' ither, an' if she says his last hair-cut aint quite even on th' back iv his neck th' poor sensitive man weeps scaldin' tears an' goes to bed wid th' headache, or a jaz.

"I'm thinkin' that most iv th' sensitive men was incubator babies an' wasn't kept in th' hot box long enough; it's a pity they wasn't kept there until they were broiled, an' well done at that.

#### Uses and Practical Value of Assay Processes.

PHILADELPHIA, Feb. 27.—Assay processes, their uses and practical value, will be the topic for discussion at the next of the lectures and demonstrations constituting the post-graduate course arranged by the local branch of the American Pharmaceutical Association. It will be held on the evening of March 16 at Temple University.

## Original and Selected

### THE CENTENARY OF CHARLES DARWIN.\*

By Prof. Henry Kraemer, of Philadelphia.

It is not my purpose to take the time of the meeting by attempting to give a resumé of the work of Charles Darwin or an estimate of the influence and character of this savant of the nineteenth century, the centenary of whose birth is being celebrated throughout the civilized world at this time.<sup>1</sup> I think, however, that it is but fitting for a professor of natural science in this College to place on record a minute that we, in this centenary year, paused along with other scientists and paid our tribute of praise and gratitude to this liberator of thought.

Darwin was the author of twenty odd books and nearly one hundred papers, about one-third of his writings being on botanical subjects. It was his book, "The Origin of Species by Means of Natural Selection," published on November 24, 1859, which was his epoch-making work, freeing us as it did from the shackles of the past, or in other words, freeing us from the necessity of considering the supernatural in our study of natural phenomena and the laws which govern them. While this is true, it is probably safe to say that apart from his masterful deductions, his other most enduring contribution to science lies in the impetus given to scientific research by his comprehensive vision, his ability to study natural phenomena at first hand, to discriminate between facts and opinions, and finally to connect facts in an orderly sequence. In short, it is the Darwinian Method which has proved such a boon in scientific research.

Darwin furnished a conspicuous example of the law of heredity, for which he claimed so much. His grandfather on his paternal side was Dr. Erasmus Darwin, a poet and philosopher, his name being often coupled with that of Lamarck as an early evolutionist; and on his maternal side his grandfather was Josiah Wedgwood, the inventor of Wedgwood-ware, formerly used much in making mortars and pestles for the use of apothecaries. His father, Robert Waring Darwin, was an eminent physician, and it was his desire that Charles should likewise study medicine. Accordingly, in 1825, he was sent to Edinburgh, where, he says, he found the lectures on geology and zoology incredibly dull, although he was at that time engaged in collecting and studying mineral and zoological specimens, and although he afterwards attained such eminence in each of these sciences. Darwin's father, learning that he did not like the study of medicine, decided that he should fit himself to be a clergyman, and thus after two years at Edinburgh, he was sent to Christ's College, Cambridge. Here he attracted the attention of Professor Henslow, the mineralogist and botanist, who became his "dearest friend," directed him in his natural history studies, and aroused in him that enthusiasm which characterized the remainder of his career as a scientist.

Through the reading of Humboldt's "Personal Narrative," Darwin had acquired a desire to travel, and this opportunity soon offered itself. Professor Henslow not only used his influence in securing for him the privilege of going on the voyage of H. M. S. Beagle as naturalist under Captain Fitz-Roy on a surveying tour around the world, but strongly advised him to do so. The voyage lasted from December 27, 1831 to October 2, 1836, nearly five years, and it was on this trip that Darwin collected so much of the material that formed the basis of his future work in geology, zoology and botany. He described carefully his observations each day in his famous Journal of the Voyage, and altogether it is no wonder that Darwin looked upon this voyage as the most important event in his life and as one that determined his whole career.

Then, for more than twenty years he experimented and pondered on his observations and those of others before giving his final conclusion to the world. This was his theory of

\*Read at the Pharmaceutical Meeting of the Philadelphia College of Pharmacy, held February 16, 1909.

<sup>1</sup>Charles (Robert) Darwin was born February 12, 1809, at Shrewsbury (England).

Natural Selection as a factor in organic evolution, and his discussion of this subject was set forth, as already pointed out, in his "Origin of Species." Darwin takes as his starting point the fact that in the lives of organic beings there is a struggle for existence, and that those which gain the ascendancy or survive in this struggle are those possessing some favorable qualities. These qualities first arise or originate as slight variations or modifications, which are transmitted through inheritance and preserved and accumulated through natural selection. That is, favorable variations, by giving to the organism an advantage, it survives and they are preserved or perpetuated. Darwin felt that if natural selection was one of the factors in evolution, light would be thrown on the subject by careful studies on plants and animals under domestication, and his observations together with those of others on the marked improvement brought about by man's selection confirmed him in this view. To this topic alone he devoted two volumes under the title, "Variation of Animals and Plants under Domestication."

In enunciating his doctrine of natural selection, or the Survival of the Fittest, as Herbert Spencer termed it, Darwin was strongly assailed by clergymen and others, including naturalists and scientists themselves, as up until that time the majority of naturalists believed that species were fixed and distinct creations, not even Lyell or Hooker having previously considered that they were mutable. Fortunately, he was supported by Alfred Russell Wallace who had simultaneously arrived at the same conclusion, Huxley, Asa Gray, Hooker, Spencer and others.

Today we have neo-Darwinians, Lamarckians, neo-Lamarckians, mutationists, Weismannians, Mendelians and so on—all battering away at Darwin's doctrines of heredity and evolution, but these doctrines bid fair to stand for an indefinite period.

It is not too much to say that Darwin's work has formed the basis of a newer geology, botany and zoology. His book on the "Descent of Man" has been the basis in the development of anthropology; while his book on "The Expression of the Emotions in Man and Animals" has made a rational psychology possible. And the celebrated geologist Geikie said, "No man of his time has exercised upon the science of geology a profounder influence than Charles Darwin."

Darwin touched life at every point. Like Aristotle, he believed that the essence of a living thing is not what it is made of, nor what it does, but why it does it. His love of science was great, as he twice states in his Autobiography. In addition to this, his ambition was to be esteemed by fellow naturalists like Lyell and Hooker, caring nothing for public applause, although pleased if his works were understood or appreciated. Twenty per cent of his life was made up of years of illness, and he conserved his time so that no moment was wasted. Poulton has recently suggested that it was largely because of the relatively few hours a day that he could work, he gave up his interest in poetry, music and art in later life.

Darwin attached relatively little importance to priority of discovery, and said of some of his fundamental discoveries which had given him great satisfaction, and which were subsequently worked out more fully, that if he failed to impress his readers he who succeeds in doing so deserves all the credit. His generous treatment of the writings and observations of others, whether published or simply in letters, was proverbial. It is true, he made some mistakes, which apparently he knew better than others, and in a letter to Huxley on one occasion, said, "I have sometimes amused myself with thinking how I could best pitch into myself, and I believe I could give two or three good digs." Darwin was not a controversialist, being advised as he said by Lyell, "never to get tangled in a controversy, as it rarely did any good and caused a miserable loss of time and temper."

If one wishes to spend a few hours profitably, one can do better than to read the "Life and Letters of Charles Darwin," including an autobiographical chapter, by his son Francis Darwin.

And if one desires to get a good idea of the physiognomy of Darwin, let him go to the American Museum of Natural History in New York, where there was unveiled, last Friday (February 12) a bronze bust of him which is clever in conception and in execution. I shall never forget, as I saw the canvas removed, the impression I first received, and it seemed that I could think of nothing but Mount Shasta. The eyes

overarched with the prominent brows seemed as if they could look into the noon-day sun and penetrate its secrets; the nose and lips both indicate strong character, yet tempered with kindness; and the massive wrinkled brow also adds to the distinction of this master mind of the nineteenth century.

It is a matter of pride that in the city of Philadelphia the epoch-making work of Charles Darwin first received official recognition, and it is also a matter of congratulation that in America he immediately found some of his most ardent friends and supporters.

## GERMANS I HAVE KNOWN.\*

(A Few Reminiscences.)

By Prof. Joseph P. Remington, Ph.M.

It gives me great pleasure to meet the Deutscher Apotheker Verein, first because I have many times promised myself this pleasure, but mainly because it does us all good to meet and mingle thoughts, and profit by the contact of one's fellows engaged in the same vocation. So, my friends, I am here to recall to your memories the names and deeds of some German friends and associates of mine, whom most of you knew personally, and all of you by reputation. I have chosen a very simple style of address, because on an occasion of this kind, entertainment is the object sought more than scientific discussion; and again, I thought it might be useful to know the impressions made upon me, who is not a German, and who, living in Philadelphia, has not been brought into as close contact with many German apothecaries as have my friends living in New York.

It would be very interesting to speculate upon the causes which have led so many Germans to enter the drug business, just as it would be difficult to explain why so many Philadelphia Quakers have chosen pharmacy for their life's work, but if I were to be asked this question, it might not be far from the truth to say that the German mind is essentially scientific and the Quaker mind is philanthropic. To both, however, the choosing of pharmacy as a vocation was due to the inducement arising from the satisfaction of earning a living in a business which was constructive and not destructive to the health of a community, and while we often hear the trite saying, "I am not in business for love but to make money," you and I, fellow pharmacists, must believe that the great majority of those who are now in the business take more satisfaction and comfort from the knowledge that the occupation which gives us a living is founded more solidly upon the basis of service in the cause of suffering humanity than it is upon the mere coining of dollars.

I have been connected with pharmacy for forty-six years, having entered the drug business January 1, 1863, and while some of those with whom I have been acquainted during this time have amassed wealth, the vast majority have merely made a living, and many of these men, who were fitted by their talents, industry and application to become rich, have felt in their hearts, I am persuaded, more satisfaction in remaining in a business which had the ennobling motive of relieving suffering and staying the progress of disease.

I am not now referring to the men who have been leaders in pharmacy, who might be styled the great ones, but to men in the ranks, the men behind the guns, who by their daily toil and sacrifice add to the advancement and comfort of their fellows. It has been my good fortune to know personally a great many men in pharmacy and it is my purpose tonight to briefly sketch some reminiscences.

The first German that I knew intimately was that distinguished savant, John M. Maisch, who first came to New York, but lived the greater part of his life in my own city, and while I never had the satisfaction of being one of his students, my knowledge and love of this great man came after I was admitted to the faculty of the College, of which he was Dean. Possessing a most remarkable mind, a memory most wonderful and with an extraordinary physique, Professor Maisch was a tower of strength.

A few weeks ago I sat close to Rudolph Blankenburg at a public dinner, and I assume that most of you are familiar with the life of this distinguished German-American, who is one of the greatest reformers in civil and municipal life

\*Read before the German Apothecaries' Society, New York City, March 4, 1909.

today. In the course of his address, he said, "At one time, I was asked to connect myself with an organization of Germans which had for its object the binding together of those who left the Fatherland, and seeking closer union with Germans for better protection, for the advancement of German ideas, for political purposes, and to weld into one wonderful body those who spoke the German tongue." Mr. Blankenburg said that he declined absolutely to connect himself with this organization because, while true to his native country, and desirous of seeing Germany progress in the greatest possible way, he thought it would be wrong and unwise to found in this country a society that would stand primarily for a little Germany. That this country, the land of his adoption, America, should have the best he was able to give and that he thought that this was the only principle one should espouse who had taken up his home in a country away from his native place, and those who knew Mr. Blankenburg's work, realize that he has proven his principle by the work he has accomplished.

Professor John M. Maisch followed the same principle in his life. He never lost the German accent and I never heard him say one word derogatory to his native land. His face, if seen anywhere in the world, would be recognized as that of a typical German. His mind had the distinguishing trait of ceaseless perseverance and specializing. He never gave up the pursuit of any form of scientific investigation and to use an Americanism, "he probed to the bottom."

A great reader, he stored his mind with facts in nearly every branch of science and his memory was the most retentive of facts of any German I have ever known.

It is not customary to speak of our German friends as being gifted with humor and yet he showed this side of his temperament occasionally. One incident I recall distinctly. When the stress of College Session was over, Maisch would unbend and the students saw him in a very different light. There may be in this room tonight some graduates who will recall the tall figure calling the class to order on the occasion of the Professor's supper, a time near vacation when the faculty meet the graduating class for the last time in the College Halls. He would arise, and make the welkin ring by banging the old brass pestle in the big mortar, and having secured silence, his face wreathed in smiles, he would say, "Gentlemen, order please. You must be good tonight for you are all my boys." The boys properly acknowledged the parentage by great applause. "I was given a great surprise this afternoon, when I went to my room to put it in order before leaving until the next course opens. When I rubbed the blackboard off, I saw that one of you had given me a farewell word. What do you think it was? I cannot do anything to the writer now, but I must here before you all tell you what the farewell was. It was 'Good-bye, Corky Warris!'"

Botany was not an attractive branch of study to the students of the College. The average student could not see how botany could ever bring a financial return when he entered into business and he considered the study wasted time. Maisch never had any patience with those who expressed such an opinion in his presence and some of the mischievously inclined students would talk to him in this strain. The Professor's eyes would flash, he would start up from his chair and attack such a heretical idea with all his energy and forcefulness, so that the students were rapidly vanquished and crestfallen, even if not convinced. Maisch's zeal sometimes led him into curious positions, but he always extricated himself from an untenable position, and he was always glad to admit when convinced that he was wrong. On one occasion, in a specimen examination at the College, one of the students was so poor in his ability to recognize unlabelled druzes that he called "aconite" "black snake root." The highest mark for this branch was 100. Each Professor had a specimen examination for his branch and the final mark of the whole examination for the student was made by adding the marks made in each of the four branches and dividing by four. It will thus be seen that a student in chemistry or pharmacy would be affected by a mark in *matéria medica*. When Maisch called off his mark for this poor student he said, "Minus 5," and when he saw the surprised faces of his colleagues he explained that any man who could not tell aconite from black snake root should be given minus five. He was much surprised at the laughter which greeted this announcement and could not see why the other members of the faculty should take exception to this

ruling. When he was asked whether he ever gave plus marks when a very observant student detected a few accidental admixtures or adulterations, in the specimen, he promptly answered "No, that is no more than I expect him to do." However, on thinking it over for a minute and seeing the inconsistency he contented himself by saying, "Well, anyhow I give him a big, black cipher in my book!" You must not think that this student ever graduated, because he did not pass one of the Professors' branches, so our respected Dean was satisfied and so far as I know he never gave another student a minus mark.

And now, my friends, I must tell you of one of the saddest events in connection with my twenty-seven years acquaintance with Professor Maisch. The Hanbury Medal, founded by the Pharmaceutical Society of Great Britain for distinguished service, was awarded to Professor Maisch in 1893, and Michael Cartoizhe, an officer of the Society, was commissioned to bring this medal with him to the Chicago World's Fair, and he handed it to me to take to Philadelphia and give it to Professor Maisch. As you probably know, our beloved Dean was dying from starvation, due to a growth in the esophagus, which prevented him from taking food. I will never forget the presentation scene. Topped up by pillows, with face shrunken and his frame so weakened that he could scarcely raise his hand, he feebly acknowledged my greeting, although possessed of all his faculties. His eyes lit up with pleasure when I explained my mission and I can see the reflection of the rays of the setting sun upon his face. He expressed thanks and gratification, touched the medal as I read him the inscription, then dropped his hand and closing his eyes, said, "It is all over."

#### Recollections of Dr. Rice.

Another great German that I would like to call your mind to is your own Charles Rice. Totally different in temperament, education and daily life from Maisch, Charles Rice gave to his adopted country services which will never be forgotten so long as the United States Pharmacopoeia lives. A great linguist, an accomplished chemist, an indefatigable worker, he laid down his life in the service of pharmacy.

One of the greatest attributes of his mind was an infinite capacity and love for detail. Although analysis was ever a strong attraction for him, anyone who studied Dr. Rice closely could not help seeing that synthesis was equally strong. In other words, he "tore down" in order that he might "build up." The mere act of destruction or curiosity to know the component parts of a substance had no interest for him, but when given a problem to be met, some test to determine the purity of a product, he realized that unless he knew positively and accurately the elements and the proportions existing in the substances he could not correctly formulate a test for purity or identification.

Dr. Rice was essentially a great student. His mind was ever reaching out for more knowledge. In many respects, he was adaptable and he was very shrewd in his judgment of men, and yet in a way he was not what would be called a sociable man to the majority. He did not seek the society of people for the sake of mingling with his kind. In a word, he was not gregarious; but books, ah, they were his friends! He would refuse invitations by the score to preside at public functions. He was nervous when called upon to speak before an audience, but this was largely due to his accent.

He could write English correctly, forcefully and beautifully. His penmanship we all know was legible, clean, with all his I's dotted and his T's crossed. In committee work he was leader; when he spoke, everyone listened, and particularly when interested in the subject before the committee, he became enthusiastic and one would always find his reasoning and judgment the best. When a member of his committee was given some specific work to do, and time was pressing, and through procrastination or other cause the work was not done as it should have been, he would go into his library and sit down with his pen and do the work himself. Then he would write a kind note to the member of the committee and ask if what he had done was approved. In a few cases I have known the delinquent member to accept his Chairman's work without giving Dr. Rice any credit. In such cases Dr. Rice would never say a word, for it mattered not to him who had the credit, provided the work was done. Dr. Rice never sought preferment, emolument or glory. He would have been worth very little as a constructive worker if he had not cared for the approbation of those whose friend-

ship he appreciated. It never occurred to Charles Rice that he was a great man. Fulsome flattery was offensive to him. He rarely replied to the attacks of his enemies, but was content to bear as quietly as he could his sufferings, which were often very acute.

Every man has an atmosphere, natural or acquired. Why? Because out of the heart the mouth speaketh. The lowest form of animal creation is pleased, shows happiness or content: the dog wags his tail, the cat purrs, and the bird pours out his soul in song, but man alone, endowed with higher gifts, can curb annoyance with silence, disappointment with cheerfulness, assaults with a smile and calamity with resignation.

Dr. Rice had a keen sense of humor. This was of a kindly sort, however, and almost without exception, impersonal. I never knew him to rejoice outwardly in the downfall of an enemy. When anxious or troubled he would turn to his books and, having the power of concentration, would soon be lost to the world and worry in working out some intricate research in Sanskrit or in tracing the derivation of a word from some Oriental source to its every day use in the vernacular.

The work, however, which furnished him a living was his position as chemist of the Department of Public Charities and Correction and superintendent of the General Drug Department at Bellevue Hospital. These positions alone would test the abilities of any man and it was the necessity for analyzing and inspecting the supplies furnished to all of the hospitals in this great city which gave him the foundation for his work in the United States Pharmacopoeia, and it was undoubtedly his early rising at 5 o'clock in the morning, when he had to go to the dock to test the milk delivered for the hospitals of the city, and his constant, unremitting labor during the day, and his recreation at night poring over his books which shortened his life. He literally burned his candle at both ends.

After the Pharmacopoeia of 1880 was issued, the name of Charles Rice became known to chemists and pharmacists generally throughout the world. His correspondence increased enormously and as he did not know how to save himself labor and give up detail, he insisted upon conducting his correspondence by personally writing by his own hand every letter. These letters will now ever be prized by the recipients. If he could not definitely answer the question propounded by

the respondent, he always made a valuable suggestion, his correspondence came to some book, or the name of someone who could aid the exigency in answering inquiries.

His health broke down several times before his decease, and I shall never forget the last time I saw Charles Rice in life. In answer to a telegram I found him sitting in the library, unable to hold up his head. He had procured a down pillow, had taken out a dozen large books from the bookshelf behind his chair, placed the pillow in the empty space and sat in his chair with his head resting upon the bookshelf. He excused himself for his position, saying it was the only way he could get relief. Naturally I made my visit as short as possible and I left him with a grateful expression on his face and a painful attempt at a smile. Two days afterward I received a telegram that he had passed away.

But now, my dear friends, while I have no desire to make these reminiscences sad or sorrowful, I nevertheless feel it is my duty to place on record this contribution to one of the greatest of your countrymen who have left behind them records which can never be blotted out.

I wish, if your time permitted, I could speak of my misadventures of that scholarly critic, Dr. Frederick Hoffman, also your own dignified, even stately, Paul Balluff, and of the solid, patient, and able Neergaard; also of Tseppean of the versatile, kindly Bendiner. You will notice I have referred only to those who have gone before. What shall I say about one who knew intimately all these I have mentioned in this imperfect sketch and who joins me, heart and soul, I know, in all I have said about his friends. I refer, of course, to your beloved member, Gustavus Ramsperger.

In closing, permit me to congratulate the Deutsche Apotheker Verein upon its achievements and particularly upon the work of fostering among those who have come out of their native land to this new country the spirit of working hand in hand with pharmacists of every nationality, contributing

so largely to the upbuilding of American Pharmacy, in which you have taken such an important part and contributed your full share.

### "DRUGGISTS' INDEMNITY INSURANCE."

By. R. S. Keeler, M.D., Vice-President of The Empire State Surety Company, of New York.

This form of insurance was introduced into the United States by the writer in 1893. Policies of like purport were, however, issued to physicians a year or two previous to that time, in England, by a mutual association organized by Lawson Tait, a celebrated surgeon, of Manchester. An apparent increase in the number of damage suits brought against druggists recently has served to make the discussion of Druggists' Liability under the law a matter of more than ordinary interest at this time. Considering the question in its broadest sense and from the insurance man's point of view, I would emphasize the fact that the litigation spirit is abroad in our land, and that suits for damages are accordingly becoming much more numerous than they were a few years ago, and that damages awarded by juries are constantly increasing as respects the amounts awarded. Litigation is encouraged by a class of lawyers who are willing to prosecute claims upon a contingent basis and without regard to merit, expecting to force a compromise from the undefended druggist as the easiest way to avoid publicity, annoyance and expense when a claim is made against him. Many of these suits are brought without a reasonable expectation of collecting damages in Court; but they are none the less annoying and expensive to the druggist, since it is not only a great annoyance to handle a claim for damages, based on some alleged mistake committed in a drug store, but it costs considerable money to win.

The druggist does not know how to gather, arrange and present facts for the defense of a claim of this kind, and even his own private attorney is lacking in the necessary experience in this special branch of the law, to enable him to successfully cope with the damage claim lawyers, who make a business of prosecuting suits of this kind; and if a claim for damages is resisted and goes to trial, the jury may decide against the druggist, who will then find that, while it cost considerable money to win, IT COSTS MORE TO LOSE one of these damage suits; and it is important at this point in the consideration of our subject, to call attention to the fact that, only an insurance company chartered under the laws of one of the States of the Union, as an insurance company, has a legal right to issue a contract or policy which will provide indemnity against loss, if damages are assessed by a jury, as well as to provide for the mere defense of the claim or suits for damages brought against a druggist, and that any contract purporting to furnish protection to the druggist must fall short of his actual needs, if it does not provide a fixed limit of liability upon the part of the company, for loss resulting from the legal liability of the druggist, for damages growing out of errors or mistakes made in the conduct of his business.

The commercial reporting agencies will be very apt to give a better rating to a druggist who is not exposed to the risk of serious impairment of his working capital, by reason of judgments rendered against him for damages, than they would give him under other circumstances; and a Druggists' Indemnity Policy fulfills this requirement, because if a claim is made against the druggist, the insurance company is to be immediately notified, whereupon it undertakes the thorough investigation of the claim, the collection and preservation of evidence and the adjustment and settlement of the claim; (not, however, unless the druggist himself is willing to have the claim settled, because his reputation may be at stake, and he may want a vindication, rather than a compromise in settlement) or if it is found necessary or advisable to contest the claim in Court, the insurance company, with the services of its expert attorneys, assumes the defense, and if a verdict is rendered against the druggist for damages, liquidates such damages within the limit of liability named in its policy.

A large number of cases have been before the Courts in different sections of the country; and it may serve to impress upon druggists the dangers which encompass them to refer briefly to the more important questions that have been settled by the Courts, and the citations following in parenthesis refer

to cases which have been decided by the Courts in the respective States, which cases will be found in the official reports printed for the convenience of lawyers, and usually finding a place in the lawyer's library:

The rule laid down by the Courts is that a pharmacist or druggist is required to exercise the highest degree of care to guard against any injury to others (Elkin vs. McKee, 79 Pa. 493; Schubert vs. Clark & Co., 15 Lawyers' Reports Annotated 818). Where an individual or a firm is engaged in the sale of drugs, there is an implied warranty with every sale, that the article sold is of the kind and character asked for by the buyer, and sold by the vendor (Hoover vs. Peters, 18 Mich. 51).

It is the duty of pharmacists and druggists to know the properties of drugs and medicines they sell, and they are liable in damages for negligence or ignorance in allowing poisonous drugs to be mixed in a prescription (Fleet vs. Hollenkemp, 52 Ky. 219). A wholesale druggist selling Belladonna that is labelled "Dandelion" by his agent in preparing drugs for market, and is sold for Dandelion, is liable to a party injured thereby, although the drug so labelled has passed through the hands of several dealers (Thomas vs. Winchester, 6 N. Y. 397). Where a merchant or druggist sells a harmful, poisonous drug to one person for a medicine which is harmless, by mistake, and it is taken for medicine without negligence by a third person, the druggist is liable to such third person for damage resulting to him therefrom (Peters vs. Johnson, Jackson & Co., 50 W. Va. 644). Where a wholesale druggist delivers to a retail druggist a package of Tartaric Acid labelled "Rochelle Salts," and the retailer breaks the package and sells a part of the contents as Rochelle Salts, the latter will be liable for injury resulting to the purchaser from taking the drug (Howes vs. Rose, 13 Ind. App. 674).

The use of Strychnine in filling a prescription, calling for a preparation of Camphor, establishes negligence, for which the druggist is liable (Minner vs. Scherph, 5 N. Y. S. 851). The druggist is liable for the mistake of a clerk employed by the druggist's brother in his absence (McNabb vs. Hastings, 22 La. Ann. 713). One selling Sulphate of Zinc for Epsom Salt is liable for any damage caused thereby (Walton vs. Booth, 34 La. Ann. 913). Where a druggist or his assistant sells Extract of Belladonna for Extract of Dandelion, and the purchaser sustains injury, the druggist is liable (Smith vs. Hayes, 23 Ill. App. 244). A druggist injuring one in his store by an explosion of a mixture, which he was compounding, is liable, if he fail to exercise the utmost care to avoid the injury, where the mixture was such that a well educated druggist should reasonably suspect danger from an explosion (Kerr vs. Clason, 2 Ohio 695).

Defendant, an Apothecary, by his assistant, sold as and for Tincture of Rhubarb (a harmless and well-known medicine) 2 oz. of Tincture of Opium, of whom he procured it for the purpose of administering and did administer it to his servant, from the effects of which the servant died; held the druggist was liable without regard to the question of privity of contract between the parties (Norton vs. Sewall, 106 Mass. 143). In an action against a druggist for alleged negligence in the sale of a drug, evidence that he was a careful and busy man in the handling of medicines and poisons is not admissible (Hall vs. Rankin, 87 Iowa 261). Where a druggist, by mistake, put up in packages a quantity of deadly poison, and labelled these with the name of a harmless medicine, and put the packages upon the market, it was held that he was liable in damages after one of the packages had passed through several hands to an apothecary, of whom the plaintiff purchased it and administered it to his wife, who used it as a harmless medicine, being deceived by the false label (Raff vs. Sommerbeck, 94 Iowa 656).

An apothecary who sold a bottle of liquid made up of ingredients known only to himself, representing it to be fit to be used in washing the hair, was held to be liable for injury, resulting to the purchaser's wife, from her using it for that purpose (George vs. Shivington, Lr. 5 Exch. 1).

Several companies engaged in casualty insurance are offering Druggists' Indemnity or Liability Insurance, the premium charge being merely a nominal sum, compared with the cost of a lawyer's fees in a single case, and it would therefore seem that no druggist can afford to do without this insurance.

It is not worth while to have the good opinion of a man who insists you shall accept all his opinions as good.

## QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

### Antiseptine.

(C. B. D.)—"Antiseptine" is a pharmaceutical specialty manufactured by Nelson, Baker & Co., of Detroit, Mich., who state that it "represents the combined antiseptic values of baptisia, eucalyptus, gaultheria, mentha arvensis and thyme, with benzoic and boric acids." It is recommended for use as an antiseptic dressing, gargle or spray. We cannot give the working formula.

Under the name of "antiseptin" (no final e) Coblentz (Newer Remedies, 4th ed., 1908), cites two preparations, one a "mixture of zinc sulphate, 85 parts, zinc iodide, 2.5 parts; thymol, 2.5 parts; boric acid, 10 parts (S. Radlauer, Berlin)," and the other "an animal prophylactic and curative solution containing 40 per cent of zinc sulphate and 4 per cent of alum in water (Schwarzlose)."

### Use of General Guaranty Legend in Oklahoma.

(H. B.)—"Please answer the following questions: I am a physician, graduated from Turin, Italy, and now registered and practicing in the State of Oklahoma; for the benefit of my many patients I have occasion to send to nearby places bottles of my medicines such as (1) cod liver oil (olio di fegato di merluzzo); (2) cod liver oil with hypophosphites of lime and soda; (3) wine and cod liver oil; (4) anti-malaric (quinine, methylene blue and syrup), and (5) Catramina (syrup of tar oil with ammonia, a cough medicine). These medicines are manufactured by myself and I would like to know if I could send them within the State and into other States without the guaranty of the Secretary of Agriculture and without my name appearing on the label, the words 'Italian Laboratory' being used instead of the name of the manufacturer."

The provisions of the Oklahoma Food and Drugs Law are essentially the same as those of the Federal Act. Under either law the preparations manufactured by you must conform to the law as to labeling and carry the declaration required as to alcoholic content, narcotic drugs, etc. The filing of a general guaranty with the Secretary of Agriculture is not mandatory upon any manufacturer. If the manufacturer can sell his products without guaranteeing them, he is at liberty to do so, but should such products be afterwards condemned, the responsibility rests upon him in whose possession the goods are found.

We see no objection to the use of the name "Italian Laboratory" as the name of the manufacturer of your products if you will give the name a legal existence by registering it under the laws of your State. Otherwise the use of the name might be held to be illegal. Please note that the Secretary of Agriculture does not guarantee any product. The law merely provides that you may file your guaranty with him. See reply to "subscriber" elsewhere in this department.

### Mist. Lini.

(J. J. B.)—"I saw a formula in THE PHARMACEUTICAL ERA recently for 'mist. lini.' I now write asking if it is possible for you to find a formula for the same which was published in the Medical Journal about eight or ten years ago. I have never been able to run across a formula like it. If you can help me out you will oblige me by publishing the formula."

There are so many medical journals that it is difficult to determine which is the "medical journal" referred to in the

above query. However, the following formula was published in a number of medical journals ten or twelve years ago under the title "Mistura Olei Linl":

Oleum linl. ....	300 Cc.
Oleum gaultherie .....	5 Cc.
Oleum cinnam. ....	5 Cc.
Acidi hydrocyan. dil. ....	5 Cc.
Glycerium .....	15 Cc.
Syrupus .....	200 Cc.
Mucil. chondri (N.F.) q. s. ad. ....	1000 Cc.

Dose: 1 to 4 fluid drams.

#### Depilatory in Powder Form.

(H. J. F.)—The following formula, employed in Bellevue and other hospitals in this city, for removing hair from the skin previous to operations will probably answer:

Barium sulphide .....	3 parts.
Wheat starch .....	1 part.
Water .....	q. s.

The barium sulphide must be as fresh as possible, and not have become oxidized by exposure to the air. The mixed powders are to be made into a paste with water and applied in a moderately thick layer to the parts to be denuded of hair, the excess of the latter having previously been trimmed off with the scissors. From time to time a small part of the surface should be examined, and when it is seen that the hair can be removed, the mass should be washed off.

Another formula calls for: Barium sulphide, 2 drams; zinc oxide, 3 drams; powdered starch, 3 drams. These ingredients are similarly mixed and made into a paste with warm water when required for use. The paste is applied and allowed to remain from one to five minutes, when it is removed by scraping with a paper knife or other blunt-edged blade. The denuded surface is then washed with warm water and some emollient dressing applied. The operation needs to be repeated from time to time.

#### Coloring Kerosene Red.

(E. C. M.)—Some years ago M. A. Rawson, of La Crosse, Wis., wrote to the ERA that he had used alkaneft for coloring kerosene with excellent results. His plan is simply to tie up the root in a coarse cloth and suspend it in the oil. Oil-soluble aniline of the desired shade has also been recommended.

#### Sweeping Compound.

(C. M.)—Some of the so-called sweeping compounds on the market are nothing more than admixtures of sawdust, sand, etc., the specifications of one patent we have seen calling for sand, 50; sawdust, 20; oil 5; hardwood ashes, 8; and sal-ammoniac, 2 parts. Other compounds seem to be sawdust saturated with soap solution, then dried and mixed with sand. Possibly some reader can contribute a practical working formula.

#### General Guaranty and Serial Number.

(Subscriber.)—"On requesting a serial number from the Secretary of Agriculture must I state the number or the names of the preparations I intend to manufacture? In case I manufacture different articles under different names, as for instance, some under..... Chemical Company, some under my own name and others under the store name, must I have a serial number for each firm or name used on the labels or will one number cover all of them?"

Your first question is very fully answered in the text of Food Inspection Decision No. 96. In the first place you must file a general guaranty in which the articles to be guaranteed may be referred to in the following way: (1) by name; (2) by use of general terms. For example, proprietary medicines, extracts, carbonated waters, etc., using the proper terms to cover the line or lines sold, and (3) by stating in the space reserved for listing articles, "all articles which are now or which may hereafter be manufactured, packed or distributed or sold by....." in which case the serial number can be used on all food or drugs, subject to the act, manufactured or owned and sold by the guarantor.

The answer to your second question comes within the scope of Regulation No. 18, to the effect that the names of imaginary manufacturers or companies and fictitious addresses on labels are not permitted. If any names and addresses

are given they must be the true names and addresses, otherwise the articles bearing labels containing such names would be held as misbranded. It is not the policy of the government authorities to assign serial numbers to individuals or corporations which have no legal existence. For this reason we do not think it will be possible for you to secure one serial number which may be indiscriminately used under the several names you propose.

#### "I WILL CREED" MAKES A HIT IN ST. LOUIS.

Many Students Stop Smoking to Prove That They Can Do So and Sign a Golden Rule Pledge.

ST. LOUIS, Feb. 27.—Prof. William Hamilton Lamont, of the Commercial Pharmacy Department of the St. Louis C.P., is introducing a "will power" test into his lectures, illustrative of what determination and self-control mean. His first test was a four weeks non-smoking contest. Forty-eight of the class of 72 were acknowledged smokers. Following an example set by Mr. Lamont they decided to stop smoking for four weeks to indicate that they had full control of appetite and body. Only nine were cigarette smokers. No penalty is attached, only truthful reports asked. While the test is not concluded, it seems that reports will be very complimentary to the self-control of the class.

In keeping with the determination test, an "I Will Creed" has been circulated. Each member of the class has signed it. The subject as presented to the class follows:

Realizing the inestimable value of honest business conduct and the strict appreciation of truth in all my actions, deeds and thoughts.

Believing in the possibilities of self-advancement and self-improvement through the acquisition and proper development of the Fundamental Essential to Successful Business, and feeling that a permanent good will result from introduction to, and retention in my business life, I herewith subscribe my name to the

#### I WILL CREED.

- 1 WILL—Respect my profession, my employer and myself.
- 1 WILL—Be honest and fair with my employer and expect in return his implicit confidence and support.
- 1 WILL—Be Loyal and Just and never speak of him disparagingly or criticize him publicly.
- 1 WILL—Enhance the value of his Reputation by my good work.
- 1 WILL—Be a trustworthy custodian of his goods and cash, and use every effort to preserve the dignity of the profession.
- 1 WILL—Base my expectation of reward upon the class of service rendered, and pay the price of success in honest effort.
- 1 WILL—Meet my duties with a smile and enter upon my work with cheerfulness.
- 1 WILL—Find time to do everything needful by never allowing time to find me unemployed.
- 1 WILL—Earn money and save it, by avoiding expensive and unnecessary amusements.
- 1 WILL—Avoid dissipation in all forms and guard my health, because a healthy body may acquire a healthy mind.
- 1 WILL—Mix brains with my work and handle the customers along correct and proper lines, remembering that plenty of satisfied customers is the best evidence of good business.
- 1 WILL—Make good business—clean business, by following the Golden Rule, which makes me Just and Honest and Truthful to my fellow man.

#### N.Y.C.P. Election to Be Held on March 16.

The annual meeting of the New York College of Pharmacy, Columbia University, will be held at 8 p. m. on Tuesday, March 16. The nominating committee has prepared the following ballot: For president, Nicholas Murray Butler; for 1st vice-president, Charles F. Chandler; for 2d vice-president, Herbert D. Robbins; for 3d vice-president, Wm. Jay Schieffelin; for treasurer, Clarence O. Bigelow; for secretary, Thomas F. Main; for assistant secretary, Edward W. Runyon; for trustees to serve three years, Thos P. Cook, Arthur H. Elliott, Heironimus A. Herold, Albert Plant, George H. Hitchcock; for trustee to serve one year, F. W. Schoonmaker.

#### Michigan State Pharmaceutical Association.

The Michigan Pharmaceutical Association will meet at the Wayne Hotel, Detroit, June 22-24. The following committee on entertainment has been appointed by the Detroit R.D.A. to co-operate with the Pharmaceutical Travelers in providing entertainment: W. C. M. Scott, chairman; J. W. T. Knox, R. A. Carmichael, M. E. Keyes, J. Greenhalgh. The legislative committee of the State association, is working for the passage of an Itinerant Vendors' Bill, a strict Cocaine Law, a Pure Drug Law and some amendments to the Pharmacy Law.

## PERSONAL MENTION

—C. C. WARD, of Crisfield, Md., has purchased an auto.  
—J. W. BREHM, of Pittsburg, is spending a few weeks on a hunting trip in Virginia.

—J. J. LORGE, druggist at Eagle, Wis., was a visitor recently at the offices of the Milwaukee Drug Company.

—CARL LORENZ, a prominent druggist of Philadelphia, is slowly recovering from a three months' spell of sickness.

—H. G. SXYDER, chief clerk for the May Drug Company, at Pittsburg, accompanied by his wife, is sojourning in Florida.

—WILLIAM E. LEE and Mrs. Lee, of Philadelphia, were the guests of Mr. and Mrs. W. H. Bradbury, of Washington, during inaugural week.

—J. E. PORTER will lay aside the responsibilities of his Pittsburg pharmacy and will spend several weeks on a hunting trip in Oklahoma.

—DR. J. H. BEAL, vice-dean of the Pittsburg College of Pharmacy, has resumed his duties after an absence of a week, during which time he was on the sick list.

—FRIENDS of Arthur J. Luebke, well-known North Side druggist, Milwaukee, are making a campaign for his election as one of the directors of the Milwaukee schools.

—HOWARD BAER, a well known Philadelphia druggist, escaped the raw weather of last week by taking a trip to Bermuda. He will be absent for several weeks.

—NICHOLAS FLOURNOY, of Richmond, Va., conducting a pharmacy at Amelia Courthouse, is ill at his home in the former place. At last advises his condition was improved.

—JAMES M. O'BRIEN, formerly with Baner & Black in southern New England, has accepted a position with Eli Lilly & Co. and will call on the retail trade of a part of New York City.

—CORNELIUS ZACHEL, formerly of Manitowoc, Wis., now engaged in the drug business at Pewaukee, Wis., has just moved into a handsome new store building, recently completed for him.

—J. A. FOLEY, buyer for the Kauffmann-Lattimer Company, of Columbus, Ohio, is on a week's tour in the East and has been calling upon the trade in New York City for the past few days.

—HARRY L. TUCKER, one of the originators of the Orient Theatre, in Ocala, Fla., has returned to the drug business and accepted a position with the Green & Bentley Drug Co. in that city.

—DR. AND MRS. R. KINDIG, of Frankford and Girard avenues, Philadelphia, attended the inauguration ball at Washington and afterwards went to Old Point Comfort for a week's sojourn.

—SIDNEY C. YEOHANS, president of the C.R.D.A., left Chicago last week for a two weeks' trip. His itinerary includes New York and points in Canada, where he will spend some time with relatives.

—SAMUEL W. RICHARDSON, pharmacist in the United States Public Health and Marine Hospital Service, stationed at Buffalo, N. Y., was a recent visitor in New Orleans, where he was formerly stationed.

—R. L. VAN DEVANTER, who is city tax collector of Hagerstown has been much improved in health by sojourning in the mountains. He was at home recently for a brief time looking after pressing business matters.

—SAMUEL FELDMAN, a Philadelphia druggist, has deserted pharmacy for the real estate business in which he has already had considerable experience. He has sold his store at Sixth and Tasker streets, that city, to M. and E. Goldstein.

—E. G. NEUMEISTER, former manager and part owner of the Union Drug Company, at Appleton, Wis., was a recent Milwaukee visitor. Mr. Neumeister has been living on his farm at Sheboygan, Wis., of late and is now much improved in health.

—DR. A. R. L. DOHME, of Sharp & Dohme, is making an extensive cruise in Southern waters for rest and recreation. The trip includes stop overs at Cuba and Jamaica, besides the Windward Islands, where Dr. Dohme expects to sojourn for several weeks.

—ALBERT PLAUT, of Lehn & Fink, is planning a trip to Europe and intends to sail March 23 on the Hamburg-Amer-

ican liner Kronprinzessin Cecilie. The trip will include visits to Italy, Germany, England, France and Spain and cover a period of over three months.

—WALTER P. BROWN, State Senator in Iowa from Marshall County, was formerly employed in a drug store in Atchison. He is now in the hardware business at Blue Rapids and puts into his efforts, both legislative and private, all the vigor he can muster, with drug store hours the limit.

—WILLIAM MCINTYRE, nestor of the Philadelphia drug trade, took part in the inaugural ceremonies at Washington. In the ranks of one of the Philadelphia marching clubs he tramped in the rain and plowed through slush, and after it was all over was as strong and cherry as an enthusiastic boy.

—CHRISTIAN WIDULE, well known druggist of Milwaukee, Wis., recently celebrated the eleventh anniversary of his installation as assistant postmaster of Milwaukee. Mr. Widule, who has given Milwaukee a most efficient administration, was appointed by former Postmaster E. R. Stillman, succeeding John J. Somers. He has served in this position longer than any former incumbent.

—DR. ENNO SANDER, St. Louis' "Grand Old Man of Pharmacy," celebrated his 87th birthday Feb. 27, at the Washington Hotel in that city. He had planned no special observance but was kept busy the entire day receiving messages, callers and answering congratulations. Dr. Sander has been elected a member of the Chicago Veteran Druggists' Association and last year received a banquet of 50 carnations. This year he received from each member of that association a special message, all sent in the form of a special letter, which was presented as a bunch of "carnations."

—A. D. HORLICK, manufacturer of Horlick's Malted Milk, and mayor of Racine, has announced his candidacy for reelection as mayor of the city. For the first time in the history of Racine, Democrats joined with Republicans on a committee of twelve to wait upon the mayor for the purpose of inducing him to again allow his name to be used at the polls. So anxious were the citizens of Racine that Mr. Horlick succeed himself as mayor that a general mass meeting was held to consider the matter. As soon as the nomination papers of Mayor Horlick were put in circulation, the necessary number of signatures was secured. The election of the popular manufacturer is an assured fact, say his many friends.

### Marriage Mentions.

—A. J. SCHWARZ, of Wota, Iowa, and bride have returned from their wedding tour.

—WILLIAM J. SIMPSON, manager of a drug store in Youngstown, O., has been united in marriage with Miss Lela A. Graber, of Mansfield.

—WILMER J. WEAVER, of Strasburg, Pa., and Miss Lydia E. Bonner, of Reading are enjoying a honeymoon trip through the South following their recent wedding.

—FRED C. BELLEMORE, a Windsor, Ont., druggist and Miss Julie C. Sullivan, a Detroit nurse, were recently married in St. Peter and Paul's Cathedral, Rev. John A. Gabriels officiating.

—ARZA FURBEE, a popular druggist of Keyser, W. Va., and member of the firm of Wells & Furbee, was married to Miss Hannah Iren Lauck, at the home of the bride in Keyser on February 26.

—PATRICK W. WHIP, a druggist of Stamford, Ky., was united in marriage February 24 with Miss Mayme Tilford, a school teacher at Home City, a suburb of Cincinnati. Rev. Dr. Wiant officiated.

—HENRY BAARS, druggist at 2822 Bardstown road, Louisville, Ky., has left the ranks of the bachelors. He was married on Washington's Birthday to Miss Brockmann, a talented young lady of that city.

### Manchester Druggists Entertain Lowell Friends.

LOWELL, Mass., March 6.—Five local druggists were well entertained by the druggists of Manchester, N. H., recently, at the Riverside Inn, Hooksett, N. H. The occasion was the annual reunion of the employers and employees in the Manchester stores, some 150 of them going to Hooksett in special electric. Dinner was served at 5 o'clock. After that there was speck-making.

The Lowell men who enjoyed the affair were: Charles E. Carter, Frank P. Goodale, Hilding C. Peterson, Edward Ellingwood and Pierre N. Brunelle.

## NEW YORKER NOW ON N.F. COMMITTEE.

Joint Meeting in April—Students at the Next New York Branch Session—Appreciation by Dr. Wiley.

George H. Hitchcock, member of the council of the A.Ph.A., announced at Monday night's meeting of the New York Branch, that the agitation to have a New York member on the N.F. Committee, had finally resulted in the election of Otto Raubenhöfner, in the place of Joseph W. England, who resigned to give New York a place upon the committee.

Mr. Hitchcock, as chairman of the committee for joint meetings with physicians, also announced that the proposed joint meeting of the branch with the County Medical Society would probably take place the latter part of April, at the Academy of Medicine, and that his committee, together with that from the medical society were now working on a programme.

Chairman Jacob Diner stated that the next meeting would be the so-called students' meeting, to be held for the purpose of enthusing young graduates in association work and if possible secure them as members. Mr. Diner stated that it was proposed to have a ten minutes' review of each of the leading Pharmacopoeias of the world by various competent persons, while the students would demonstrate several assay processes from some of the Pharmacopoeias. The students from at least three colleges of pharmacy were to be invited.

A communication from Dr. Wiley was read, in which his thanks and appreciation were expressed to the branch for the resolution endorsing his work in the Bureau of Chemistry.

Joseph Weinstein, treasurer, announced that the resources were still above the \$25 mark, there being a balance on hand of \$54.89.

The papers of the evening, "Business Methods in the Drug Store," by Dr. Julius Jungmann, and "Card Signs in Drug Stores," by Caswell A. Mayo, were both read by Mr. Mayo, Dr. Jungmann being absent. They related entirely to commercial matters as indicated in the titles, and there was a large display of card signs about the room to illustrate the second paper. Methods of making these cards were shown by a card writer who was present. The use of carbonic acid gas as spray in manipulating an air brush was also demonstrated. There was shown a new cigar vending machine, attached to a special show case in which a number of brands could be placed. The machine could be regulated so that coins of various denominations would produce any number of cigars it was desired to give for the value. Both papers were discussed.

## Meeting of Eastern A.Ph.A. Members Desirable.

New York Branch of the A.Ph.A. on Monday evening discussed the suggestions of Prof. Henry P. Hynson, of Baltimore, that a joint meeting of the eastern branches of the parent body be held in Atlantic City in June.

It was explained that the American Medical Association would be in session at the time of the proposed meeting and that the Philadelphia branch was working upon an exhibit of U.S.P. and N.F. preparations to be displayed during that convention. It was also brought out that it was not the intention to detract in any manner from the regular convention of the parent organization which will be held later in Los Angeles, but by such a meeting as the one proposed, to grasp the opportunity to confer and bring certain matters before the large number of doctors who would be present at the convention of the A.M.A., besides the getting together of a number of the eastern members of the A.Ph.A., who would find it impossible to go to Los Angeles.

A communication was received from John K. Thum, of the Philadelphia branch, asking for contributions from the individual members of the New York branch toward the exhibit which the former branch intended to display at Atlantic City, but after a short discussion it was decided to submit this matter together with the suggestion of Professor Hynson to the committee on professional relations, with instructions to take the matter up with the respective parties and report at the next meeting.

There was a strong sentiment that some meeting of the kind proposed should be held and that regarding the exhibit if the branches were asked to contribute all should have some credit and part in the same.

## OBITUARY.

## James S. Magnus Stricken in Broadway, New York.

James S. Magnus, for more than twelve years a salesman connected with Bruen, Ritchey & Co., wholesale druggists, New York City, died suddenly from heart disease on February 24. He was in the 46th year of his age. Mr. Magnus, who had recently recovered from an attack of grip and had been out only a few days, was walking in Broadway when he collapsed. He was taken to the Milhaus Pharmacy where he expired a few minutes later. His wife and a son survive him. During the last few years Mr. Magnus covered Manhattan and Brooklyn Boroughs of New York City for his firm.

## George V. Marshall, Retired Wholesaler.

CHICAGO, March 6.—George V. Marshall, connected with the Chicago drug trade for over 18 years, died Wednesday at his home, 149 Warren avenue, of the infirmities due to old age. He was born in Westchester, N. Y., in 1828 and came to Chicago in 1880, becoming connected with Morrison, Plummer & Co., wholesale druggists. He was with that firm until the time of his retirement in 1898. Since then he has been interested in a fruit farm in Sagautuck, Mich. He is survived by a widow, four daughters and three sons.

## Addington LaDow, of Philadelphia.

PHILADELPHIA, March 6.—Addington LaDow, one of the best known retail druggists in Philadelphia, and the proprietor of a chain of stores, is dead, aged 39 years. He had been in poor health for years and had taken trips to various health resorts in the hope that his tubercular trouble would be benefited. He was a graduate of the Philadelphia College of Pharmacy, a member of the Philadelphia Association of Retail Druggists, the Drug Club, and of numerous other business and social organizations.

## Obituary Notes.

—B. A. BARRETT, formerly in the drug business in North Topeka, Kas., died recently in Fulton, Ill., aged 85.

—S. P. BAIRD, a retired druggist of Carlisle, Ky., died recently at the age of 76. A widow and three children survive.

—EDWARD SCHULTZ, died of liver complaint recently in San Antonio, Tex., aged 61. He came from Germany 30 years ago.

—F. M. SCOTT died recently in Mexico, according to information received by his former partner in the drug business in Ithaca, Mich.

—DR. J. H. McCALL, Quitman, Ga., is dead, aged 72. He served with distinction in the Confederate Army and was a prominent citizen of his section.

—WILLIAM SCHOOLEY, JR., formerly a Buffalo (N. Y.) druggist and later of Port Colborne, Ont., is dead at Rochester, N. Y. Pneumonia was the cause.

—CHARLES L. BARTLETT, president of the Orange Chemical Company, of Chicago, died at his home in that city last Sunday of heart failure. The body has been interred at Syracuse, N. Y.

—G. H. DRURY, who died in Nashville last month, was one of the most popular traveling men who visited that section. Mr. Drury had represented the Billings-Clapp Company, of Boston, for many years.

—WILLIAM B. FOLKS, formerly a well known retailer of Atlanta (Ga.), and afterwards of Stone Mountain, died recently after a long illness in the Presbyterian Hospital in the former place. He was 38 and is survived by a wife and three daughters.

—FRANCIS N. MUTH, aged 79, for many years connected with the wholesale drug firm of Muth Bros. & Co., and before that in the employ of Thomsen & Muth, is dead in Baltimore, due to the infirmities of age. His identification with the drug trade extended over half a century. George A. Muth, a son, is also with Muth Bros. & Co.

—DR. N. H. LONGABOUGH, aged 86, died recently of old age at the home of his daughter in Camden, N. J. He was graduated from the U. of P. Medical School 60 years ago and was one of the oldest Free Masons in the United States. For many years he conducted a drug store in Norristown, Pa. His wife died last July. A son, living in Philadelphia, William W., survives, in addition to his daughter, Mrs. J. N. Woolman.

## M. F. LYONS NOW HEAD OF THEO. METCALF CO.

## BALTIMORE BRANCH DISCUSSES ELIXIRS.

**After Quarter Century in Its Employ He Becomes President of Famous Boston Drug Institution.**

Boston, March 6.—The control of the Theodore Metcalf Company, of Boston, pharmaceutical chemists and wholesale druggists, has passed into the hands of Michael F. Lyons, Ph.G., who for 25 years has been associated with this famous Boston institution, and who learned the business under the direction of Theodore Metcalf himself. Negotiations for the transfer have been recently completed and Mr. Lyons is now the president and treasurer of the corporation. Edwin W. Shedd, who also has been with the Theodore Metcalf Company for more than a quarter of a century as manufacturing chemist in charge of the laboratory, is the vice-president of the company, and Denis Lyons, a brother of the president, is clerk of the corporation and a director.

The sale of the Theodore Metcalf Company is one of the most important events in the Boston drug world for a long time, for the company occupies a unique position in the history alike of the city of Boston and of pharmacy. Probably few apothecary stores in the world can show, as this store can, prescription books with the numbers running up beyond the million. Few apothecaries in America have such a halo of fame enshrined about it as has Metcalf's, which through a history covering nearly three-quarters of a century, has been the rendezvous of many of the men of medicine, art and letters, who have given to Boston its reputations for culture and learning.

Perhaps there is no better illustration of this than the dinner which was given to Theodore Metcalf, under the auspices of the Boston Druggists' Association on March 29, 1887, the date which marked the 50th anniversary of his starting in business at 39 Tremont street, on the very site which is now occupied by the store, although in the meantime the building has been rebuilt in modern fashion. At that dinner were the mayor of the city of Boston, a representative of the governor of the State, the venerable Dr. Oliver Wendell Holmes, the poet and Harvard professor; William Warren, the actor, and representatives of the Massachusetts Medical Society, and of every large pharmaceutical house in the United States. The committee of arrangements, by the way, Dr. Thomas L. Jenks, Joseph Burnett, and Joel L. Orne, three names illustrious in Massachusetts pharmacy. It was a notable occasion, and it only served to show the rare esteem in which the head of this famous apothecary shop was held.

When that dinner was given, Michael F. Lyons had already been for five years in the employ of the house, and the year before, 1886, when he and a number of other Metcalf clerks were graduated from the Massachusetts College of Pharmacy with the degree of Ph.G., they succeeded in inducing the venerable Mr. Metcalf to sit for his photograph. Mr. Metcalf was then 72 years of age, and although modest in the extreme, he yielded to the appeal of his young clerks, and gave each of them one of his pictures. The picture is the last one he had taken, and is the one which is familiar to students of Boston pharmaceutical history.

Mr. Lyons entered the store of Theodore Metcalf & Co. in 1882, when Thomas Doliber, now of the Mellins Food Company of North America, was Mr. Metcalf's partner. Subsequently a stock company was formed, and the heads of the various departments were taken into the company. Afterward a Maine corporation was formed, and this was succeeded a few years ago by a Massachusetts corporation, the name of Theodore Metcalf continuing to be carried throughout, and the high principles of the founder being likewise maintained.

Mr. Lyons, the new president of the company, was for 20 years the head of the prescription department, and many thousands were put up under his supervision.

**Paper on Medicinal Earths by Herman Schelenz Also**

**Read at the February Meeting.**

BALTIMORE, March 6.—The Baltimore Branch of the American Pharmaceutical Association, at its February meeting, continued the discussion of National Formulary preparations, the elixirs being the special subject. The branch also listened to a paper on "The History of Medicinal Earths and of Katalaplasma Koalini," by Herman Schelenz, the paper being read by Prof. Charles Caspari, Jr. This paper, which refutes the statements that the use of the earths in medicine, particularly as poultices, is of recent origin, was translated by Otto Raubenhaimer, of Brooklyn, N. Y.

In opening the regular discussion President H. P. Hynson reviewed the history of elixirs, their development and their general pharmaceutical principles. He drew particular attention to the fact that a Baltimorean, A. P. Sharp, one of the founders of Sharp & Dohme, originated the first American elixir, that of cinchona, the formula for which appears in the proceedings of the A.Ph.A. of 1858. Dr. Hynson further pointed out that the introduction of elixirs was greatly assisted by the work of two other Baltimoreans, Prof. J. Faris Moore, and Dr. John F. Hancock. Dr. Hynson proposed that the present alcoholic percentage of elixirs be continued, or, if possible, reduced and that similar preparations in which a higher percentage is used necessary be known as aromatic solutions.

M. I. Wilbert, of Washington, a member of the National Formulary Committee, favored the elimination of many elixir formulas, especially those of the compound elixirs, as they are of no credit to American Pharmacy, and, besides, are not used to any extent.

C. L. Meyer reported on some experiments he had made with the purpose of perfecting the formulas of Elixir Viburnum Opulus compound, so as to obtain a permanently clear product, but which were unsuccessful mainly on account of the very complex character of this elixir, it having approximately 16 constituents of every description, which objection applies to several National Formulary elixirs. Mr. Meyer suggested that similar elixirs, such as Elixir Terpin Hydrate, Elixir Terpin Hydrate with Codeine and Elixir Terpin Hydrate with Heroin, should be differently colored to avoid

confusion. The various elixirs were discussed, the following general suggestions being made:

That a note cautioning that elixirs, especially those used as a basis for other elixirs, should be kept a sufficient length of time after manufacture to allow for a complete blend of the flavor and that this note should appear in the next edition of the N.F.

That the alcoholic contents should be decreased wherever possible, glycerin being used where advisable to replace.

That the amount of flavoring material should be decreased in such elixirs, more being prescribed than would dissolve, causing a loss and, in many cases, a too highly flavored preparation.

It was the sense of the meeting that the formulas for the N.F. should be carefully revised and as many eliminated as possible.

H. P. Hynson, the president, occupied the chair at the meeting, and Secretary E. F. Kelly kept a record of the proceedings. The next meeting will be held March 18.

### Negro Druggist Heavily Fined in Louisiana.

SHREVEPORT, Feb. 27.—T. H. Wright, a negro physician and druggist, was convicted in the District Court recently on the charge of violating the prohibition law and was fined \$250 and costs; the total penalty aggregating about \$300. Wright's defense was that he sold the whisky as a drug and that he was ignorant of the law.

MICHAEL F. LYONS, Ph.G.,  
of Boston, Mass.

## BENZOATE OF SODA DECISION IS NO. 104.

New Regulation as Promulgated at Washington Amends Food Inspection Decisions 76 and 89.

Although the secretaries comprising the Board of Food and Drug Inspection at Washington signed the order on March 3, promulgating the benzoate of soda report of the Referee Board of Experts, it was not until the 8th that copies were received in New York City. The order is entitled Food Inspection Decision 104. In addition to the following statement the board prints the findings of the referees substantially as printed in the ERA of January 28, page 100:

The board reports, as a result of three extensive and exhaustive investigations, that benzoate of soda mixed with food is not deleterious or poisonous and is not injurious to health. It having been determined that benzoate of soda mixed with food is not deleterious or poisonous and is not injurious to health, no objection will be raised under the Food and Drugs Act to the use in food of benzoate of soda, provided that each container or package of such food is plainly labeled to show the presence and amount of benzoate of soda. Food Inspection Decisions 76 and 89 are amended accordingly.

In this connection it is also announced that Food Commissioner A. H. Jones, of Illinois, has adopted the decision of the Referee Board of Chemists on benzoate of soda as final and has issued to the drug stores of his State the following circular letter:

The Referee Board of Scientific Experts has reported that "sodium benzoate in large doses (up to 4 grams per day), mixed with the food, has not been found to exert any deleterious effect on the general health, nor to act as a poison in the general acceptance of the term."

"The admixture of sodium benzoate with food in small or large doses has not been found to injuriously affect or impair the quality or nutritive quality of such food."

In view of these findings and the fact that the full report will not be available for some time, it has been decided by the Department that the placard mentioned in bulletin No. 12, stating "The fruits and syrups used at this fountain are preserved with 1-10 of 1 per cent of benzoate of soda," will not be required this season.

A. H. JONES,  
State Food Commissioner.

P. S.—I trust that you will exercise the greatest care in keeping all parts of your store where food is served, prepared or stored in the best possible sanitary condition. During the past year several instances were found in which those parts of the store and soda fountains not exposed to public view were dirty and unsanitary. These matters will be investigated and prosecuted more thoroughly this year than ever before.

## Branch of A.Ph.A. Organized in New Orleans.

NEW ORLEANS, March 6.—The New Orleans Branch of the American Pharmaceutical Association has been organized here with about fifteen charter members, and the prospect is good to increase the membership immediately to thirty or more, there being that many more New Orleans members of the A.Ph.A.

The meeting was called by Adam Wirth after members of the A.Ph.A. had been canvassed, and was held at the New Orleans College of Pharmacy. Mr. Wirth called the meeting to order, stated its purpose and the organization of the branch was proceeded with. F. C. Godbold, the veteran secretary of the State Board of Pharmacy, was elected president; Dr. Philip Asher, dean of the New Orleans College of Pharmacy, was elected vice-president, and J. Guidry, chemist for Finlay, Dicks & Co., was chosen secretary and treasurer. The regular form of organization in force with other local branches was adopted, and the second Monday of the month was fixed as the regular time of meeting.

## Wedgewood Club at Dinner.

BALTIMORE, March 5.—The Wedgewood Club's February session was held at Junker's Hotel. There was a good attendance and the evening was passed most agreeably in discussing an excellent menu, in exchanging sallies of wit and telling stories. Dull care and business matters were rigidly excluded, the time being devoted to the social amenities. Charles Morgan, of Morgan & Millard, presided.

## To Entertain American Chemists' Society in June.

DETROIT, March 6.—The committee appointed to take charge of local matters pertaining to the meeting of the American Chemists' Society here, next June, consists of: W. I. Scoville, of Parke, Davis & Co.; Dr. Frank T. E. Stephenson, of the Detroit College of Medicine, and W. P. Putnam, of the Detroit Testing Laboratories.

## TO ENFORCE THE NEW ANTI-OPIMUM ACT.

Customs Officials and Drug Trade Representatives Confer Regarding the Preparation of Rules.

A conference of the wholesale and importing drug trade and representatives of the Custom Collector's office was held at the United States Custom House in New York City last Monday afternoon, for the purpose of drafting such regulations as might be deemed necessary to carry into effect the Act of Congress prohibiting the use of opium and its derivatives except for medicinal purposes. This act takes effect April 1. Special Deputy W. C. Stuart presided.

There were no regulations adopted, but a number of suggestions were made. These will be drafted by the Department and mailed to the trade for further consideration preliminary to another meeting, which will be held shortly, for the purpose of a final discussion and action on the matter, before a final draft is submitted to the Treasury Department at Washington.

The suggestions agreed upon by those present were that the importation of opium be only in case lots of not less than 100 pounds, as this would tend to eliminate irresponsible parties from the trade. Also that a minimum of 50 ounce and 25 ounce packages be adopted for the weights of morphine and codeine respectively; that some system of permits be issued to importers by the Government, and that the names of importers be registered with the Custom Department.

Several suggestions have also been received by the Custom Department by mail, and it is expected that a number of other suggestions besides those agreed upon at the meeting will be contained in the proposed draft.

## SIXTY NEW MEMBERS FOR ORLEANS P.H.A.

Propaganda Work Gives Impetus to Association—New Telephone Contract Made for Pay Station Service.

NEW ORLEANS, March 6.—The effects of the propaganda work on the Orleans Pharmaceutical Association continue to be felt, fourteen new members being admitted at the last meeting. These, together with those admitted at the previous meeting, have increased the membership of the Association by about sixty. Those admitted at the last meeting are:

Charles A. Walsdorf, Corrollton and Oak streets; Oscar Von Gohren, 1429 Orleans; Louis J. Medola, 523 St. Ann; Peter J. Pretus, 1903 Fourth; C. L. Keppler, 1022 Dryades; Paul J. Croue, Jr., 825 Orleans; Robert Walter Everett, 2300 Marengo; John Fourment, 727 Dublin; P. J. Bertrand, 4739 Baronne; Joseph H. Berner, 2536 Valence; Albert F. Bernius, 5444 Jeanette; L. P. Otto, 828 Oak; J. J. Duggan, 4326 Magazine; William H. Grun, 5469 Dauphine.

The telephone committee reported that it had been unable to obtain better rates from the Cumberland Telephone & Telegraph Company, and it was authorized to contract on the present basis of rates for five years. The druggists of the city, by recent concerted action, replaced their free telephones with pay telephones, six months' trial to be given the plan. The company agreed to divide equally all profits over \$4.50 monthly, and to exact no minimum guarantee from the druggists.

## Election of the St. Louis C.P. Alumni.

ST. LOUIS, March 1.—The Alumni Association of the St. Louis College of Pharmacy, held its annual meeting at the college recently, and after the business was transacted, adjourned to Lippe's restaurant for a banquet. The following officers were elected: Martin J. Noll, president; Otto C. Hanser, first vice-president; Charles Stoermer, second vice-president; Olaf Karbo, secretary; Francis M. Rudi, a former minister in Texas, who recently returned to St. Louis to engage in the drug business, recording secretary; Charles Gietner, treasurer, re-elected for twenty-ninth consecutive term; E. H. Graul, register; Henry Huegel, William H. Lamont, Eugene Kurtz, Dr. O. H. Elbrecht and John C. Thumser, retiring president, executive committee.

## Getting Together in the Smoky City.

PITTSBURG, March 8.—Local pharmacists will be hosts of the physicians at a get-together dinner to be held March 24, 8.30 p. m., at Elks' Hall, Washington street and Cedar avenue, North Side.

H. C. BLAIR, PRESIDENT PHILA. BRANCH A.P.H.A.

### Parent Association Asked to Contribute Toward the Expenses of the Auxiliary Organizations.

PHILADELPHIA, March 6.—Henry C. Blair was elected to the presidency of the Philadelphia Branch of the American Pharmaceutical Association at the recent annual meeting. The other officers elected were: E. M. Borlag, first vice-president; I. V. S. Stanislaus, second vice-president; Ambrose Hunsberger, secretary and treasurer. Mr. Hunsberger was also elected a member of council of the American Pharmaceutical Association.

Upon motion by Joseph W. England, it was resolved to recommend to the parent association that twenty per cent of the annual dues of the local branches be refunded regularly for the purpose of paying the current expenses of the branches. It was declared that such a course would result in the formation of many other branches throughout the country. Another important action was the decision to hold a meeting next Thursday evening at the College of Physicians for the purpose of organizing the proposed scientific section.

A communication from the Washington Branch announced that a good-sized delegation would probably attend the meeting on April 6 of the Philadelphia Branch. President William McIntyre was given a vote of thanks for the able manner in which he had administered the duties of that office during the year.

The papers and discussion were confined to the consideration of the chemistry and methods for determining the purity of volatile oils. The speakers and their subjects were as follows: "Alpha and Beta Ionones," Prof. S. P. Sadler; "Some Recent Work on the Chemistry of Volatile Oils," Prof. I. V. S. Stanislaus; "Preliminary Methods for Determining the Purity of Volatile Oils," Dr. G. L. Pancoast, and W. A. Pearson: "The Use of the Centrifuge in Assaying Volatile Oils," Prof. Frank N. Moerck.

JOHN B. THOMAS PRESIDENT.

**Chosen Head of Alumni Association  
of the University of Maryland.**

BALTIMORE, March 6.—Baltimore druggists are well represented on the General Alumni Association of the University of Maryland, which held its annual meeting this week and elected officers, besides transacting other business. John B. Thomas, of the Thomas & Thompson Co., was elected president, his choice being a highly popular one, and J. W. Westcott, of Hynson, Westcott & Co., was made one of the vice-presidents; H. P. Hynson, of the same firm, being elected a member of the executive committee. The first choice for president was Prof. Charles Caspari, Jr., the widely known permanent secretary of the American Pharmaceutical Association, but he refused positively to take the office, as he has done in various other instances where he was singled out for honors.

The Grahame Society of the Department of Pharmacy, University of Maryland, has been organized in honor of the late Prof. Israel Grahame, by members of the graduating class, with the following officers: President, Robert L. Swain, Delaware; vice-president, Harry O. Ivins, Maryland; secretary-treasurer, L. M. Kantner, West Virginia; committee on entertainment, F. M. Salley, North Carolina; H. O. Ivins, Maryland, and R. W. Wilson, Maryland; committee on scientific studies, D. C. Lisk, North Carolina; L. M. Kennedy, North Carolina, and G. W. Hinton, West Virginia.

### Planning to Entertain Chemists From Abroad.

The next meeting of the temporary committee to arrange for bringing the International Congress of Applied Chemistry to this city in 1912 will be held at the Chemists' Club, on Saturday evening, April 3. Persons interested are requested to communicate with the secretary, H. Schweitzer, 117 Hudson street.

PROF. REMINGTON TO GERMAN APOTHECARIES.

Philadelphia Professor Guest of Honor of the New  
York Society—Addresses and Salamanders.

The meeting rooms of the New Yorker Deutscher Apotheker Verein were filled to overflowing last Thursday evening by members and guests anxious to hear Professor Remington deliver his address on "Germans I Have Known," which appears elsewhere in this issue of the ERA. It was a gala night for all present, every one brimmed over with enthusiasm and the reception accorded the guest of the evening was in the nature of an ovation. A "saluamander," executed under the direction of Emil Roller, was also given in honor of Professor Remington.

Following the address of Professor Remington, several other guests and a few members told briefly of reminiscences brought to mind by the address. Ewen McIntyre, the oldest living graduate of the New York College of Pharmacy and its honorary president, told of the similarity in the founding of his alma mater with that of the Philadelphia College of Pharmacy, which Professor Remington started. Mr. McIntyre was founded by Quakers. Mr. McIntyre stated that this also was the fact in connection with the New York College.

Dr. N. Sulzberger made several references to the influence of the Germans in science and later spoke of their hospitality and sociability. C. Schleussner told some humorous reminiscences about Dr. Charles Rice. Among others who made remarks were Thomas D. McElhenie, President Felix Hirseman and Dr. Wm. C. Alpers.

A communication and a telegram, both expressing greeting to the guest of honor and the society, were received from Wilhelm Bodemann, of Chicago, an honorary member of the Verein. They were read by President Hirsman. Several new members were elected and Robert S. Lehman announced the death of Oscar Carlstedt, who had been a member of the society for over 15 years. An elegant lunch was served about midnight.

## Two New Riker-Jaynes Stores.

Boston, March 8.—Two more drug stores are to be added to the Riker-Jaynes chain of stores in this city and in New York and its vicinity. One will be opened April 1, at 146 Tremont street, Boston, and the other will be opened

shortly afterward in Newark, N. J. The Boston store, so the management announces, will be the handsomest drug store in this part of the country. The location is almost directly opposite the Park street entrance to the subway. The general finish will be in mahogany, and the contract has been awarded already for a 30-foot Becker fountain.

### Miss Dow Buys a Large Building.

CINCINNATI, March 1.—Miss Cora M. Dow, owner of nine retail drug stores in Cincinnati, has purchased the property at the northwest corner of Fourth and Main streets from Henry Burkhold. The price was \$121,500. The ground rent is \$100,000 at an interest rate of 4 per cent. The property has a frontage of 60 feet on Fourth street and 45 on Main. The price amounts to something over \$2000 a front foot. Miss Dow has a retail drug store in the first floor of the big building, and says she will not take any steps at present to alter or add to the building. She says she bought it for her mother. There was some talk some time ago of a skyscraper being erected on this site.

Entertainment for Dr. Hugo Schweitzer.

An entertainment will be tendered Dr. Hugo Schweitzer by a number of his friends tomorrow evening at Liederkrantz Hall, 111 East 58th street, New York, in celebration of the 25th anniversary of his doctorate, the 20th anniversary of his landing in America, and the 15th anniversary of his selection as secretary of the Society of Chemical Industry.

## BOARD EXAMINATIONS

### Massachusetts.

BOSTON, March 6.—In Massachusetts only six applicants were successful out of 35 during the month of February for registration as pharmacists, the smallest percentage for many months. Following are the names of the successful men: Henry J. Doherty, Boston; Ephrem Maden, Fall River; Edmund F. Guertin, Easthampton; Harry Langdon, Somerville; John J. O'Neill, Somerville; Frank W. Rice, Leominster.

Certificates of assistant pharmacists were granted to 17 others as follows: Humphrey Burton, Methuen; James E. Harris, Cambridge; Jeremiah Healy, Fitchburg; Charles H. Knott, Boston; Joseph Musman, Malden; Nathan M. Ovsianik, Boston; George E. Reinhalter, Quincy; Alrick B. Swensson, Melrose; George H. Thomas, Boston; Ray P. Webster, Lowell; William English, Boston; Ernest W. Henderson, Lynn; Francis A. O'Reilly, Lawrence; Claude E. Packard, Beverly; Francis T. Quinn, Lowell; Earl L. Sargent, Lakeport, N. H.; George C. Spaulding, West Somerville.

### New York—Western Branch.

BUFFALO, March 6.—The following passed the February examinations of the Western Branch of the New York State Board of Pharmacy and have been granted licenses:

PHARMACISTS—Benj. R. Abrams, Buffalo; W. F. Brandow, Buffalo; John D. France, Salamanca; George M. Gilbert, Rochester; Merle G. Nye, Buffalo; Walter V. Sartore, Nunda; Genevieve D. Sweeney, Buffalo.

DRUGGISTS—Arthur H. Ayrault, Buffalo; Fern L. Berry, Akron; George H. Bremer, Dunkirk; Don F. Conant, Buffalo; Louis R. Connell, Buffalo; Harold P. Fortune, Buffalo; William G. Harkin, Buffalo; John G. Hart, Buffalo; Charles R. Kingsbury, Buffalo; William P. Webster, Buffalo; David Weinstein, Buffalo.

### Maine.

PORTLAND, March 6.—The names of those who successfully passed the State Board of Pharmacy's examination in this city recently have been given out as follows:

REGISTERED DRUGGISTS—Harry E. Ring, Portland; George H. Earle, Sanford; Albert W. Flint, Bath; Thomas F. Devine, Portland; Lester V. Ashton, Norway; William A. Bennett, Lewiston; J. L. Tewksbury, Auburn; Forrest C. Parker, Lewiston; George A. Wilbur, Freeport.

QUALIFIED ASSISTANT—William R. Rich, Gorham.

### Louisiana.

NEW ORLEANS, March 6.—Secretary F. C. Godbold, of the State Board of Pharmacy, has just announced the result of the regular quarterly examination held Feb. 5 and 6 and conducted by William Levy, chairman; Adam Wirth, C. D. Sauvignet and Mr. Godbold. The following passed as registered pharmacists: L. F. Mitchell, G. O. Grass, O. L. Holloway, E. B. Tanys, A. D. Lehmann, E. M. Nelson, H. C. Thomas, J. M. Montgomery, G. J. Comeaux, F. J. Rollian, L. C. Suss, A. V. Gremillion, J. S. Cohen, G. E. Awcock and A. L. Frank.

The following were successful as qualified assistants: O. A. Dupont, F. B. Camois, L. J. Necalle, B. F. Levy, C. Keppler, S. D. Sturat and W. B. Black.

### Kansas.

ELLSWORTH, March 6.—Secretary W. E. Sherriff, of the Kansas State Board of Pharmacy, announces that of 58 applicants at the February examination the following 34 were successful and have received certificates:

REGISTERED PHARMACISTS—Ray Alfred, Columbus; Albert C. Curtis, Topeka; C. F. Coleman, Fredonia; Franklin H. Durant, Topeka; C. E. Daniel, Topeka; W. R. Frisbey, Delia; Arthur Geyer, Herington; D. D. Hunt, McCracken; M. H. Hoyal, Scott City; Walter W. Jones, Topeka; Nicholas H. Lenz, Rosedale; Edward L. Mason, Parsons; James E. McFarland, Ft. Scott; J. Moore Rutledge, Greenleaf; Arno R. Sasse, Kansas City; Frank G. Smart, Sterling; Clarence C. Steele, Sabetha; R. L. Berkett, Holton; Benson Clark Culp, DeSoto; A. L. Doty, Cunningham; Erle Dewese, Kansas

City; E. H. Eubanks, Topeka; J. Larkin Fields, Kingman; Ralph E. Gray, Kansas City; Mrs. D. D. Hunt, McCracken; John P. Hinkle, Kansas City; Mat Keefer, Kansas City; Martha W. Lewis, Lucas; P. L. Mullins, Kansas City; William Henry Post, Springhill; Charles T. Sapp, Topeka; Attie Schoonhoven, Riley; Bayard G. M. Smith, Kansas City.

REGISTERED ASSISTANT—John T. Wills, Pittsburg.  
REGISTERED ON DIPLOMAS—F. Fabian, Kansas City, Kas.; J. A. Swan, Nat. Military Home; C. L. Walkenwitz, Leavenworth.

The next meeting for examination will be held in Independence May 27 at 9 a. m. Those desiring to take the examination should notify the secretary at least five days before the date of meeting.

### Mississippi.

Mississippi's new State Board of Pharmacy announces through the secretary, L. H. Wilkinson, Jr., that the next examination will be held at Jackson, April 6. An appeal is made to all non-registered druggists to appear and qualify for certificates. Attention is called to the State law regulating the practice of pharmacy and all good citizens are urged to aid the board in enforcing its provisions. The announcement is being widely circulated.

## SWINDLER FRANKFURTER IS UNDER ARREST.

Man Exposed by the ERA is Captured in Detroit and  
Extradited to Omaha for Trial.

Otto Needham Frankfurter, alias Frankfort, a salesman formerly in the employ of the Richardson Drug Company, of Omaha, Neb., and wanted by that concern for embezzling, was captured in Detroit, Mich., last Saturday. He was arrested by detectives on the complaint of the Richardson Drug Company and papers have been issued for his transfer to Omaha. It is reported that he is wanted in Kansas City, St. Louis, Ida Grove, Iowa, besides Omaha. On being arrested Frankfurter admitted his guilt, laying his downfall to the extravagant manner in which he had entertained women, but stated he was neither a drinker nor gambler. He predicted that all would turn out well upon his arrival in Omaha, where he would make an explanation that would clear him.

Frankfurter sold his sample cases and collected bills, but failed to turn over any cash to the house. He is also charged with passing checks signed by fictitious persons, and owing bills to at least a dozen concerns in Omaha.

The ERA published a warning to the trade concerning his character and methods on February 18.

Mr. Weller, of the Richardson Drug Company, states that Frankfurter is one of the cleverest of swindlers, being very bright and a fluent speaker of Spanish, German and English, and adds that had the man been honest he would have had a great future before him.

### Phi Chi Fraternity Changes Name to Phi Delta Chi.

CHICAGO, March 6.—The grand council of the Phi Chi Fraternity met in executive session here this week. On account of conflicting with the medical Phi Chi Fraternity the council voted to change the name to Phi Delta Chi. The grand council will hold its next session at New York. A banquet was tendered the visiting delegates Saturday evening at the College Grill. Dr. Harry Kahn officiated as toastmaster and the following responded to toasts: Prof. H. M. Gordin, Chicago; William E. Clappold, Peoria; Edward Seaside, Ohio; A. E. Buesch, Chicago, and H. M. Erickson, Chicago.

### Druggists Victimized by Counterfeiters.

CHICAGO, March 6.—The police have been hunting for a week for a band of counterfeiters who have victimized a score of grocers and druggists in the vicinity of Twenty-second street, by passing bogus \$1 bills. J. Ritter, a druggist, at 2341 Wentworth avenue, was one of the complainants.

### No More Drug Samples in Madison.

MADISON, Wis., March 1.—The Hobbins ordinance, forbidding the distribution about the streets of "sample" drugs, has been passed by the common council. The measure received support from leading druggists, club women, and citizens in general.

## LOUISVILLE DRUGGISTS ACTIVE IN PREPARING FOR THE 1909 CONVENTION OF THE N.A.R.D.

**Executive Committee Elects Horace Taylor Secretary and Decides on Headquarters.**

LOUISVILLE, March 6.—The executive committee which has charge of all of the arrangements for the coming convention of the N.A.R.D., had its first meeting Tuesday afternoon at the Commercial Club and organized by electing Horace Taylor as secretary, the president of the local association being chairman ex officio. This committee is composed of the chairmen of each of the subordinate committees. The most important business was the report of the committee on hotels, Addison Dimmitt representing this committee. The Seelbach Hotel was chosen unanimously as headquarters.

The Seelbach is one of the most complete, both as to structure and furnishings, in this country. It is all new, the recent addition being completed less than a year ago, while the older portion has only been in use for a few years. No expense has been considered in making it equal to the best that can be found anywhere. It has nearly 200 rooms and is located right in the heart of the busiest retail district. On the top is the roof garden, extending over the entire structure, a portion of which is enclosed with glass, the remainder being open for use at all times during the summer months. The convention proper will hold its meetings in the enclosed portion and adjoining spaces will be used for exhibits extending out into the open portion, which is arranged so that it can be covered to protect the people as well as the exhibits from rain should it be necessary. The hall being about 12 ordinary stories above the street will afford freedom from noise and should be very comfortable in every way. The entire building is fireproof.

The W.O.N.A.R.D. will hold its meetings in the red room of the Seelbach. This room is on the parlor floor and is most luxuriously furnished. It has a seating capacity of about 300 and has adjoining rooms for the use of committees. The members of this organization, as well as the ladies who may attend the convention, can look forward to a most enjoyable time. Horace Taylor, who is chairman of the special committee to look after the entertainment of the ladies, has many things in contemplation, an automobile ride through Cherokee, Iroquois and Shawnee parks and also through the residential portion of the city, which will consume two or three hours, winding up at Fountain Ferry with luncheon, returning through the business portion of the city. A ball, an evening devoted to progressive euchre, with a prize worth contesting for, are also being considered. Every moment that the ladies can spare for entertainment will be filled, according to the plans of the committee.

It was announced at the meeting that the delegates and other druggists who may attend can rest assured that they will not be forgotten, but what shape the entertainment for the male contingent will assume has not been figured out, although the "mint" will be in its prime, sugar plentiful and other requisites obtainable. "Nuf ced," remarked one of the committeemen.

**Appointed as Food and Drug Inspectors.**

BUFFALO, March 1.—Dr. Frederick W. Koehler, of 582 Broadway, has been appointed an inspector of drugs and food in the Health Department. His was the only name on the Civil Service list and he had a percentage of 90.88. Eight other physicians failed to pass the examination.

LINCOLN, Neb., March 1.—D. L. Murray, of Pierce, has been appointed drug and food inspector for the Third district by Governor Shallenberger.

**Catches Thief With Buzzer on Slot Telephone.**

ST. LOUIS, March 6.—James A. Watkins, of 1115 Union boulevard, caught a telephone thief in his store recently by a burglar alarm that he had attached to the coin box on the slot telephone. When Watkins heard the buzzer he started for the front door, beat the thief to it, locked it and then proceeded to tie the thief to hold him securely until a policeman arrived. That the thief escaped from the policeman was no fault of Druggist Watkins.

*Hotel Seelbach, Which Has Been Selected for Headquarters.*

**Wyeth Branch to Be Opened in St. Paul.**

ST. PAUL, Minn., March 6.—John Wyeth & Bro., Philadelphia, is about to open a branch house here at 223 East Fourth street. Soon as necessary improvements have been made the store will be opened.

**Enforcing Anti-Cocaine Law in Chicago.**

CHICAGO, March 6.—Otto Wintermeyer, a druggist at 278 West Madison street, was fined \$75 and costs in the Municipal Court Friday for selling cocaine without a physician's prescription.

# LETTER BOX

## DRUGGIST'S DENATURED ALCOHOL EXPERIENCE.

**Believes Trust is Using Retail Drug Trade as a Cat's Paw—Price Fluctuations—Letter From Dr. Wiley.**

*Editor The Pharmaceutical Era:*

Don't be too enthusiastic in urging druggists to handle denatured alcohol. I have handled it since it was introduced, have talked for it, helped popularize it here at a small profit and now begin to feel the squeeze. I sold it at 60 cents a gallon when it cost 45 cents in order to help swell the sale of the stoves which at that time were sold by a canvasser.

If you remember the first press notices sent out said it would sell for 20 or 30 cents retail. I was obliged to overcome this impression. Then later when I had to pay 53 cents f. o. b. here and raised the price to 75 cents the press notices said it should be retailed for 50 cents. It was sold to me by a trust agent here cheaper than I could get it of my drug jobber and this same trust branch in New Orleans at the time I bought the barrel of its agent here offered it to one of my customers at 50 cents a gallon in 5 gallon lots f. o. b. New Orleans and 50 cents in barrel lots f. o. b. New Orleans.

About this time I started handling stoves, lamps, etc., and had just sold enough to get them introduced when I found my source of supply for them had sold his business or so he said, and the trust agent here got in a supply and offered them to me at the prices I paid in New York.

Now this can all be substantiated, so let us now proceed along suppositious lines and see how things look. A district manager of a large varnish house which is a large producer of wood alcohol told me before the law had gone into effect that I would find that the price of the product would not go below 50 cents, that the Whisky Trust wanted the trade then controlled by the wood alcohol people, that is for use industrially and that the agitation was supported by the Whisky Trust.

What do we find has actually taken place? The price of denatured alcohol is regulated by the price of wood alcohol, always selling 5 cents a gallon cheaper and is not regulated by the cost of the production of denatured; if wood goes up 5 cents denatured goes up the same, so we have this man's prophecy fulfilled.

I enclose a letter which I received in reply to one addressed to the President, as letters addressed to the department had brought unsatisfactory replies.

I am curious to know just who and how many makers of denatured there are.

In this letter it is stated that the price is regulated by the price of corn. The press reports told us it would be made from waste products and here we have a statement that it is made from one of our food products, thus raising the price of corn as well as of the alcohol. However, I challenge the statement that its price is regulated by the price of corn, for the trust is now making it in New Orleans from molasses and further, the fact that denatured is sold always a shade under wood looks queer. There are press reports about unscrupulous druggists selling it at enormous profits. The trust offers it at the price the druggist buys at wholesale and it looks very like they are using the druggist as a cat's paw to introduce it and then to retail it direct to the consumer just as the Standard Oil Company does its products.

Yours truly,

H. L. SQUIRES.

Morgan City, La., Feb. 21.

[Enclosure.]

Mr. Harry L. Squires, Morgan City, La.

DEAR SIR: In reply to your favor of November 26, addressed to the President of the United States, I beg leave to say that it is not to be expected that a practically new material such as denatured alcohol will come into immediate use by large numbers of people, nor that its manufacture will be undertaken immediately by people who have had no previous experience in the manufacture of distilled spirits of any kind. It is a fact, however, that denatured alcohol is being made in this country by several concerns rather than by one firm only. It is true, furthermore, that the Department of Agriculture has accumulated within the last few months, considerable practical information available for farmers with

regard to the manufacture of the foregoing material, and that the Department is likely within a few months more to be able to furnish detailed instructions regarding the most economical method of production.

Centrifugal molasses, as you state, is a very valuable material for the manufacture of alcohol; and it is to be hoped that manufacturers in your part of the country may see their way clear to utilize this cheap and abundant raw material, and that as a result of this action on their part the present price of fifty cents a gallon, due largely to the high price of corn, may be materially reduced.

Respectfully,

H. W. WILEY, Chief.

## Four Weak Points of Some Drug Clerks.

*Editor The Pharmaceutical Era:*

In about all your publications you have editorials comparing clerks and employers, offering suggestions and pointers on salesmanship, advertising display, etc. Unable to remember seeing any articles written by a clerk who is the one behind the gun, this article might be useful to fill in as it is from personal observation which I have had in New York, Boston and Providence in the largest drug companies of the East. I think I have the best dope on how a clerk can make his services indispensable to his employer without any aid from the dope closet.

Results of the pill-mixers, as seen by a dope artist of the same profession who has associated with all the miscellaneous tribes of the pill shop may be included in the following classification of them: boozers, dopers, clock watchers, lady's man and ordinary drug clerks. Seventy per cent of the drug clerks today are weak on one of the first four counts; they are just sliding by but do not know how, yet wondering why their salaries are not raised or why the boss favors other clerks. So they knock the boss and the faithful clerk for no reason in particular, just don't like them. Jealous? No. What then? Unable to give satisfactory explanation.

Add to such a clerk's system, well injected, an ounce of common sense by a persistent, influential and conscientious clerk or boss and an almost instantaneous change will be noticed in this clerk for the good of the store and his associate clerks. Persistency should be the motto of every clerk. With this one word impressed on your mind you are bound to get there. It makes no difference whether you are a soda clerk, salesman or prescription clerk; produce results, no matter how small, for they all count in the long run. Condense your work, don't make any false movements and above all be accurate. The all-around clerk or filler-in for any department is the scarce man of today.

Don't do just what you are told, try to do more—make yourself indispensable to your employer. Two years ago, in a store which employs about 30 clerks, about 10 o'clock in the evening the manager approached a group of nine or ten clerks who were in conversation (not about business), asking if one of them would scatter a few drops of oil on the floor behind the counter. "Nay! nay!" was the vote of the bunch of ornaments. Before the manager could recover from his shock due to the answer to his request a clerk older than any of the others spoken to was oiling the floor of his own free will, soon finishing and returning to a pile of tooth-brushes he was marking. The store was one belonging to a large syndicate and that clerk is now manager of one of its stores in a city in western Massachusetts at a good fat salary and highly respected by all his clerks, as well as the boys. He was once one of the "bunch."

This is only one incident that has been brought to the writer's attention and shows there is always an opening for a good, bright energetic man.

L. H. M.

## A Petty Bill Collection Swindle Exposed.

*Editor The Pharmaceutical Era:*

A number of pharmacists have paid 20 cents for 15 to 25 collection blanks (to be filled in by them) to a smooth fakir on his representation that he would buy all the bad accounts they had at 25 cents on the dollar after they had sent out these formal notices—which are marked copyright in Canada and copyright applied for in the United States. He claimed that by giving the debtor 10 days' notice, exclusive of Sundays and holidays, that then the claim would be beyond dispute by the debtor and that when he bought the bill, he would be able to collect without being bothered by referring to the merchant's

books to prove the bills. Of course he never shows up again. As a matter of fact a judgment from a justice court after standing 20 days cannot be appealed. Copy of form used:

DEAR

.....find on going through.....books that.....  
have a bill against you for.....Unless this is settled  
at once I shall be obliged to sell it to.....  
Toronto, Canada, unless settled before.....  
Yours truly,

Perhaps you can save some brother druggist from being separated from his easy money. I did not bite on this although one druggist and several other merchants did.

X. Y. Z.

#### About Badger Sheboygan Ginger Ale.

The Sheboygan Mineral Water Company was established in 1876, and today is one of the leading concerns in the country in the bottling of Carbonated Mineral Water, Ginger Ale and Beverages. Sheboygan Mineral Water is a product of exceptional merit, is well known, and very popular in all the leading cities. For the Inaugural Ball at Washington this year, Sheboygan Water was selected as the Water to be served at the banquet. This great honor was conferred upon this water because of its pure quality and great popularity.

The celebrated Badger Sheboygan Ginger Ale put up by this firm is a delicious combination of pure Water, Ginger Root Extract and Fruit Flavors, scientifically blended into a most delightful and wholesome beverage. There is refreshment and pleasure in every bottle of Badger Sheboygan Ginger Ale. Nothing enters into its composition but the choicest of pure materials, bottled under perfectly sanitary surroundings, in a modern and up to date plant. There is not the slightest chance for any impurity to enter into the composition of this product. All bottles are perfectly sterilized just before they are filled and the greatest care is taken in every process, until the goods are placed on the market.

The members of this firm have had unlimited experience in the Ginger Ale business and are therefore able to produce a bright and sparkling Ginger Ale with perfect keeping qualities without the aid of preservatives. The style of package is also within keeping with the quality of the goods.

Bottled Beverages of high quality have become very popular during the past year or two and the Sheboygan Mineral Water Company is offering to the Drug and Soda Fountain trade a very attractive proposition. With the first order for Badger Sheboygan Ginger Ale the Company offers a liberal supply of very attractive display advertising material and a half dozen handsome aluminum bottle holders.

#### New York Board of Trade Committees.

The members to serve on the various committees of the Drug Trade Section of The New York Board of Trade and Transportation, for 1909, were appointed last week by Chairman George William Kemp and are as follows:

Executive—Clarence G. Stone, chairman; C. R. Cosby, Charles S. Littell, Dr. Harry C. Lovis, Frederick E. Watermeyer.

Membership—Franklin Black, chairman; Jesse L. Hopkins, Dr. Harry C. Lovis, Paul H. Brickelmaier, O. N. Cammann.

Jobbing Druggists—William P. Ritchey, chairman, and one representative from each jobbing house in the Drug Trade Section.

Legislation—Thomas P. Cook, chairman; Thomas F. Main, Albert Plant, Charles S. Littell, Irving McKesson.

Arbitration—William S. Herschen, chairman; Francis H. Sloan, Herbert D. Robbins, Samuel W. Fairchild, Herbert B. Harding.

Importers of Drugs and Chemicals—Joseph A. Velsor, chairman; J. Frank Stone, Herman A. Metz, J. Edward Young, Jr., James E. Heller.

Manufacturing Chemists—Charles A. Loring, chairman; Thomas J. Parker, George Merck, H. T. Jarrett, John Anderson.

Manufacturing Pharmacists—Mecomb G. Foster, chairman; Ernest Staufen, Horatio N. Fraser, H. Bolt Plauten, R. C. Stoffer.

Importers of Essential Oils—Edwin H. Burr, chairman; C. G. Euler, Joseph Matthias.

#### Larger Plant for Licorice Manufacturers.

BALTIMORE, March 6.—The J. S. Young Co., a branch of the MacAndrews & Forbes Co., licorice manufacturers, with a factory at Boston and Elliott streets, this city, has decided to erect an addition to the plant. The structure will be taken up with the grinding department, the engine room, extractor machinery and the boilers. It will have a length of 200 feet, and the materials will be brick and steel.

#### PHILADELPHIA SENDS \$1000 TO THE N.A.R.D.

Active Campaign on for Increased Membership and Some Important Subjects Discussed by R.D.A.

PHILADELPHIA, March 6.—Loyal support of the national organization was emphasized at the March meeting yesterday of the Philadelphia Association of Retail Druggists at the College of Pharmacy, when a motion to draw an order for \$1000, as a part of the 1909 dues to the N.A.R.D., was carried unanimously.

Some most important suggestions as to the regulations on the sale and storage of gasoline in its relation to insurance were made. Stock taking and the necessity of having an inventory of the goods insured was also discussed and it developed that retail druggists are rather lax in this latter respect and that few had attended to this most important detail in less than five years.

The fact that the P.A.R.D. has been doing propaganda work for the past two years, in the opinion of the members, made it unnecessary to take up the national campaign from the start and it was this adjustment of conditions, the number of circulars and booklets and letters and the number of months during which they were to be sent out that delayed the work for a month or two. It is expected that the campaign of education will be in full swing in this city before April 1.

Chairman J. E. Marsden, of the entertainment committee, announced the minstrel show and dance to be held at Mercantile Hall on April 26, and called for volunteers for "stunts" and specialties.

Attention was called to the cards that are being circulated by one manufacturing company, which a short time ago made a strong bid for popularity through the retail drug trade. In this latter move, they are throwing the drug trade over and through the grocers are making a free-goods offer. Samuel W. Strunk reported the discourteous methods of a Philadelphia manufacturing concern which, by accusing "some druggists" in the city of substituting, sought to have the stores stock up with a bona fide article. Secretary Cozens was instructed to write and question the truth of the substitution charge.

On motion of H. C. Blair, a resolution of congratulation to Christopher Koch, Jr., upon his appointment to membership in the State Pharmaceutical Examining Board was unanimously passed.

Representative J. H. Barlow announced an aggressive membership campaign and asked the members to let him have the names of non-members in their neighborhoods so that he could call on them.

H. W. Hammersback and J. W. Schorpp were elected members.

#### Receivership of Rogers & Pyatt to Be Discontinued.

In the United States Circuit Court Judge Hough has signed an order with regard to the firm of Rogers & Pyatt, Inc., of New York City, which failed some months ago. The order permits the sale of the concern to L. C. Gillespie & Son on an agreement to form a new corporation. The old name, however, can be retained. The officers and amount of capital of the new corporation will not be announced until later, but the incorporation dates from March 1. The receivership it is understood has been very satisfactory, especially from the creditors' point of view.

#### Banner Year Was 1908 for This Company.

DETROIT, March 6.—The eleventh annual meeting of the Ray Chemical Co., resulted in the re-election of the following officers: President, Cornelius N. Ray; vice-president, Gustavus D. Pope; secretary, J. B. Schlottman; treasurer and general manager, Charles T. Miller. The directors consist of the officers above named and Frederick T. Ducharme, Willard Pope and H. A. Burnett. The company reports that 1908 was its banner year.

#### New Fountain and Fixtures for Old Store.

Peters & Boeck, well known Milwaukee druggists who lately purchased the pharmacy of August Von Trott, 441 East Water street, in that city, are planning on making several changes at the pharmacy. New show cases and other equipment, besides a new soda fountain will be installed in the near future.

# BUSINESS RECORD

**Changes in Ownership, New Drug Stores, Incorporations, Fires and Other Commercial Matters of Interest to Wholesale and Retail Merchants.**

Supplement to The Era Druggists' Directory.

**ARKANSAS**—CARLISLE—Dudley & Callahan have opened a new drug store here.

**CALIFORNIA**—BERKELEY—University Pharmacy, 2101 Shattuck avenue, has been succeeded by Mullers Pharmacy and stock moved to 2129 University avenue.

**LOS ANGELES**—Miss Nina C. Edmiston, 3500 Vermont avenue, has moved her stock of drugs to 3127 Vermont avenue.

**NEELES**—Needles Drug Company has been bought by O. D. Collins. Style of firm will not change.

**PORTERVILLE**—Robbins, Charles, Byrd Drug Company, incorporated; capital stock, \$15,000.

**RIVERSIDE**—East Side Pharmacy, 158 East 8th street, E. D. Gibson, proprietor, has moved his stock to the new building, corner 8th and Vine streets.

**CONNECTICUT**—MIDDLETOWN—Bersquist Bros., 588 Main street, have moved their stock of drugs to 226 Main street.

**GEORGIA**—ATLANTA—Jacobs Pharmacy have opened three new drug stores here as follows: 423 Marietta street, Peters and Walker streets, and Mitchell street and Madison avenue.

**ILLINOIS**—CHICAGO—Edna F. Nichols has opened a drug store at 426 East 55th street.

**MIDDLETOWN**—B. E. Crum has bought a half interest with H. T. Anson in the store formerly run by Reed Drug Company. Style of firm will be Crum & Anson.

**PEKIN**—John A. Weber, 437 Court street has been succeeded by Emil Ketterer.

**SPRINGFIELD**—Mathies Drug Company has succeeded M. H. Boland, at 609 South 11th street. C. H. Wineman, manager.

**INDIANA**—ELKHART—F. H. Bentz & Co., 117 South Main street, have been succeeded by C. H. Leonard, who sold the store to them several years ago.

**NOBLESVILLE**—C. L. Mitchell has been succeeded by Haines & Glenn.

**SHOALS**—Samuel H. Ross, store destroyed by fire; loss, \$12,000.

**IOWA**—CENTERVILLE—Appanoose Drug Company, 212 North 12th street, has been succeeded by C. L. Gardner.

**EAGLE GROVE**—Sorenson Drug Company, incorporated; capital stock \$11,000.

**LONE ROCK**—J. E. Gaumer has changed the style of his store to J. E. Gaumer & Co.

**KANSAS**—GARFIELD—Russell Rankin has opened a new drug store here.

**MANKATO**—Weeks Drug Store destroyed by fire.

**MARYSVILLE**—E. D. Vincent has been succeeded by O. N. Berry.

**MILBRED**—Dr. R. Nevitt has opened a new drug store here.

**LOUISIANA**—NEW ORLEANS—E. R. DeBow, Customhouse and Marais streets, out of business.

**MAINE**—WATERVILLE—G. W. Dorr, 118 Main street, deceased. Business will be continued as the Dorr Drug Store. Harry H. Dmbar, proprietor.

**MARYLAND**—BALTIMORE—Henry C. Spetzler, 1016 Druid Hill avenue, has been succeeded by Stokes & Derry.

**MICHIGAN**—CHESANING—Stewart & Meyer and George H. Tristram have been succeeded by Meyers Drug Store.

**DETROIT**—George W. Stringer, 508 Michigan avenue, has been succeeded by John A. Grier, Earl F. Townsend, 1365 Gratiot avenue, has been succeeded by George Mahlmeister.

**PORT AUSTIN**—Port Austin Drug Company, incorporated; capital stock, \$10,000.

**MINNESOTA**—LAKE PARK—M. B. Olson has sold his stock

of drugs to John Nelson, who will move it to his present store.

**MISSISSIPPI**—HATTIESBURG—Peoples Drug Company, store destroyed by fire; loss, \$3000, with about \$2500 insurance.

**NEBRASKA**—NORFOLK—C. F. Haman has been succeeded by Doering Drug Company.

**WINSTON**—W. E. Kaufman opened a new drug store here March 1.

**NEW JERSEY**—JERSEY CITY—J. B. Schaefer, 250 Washington street, store burned out. Mr. Schaefer is now doing business at 583 Summit avenue, formerly William Hornblower.

**NEWARK**—L. D. Greenleaf, 493 Broad street, out of business.

**NEW YORK**—ALBION—Fisk & Freeman have been succeeded by Harris H. Freeman.

**ALBANY**—G. A. Smiley has been succeeded by Clarence R. Cox.

**BATAVIA**—Atchison & Douglass, 102 Main street, has been succeeded by Thomas E. Atchison.

**BROOKLYN**—Israel Berow has opened a new drug store at 4305 13th avenue.—O. Linke, 349 Covert avenue, has bought the stock of O. P. M. Canis, at this address, and moved to 246 Covert avenue.

**BUFFALO**—Henry Frost has opened a new store at 104S Genesee street.—Radder & Wright, 1872 Niagara street, has been succeeded by J. B. Sumner.—A. B. Strode, Main and Exchange streets, has been succeeded by Grove & Langer.

**EAST AUBURN**—Sprague & Cummings have dissolved partnership. E. M. Cummings will continue the business alone.

**HONOLULU**—Harnish Bros. have opened a new drug store here.

**NEW YORK CITY**—Edward F. Pfaff, 277 Lenox avenue, has been succeeded by C. E. Slawson.

**OLEAN**—Hicks & Bryant have dissolved partnership. W. A. Bryant will continue the business alone.

**RIPLEY**—Miller & Haman have been succeeded by R. B. Hannan.

**NORTH CAROLINA**—ROSE HILL—J. F. Blizzard has succeeded the Rose Hill Drug Company.

**OHIO**—BRIDGEPORT—Roberts & Frederick will open a new drug store on March 15.

**SEEBING**—Milo E. Mowry has been succeeded by J. M. Hazen.

**PENNSYLVANIA**—PHILADELPHIA—Clarence L. Bonta, Front street and Wyoming avenue, has been succeeded by A. DeMaire Bartholomew.

**SOUTH CAROLINA**—TRAVELLERS REST—Travelers Rest Drug Company is the style of the new drug store here.

**VIRGINIA**—BIG STONE GAP—Enterprise Drug Company, incorporated; capital stock, \$3000 to \$10,000.

**BLACKSTONE**—Blackstone Drug Company's stock has been bought by Dr. W. E. Anderson, who will move it to Farmville and open a new store. Style of firm will be Anderson Drug Company.

**LAWRENCEVILLE**—Lewis-Mallory Drug Company, incorporated; capital stock, \$3000 to \$5000.

**WISCONSIN**—MADISON—W. G. Heberhart, 835 Main street, has been succeeded by Fred H. Flaughter.

**MIDDLETON**—Tiedeman & Schroeder have dissolved partnership. R. J. Tiedeman will continue the business alone.

## Free Offer of Imported Post Cards.

In view of the fact that the sale of post cards has become an important feature on the commercial side of the drug store, an offer to give free of charge 200 fine imported post cards as a premium is not to be overlooked.

The Chichester Chemical Company, 2315-19 Madison square, Philadelphia, Pa., are offering to supply these cards with every \$16 order for the Chichester Diamond Brand Pills, single or assorted sizes. These cards are said to be quick sellers at three to ten cents each, and consist of 154 choice designs, of which 122 are birthday cards. In figures, this should mean a clear bonus of \$6. This firm also offers to supply the best quality of Pressed Herbs free with orders given through jobbers, providing the purchaser specifies "with herbs." See their advertisement in this issue of the ERA.

If you want anything use the ERA's Want Ads.

## PATENTS, TRADE MARKS, ETC.

## PATENTS.

Granted March 2, 1909.

913,780—Eric A. Starke, Berkeley, Cal. Producing benzene or its homologues from petroleum.

913,840—Daniel J. O'Neil, Chicago, Ill. Non-refillable bottle.

913,887—Navier Hermé, Fruitvale, Cal. Process of preparing carbid of calcium.

913,889—Orel L. Hershisier, Buffalo, N. Y. Beeswax extractor.

913,940—Ludwig Benda, Frankfurt-on-the-Main, Germany, assignor to Farbwerke vorm. Meister Lucius & Brüning, Höchst-on-the-Main, Germany, a corporation of Germany.

Manufacture of homologues of paraminophenylarsinic acids.

913,941—Lucien J. Blake, Denver, Colo. Ionizer or apparatus for producing gaseous ions.

913,996—Alva Watts, New Brighton, Pa., assignor of one-third to John M. Richards and one-third to James T. Moltrup, Beaver Falls, Pa. Bottle-making machine.

914,080—William C. Seifert, Detroit, Mich. Crate for bottles.

914,120—Moritz Forst, New York, N. Y., assignor of forty-nine one-hundredths to himself, seventeen one-hundredths to Emanuel Lindhardt, seventeen one-hundredths to Harvey K. Kuttner and seventeen one-hundredths to George Pohlmann, New York, N. Y. Non-refillable bottle.

914,175—Jean Nicolaidi, Paris, France. Official preparation of phosphoric acid.

914,223—Jonas W. Aylsworth, East Orange, N. J., assignor by direct and mesne assignments to Fireproof Products Company, a corporation of New Jersey. Chlorinated compound and process of making same.

914,224—Jonas W. Aylsworth, East Orange, N. J., assignor by direct and mesne assignments to Fireproof Products Company, a corporation of New Jersey. Apparatus for utilizing chlorine.

914,243—Conrad M. Conradson, Madison, Wis., assignor Company, Sioux Falls, S. D., a corporation of South Dakota.

by mesne assignments to Precision Glass Grinding Machine Machine for spirally ground bottle necks and stoppers therefor.

914,244—Conrad M. Conradson, Madison, Wis., assignor by mesne assignments to Precision Glass Grinding Machine Company, Sioux Falls, S. D., a corporation of South Dakota. Method of making interchangeable ground glass bottle necks and stoppers therefor.

914,251—Carleton Ellis, White Plains, N. Y., and Karl P. McElroy, Washington, D. C., assignors to Fireproof Products Company, a corporation of New Jersey. Process of chlorinating organic bodies.

914,252—Louis Eschner, Philadelphia, Pa. Closure for bottles and jars.

914,253—Louis Eschner, Philadelphia, Pa. Receptacle closure or retainer.

914,271—Wilhelm Hasenbach, Mannheim, Germany. Process for making infusible sulfid.

## TRADE MARKS.

Published March 2, 1909.

33,930—The Mother Siegel's Syrup Company, of New York, N. Y. Class 6. Tablets for dyspepsia.

34,375—Paul Rieger & Co., San Francisco, Cal. Class 6. Perfumes, face creams, floral waters, essential oils, pomades, face powders, toilet powders, etc.

36,426—John T. Carback, Baltimore, Md. Class 6. A liquid remedy for rheumatism.

36,514—Frederick S. Ackerman, Chicago, Ill. Class 6. Rectal suppositories to be used as a remedy for hemorrhoids and constipation.

38,175—Jacob P. Urban, Cleveland, Ohio. Class 6. A remedy for gonorrhea, gleet and stricture.

39,060—Eletto Company, New York, N. Y. Class 6. Sachet powder.

39,142—J. Touzeau Saunders, Limited, London, Eng. Class 6. Perfumery.

39,470—Frederick Stearns & Co., Detroit, Mich. Class 6. Perfumes, toilet waters, toilet cream, hair tonic and face powder.

39,680—Minna M. Dubin, Philadelphia, Pa., Class 6. Antiseptic and disinfectant compounds.

40,008—John Wyeth & Brother, Incorporated, Philadelphia, Pa. Class 6. An expectorant pharmaceutical compound.

Copy of any PATENT or TRADE MARK, 10 cents.

Author of copyrighted work on Protective Trade Marks, Food and Drugs Act, and Valid Patents.

# THE DRUG MARKETS

## DEMAND MOSTLY OF A JOBBING CHARACTER.

**Cocaine Manufacturers Advance Prices Fifteen Cents Per Ounce, Due to Scarcity of Crude.**

**NEW YORK, March 8.**—The general market for drugs and chemicals continues fairly active with some articles showing strength, but weakness in others; while the demand is of a jobbing character only, the aggregate volume of business may be considered satisfactory, and in the absence of any discouraging features an improvement is looked for as the season advances. Opium and quinine are quiet and without any change in values. Refined camphor is in more active demand with former quotations still maintained. Russian ergot is in demand at full prices, and short buchu leaves are active and higher. Citric acid is lower and the essential oils, such as bergamot, lemon and orange, continue unsettled. However, the opinion is gaining ground that higher prices will prevail later on. Cocaine hydrochloride has been advanced 15c. per ounce.

**COCAINE HYDROCHLORIDE.**—In sympathy with the position of the crude abroad, domestic manufacturers advanced their quotations 15c. per ounce last Saturday, to the basis of \$2.65 $\frac{1}{2}$  \$2.90 for bulk, as to quantity. There has also been some talk in local trade circles of this product being subjected to government regulation, in line with opium and its derivatives, but nothing officially has been learned on the matter. The present advance seems to be due entirely to the fact that the stock of crude is at present very light, with higher prices at all distributing points. Revised quotations are as follows, per ounce: bulk, \$2.65 $\frac{1}{2}$  \$2.90; 1-oz. vials, \$2.70 $\frac{1}{2}$  \$2.95;  $\frac{1}{2}$ -oz. vials, \$2.75 $\frac{1}{2}$  \$3.00;  $\frac{1}{4}$ -oz. vials, \$2.80 $\frac{1}{2}$  \$3.05;  $\frac{1}{8}$ -oz. vials, \$2.90 $\frac{1}{2}$  \$3.15.

**QUININE SULPHATE.**—The demand for this article is not very active, but manufacturers' prices are maintained on the basis of 14c. per ounce in 100-oz. tins. In Batavia, on the 3d inst., 2000 kilos of quinine were sold at florins 10.50 as against florins 10.70 at the previous sale. There were also 50,000 ounces sold at Amsterdam on the 5th at florins 10.82, as against florins 10.80 at the February sale. The sales will not affect the price of standard brands of quinine. The shipments of cinchona bark, for the month of February, amount to 530,000 pounds, which shows a falling off, compared with previous months.

**OPUM.**—The market is without any change in values and the demand is limited to actual requirements. Primary markets are also without change. The arrivals in Smyrna up to February 12 amount to 2010 cases as against 1350 cases for the same period last year.

**NORWEGIAN COD LIVER OIL.**—The demand continues very active here and also in primary markets. Stormy weather is again reported in Norway, which is to some extent interfering with the fishing. The results of the fishing to March 1, is as follows: Lofoten, 2,000,000 fish, yielding 2500 barrels of oil; for other districts, 7,000,000 fish yielding 8270 barrels of oil. For 1908, to same date, the reports were: Lofoten, 2,300,000 fish, yielding 3340 barrels of oil; other districts, 7,300,000 fish, yielding 10,000 barrels of oil.

**SHORT BUCHU LEAVES.**—The crop is said to be a small one and to be short about 200 bales. High prices have been asked in all foreign markets and where large lots were handled sales were reported at an advance of 20 to 25 cent over former quotations. There is very little stock of good green leaves in our market and prices have been advanced to 45 $\frac{1}{2}$  50c., and 50 $\frac{1}{2}$  55c. for powdered.

**CITRIC ACID.**—The market is very quiet and shows signs of weakening. Manufacturers' prices are maintained on the basis of 41 $\frac{1}{2}$  42c. per pound in kegs of 100 pounds.

**AFRICAN GINGER ROOT.**—The crop is reported to be only two-thirds of an average one and is held in the hands of a few firms in the foreign markets who are asking high prices. It is expected to go much higher.

**WORMSEED, LEVANT.**—It is reported that the Russian government will again control the crop of this article and give to the manufacturers of santonine the monopoly they formerly

enjoyed. Until further information has been received quotations have been withdrawn, and also on account of this condition Santonine is being offered only in very moderate quantities.

**BALSAM PERU.**—Supplies are light both here and in the country of production, prices showing a material advance in the latter markets, while they remain unchanged in this market, being maintained at \$1.70 $\frac{1}{2}$  \$1.75 as to quantity, quality and seller.

**GUM CHICLE.**—The carload quotation for prime grades is 46c. per pound, while jobbing parcels are held at about 50c. There is only a light available supply and the market is firm with upward tendencies.

**CACAO BUTTER.**—Steady values were realized at the auction held at Amsterdam on March 2. The offerings consisted of 80 tons of Van Houten's and ten tons of prime Dutch brands. On the basis of the sale, Van Houten's was quoted at 80c. and prime Dutch at 27c.

**ACETANILIDE.**—Manufacturers have reduced their quotations to the extent of 2c. per pound, and the revised figures are: 23c. for bulk in barrels, and 24c. for smaller quantities, 25c. for one pound boxes, 27c. for halves, 31c. for quarters, and 4c. per ounce cartons.

**SOAP BARK.**—There is a good demand and the market is firm at 10 $\frac{1}{2}$  10 $\frac{1}{2}$  10 $\frac{1}{2}$  c. per pound for large quantities. Sales in a large way are reported numerous at full prices.

**CHAMOMILE FLOWERS.**—The Hungarian variety is steadily held at 36 $\frac{1}{2}$  38c. per pound as to grade, quantity and seller. Stocks are light, the consuming demand good, and full prices are being realized for the parcels that are moving.

## London Drug Market

**LONDON, Feb. 27.**—There was a much brisker demand than usual for the small supply of drugs offered at this week's auction, a good proportion of the lots which found buyers being bought for America. Buchu leaves were in strong request and all the offerings, consisting of 29 bales, sold with competition at 9 $\frac{1}{2}$  to 10 $\frac{1}{2}$ d per pound for small green round leaves, being slightly dearer. Cape Aloes also sold well at 1s per cwt. advance, good, hard bright realizing 32s per cwt.; a few cases of skinny Zanzibar sold at 65s to 70s per cwt. Ipecacuanha was firm, fair plump Matogrosso selling at 5s 2d to 5s 3d per pound and Minas at 4s 10d. Sarsaparilla was in fair request and good, gray Jamaica fetched 1s 4d to 1s 5d per pound, native red, 1s to 1s 1d, Lima, 1s 1d to 1s 2d, and Honduras (which was offered without reserve) 1s 3d to 1s 4d. Gamboge was not in demand and only a few lots sold at barely steady rates, the highest price paid being £13, 17s 6d per cwt. for fair Siam, block and pipe, dark. Sumatra Gum Benjamin realized £7, 12d, 6d to £7, 15s per cwt. for good, well-packed seconds. Cardamoms were from 1d to 2d per pound dealer. Coca leaves were steady on basis of 7 $\frac{1}{2}$ d per pound for brown, green Ceylons. Balsam Tolu was firm at 1s per pound for fair. Of Cascara Sagrada, 150 bags were bought in. A case of Gun Myrrh realized £5 15s for picked. St. Lucia Honey sold at 26s to 27s per cwt. for dark brown syrup. A bid of 5s 6d per pound for Beebe's American Peppermint Oil was refused and the two cases offered were bought in. Senna was in small supply and realized firm prices. A few cases of flat, high, dried Rhubarb sold without reserve at 1s 1d per pound.

Privately, business in drugs and chemicals is no worse and perhaps a trifle better. There has been no marked demand for any specific article but a small consumptive business of an all-around character. Citric Acid is quiet and unchanged. A small business has been done in Essence of Lemon down to 4s per pound spot with offers to arrive at 6d below this figure. Cocaine is very firm. Business in Cod Liver Oil continues to be limited to small transactions. Quinine is in steady in absence of any demand. The average unit paid at the Amsterdam Cinchona Bark sales was 3.10 cents per half kilo against 3.03 cents at the previous sales. The scarcity of Santonin is more pronounced and 14s per pound is wanted by second hand dealers.

### Only Natural.

"That man Higgins is always getting into trouble."  
"What else could you expect? He's always looking for it."

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, MARCH 18, 1909

No. 11

D. O. HAYNES & CO. - Publishers

90 WILLIAM STREET, NEW YORK

Telephone. 2457 John. Cable Address: "Era, New York."

Western Office:

Room 500, Dickey Building, 40 Dearborn, Chicago  
Telephone, Central 5888.

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-office as Second Class Matter

## Re Photographs for "Era Album"

### Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

#### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.  
McMonagle & Rogers,  
Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

## THE REVISION OF THE NATIONAL FORMULARY.

Widespread interest is being taken by pharmacists in the forthcoming revision of the National Formulary, as is shown by the number of valuable papers which are being prepared and presented to the various pharmaceutical associations, some of which the Era has printed in whole or in part. Many of the criticisms of nomenclature are well-founded and this is especially true of the items mentioned by Mr. Hilton, of Washington, in his paper which is printed on page 253 of this issue, in fact it is quite probable that if the Pure Food and Drugs Act did not expressly recognize N.F. preparations that the provisions of that law relating to misbranding could be invoked with success against them.

It is not likely that the statutory recognition of the National Formulary will ever be repealed and for that reason in the revision the volume should in its entirety be brought into harmony with the general trend of pure drug laws, especially in cases where the titles given to preparations would obviously be assailable under the sections prohibiting misbranding. While the revision in any contingency should be thorough and consistent there is all the more reason, if the N.F. is to remain a recognized legal authority, for placing it upon a more scientific basis in the matter of nomenclature, standards, definitions, etc. The present flood of criticisms and suggestions will no doubt be of great assistance to the revisers in approaching their task.

## TO STOP DOCTORS FROM DISPENSING.

Some Massachusetts physicians are considerably wrought up over a bill pending in the Legislature of that State which strikes at the "dispensing doctor" in a way that would benefit the pharmacists. The bill prohibits physicians, unless they also are pharmacists, from dispensing medicines to patients except in "cases of emergency," and makes provisions for the recording of such acts. Doctors also are prohibited from collecting or receiving commissions from druggists on prescriptions, from using prescription blanks bearing druggists' business cards, or from in any way trying to divert the patronage of their patients to any particular pharmacy. First offenses are punishable by fine of \$25 or more, second offenses by fine of not less than \$100, while for a third violation the limit is \$500 fine, or ninety days in jail, or both.

In Oklahoma also there is pending legislation directed against the "dispensing doctor" which hits him below the belt. It provides that "registered physicians may dispense their own medicines in towns where there is no registered pharmacist" and

the passage of the bill would by inference make it unlawful for doctors to dispense in towns containing registered pharmacists.

Bills of this description may be expected to originate in localities where the dispensing evil is carried to extremes, but it would be wise to so qualify such legislation as to except emergencies. The fight against these measures will of course be conducted only by the doctors who want to monopolize everything in sight, like the old Marylander who besides being the family doctor acted as druggist, undertaker, justice of the peace and minister in his bailiwick.

#### SHOULD PRESENT A SOLID FRONT.

It is to be regretted that the meeting of the Manhattan Pharmaceutical Association on Monday evening disclosed dissension in the ranks of the pharmacists in relation to pharmacy legislation pending at Albany. The course taken by Mr. Diner in his effort to "have pharmacy recognized as a profession" by the lawmakers was precisely the one best calculated to defeat his avowed object, for in union only is there strength and a divided house of pharmacy will receive less attention from the legislators than would be accorded a solid, united representation.

Under the system of having the State Ph.A. take care of legislation at Albany progress has been made, the pharmacists have been gradually getting on a better footing and the outlook has been favorable, with the exception of the determination of the Governor to change the method of electing the board to the appointive system. There does not appear to have been any reason for undue haste in disposing of the pharmacy bills at Monday night's meeting and the effect of the action taken will probably be of little moment outside of the evidence which was given of discord in the profession.

#### PRACTICAL TESTS AT EXAMINATIONS.

A point raised by Mr. Bigelow at the meeting of the Manhattan Ph.A. regarding the matter of examinations of prospective pharmacists was that the supply of competent clerks required to meet the demand in New York City would be restricted if placed under the control of the State Board of Regents, for the reason that the latter's examinations are not held with sufficient frequency and that the board is without the means to apply the practical tests which have been a feature of the examinations of the State Board of Pharmacy.

It is surprising that pharmacists having the welfare of the retail druggists in mind, or favoring the elevation of the profession of pharmacy, should be either eager or complaisant in advocating the change from a practical system of examination to one which omits the demonstrations of competency that are so essential in qualifying as pharmacists, saying nothing of the possibilities for fraud that have so frequently been exposed in connection with regents' examinations. Whatever is done at Albany, care should be taken to safeguard future examinations

so as to exclude incompetents from receiving unearned certificates.

#### MONUMENT OF ENERGY AND ENTERPRISE.

Burning the last mortgage of the Brooklyn College of Pharmacy on April 15 will mark the freedom from debt of one of the important educational institutions of the country. Originating some thirty years ago through the needs of Brooklyn retail druggists for competent clerks the movement grew steadily in strength until in 1892 a college was established in a hall that soon proved too small. It was in 1902 that the present building was first suggested and its erection was soon after begun. Starting with nothing, a property valued at \$70,000 has been accumulated simply through the energy, enterprise and perseverance of retail druggists who took practical steps toward supplying an important trade need and at the same time elevating the standard of their profession.

Originally the Brooklyn Druggists' Association, but now the Kings County Pharmaceutical Society, the members can boast of being the only retail organization of druggists which owns and controls its own college. It will be a proud day next month for trustees, members and faculty when the match is applied to the mortgage and the last vestige of debt is destroyed. No doubt the celebration will be in keeping with the importance of the occasion.

#### CHANGING CONDITIONS IN LONDON.

American pharmacists will watch with considerable interest the great commercial duel which has just begun in London retail trade between the former Chicago merchant, Mr. Selfridge, who has opened a great department store of the American variety in the British metropolis, and Harrods, his largest competitor. The effect upon the advertising columns of the newspapers, through the publication of large and costly announcements, as well as the enormous crowds attracted to the rival stores, will at first chiefly impress observers who are not directly interested, but there are other possibilities and problems to be considered.

With American methods launched in London there is no telling where competition will stop and it will be interesting to note whether the big department stores will invade the field of the local chemists and apothecaries, as they have done in this country. Conditions in England, especially in the drug trade, are somewhat different from those in the United States, but they may be changed by the injection of new methods and increased competition into the situation.

As this issue of the ERA goes to press the tariff situation at Washington is euimatical. The proposed revision has not been made public and speculation regarding the provisions of the bill are so much at variance that intelligent comment at the moment is impracticable. The one bright spot in the situation is that President Taft's urgent stand for speedy disposal of the subject seems to have struck responsive chords in the legislative halls.

As a contribution to the fund of criticism printed concerning the use of benzoate of soda as a preservative it is inter-

esting to note that the *Journal of the American Medical Association* regrets that "there is some danger that to the public the decision will mean that Dr. Wiley's work is discredited, when as a matter of fact it means nothing of the sort. \* \* \* To assume from these findings that the use of benzoate of soda in foodstuffs is therefore beyond criticism is absolutely unwarranted." This view of the controversy will be very pleasing to Dr. Wiley's friends.

Druggist Rice, of Greensboro, Ga., although only 44 years old, has made a record as a pharmacist and as a citizen of which any man might well be proud. Duty to his profession, to his fellow citizens and to his family, with healthful activity in various spheres of usefulness, have contributed to create a conspicuous presentment of public-spiritedness, all of which are entablated on page 261 of this issue of the ERA.

If you want to see something real coy and kittenish watch a woman buying her first bottle of flesh reducer.

Charles F. Ripley, the new president of the Boston Druggists' Association, the oldest organization of druggists in Boston, is now the secretary of the State Board of Registration in Pharmacy. In the latter position he has recently come into the lime light of publicity because of the recommendation of Governor Draper, in his inaugural message, that the four State boards of registration—of pharmacy, of medicine, of dentistry, and of veterinary medicine—be consolidated under a single head. Incidentally the recommendation did not find many friends, but for a little while there was unusual scrutiny of the acts of the various boards and of their officials.

In Massachusetts the secretary, rather than the chairman, is the executive member. Undoubtedly, had any of these boards, or had any of their officials been anything but of the highest rectitude and ability, the Legislature might have taken some kind of action in accord with the Governor's recommendation. But when the legislative hearing was announced, not a single person appeared to speak in favor of the change, while members of the various professions concerned turned out in large numbers to speak in opposition. Druggists from all over the State spoke in favor of keeping the State Board of Registration in Pharmacy upon its present basis, and spoke of the high efficiency of its past and present officers.

The legislative committee on public service later reported against the Governor's recommendation for consolidating the registration boards, and it is probable that Mr. Ripley will serve out the rest of his term on the board in the position which he now occupies, and to which he brings high efficiency, and in which he is increasing his reputation as an able administrator and thorough pharmacist.

Mr. Ripley is serving his first year as secretary, a position to which he was elected last October, succeeding Fred A. Hubbard, whose term expired. Under the State law a member of the State Board of Registration in Pharmacy is not eligible for reappointment. The term is for five years.

Mr. Ripley came on the board early in 1905, through appointment by Gov. William L. Douglas, to fill a vacancy caused by the resignation of George M. Hoyt.

Mr. Ripley is one of the best-known members of the profession in the southeastern part of Massachusetts, where he has been identified with pharmacy for nearly 30 years. He is a Bostonian by birth, however, and was educated in Boston schools. His first experience in pharmacy was obtained in Lowell with Butler & Co., but in 1880 he went from the northeastern part of the State to the southeastern part of the State, and entered the store of J. B. Hanson, in Taunton. He was then in his 21st year. He remained with Dr. Hanson until the retirement of the latter in 1895, when he succeeded to the business by purchase. With him is associated F. R. Briggs. The business is the largest in its line in the city. A few

years ago a second store was opened at East Taunton, and this was continued until Mr. Ripley's appointment to the State Board of Pharmacy, when he sold it to his chief clerk.

Mr. Ripley was elected second vice-president of the Massachusetts State Pharmaceutical Association in 1905. He also holds membership in the Independent Order of Odd Fellows, the Knights of Pythias and the Masons.

"What is this peculiar key on your typewriter? I never saw it on any before?"

"Hist! My own invention. Whenever you can't spell a word you press this key and it makes a blur."—*Health Culture*.

The Paris Medical Society is considering asking physicians to wear badges in the streets and public places so that they can be easily found in case of accidents. It is not infrequent for a person in need of medical aid or acting as messenger for some one who is to run for blocks before encountering a doctor's sign, and at any time he might unknowingly pass a physician.

Museums of safety and sanitation are becoming the means of saving thousands of lives, and will lessen the economic waste of accident cases brought before the courts, says William H. Tollman in an article on "Prosperity-Sharing" in the *March Century*. A feature of such a museum will be an experimental laboratory in which safeguards may be perfected for dangers and processes now without any known device; and which may become an educational center for teaching the science and preservation of health, in preventing diseases due to impure foodstuffs, bad ventilation, occupational dusts and poisons, infection, tuberculosis and offensive trades.

There are ten European museums of safety and sanitation, located in Berlin, Munich, Paris, Vienna, Amsterdam, Milan, Stockholm, Zurich, Moscow and Budapest. The Berlin Museum of Safety covers 34,000 square feet of floor space, where are exhibited devices for the protection of the dangerous parts of machinery or processes in all trades and occupations. Germany realizes that every life saved is a national asset.

An increase from 3,500,000 gallons of the oil of coal tar, or creosote, as it is popularly known, imported into the City of New York in 1904, to an amount estimated to be almost 25,000,000 gallons last year, is one of the indications pointing to the progress of the nation-wide movement for the conservation of forest resources. It is creosote which the Government and scores of corporations and private wood users have found to be one of the most satisfactory preservatives of railroad ties, mine props, telephone and telegraph poles, fence posts, and for timbers used for other commercial purposes. Lengthening the life of timber in use means the lessening of the drain on the country's forests, and what is more important to the average business man, it means the saving of thousands of dollars annually spent for the labor of the frequent renewals made necessary when untreated timber is used.

"A customer gave me a little lecture the other day," said a wide-awake Indianapolis druggist, "and I intend to profit by it. Copying after some dealers whom I thought were real smart I had two brands of cigars which I called 'specials' which I sold only on Saturday for five cents, with the assertion that they were 10-cent cigars on other days in the week. This customer came in for three or four Saturdays in succession, each time buying five of these cigars. The other day he came in on a Monday and asked for one of those brands. I told him it was a special for Saturday. He started to go out, hesitated, then came back and gave me the lecture. He told me quite plainly that he bought from 25 to 50 cents

CHARLES F. RIPLEY,  
of Boston, Mass.

worth of cigars daily and that my special cut me off from his trade six days in the week. I became wise immediately, and have given up the 'special' game."

"Half a block away," said another druggist, "is a Presbyterian Church with a thriving Sunday school. This church, as one of its features, has a tithing membership, those who pledge themselves to give one-tenth of their income to the church. The children of this church have the sweet tooth and each Sunday on their way to the school they come in here and spend their pennies for candy. I have not yet learned what effect this has on the collection, but a small boy last Sunday gave me an exemplification of the tithing principle. He had 10 cents in his fist."

"'Gimme a penny's worth of that—and of that—and of that'—and so on. 'Now how much is that? Nine pennies? Well, gimme back a penny; that's for the poor heathen.'"

A third druggist, a worthy German, gave this experience: "We haf to take a goot many chances mit guessing in dies neighborhood I dell you. I be a goot guesser, sometimes, aber nit, and it makes trubl. Von day a poy come in und be say 'gif me for life cent custard.' So I lauch mit minself and I say, 'Nein, it is sure mustard he vas sent for.' So I weigh him out de ground mustard. You should haf been by me here ven dot poy's mutter come in mit four pies in her apron and lay 'em out on mine counter."

"'Look there,' say dot woman. 'You vant to pizen me, alretty?'"

"'I look and I say, 'Ya dose is pies, aber nit pizen, eh?'"

"'Was you sell mine little poy ven I sent him for cinnamon?' 'Ach, Gott, so it come to me all at vonce. Dese vas custard pies and ven dot poy said custard and meant cinnamon I made de bad guess. Und she made me pay dose mustard pies for sixty cents. Now I don't nefer guess no more on anything.'"

"And now," said the wholesale druggist, "I always read my letters over very carefully after they have been through the hands of the typewriter. This is the why and wherefore: Some months ago one of our traveling men brought in an unusually large order from a druggist in a thriving country town. I had never met the druggist but it happened that years ago I knew his father, who was a man of high character and considerable importance. I thought it would be a clever thing to write to the young man and tell him about this old acquaintance. I dictated the letter to the typewriter lady and no further orders came. The traveling man said the druggist seemed 'soured' on the house but would give no explanation. We keep copies of all our letters and I hunted up that one. Imagine my feelings when I came across this line in my letter: 'I knew your father very well; he was a fine, old, lying Democrat.' 'Old-line Democrat' was my dictation but the typist slaughtered me."

Whenever physicians' fees seem extortionate it is comforting to recall a certain famous eye specialist, one of whose patients coming to pay his bill growled: "Doctor, it seems to me that \$500 is a big charge for that operation of mine. It didn't take you over half a minute."

"My dear sir," the other answered, "in learning to perform that operation in half a minute I have spoiled over eleven pecks of such eyes as yours."—*Lippincott's*.

An insidious and wholly innocent looking paragraph tucked away in an article on how to make pound cake has brought forth a deluge of protests from the readers of the *Northwestern Christian Advocate*, in which the recipe was published. "One wine glass of whisky" was the ingredient in the pound cake which brought down upon the head of the editor such a flood of criticism. The paper has always opposed the use of alcoholic beverages. To square himself with the readers of the paper Charles M. Stuart, the editor, is going to print another recipe for pound cake which will make no mention of whisky in it. Incidentally, the blame has been placed on a proof-reader who did not detect the fatal word "whisky."

"The whole thing was an accident, an unfortunate inadvertence," said Mr. Stuart when seen today. "She can tell you all about it," he added, pointing to a woman editor.

"Oh, it was most unfortunate, that clipping," exclaimed Miss Richmond, who has charge of the cooking department.

"I got it out of a paper which I have always depended upon as being strictly temperance in all its recipes. When I looked it up later I found that the proofreader, who should have called my attention to the flaw in the recipe, had carefully eliminated the 'w' from the original spelling, which was 'whisky,' but had failed to get at the main error."

Mrs. Edward Jacobs, of Sandusky, Ohio, advises florists, who will be called upon earlier than usual this year to supply the market with Easter lilies, to water their plants with coffee. She says she knows by experience that coffee makes them bloom. For a number of years Mrs. Jacobs' lilies have excelled in every way those of her friends and neighbors. Instead of moistening the earth around their roots with water she used coffee left over from the day before.

"There is no sand in sandpaper," said a manufacturer to a New Orleans reporter. "It is powdered glass that does the business. That's where the broken bottles go to."

He nodded toward an Everest of broken bottles in the yard. "We powder the glass into half a dozen grades," he said. "We coat our paper with an even layer of hot glue. Then, without loss of time, we spread on the glass powder. Finally we run a wooden roller lightly over the sheets to give them a good surface."

"When in the past they made sandpaper of sand it wouldn't do a quarter of the work that glasspaper does."

An extraordinary street accident happened the other day in Stuttgart, Germany. A cart loaded with cylinders filled with carbonic acid skidded on the slippery car track. One cylinder fell off, the top broke and the acid, suddenly released from enormous pressure, caused the cylinder to fly up like a projectile fired from a gun. Several blocks away it struck a middle-aged man in the back, went clean through him and tore off his limbs, which were flung upon a woman who was passing on the sidewalk. The body was mutilated beyond recognition.

At the banquet given in San Francisco recently to celebrate the establishment of a Chinese Chamber of Commerce priceless Chinese delicacies were served. Among the guests were 50 Americans. Although chop sticks were used, all of the speechmaking was in English.

Some of the items in the dinner, that cost \$25 a plate, were as follows: Snow fungus, which retails at \$40 a pound and is one of the rarest Chinese delicacies; sharks' fins, birds' nests, preserved eggs, 100 years old; melon seeds, which the white guests could not eat with chop sticks; brains of yellow fish and water lily seeds with duck. In all there were 17 courses.

The pen used by Charles Dickens just before his death, which has been sold at Messrs. Sotheby's rooms for £19 10s., must yield the palm of costliness to the well worn gold pen, used by "Boz" for many years, which found a purchaser some time ago for over £40, says *Tit-Bits*. At the sale of the Dalhousie collection a quill pen used by Wellington when writing to Queen Victoria in 1844 brought only five and a half guineas, while one of Sir Walter Scott's pens, selected by Lord Dalhousie in 1829 from Scott's writing table at Abbotsford, only realized three guineas more.

Among the most valuable pens in the world are one owned by Isaac Reed, of New York, carved from a portion of George Washington's lens box and used by Lincoln when President, and the quill of a golden eagle's wing, the property of the Empress Eugenie, with which the treaty of Paris was signed in 1856.

Young men who frequent saloons will not be permitted to enter into matrimonial relations in Illinois, if a bill that has been introduced in the House is enacted into law, and it probably will pass. The bill was introduced by Representative Graves, says the St. Paul *Dispatch*, and amends the marriage laws of the State by declaring an habitual drunkard incapable of contracting marriage, and defining an "habitual drunkard" to be a person who becomes intoxicated twice in a year. The bill provides also that applicants for marriage licenses shall make affidavit that they have not been intoxicated twice in the preceding year.

## Window Display in Elmira Wins the Era Cash Prize of \$5 This Week.

In the ERA'S Cash Prize Competition this week the judges have awarded the \$5 prize in Contest No. 3 (for conditions see advertising page 21), to G. C. Gerity, Elmira, N. Y.

The framework of the cabin was made of a box, the top of which was cut in the shape of a roof and covered with rows of absorbent cotton in pound packages and wired on the sides to make a log cabin effect. Loose cotton was used to fill in all cracks, while the chimneys, doors and steps were made of different sized packages.

The floor of the show window was covered with white cheesecloth, edged with lumps of alum for ice and two mirrors which are in the corners and do not show, formed a pond, the whole being sprinkled with powdered alum to represent snow.

A grove of pine trees on the sides and various sized packages of cotton scattered about the bottom of the window, and the whole being sprinkled with diamond dust to give a sparkle to the snow and ice, added to the effectiveness of the window.

This is a corner window and was designed by C. W. Biggs and G. C. Gerity for Gerity Brothers Drug Company, Elmira, N. Y.

## Publicity and Promotion.

### House to House Advertising.

No method of advertising has been so abused, often unjustly so, as that of house to house distribution of advertising matter and samples. Many of the failures which are blamed on the character of the matter itself are due to the method of distribution, or to be exact, to the distributors. Do not send out heedless, unwatched boys, unless your only desire is to enrich the waste-paper man or add numerous floaters to the sewer streams.

In flats and apartment houses it is an utter waste to place matter elsewhere than in the letter boxes, and if those boxes are stuffed with cheap circulars loosely folded, unenclosed booklets which catch in the hinges of the box, or poorly enclosed samples which scatter pills, powders or tablets in the boxes, the so-called advertising matter will have no result except to secure for the advertiser the enmity of the flat dwellers. No matter is fit for distribution to the residents of flats unless it is thin and enclosed in an envelope small enough to go into the box without being bent and yet still large enough to be kept upright in the box. The value of all matter used in flat distribution is increased fifty per cent through sealing and addressing. The addressing may be done with a fountain pen on the ground, the distributor taking the names for the purpose from the boxes.

### Making the Distribution Effective.

Where the distribution is among solidly built rows of houses or among those of such character as indicate the employment of a servant, the matter should be left at the front door. There are still some druggists who need to be told not to brow advertise matter in yards, or on porches or steps. If there are no weather strips or other obstructions and the matter should permit, it should be slipped beneath the door. Forcefully pushing it half way under does not suffice. To keep children from gathering the advertising paper by armfuls it must be placed out of sight or out of reach. After a piece is pushed almost entirely beneath the door the protruding edge or corner should be hit a quick short blow or given a twisting snap with the hand, to throw it entirely within the house.

When the matter cannot be slipped beneath the door it should have one edge forcibly wedged between the door and

the jam, above the knob and high enough to be out of reach of children. Of course, so long as the door remains closed, the matter is unseen, but when the door is opened it falls past the eyes to the feet of the person who first attempts to enter or leave the house. In a distribution among detached dwellings, such as are presided over by women who do their own housework, the advertisement should invariably be taken to the back door. In many cases, it may then, through already open doors, be placed directly in the hands of the head of the family, the wife, mother and housekeeper.

### Samples.

Samples intended for test through internal administration, however harmless the remedies may be, should invariably be placed in the hands of adults. This necessitates the ringing of bells a method whose value is questionable; the obliging of women to answer door-bells at inconvenient moments has resulted in druggists losing many a good customer. House to house distribution of any samples of internal remedies in any manner is of doubtful value, and the practice is forbidden in many localities. It is far better to confine sampling to store distribution and mail.

### Class Distribution.

Much advertising matter is wasted by distributing it in places and among people from whom it is not likely to produce a profitable result, however well the distributing may be done. To advertise cheap soaps on Swell Avenue is almost a total waste of effort, while advertising high-grade toilet specialties among the foreign-born laboring class is equally wasteful.

As a general proposition, placing matter in the stores on the main business streets is largely wasteful. When thrown upon the floor or upon show-cases near the door it is only provocative of profanity. Store matter, if used at all, should be placed in the hands of people behind the counters, even though the distributor may have to walk the length of the store to do it.

One-fifth of the number officially given as the population is supposed to represent the number of families in the average town. Experience generally teaches that the figures by such a computation are too high. Aside from that, it is rarely good business to cover every part of any town with any single sort of advertising matter. The best results are secured by avoiding those sections which represent social

extremes. One piece of printed matter to seven or eight of the estimated or counted population is a safe quantity to calculate upon. First cover the thickly built, middle class sections and then work the more scattered middle class neighborhoods.

#### How to Cover.

With two distributors, start one on each side of the street running with the length of the section to be covered. Have them distribute for one block on that street. Upon reaching the first cross street, the distributor who has been on the right side of the main street should turn to his right and distribute along the first block of the near side of the cross street and then cross over and distribute along the corresponding block of the far side of the same street, returning to the main street at the corner opposite from where he left it. Meanwhile, the other distributor should handle the left block of the cross street in the same manner. They should then go on with the distribution of both sides of the next block of the main street, both sides of one block of the next cross street and so on to the end of the main street. Both distributors should then take the next street parallel with the main street just covered, and distribute it *without* going on the cross streets. When this is finished, come up on the third main street, distributing it *with* the two blocks of the intersecting cross streets, the same as the first street was distributed. Thus the greatest amount of distributing is done in the shortest possible time and with the least possible walking. The watcher may stand at the intersections when the distributors are on the cross streets and thus keep both of them under his eyes.

Five distributors work together to better advantage than four will do. While two pairs are working main streets numbers one and three, with the cross blocks, the fifth distributor can easily work both sides of the second street and by a little skipping around the watcher can keep pretty close tab on all five.

#### Neighborhood Distribution.

With druggists, it is often a problem how far to go with distribution. Wherever his store may be located, the enterprising druggist in a town of five thousand or less, should be able to get business from any part of the town and he is therefore justified in extending his distribution to cover all of it; except in those parts with the class distinctions noted above. In larger towns the druggist's location is a factor to be considered in deciding how far to distribute. If he is in the heart of the business district of the town, distance should be disregarded and the classes of people and nature of advertised goods only be considered. If he is located so far from the main thoroughfare that he is half the distance between it and the extreme solidly built part of the town his distribution should not cross the main street. If located in one of the larger places and the business is what may be called "a neighborhood drug store," the druggist's distribution should pass his nearest competitors on all sides and extend at least half way between them and the next zone of drug stores. These suggestions apply to general-class matter. If the druggist is advertising a specialty of his own making, the range of his distribution depends upon the character of the article, its novelty and his aspirations and capital.

The following tips are given by one who has been very successful with house to house advertising: Advise for the women and get your matter into the hands of the women. Avoid bulky matter and long-drawn statements. Don't play detective, but openly watch your distributors or have a reliable man to do it for you. So far as possible, distribute on days when schools are in session and during school hours. Morning distribution is more effective than that done in the afternoon. Do not distribute in stormy weather. See that distributors take clean matter from clean sacks with clean hands.

#### Improvements at Marquette University.

MILWAUKEE, March 15.—Improvements will be made by Marquette University this year amounting to more than \$300,000 and will include the erection of a new building for the pharmaceutical, medical and dental departments. The present structure is becoming far too small and will be given over to Trinity Hospital. The pharmaceutical department of the university has been developing rapidly in recent years.

## Every Day Finance.

By Emma Gary Wallace.

It had stormed steadily for three days and there was no sign of a let-up as yet. Customers were few and sales light. The Apothecary walked restlessly to and fro the length of the back store until at last he came to a standstill before a placard which Madam had tacked up some time previously. It read:

Make every season, whether it be fair or stormy, count for something. That *Something* may be the link between Possibility and Reality.

The Apothecary's eyes twinkled. "For example," he inquired with suspicious gravity, "for what did you make yesterday's trip count?"

You will recall that you insisted on attending the funeral of an almost unknown male relative miles away in a pelting rain. Did your placard philosophy prove to be waterproof?"

"Didn't leak a drop," Madam declared with an infectious laugh, "and it counted for a whole lot. No less than three Somethings. First, I became the proud possessor of a splendid pair of sixteen-button black kid gloves. Cheap mourning is detestable. I have longed for those gloves for some time, but you know money has been close and I did not feel justified in the expenditure until I was called upon to go to that funeral."

"Next, I firmly resolved that if any of my friends or relatives are ill in the future, I shall not wait until they are dead before I show any interest. By the way, one of our Organization ladies is ill, and I must write her this very day and tell her how much we all miss her. It may cheer her a bit to know it."

"And the next count was?" the Apothecary reminded her. "The solution of our own every day financial problem." Madam announced solemnly.

"You found that out at the funeral?" the Apothecary ejaculated in shocked astonishment.

"I certainly did not. You asked me for what I made the trip count. The trip included the going and the coming," Madam responded airily. "The thought kept coming to my mind that the journey was not nearly as disagreeable as I had anticipated, and how nearly I had come to not going on account of the weather. I could recall a number of things I had been prevented from doing in my life time, just by some equally silly dread. I made up my mind that the next disagreeable task that faced me, I should tackle promptly and not stand back shivering."

"This morning when I saw we were in for another stormy day I came down to the store determined to put that desk to rights. It is a sight. I further resolved to weigh carefully the merits and demerits of our present system of bookkeeping. When you come to think of it, it is about as systematic as that desk arrangement at this minute. You and I have both recognized for a long time that it is far from an ideal system, and yet we have stood back and dreaded it. It has been a trifle hard to discount the bills lately, because as fast as we poured the grain into the top of the bag it was spilling out of the mouse holes in the bottom. Now I just hate to handle gritty, dusty papers. I don't know a great deal about bookkeeping, and I am sure to annex a headache before noon, but it is high time we located the leaks and the weak places, and there is no time like the present."

The very first pigeon-hole attacked was stuffed with bills made out and never rendered. They bore a date of some two months earlier, and among them Madam recognized the names of two families, who in the interim, had found it cheaper to move than to pay rent; the name of a friendless man whose liberal purchases of medicine had not halted the hand of Death; and a good-sized account against a firm that had recently become insolvent. Perhaps later bills had secured the payments of these amounts. The ledger showed no later posting. Matters were sadly behind. These sums aggregating

about thirty-five dollars were as good as lost. At a conservative estimate that would mean the profit on from one hundred to one hundred and twenty-five dollars worth of cash sales. The goods charged up in those accounts must be paid out of the good cash profits.

### Facts on Cost of Doing Business.

The Apothecary was inclined to place the percentage of profit considerably higher, but Madam produced a financial report which proved that the cost of doing business was generally under-estimated and that 90 per cent of all mercantile failures were due to under-estimating expenses. In other words, that 90 per cent of these men who failed paid more to carry on their business than the profits amounted to. Both were astonished to read that 95 per cent of the business done in this country is done on a credit basis.

"There is one blessing for which to be thankful," Madam remarked, "that our calling does not warrant any such a percentage of charge accounts. There is the janitor down in the basement now, shoveling coal into the furnace regardless of the weather. Sometimes we are nearly driven out by the heat and again we are about frozen. A good, scientific heat regulator of some sort would save the landlord money. I suppose if we shovel energy and money into this business regardless of the regulation of proper business methods we use about the same grade of intelligence as the janitor. Perhaps that is why so many businesses are frozen out by lack of trade or roasted out by competition."

"But," protested the Apothecary, "our credit business is not extensive enough to put unlimited time upon it. In stores where a regular bookkeeper is kept it should be an easy matter."

"A little furnace needs a heat regulator even more than a big one," Madam persisted. "If an unbusiness-like small dealer becomes prosperous it is in spite of his methods and not because of them."

The Apothecary was called to the front store to interview an irate customer who claimed not to have received credit for the payment of a bill. Madam continued her work in silence, with a mind keenly alert for further pointers. To her amazement, she did not grow nervous or headachy, from which fact she felt that she had made the valuable discovery that a nervous headache is very often due to lack of concentration of effort; that nervousness is often mental confusion, or a failure to focalize the mind's eye on a given point.

### Madam Apothecary's Deductions.

In the afternoon she sat down to an orderly desk. Everything seemed so much roomier and more readily accessible. After a careful study of the books, she took a sheet of paper and wrote down her deductions. They were:

1. Where credit business is done, the difference between success and failure often lies in close collecting.
2. Itemized statements of accounts of the preceding four weeks should be rendered at the end of every month, and should bear the words, "All claims for errors must be made within five days." This will do away with all questions as to accuracy, after the circumstances have gone from mind.
3. These bills should be typewritten and sent by mail on the first day of every month. Postage is cheaper than time and arfare. Collection returns show better results by mail than by personal solicitation. Reasons for this are self-evident.
4. Before giving a stranger credit, two references should be required and investigated. Any business person will recognize the justice of this when asking for time accommodation.
5. Judgment should be used in the extension of credit to eligible persons, or to those known to be in temporary straits, to lavish buyers who show no disposition to settle after a reasonable time or to grant respectful consideration of just claims are entitled to no special accommodation.
6. Where there is a dispute about a customer having paid or of the clerks and not having received credit, we should give the customer the benefit of the doubt, but one or the other is either honestly mistaken or in wilful error.
7. Indefinite promises of payment on difficult accounts are to be avoided. If possible fix a date, and then exact payment as a reason for non-payment. We are entitled to this courtesy.
8. To a moderate wage-earner, who has been forced to contract a debt, small payments are often all that are possible.
9. Persons who get in debt and find it difficult to settle, are usually lost as regular customers, even for their

small items of cash trade. They go elsewhere rather than face the music. To secure a courteous settlement generally means to regain a customer.

10. The man who borrows ten cents with which to telephone, because he has left his change in his other clothes, and afterwards goes by on the opposite side of the street, is the man whose trade we can afford to lose.

### Promptness Necessary in Making Charges.

11. All drug-store help should be impressed with the necessity of making charges immediately, even if the building is in flames. We are insured against fire, but not against carelessness.

12. The books of the store must at all times be a complete and truthful mirror of the business to date. It is even more important to see that the records are complete at night than to keep open the last half hour.

13. The books at the month-end should invariably show the condition of stock, expense record, and profit or loss both in dollars and percentages. One may drift without it, but to drift is usually to strike a snag.

14. Bank balances must be carefully looked after. An over-drawn account is an acknowledgment of poor business methods.

15. To make the deposit-book a cash record of some value, a deposit slip should be made out for each separate entry, and bank tellers requested to enter such amounts separately. Later the particulars may be entered thus:

Jan. 14. Cash .....	\$125.00
" Check Brown, acct. ....	16.25
" Check Green, acct. ....	74.62
" Check Black, Int. ....	50.00
" Clk. Dividends, L. G. ....	18.96

This being far more comprehensive and available for information than the single entry:

Jan. 14. By dep. ....	\$284.83
-----------------------	----------

(Madam explained that this method had first been given her by a prominent Judge, noted for his ability and short-cut judgment. He stated that this simple idea had saved many legal complications both in and out of court.)

16. When our system proves inadequate to a full and proper accounting we should not hesitate to remedy the weak places or adopt an entirely new system. There must be no guess work about our methods. If we cannot solve the problem for ourselves we will employ expert assistance.

### If You Haven't Got Brains. Buy Them.

Sometimes it is profitable to buy brains. A man who is a good manufacturer and a poor financier is likely to fail miserably. He must know both ends of the game or employ someone who does. The man who hesitated to pay ten dollars for legal advice and who afterwards found that his economy had cost him exactly eight hundred dollars bought his experience pretty dearly. The real Cost of things is only measurable by the Results gained. Many people of mediocre ability have become singularly successful because they recognized their own limitations. Andrew Carnegie says: "Place on my tombstone this epitaph: 'Here lies a man who knew how to keep around him men who were more clever than himself.'"

Madam submitted the list to the Apothecary. "There is one other point I should add," he remarked. "The system must not be cumbersome or complicated."

"That is so, too," Madam said thoughtfully. "See the skies have cleared. I think I shall run downtown and investigate certain book-systems for which much is claimed. Possibly I may aspire to be the bookkeeper. There is no sort of a system that will keep itself and it looks as if the rest of you have about all you can attend to."

"I heard of a man the other day who had a capital of five thousand dollars. He knew something about the tea business, that is, the store part of it, but he hesitated to venture without a working knowledge of the financial part. He paid a successful tea man over three hundred dollars to teach him the system that experience had proved of worth. In five years the younger man had multiplied his capital by the figure eight. He knew how to make the most of his opportunity. Here is my car. Good bye."

### The Obstacle.

Bessie—Why won't you marry him? Don't you like him?  
Jessie—Oh, yes. I like him. But he won't propose.

## Blizzard and 'Possum.

By Joel Blanc.

After having survived Washington's week of joyous slush I find that the two things which made the deep impression upon my physical and mental combination were the blizzard and the 'possum—the latter being stuffed with junk under a covering that looks like a soiled woolen sock with a wire in the caudal appendage so that it may be hung by the tail—and by the 'possum and the blizzard hangs this tale, a disjointed collection of tales, in each of which there may be found a little fable for the drug store man.

A funny thing about inauguration weather is that the expected usually happens and then every one appears to be terribly surprised at the happening. This year the expected happened ferociously; the snow snowed and the wind blew and all were terribly surprised and expressed that surprise while standing in ankle deep slush. At present the papers say that the date of inauguration must be changed. They said the same thing on previous occasions, when Zach Taylor, Tippecanoe Harrison, Ben Harrison and Grover Cleveland were given doses of similar weather. Three months from now every one will have forgotten all about the matter and four years hence the expected surprise will happen some more.

How like some of these talkers a lot of us drug fellows are! We expect intemperate legislation, false accusations, cut prices and so on, but when the excitement of the time has passed we hibernate again until there is more evil prophecy, realization and yelling.

In numerous show windows might be seen Teddy Bears with Bill 'Possums seated crisscrossly thereon. In connection with one such exhibit I saw a card between the Teddy's paws, upon which was written: "I don't know where I'm going; but I'm on my way." That's us! You bet! Especially in organization work. We hurrah around one of our fellows who pleases us by his service or give to him what may be even greater honor by vociferous condemnation, and as soon as he is out of office we sit on him and then send him on his way.

Washington is a peculiar town, beautifully peculiar; but I do not agree with those who speak of it as an "overgrown village." I have happened in here a number of times during the last 25 years and to me it has always been a civic barometer, clearly indicating the social and commercial weather of the entire country. If you will concede that this is so, then you must concede that drug conditions here furnish the basis for a forecast of what they are to be the country over. The day before inauguration I scanned the windows of the central stores along Pennsylvania avenue and F. G. Seventh and Ninth streets. In not one of them was there a single article that could be called either a drug or medicine. The nearest approach to drugs was a display of brushes. Souvenirs and gift goods predominated in displays, the tendency in this direction being reflected in the business centers of all of the large towns of the country. While cut prices on medicines have had their day, except for sporadic outbreaks, the inroads that department stores have made upon the sundries and toilet goods trade are such that the druggist with a centrally located, high rental store must go after any sort of business he can get and what the central stores do, the other stores must eventually do as the new competition reaches out in broader circles.

An extreme example of this tendency is furnished by the newspaper advertisement of a prominent Washington "druggist" (?) I quote: "We handle everything and sell at cut prices. Grand stand seats for sale. A room with 24 chairs for viewing the parade. Sleeping accommodations for 100 people for rent. For the accommodation of our patrons we will have 5000 sandwiches for sale on March 3, 4 and 5." Of course, this is exceptional, even for Washington, for no-

where are there handsomer and better kept, legitimate pharmacies than in this beautiful city. However, one administration has taught us that the radical of today may be the conservative of tomorrow.

Every building of any historical interest in Washington bears a bronze tablet upon which is given interesting information. The day after the inauguration I was walking along 14th street when I saw two men fastening a tablet to a church, which bore the statement: "President Taft attends this church." Cogitate upon that, my procrastinating, system-lacking brother! Taft had been President less than a day when the announcement was put in place. It was easy to have the tablet made before the inauguration. It is just as easy for you to think, plan and execute for the future. I wish that you might all come here and see the system, promptness and cleanliness that prevail directly beneath Uncle Samuel's eyes. If you did and would profit by what you saw you would become better business men and better advertisers.

There was one unpleasant feature of the parade which also suggests a lesson. In the ranks of the marchers were a number of very small boys. There was a pickaninny band from a Southern orphanage, some of its members were mere babes and two of the smallest were deformed. These little fellows tramped along carrying heavy guns or playing musical instruments. They had stood in the slush for hours before the parade started. Their feet were soaked and their uniforms wet and bedraggled. Their faces were drawn with lines of pain and fatigue, apparently some of them could barely stand. Call that patriotism? It seemed to me more like the triumph of a Caesar or Sultan returning from a war of conquest with human chattels as spoils. I wondered if the Society for the Prevention of Cruelty to Children was asleep. No amusement manager or other employer or even a parent would be permitted to treat children under ordinary conditions like these little ones were treated in the inaugural parade "for the glory of the nation under the all-protecting flag."

The sight of these tots led me to think of some of the over-worked store boys and their elders, the clerks. Of course, they are not intentionally treated with injustice. Neither was intentional injustice meted out to the pygmies on parade. The treatment they received was due to thoughtlessness and carelessness. Well! They are not admirable characteristics, are they?

Tuesday night, before the storm came, I took the little fellow to see the illumination of the Court of Honor in front of the White House. It was truly a beautiful sight. The white columns joined by festoons of flowers, leaves, bunting and lights were quite enough to make the boy open his eyes, but I noticed that he looked most at the fakers along the curb. I asked him if he did not think the illumination was beautiful? Yes, papa; but I like the badges and little flags best. So I bought him several badges, pinned them to his coat, placed a little flag in his hand and let him march ahead of me. Up the avenue he went, the proudest, happiest mortal in all that throng. How like some children many adults are; they only appreciate what is within the possibility of their possession. In buying, advertising and selling it is good business to strive to give your patrons what they can understand and afford.

### Buffalo College Observes Statesmen's Birthdays.

Washington's Birthday, which is also "University Day" in Buffalo, was fittingly celebrated by all the departments of the university by public exercises in the Teck Theater, in which they were joined by the Mayor and city officials, the officers of the National Guard and students of the four high schools. The parade from the university building was led by Lieut. Col. Hafla and staff of the 65th Regt., and the 65th Regt. band.

Rev. F. A. Kahler, D.D., pastor of Holy Trinity Lutheran Church, delivered the invocation. The speaker of the day, Rev. A. V. V. Raymond, D.D., pastor of the First Presbyterian Church, was introduced by Vice-Chancellor Norton. The doctor's address was on the relation of higher education to the life of the city, and was a most stirring and eloquent appeal. After the theater exercises, the faculties of the university entertained the instructors and students at luncheon at the University Club.

Lincoln's Birthday was also observed by the closing of the different departments.

## Original and Selected

### PRACTICAL SUGGESTIONS FOR THE REVISION OF THE NATIONAL FORMULARY.\*

By Samuel L. Hilton, Chairman of Committee on National and State Legislation of the American Pharmaceutical Association, Washington, D. C.

Before entering into any definite criticisms or suggestions in regard to the National Formulary, I desire to present some data which clearly shows that the pharmacists of this country, individually and collectively, have desired and endeavored to promote uniformity in pharmaceutical preparations as far back as 1818, when the first book of formulas was published.

According to Mr. M. I. Wilbert, who has carefully investigated this subject, numerous endeavors have been made, notably of which the following are the most prominent: by the members of the American Pharmaceutical Association in 1856 and published the following year and on many other occasions, the Maryland College of Pharmacy in 1867 and which was revised in 1873. The same year, 1867, the physicians and pharmacists of the District of Columbia, through a joint committee, compiled and published a formulary for the use of both professions in this District; it was revised by a joint committee of the Medical Association and the National College of Pharmacy in 1875. The Louisville College of Pharmacy published a collection of formulas in 1872, the Philadelphia College of Pharmacy in 1874, and the New York College of Pharmacy in 1874.

It remained, however, until 1885 before any endeavor was made to establish a formulary that should be National in its scope and character and one that would be accepted generally all over the country, this was brought about by the publication of the New York and Brooklyn Formulary, by a committee representing the New York College of Pharmacy, the Kings County Pharmaceutical Association and the German Apothecaries' Society, and was afterwards tendered to the American Pharmaceutical Association in 1885, as a nucleus for the construction of the National Formulary.

From the preceding historical data, it will be seen that all of the endeavors of individuals and associations, with one exception, have been made by the pharmacists. I believe this act, that all of the compilation and revision having been made by the pharmacists is the greatest mistake of the past and likewise it also applies to the National Formulary. I could therefore then suggest, that the next revision of the National Formulary be made jointly by the American Pharmaceutical Association, the American Medical Association, with a representative from the Bureau of Chemistry, Department of Agriculture, the U. S. Army, the U. S. Navy and the Public Health and Marine Hospital Service; if this is accomplished, I believe the Formulary would then be as valuable as the U. S. Pharmacopoeia.

With the physicians of the country indicating what they desire, the representatives of the several branches of the Government to assist, the pharmacists would be able to perform the remaining work of revision in a more intelligent manner and compile a formulary that would prove far more valuable than any previous publication and one that would be more universally used. Propaganda work now being conducted by the several medical and pharmaceutical associations would be greatly facilitated, the physician would become more familiar

with the products of the formulary and the general result would be far more satisfactory to every one.

Previous to the Food and Drugs Act the recognition of the National Formulary was by common consent only, the passage of this Act gave to the National Formulary a recognition which makes it a standard for drugs equal in importance to the Pharmacopoeia.

Section 6 of this Act provides, that the term "drug" as used in this Act, shall include all medicines and preparations recognized in the U. S. Pharmacopoeia or National Formulary, etc. Since this recognition, it should be the duty of the American Pharmaceutical Association, an association that has for considerably more than a half-century represented the best sentiments of professional, scientific, educational and commercial pharmacy in this country, whose record for the advancement of pharmacy ethically in all of its branches cannot be successfully questioned, to compile a formulary that is broad, complete and as free from errors as possible.

I believe this can be accomplished better by the joint endeavors of all bodies interested than by the labors of one association.

While the Act of Congress legalized the National Formulary, it takes but an ordinary perusal of the work to discover that the nomenclature of many preparations contained therein is erroneous, and if so labelled are clearly misbranded under the provisions of Section 8 of the Act, if

it were not for the proviso contained in Section 6, which specifically recognizes all medicines and preparations of the National Formulary. With this condition existing, it is the duty of the next committee of revision to change the nomenclature of these preparations so that no question could arise in regard to misbranding, although this may be covered by the terms of Section 6.

The following preparations are a few of those that are apparently misbranded: Compound anise powder, Canada liniment, catarrh powder, compound elixir of tar, glycerinated elixir of gentian, pectoral syrup, tinct. iodine decolorized.

Compound anise powder is by no means a proper name for a mixture of rhubarb and heavy magnesia that contains but a small amount of oil anise that is added only for flavoring. It has little if any medicinal effect and certainly there is no justification in continuing the use of this name, the word anise according to the Pharmacopoeia means the seed.

Compound elixir of tar is clearly misbranded. Tar is not present in this elixir, only the soluble constituents obtained therefrom; they are not tar and certainly this does not justify naming the preparation as at present. Further, the

title does not disclose that the compound contains morphine. I have had no demand for this preparation in more than ten years.

Canada liniment. There is no good reason for the use of the word Canada and this word should be dropped as a synonym for the regular title in future revision. Further, the note for the guidance of the compounding I consider objectionable. It suggests the addition of tr. quillaja to prevent separation; this should be added to the formula if it is to be used or the note should be eliminated.

Glycerinated elixir of gentian. What reason can be given for the application of this title to a preparation that is nothing but a conglomeration of various medicines? It is not an elixir in its true sense. Further, what justification is there in the use of saccharin in this or any other preparation as a sweetening agent? Saccharin has not been shown to be innocuous. I believe we should proceed carefully in using such preparations until after a thorough investigation they have been proven harmless beyond all question.

Catarrh powder. This to say the least is a very dangerous preparation, for it contains a habit-forming drug in considerable quantity. This formula should be eliminated in the next revision. There is no justification in retaining a preparation of this kind which has never demonstrated its utility.

SAMUEL L. HILTON,  
of Washington, D. C.

\*Read at the meeting of the Washington City Branch of the American Pharmaceutical Association, March 9, 1909.

Physicians desiring such compounds can readily write for what they want. It cannot be dispensed to the general public except on non-renewable prescriptions.

Pectoral syrup is another case of misbranding. The name should be changed, and if it is desired to retain the preparation in the Formulary, the original formula with sassafras pith is far preferable to the present formula made with oil of sassafras. Further, the title does not disclose that it contains morphine.

Decolorized tincture of iodine. Why should this preparation be called *t. iodine* when it has lost all of the properties of iodine by converting it into an iodide and iodate of ammonium and sodium? Pharmacy would lose nothing if it were dropped.

Since the last edition of the National Formulary I have found many formulas that are not perfectly satisfactory and require revising, some of which I will name and call attention to some of the objectionable features.

All preparations such as liquor antisepticus alkalinus and elixir digestivum compositum, containing coloring matter like cudbear, should have the formula so adjusted that the drug cudbear should be used instead of the tincture of cudbear. Experience has shown that no matter how carefully tincture of cudbear is prepared, it is not possible with the quantity of menstruum used to extract all of the coloring matter, so that a more uniform color can be obtained by macerating the coloring matter in the liquid for 24 hours before filtration than by the use of a previously prepared tincture.

The addition of coloring matter to many of the preparations could well be omitted. In those preparations where coloring is desirable to improve appearance the amount of coloring in its natural state rather than a preparation thereof should be specifically stated, so that no matter who makes the preparation or where it is obtained it will be found to have the same general appearance.

Emulsion of petroleum is not satisfactory, for it does not keep, the tragacanth seeming to be the disturbing factor. Acacia and tragacanth mucilages when mixed become less viscous than what each is before mixing, due to some apparent chemical change, possibly by the action of oxydase, a ferment that has been shown to be present in acacia. If made with acacia it keeps better and makes a more satisfactory preparation.

Phosphatic emulsion. This formula is far different from the original formula that was originated in this city by Dr. S. C. Bussey and Mr. W. S. Thompson. It contains too much oil bitter almond. There is no necessity to use Jamaica rum. New England rum answers every purpose. The method of making, by shaking in a bottle, will not make as perfect an emulsion as if it was made in a mortar by reducing the yolk of egg to a smooth paste and gradually adding the oil until it is thoroughly emulsified. There is probably no place in this country where there is as much of this preparation made and consumed as in this city; therefore I think the original formula should be adhered to. The name *mistura phosphatica* should be changed.

Essence of pepsin is a very satisfactory preparation if properly made, but care must be exercised in preparing the same and the directions should be more explicit in regard to the methods of solving the pepsin and rennin. The wine used should be free from tannin, very light in color and of full alcoholic strength or fermentation will likely occur.

A detannated fluid extract of gentian would be very acceptable for making elixir of gentian instead of detannating the finished elixir.

Elixir terpin hydrate is not a satisfactory formula. The addition of syrup is the disturbing factor; if this is eliminated and a larger amount of glycerin used, there will be no trouble with precipitation of crystals of sugar. Further, saccharin should not be used, as the preparation is sweet enough and the point previously made against the use of this drug applies equally well here.

Solution of peptonate of iron and manganese is most unsatisfactory, for the finished product is offensive in odor, unpleasant in taste and does not represent what is claimed. The formula and process of Mr. H. A. B. Dunning, as published in the proceedings of the American Pharmaceutical Association, 1905, and frequently spoken of as the Harrison formula, makes a better preparation without any of the above objections. If the formula cannot be made satisfactory it had better be eliminated. I have found most of the peptonate

of iron on the market unsatisfactory and not perfectly soluble.

Antiseptic powder. This formula should be reconstructed. Powdered dried zinc sulphate should be used in place of the granular salt of the Pharmacopoeia, due allowance being made for loss of water in drying the zinc salt.

Syrup actaea compound. The formula for this preparation is unsatisfactory, for the reason that it is almost impossible to obtain a clear preparation. Some experimenting should be done to see if this objection cannot be overcome; possibly the use of glycerin will have the desired effect.

Compound syrup of Irish moss. The same objections can be raised against this preparation, for while clear when first made it does not remain so. It contains the mucilaginous principles from 1 gm. of Irish moss to 1000 cc. of finished syrup, too small amount of the drug for the preparation to receive the above name.

Syrup white pine compound. All of the drugs in this preparation with the exception of the morphine have been increased in the last revision without any apparent justification. All of the pharmaceutical manufacturers, with one exception, make the preparation much weaker. The morphine sulphate should be reduced to 3-16 grain to the fluid ounce. The addition of coloring is an improvement.

Compound resorcin ointment. Some changes are desirable in the manipulation of this preparation. The trituration of resorcin, zinc sulphate and bismuth subnitrate with the hydrous wool fat should be made in a warmed mortar, before incorporating the paraffin and petrolatum, and after melting together they should be allowed to cool to about the same temperature of the mixture first prepared.

Another very desirable addition to the formulary and one that I consider absolutely necessary since the Food and Drugs Act is that directly under the name of each preparation containing alcohol, a statement should be made of the average amount of absolute alcohol, by volume, in the finished preparation to conform to this Act. If the preparations contain any of the other drugs that are required by the Act to be stated on the label, they also should be stated so that no question could arise about the properly labeling all National Formulary preparations.

In closing these remarks, I desire to thank you, Mr. President, and the members present for the opportunity given me to present a few suggestions on a subject that all are interested in. While I realize that I have not presented anything novel, I trust I have brought out some points that are of interest, and which will precipitate some discussion, so that the next revision committee will have the benefit of as many suggestions as possible and be able thereby to give the professions of medicine and pharmacy practically a perfect formulary.

## THE GROUCH.

By Walter H. Cousins, Munday, Texas.

Of all the human deformities that are permitted to soak up a good sunshine, spoil pure air or take up room on this terrestrial ball of mud and sand, the most useless and out-of-place bundle of dissatisfaction it has ever been our misfortune to meet it is that yet unclassified specimen, "the grouch." He is the chap whose look is capable of turning a sunshiny Sabbath morning into a season of nervous unrest and from whose very life one can readily infer that he has filed a roar against fate, soured on humanity, and kicked at God.

These unnameable things are found in every rank and station of life and in every branch of human endeavor, and it is a deplorable fact that not a few of them have found their way into the ranks of pharmacy. They are the sore heads who retard every move of progress and spend the small amount of influence they possess in the wrong direction.

The calamity howl of these human lemons brings down the stamp of disapproval on the whole profession, and by their never-ending objection to everything, whether good or bad help to class us as an aggregation of blood-spitting misers who, unsatisfied with possessing the earth, are crying for the moon. To this class belongs the pitiful specimen of natural history who mourns over spending 50 cents a year for the maintenance of a State pharmacy board, and who would not mind being a member of the State association if it were not for "fooling away two dollars a year." He is the same guy who works clerks whose intelligence would not warrant

their continuing their career as draymen, and if you sat him down on a thin dime his feet would not touch the ground. His heart is smaller and much harder than a buckshot.

To make a fraternal visit to his place is an embarrassing expedition. Ere you cross his threshold he seems to view you in much the same manner that a wild-cat distiller looks upon a man suspected of being a revenue officer. You venture to ask about his competitor and he promptly informs you that he knows nothing for he has nothing whatever to do with him. Any time the grouch treats you nicely or dispenses any brotherly love you may know that he has suddenly lost his mind or that this system of worlds has slipped a cog, for under normal conditions he would not for a moment be guilty of such conduct.

He is probably the only specimen of the animal kingdom to whom the word "friend" is Greek. He is to the traveling man a nightmare, to the house that sells him goods a never ending source of trouble, to his trade a thing of mortal dread, and to his neighbors a shame. He has never discovered that a smile is the cheapest and most effective piece of advertising known to the profession. He is not aware that a few kind words and a slap on the shoulders are worth more than a whole page of expensive newspaper space in the matter of converting reputable merchandise into cash.

His idea of sunshine is to "wire" the current around the meter and thereby sidestep a light bill. The one troublesome thorn in his flesh is the fact that Joseph P. Remington and his party of revisers have never devised a means whereby he can weaken the *Aqua pura* with which he Q. S.'s prescriptions. He is the inanimate package that almost proves Darwin's theory that man sprang from a monkey, only he leaves us wondering why he did not spring further!

His acetic frown and carking protest betoken the fact that his hepatic organs are out of order on the wrong side, and seemingly, he has never outgrown the attack of colic contracted while passing through the catnip tea period immediately after his arrival on this otherwise beautiful world. Decent descriptive English is as powerless to delineate his perverse nature as is an ant to move Gibraltar.

He pours his putrid vituperation out on the oldest and most honored members of the State association because "the members have never done anything." He finds fault with the men who, at a sacrifice of money and weary years of toil, have done all they could to raise pharmacy to the plane where it rightfully belongs, while he has never paid a month's dues or contributed anything but insulting letters to the secretary.

His existence in the world makes us doubt the truth of the such said saying that "it takes all kinds of people to make a world." If it were ours to draw the plans and specifications of a world, we would specify twice the number of yellow dogs required and leave out the grouch, for it is our firm belief that half his room in the Sahara Desert is worth more than is company.

The hollow-headed, cheerful idiot, however stale, were a thousand times more preferable than the grouch with a brain fit for Socrates accompanied by the scowl of a dyspeptic and the demeanor of the miser. He neglects his own business in order to have time to ride hard on the entire universe and to see that things terrestrial do not go wrong. He usually begins the day with a vociferous arraignment of the President and Congress for he doings ancient international affairs, coming down through the various grades of officials until the town marshal is reached.

He appreciates nothing, and tolerates the rising and setting of the sun merely because of his inability to prevent these natural phenomena. If all the sympathy in the world were brought to bear on him it would not in a thousand years awaken a responsive throb within his sunken bosom. He refers to make human hoof prints along the pathway of life, living this fairly appreciative world scowls and frowns when sales cost nothing per million, and making howls while other men make history. Let us hope that he will either be removed or rebuilt.

#### West Virginia Ph.A. Meets in June.

Secretary F. S. Johnston, of Elkins, announces that the West Virginia State Pharmaceutical Association will meet annual session at Morgantown, on June 2 and 3.

Some druggists are like a package of spoiled labels; they are their value as soon as they get stuck on themselves.

## QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of The Era. Copies of these may be obtained at 10 cents each, except a few issues which are out of print, for which we charge 25 cents each.

### Perfumed Face Lotion for Barbers.

(F. M. M.)—"Please publish several formulas for a perfumed face lotion that would be suitable to make and sell to barber shops."

The lotions employed by barbers for use as an "after shave" are as numerous and varied as the personal tastes of thousands of tonsorial artists will permit. Bay rum, with hazel water, and alcohol enter into nearly all of them. Here are some typical formulas:

(1)

Bay rum .....	2 ounces.
Witch hazel water .....	2 ounces.
Glycerin .....	1 1/2 ounce.
Boric acid .....	1 1/2 dram.
Rose water .....	3 ounces.
Alcohol .....	3 ounces.
Water, enough to make .....	16 ounces.

(2)

Menthol .....	5 grains.
Powdered tragacanth .....	1 1/2 dram.
Alcohol .....	1 1/2 ounce.
Glycerin .....	2 drams.
Distilled extract of witch hazel .....	4 ounces.
Water .....	2 ounces.

Dissolve the menthol in the alcohol and add to the tragacanth contained in a dry bottle; add the extract of witch hazel, water and glycerin and thoroughly shake.

(3)

Quince seed .....	3 ounces.
Boric acid .....	1 1/2 drams.
Carbolic acid .....	1 fl. dram.
Distilled extract of witch hazel .....	2 fl. ounces.
Glycerin .....	6 fl. ounces.
Perfume extract .....	2 fl. ounces.
Water enough to make .....	4 pints.

Pour 32 fluid ounces of boiling water upon the quince seed, add the acids and macerate for several hours, stirring occasionally, decant the liquid, upon the residue pour 16 fluid ounces of boiling water, macerate again and decant as before, mix and strain the two liquids, add the glycerin, distilled witch hazel and perfume and finally the remainder of the water. The quantity of distilled extract of witch hazel may be increased, if desired, omitting, of course, a corresponding quantity of water.

After all is said it is probable that bay rum is the best "after shave" and there is nothing we know of which will take its place.

### Dilute Phosphoric Acid and Iron Pyrophosphate.

(A. C. S.)—"I submit the enclosed prescription:

Iron pyrophosphate  
Dilute phosphoric acid  
Glycerin  
Strychnine  
Elixir of calisaya (detannated)  
Port wine (detannated)

"When the ingredients are mixed a precipitate is formed, the order of mixing then being immaterial. A clear solution can be obtained and so remains until the phosphoric acid is added

when a precipitate appears. After standing 20 or 30 minutes the solution becomes clear again. What is precipitated and why does it go into solution again?"

The difficulty in this prescription arises from the fact that the pharmacopoeial dilute phosphoric acid is incompatible with pyrophosphate of iron, a gelatinous precipitate of ferric phosphate resulting when these substances are brought together. As you have not given the quantities of the various substances directed in the prescription we cannot estimate the amount of the precipitate formed, but it is probable that it is so small as to be afterward dissolved in the combined liquids on allowing the mixture to stand for a time. If this be the case, it is also probable that the precipitation first noted could be considerably retarded or prevented altogether by dissolving the iron pyrophosphate in a little water and adding to it the elixir of calisaya and glycerin previously mixed. Then dilute the phosphoric acid with the port wine and mix the two solutions. In this way the reacting substances are brought together in diluted form and in the presence of the glycerin which serves as a "protecting agent."

In this connection we would say that there are three kinds of phosphoric acid known individually as the "meta," "pyro," and "ortho" phosphoric acids. The official acid is the ortho acid and it is distinguished from the others by the fact that it does not precipitate tincture of iron nor coagulate albumen or gelatin. The second variety does not enter very much into this discussion more than to say that the other phosphoric acids are liable to contain it as an impurity. Metaphosphoric acid is obtained by dissolving oxide of phosphorus in water, or by heating the other phosphoric acids until no more water is given off. A formula for dilute acid (metaphosphoric) of this character is given in the National Formulary (page 31). Now as to the characteristic reactions between these acids and the pyrophosphate and phosphate of iron. Whenever pyrophosphate of iron forms one of the ingredients of a mixture containing dilute phosphoric acid, the official tribasic or orthophosphoric acid is unsuitable, as it produces with that salt a gelatinous precipitate. A similar precipitate is almost sure to occur when phosphate of iron is combined with the official acid, though the precipitate formed is not so bulky, and, under certain conditions may not appear at all. Both of these salts are, however, perfectly miscible with metaphosphoric or glacial phosphoric acid, and if our correspondent had used the dilute metaphosphoric acid of the National Formulary (representing an equal acid strength to the official acid) he would have had no precipitation. Whether this acid has the same therapeutic value as the official acid remains for the prescriber to decide. It probably has, but before any substitution be made, his consent should be obtained.

#### Clearing Discolored Ammonia Water.

(P. Bros.)—"We have in stock about eight gallons of stronger ammonia water stored in five-gallon jugs which, in some way, has become red. We cannot account for the change in color and if you can we should like to have you answer in the Question Box what you think the trouble is and how it can be remedied. We have filtered the ammonia through charcoal, but were unable to remove the color."

Two possible causes of coloration suggest themselves, viz., the presence of coal tar bases and fixed impurities derived from the ammoniacal liquor of gas works used in making the ammonia water (dفعitive purification), or the presence of organic matter from the corks of the jugs or from other sources which may have accidentally contaminated the preparation. In the manufacture of ammonia on the large scale ammoniacal liquor from gas works is first mixed with milk of lime and heated, the gaseous ammonia being further purified by passing it through a series of tubes filled with charcoal which retain the empyreumatic products. If these products be the cause of the coloration which you report, they could undoubtedly be removed by following a similar process, but which is hardly practicable on a small scale. If the ammonia has become colored by organic substances it can probably be only thoroughly restored by distillation. It is possible in many cases, to remove the obnoxious color by the cautious addition of potassium permanganate; yet the products of decomposition remain, and the resulting solution could not be satisfactorily used for internal or nice purposes. Previous to redistillation, which is a simple operation, the colored water of ammonia may be mixed with enough potassium permanganate to give it a decided tint. This will help to destroy the volatile organic mat-

ter which might otherwise come over with the water. However, unless you have special facilities for the work, it is doubtful whether any scheme to decolorize the ammonia would prove commercially profitable. The stock need not prove a dead loss, however, as it could be easily utilized in the preparation of any one of a number of household cleaning fluids which are sold by druggists and in which the tint is not an important factor. You could probably buy a standard product of high grade for less than it would cost you to undertake redistillation.

#### Acid Sodium Oleate.

(B. S. E.)—Acid sodium oleate has been recommended for the treatment of gall-stones and chronic hepatic torpor. It may be made as follows:

Sodium hydroxide .....	25 grams.
Oleic acid .....	280 grams.
Water .....	25 Cc.
Alcohol (90 per cent) .....	50 Cc.

Dissolve the sodium of hydroxide in the water and add to a mixture of the oleic acid and alcohol; set aside in a warm place until clear, then pour into shallow dishes, dry in warm air, and reduce to a powder. For a neutral oleate use oleic acid, 285 parts; sodium hydroxide, 40 parts; water, 50 parts, and alcohol, 150 parts.

#### Fluid Extract of Larkspur.

(J. S.)—The last edition of the U. S. Pharmacopoeia gives a formula, which see (fluid extract of stavesacre). There is no official formula for tincture of larkspur, but an electric authority gives the following:

Larkspur seed, fine powder .....	10 av. ounces.
Alcohol to make .....	16 fl. ounces.

Extract the drug by maceration or percolation.

#### Liquor Ammonii Anisatus.

(L. W.)—A formula for this preparation official in the German Pharmacopoeia was printed in the ERA of November 26, 1908, page 670.

#### Mercer County Druggists Entertain Doctors.

TRENTON, March 12.—The annual banquet of the Mercer County Druggists' Association was held recently. The physicians of the city were the guests of the druggists. Charles H. Young, president of the association, acted as toastmaster. Dr. G. N. J. Sommer responded to the toast, "The Druggists and Physicians' Club." Dr. P. W. Yard's toast was "Experience," while Dr. Martin W. Reddan made a hit in his original song, "Glen Gardner."

Dr. John Bruyere, who was recently married, gave a toast on "Matrimony." A. L. Updike talked on "Why I Am Not a Druggist"; Dr. Samuel Freeman, "The City's Poor"; Dr. Horace Bellis, "Athletics," and Dr. William S. Collier, "The Ladies."

The committee in charge was composed of Harry Hughes, Isaac J. Keuper and David E. Stretch. The officers of the association are: President, Charles H. Young; vice-president, James L. Mathes; secretary, George T. Fitzgeorge; treasurer, David E. Stretch.

#### New York State Pure Drug Law Faulty.

ALBANY, March 14.—Complaint that it is almost impossible under the present provisions of the so-called New York State Pure Drug Law to secure convictions for violations is made in the annual report of the State Board of Pharmacy, submitted to the Assembly. The report states that flagrant violations in many cases go unpunished because the penalty provided by law is such as "to require a trial by jury or before a local magistrate, resulting in a miscarriage of justice in favor of the defendants."

The report says that there is almost a complete elimination of the improper sale of cocaine as a result of legislation upon that subject.

#### Election of New England Association of Boards.

BOSTON, March 12.—At a recent meeting of the New England Association of Boards of Pharmacy the following officers were elected: President, L. A. Lamson, Massachusetts; vice-president, D. F. Davis, of Vermont; secretary and treasurer, Frank W. Bucknam, of Maine.

## PERSONAL MENTION

—DR. N. NICOLAI, of the New York branch of Parke, Davis & Co., is at present in Boston.

—J. E. TYLER, of Eminence, Ky., has gone to Pineville in the same State to practice pharmacy.

—C. W. WEST, of the Eastern Drug Company, of Boston, was a New York City visitor last week.

—J. L. HOPKINS, of J. L. Hopkins & Co., of New York, is taking a short rest at Pinchurst, N. C.

—F. M. LORING, of Harvard street, Dorchester, Mass., has recently been confined to his home by illness.

—T. EDWARD ATCHISON, of Batavia, N. Y., has been elected mayor on the Democratic ticket in that village.

—W. H. BARR, president of the W. H. Barr Drug Company, of Milwaukee, made a recent business trip to Chicago.

—C. C. VEITH, of Danville, N. Y., has joined the automobilists, having purchased a new touring car in Buffalo.

—A. S. BROOKS, secretary of the Michigan Drug Company, of Detroit, Mich., was a New York City visitor last week.

—W. B. KAUFMANN, head of the importing department of Parke, Davis & Co., is enjoying a short sojourn in Florida.

—E. G. SWIFT, general manager of Parke, Davis & Co.'s laboratory, lost a valuable launch by fire recently.

—O. O. TURNER, manager of Webb's King Hill Pharmacy, St. Joseph, Mo., has recovered from a severe attack of grip.

—A. J. FELLOWS, of Chatham, N. Y., who has been ill in the Albany Hospital, was considerably improved at last accounts.

—MISS CECIL BADER, of Green Bay, Wis., has accepted a position with the McDonald-Strassburger Pharmacy at that city.

—J. A. WEBER, of Pekin, Ill., who recently sold his pharmacy, has taken a position with the Pioneer Life Insurance Company.

—W. D. ROWLES, of the special preparation department of the New York branch of Parke, Davis & Co., has gone to Pinehurst, N. C.

—JOHN B. THOMAS, of the Thomas & Thompson Drug Co., Baltimore, went with Mrs. Thomas to Atlantic City last week on a brief vacation.

—W. J. BARKER, for the last eight years with West's drug stores, Grand Rapids, Mich., has accepted a position with Muir's Drug Store.

—WALDO E. DRUMMOND, of Huntington, W. Va., has become the prescriptionist at the Chester A. Baird pharmacy in Zanesville, Ohio.

—HARRY HURRY, of the special preparation department of Parke, Davis & Co., Chicago, spent last week in the home laboratories in Detroit.

—PROFESSOR MORRISON, chemist to Lymans, Ltd., recently lectured before the Montreal College of Pharmacy on "Perfumes, Artificial and Natural."

—JUSTIN KEITH, Western representative of J. L. Hopkins & Co., is visiting friends in New York City after covering an extensive territory in the West.

—JULIUS GERICKE, formerly connected with the Heimstreet Pharmacy at Lake Mills, Wis., has resigned to devote his time to studies which he is pursuing.

—F. E. BOGART and Harry T. Carver, of Farrand, Williams & Clark, Detroit, Mich., were callers upon the wholesale trade in New York City a week ago.

—W. F. BAUM, a well-known member of the Illinois State Ph.A., will probably be elected mayor of Danville. He is a candidate on the Republican ticket.

—SAMUEL WILLIARD, Eastern sales manager for the Coca-Cola Company, with offices in New York, was a visitor last week at the Drug Club of Philadelphia.

—V. O. PETERS, formerly associated with E. J. Nolin in the drug business in Mansfield, Ohio, is mentioned as a candidate for mayor of Shelby in the same State.

—A. J. HORLICK, of Horlick's Malted Milk Company, Racine, Wis., and also mayor of that city, was a caller upon the wholesale drug trade in New York City some days ago.

—CHARLES UZZELL, of Granite City, Ill., has been nominated for mayor on the Labor ticket, with an excellent chance for election. He has already served his city as treasurer.

—H. F. BADER, for 37 years engaged in the retail drug

business in East St. Louis, Ill., has decided to retire and will engage in the manufacture of medicinal preparations in the future.

—JOHN HALLOCK, pharmacist at the South End Drug Store, Hillsdale, Mich., married Miss Selma Dahlstrom, at the home of the bride's parents in Cadillac. They will reside at 49 Bacon street west.

—R. P. WALTERS, former proprietor of Walters Drug Store, De Land, Fla., has been appointed general agent of the Columbian National Life Insurance Company for the State of Florida, with headquarters in De Land.

—CLAYTON FRENCH, a director of the Smith, Kline & French Co., and a son of H. B. French, the vice-president of the corporation, led the Drug Club team in bowling in last week's matches, having one score of 204.

—L. N. BENTON, who sold his drug business in Illinois last fall and went to Oklahoma City, plans to return to the former State as soon as he can arrange his affairs. He expects to locate at Aurora, Sterling, Rockford or Elgin.

—CHARLES WAGNER, of St. Louis, a favorite entertainer at druggists' social gatherings and for a number of years with T. B. Lippincott & Co., soda supply manufacturers of that city, is now selling Hires' Automatic Munkmakers in that city. —A. J. MORE, of Sioux City, Iowa, and Mrs. More were in New York City for several days last week. They report a very pleasant time. Mr. More is chairman of the committee on membership of the National Wholesale Druggists' Association.

—CLYDE GOODRICH, accompanied by his wife, of Marcellus, Mich., recently visited the Chicago jobbers. They were on the way to Florida, where they will spend a few days before leaving for Cuba, where they expect to stay the balance of winter.

—FRANK W. FLUCK, the dignified president of the Philadelphia Association of Retail Druggists, surprised his many friends and incidentally made a big hit when he appeared as one of the endmen in a minstrel show given by the Northwest Business Men's Association of Philadelphia.

—H. DUEBELDT, manager of the Herpicde Company, has resigned and purchased an interest in Murgittroyd's Drug Store, of Spokane, Wash. The Herpicde Company's employees presented to him a handsome leather traveling bag as a farewell gift. He will make a buying trip East before leaving for Spokane.

—P. P. BROWN, who looks after the interests of the Armour laboratories in Philadelphia, is the present candle-pin champion at the Drug Club. The record was held for a few hours by R. H. Lackey, a well-known retailer, but Mr. Brown established a new figure while Mr. Lackey's friends were still congratulating him.

—PROF. I. V. S. STANISLAUS, dean of the department of pharmacy at the Medico-Chirurgical College of Philadelphia, and Prof. C. H. Kimberly, a member of the same faculty, are among the recent applicants for membership to the Drug Club of that city. Another is Prof. Frank N. Moerk, professor of analytical chemistry at the Philadelphia College of Pharmacy.

—GODFREY OLIN HANCOCK, of Asbury Park, N. J., who was president of his class at the Philadelphia College of Pharmacy in 1903, and is now looking after the interests of Eli Lilly & Co. at Wilmington, Del., called on old friends and classmates in the Quaker City in the course of a business visit. Incidentally he put in his application for non-resident membership in the Drug Club of that city.

—MIERS BUSCH, of Shoemaker & Busch, of Philadelphia, has been spending a week in the interior of Pennsylvania looking after the trade in the territory covered by one of their sales representatives, Charles H. Marcy, of Altoona, Ill. Many friends of the latter, who is the local secretary for the 1909 meeting of the Pennsylvania Pharmaceutical Association at Bedford Springs, will hear with regret of his serious illness.

—CHICAGO visitors last week included the following druggists: E. T. Scott, Westville, Ind.; C. E. Traggardh, Rockford, Ill.; L. H. Mattern, Hammond, Ind.; J. M. Alte, Buckley, Ill.; B. J. Burkhart, Fayette, Ind.; H. D. Stone, Albion, Ind.; J. W. Schenpf, Watertown, Wis.; A. Pretzinger, of R. Pretzinger & Bros., Dayton, Ohio; W. C. Porterfield, Silver City, N. M.; C. E. Cameron, Alta, Iowa; L. A. Wangler, of Wangler Brothers, Waterloo, Iowa; J. Crocker, Maroa, Ill.; Mr. Roberts, of Roberts Drug Company, Bloomfield, Iowa; E. P. Lockhart, Norway, Mich.; G. Brown, Sheridan, Wyo.

## OBITUARY.

### Bradhurst Schieffelin, of New York.

Bradhurst Schieffelin, who introduced petroleum to the world commercially in 1860, and until his retirement from business some years ago, was a member of Schieffelin & Co., New York, which was established by his grandfather, died last week from a complication of diseases at his home in Centre street, Richmond, S. L., at the age of eighty-four years. He leaves a widow, who was with him when he died, and two daughters, who are now in Europe.

Mr. Schieffelin was born in New York City in 1824, the son of Henry Hamilton and Marie Teresa (Bradhurst) Schieffelin. He married Lucy Dodge, of Montpelier, Vt. He organized a committee of citizens to co-operate with President Lincoln in the Civil War, and in the commercial crisis that followed the war he provided food and shelter for thousands of the destitute.

### Druggist Killed by Fall on a Picket Fence.

LOUISVILLE, March 14.—A peculiar accident happened to Edward Guthrie, a well-known druggist of Hardinsburg, a town not far from this city. He was found dead with his head through the iron pickets of the fence surrounding the Court House. The body was discovered by some boys and they immediately summoned several men who removed it from its position. The supposition is that he was seized with a fainting spell while passing, leaned on the fence and losing consciousness, fell. His neck was broken. The accident happened only an hour after he had left the drug store in apparently the best of health.

### Virginia Druggist Shoots Himself.

RICHMOND, Va., March 15.—B. F. Eubank, a druggist of Halifax County, Virginia, committed suicide March 3 by firing a bullet through his heart. He had been despondent. Mr. Eubank was 40 years old and was moving to Elizabeth City, N. C. The furniture was already on the train, and a number of friends of the family were to assemble at the station to see them off. He formerly lived in South Boston, where he was engaged in business, and leaves a widow and five children.

### Another Bereavement for J. E. Howard.

DETROIT, March 13.—J. Edward Howard, secretary of the Drug Merchants of America, whose wife was recently laid to rest in this city, was again called here this week by the death of his father, John McLean Howard, who passed away Thursday. Mr. Howard was 65 years old. Besides J. Edward Howard, a widow and one other son, John Howard, of Port Huron, survive.

### Druggist Killed in Wreck of Railroad Train.

DAVENPORT, Iowa, March 15.—Frank Nadler, of this city, was instantly killed in an accident to a passenger train on the Muscatine Railroad. The car rolled down a 20-foot embankment. Two of his brothers, living in Moline, are druggists.

### Obituary Notes.

—ANDREW LINN, former druggist of Fayette County, Pa., died recently in North Dakota, aged 87.

—FRED RAUSCHER, of Laton, Cal., is dead. He was a native of California, aged 48, and leaves a widow.

—CHARLES H. THORP, brother of Will R. Thorp, druggist at Milton Junction, Wis., is dead, aged 39, of pneumonia.

—FRANK L. FRY, for 25 years a druggist at Manor, Pa., died recently of brain trouble in a Pittsburg hospital. He was 41.

—WILLIAM HUMMEL, for 30 years a prominent druggist of Philadelphia, died at the Masonic Home recently, aged 70 years.

—EDWIN T. DILWORTH, late president of the Standard Pharmacy, Wilmington, Del., is dead, aged 54. A widow and two children survive.

—FRANK WOLFMAN, for nine years a trusted employee of Farrand, Williams & Clark, Detroit, died last week after a brief illness with lung trouble.

—J. J. NUSSEBAUMER, formerly a druggist, is dead in San

Angelo, Tex., aged 49. He went there 14 years ago from Oakville, Ill. A widow and son survive.

—DR. EDMUND C. GIBBS, who left pharmacy to become a physician, is dead at his home in North Baltimore, Md., aged 53. A widow and five children survive.

—E. J. DAWOWSKY, of Allentown, Pa., died almost instantly of heart disease recently while entering his pharmacy. He was 67 years old and leaves two married daughters.

—DR. S. C. PRICE, 71 years old, a pioneer physician of Joplin, Mo., who established the first pharmacy in that town, died recently in Los Angeles, wither he had gone for his health.

—J. ABORN SMITH, of Waterbury, Conn., is dead, aged 48, leaving a widow and one daughter. He had been engaged in the drug business in several Connecticut cities and was a prominent Mason.

—R. E. SHELTON, who had been connected with pharmacies in Woodland, San Francisco and other places, died recently in Dutch Flat of ill health, following exposure at a fire. His wife and mother were with him.

—WESTON NELSON, for many years connected with the Minard's Liniment Manufacturing Company, is dead, aged 74. He had been with the company both in Boston and in South Framingham, where it is now located.

—JOHN F. HENNELLY, employed as a clerk by Glynn & Kelly, druggists, Waltham, Mass., is dead, aged 31. He had attended both Boston College and the Massachusetts College of Pharmacy, and he had a wide circle of friends.

—ROBERT SIMONS, who some years ago gave up the retail drug business to go on the police force of Philadelphia, was killed on a railroad while chasing a fugitive. His promotion to the position of house sergeant had been announced.

—R. A. DOWNING, of Purnell & Downing and one of the best known business men of Lexington, Ky., died recently of paralysis, in his 65th year. He served in the Civil War, was a member of the G.A.R. and leaves a widow and four children.

—FRANK MARBURY STOCKDELL, a traveling salesman of Petersburg, Va., died recently in a hospital in Atlanta, Ga., following an operation for acute appendicitis, aged 25 years. He was formerly connected with the Powers-Taylor Drug Company, of Richmond, and was a brother of Hugh Stockdell, of Petersburg.

## CHEMISTS HONOR DR. HUGO SCHWEITZER.

### Salamanders, Speeches and Songs at Triple Anniversary Celebrated Last Saturday at the Liederkrantz.

There was a notable gathering of chemists at the Liederkrantz Saturday in honor of Dr. Hugo Schweitzer, who had been closely identified with the chemical industries in this country for many years. The chemical societies of which he is a member, desirous of showing their appreciation of his services, assembled in strong force to celebrate the 25th anniversary of Dr. Schweitzer's doctorate in chemistry, the 20th of his landing in America, and the 15th of his secretaryship of the Society of Chemical Industry. Various chemical organizations were present—the American Chemical Society, the Verein Deutscher Chemiker, the Society of Chemical Industry, and the Chemists' Club.

The celebration was entirely informal, being in the form of a commers. The chief address of the evening was made by Prof. Charles F. Chandler, of Columbia University, who traced the career of Dr. Schweitzer. In a few felicitous remarks T. J. Parker presented to Dr. Schweitzer a magnificent silver tea service.

Mr. Seitz, president of the Liederkrantz Club; I. J. R. Muurling, president of the Farbenfabriken of Elberfeld Company; Comptroller Metz and others spoke, with salamanders and songs between. Ellwood Hendrick officiated as presiding officer.

### Mercer Faculty and Students at Dinner.

MACON, March 15.—The pharmacy class at Mercer University entertained the pharmacy faculty of the college at a delightful banquet at Ed Loh's restaurant recently. The guests were Dr. M. A. Clarke, Prof. J. F. Sellers, Prof. A. J. Ayers, and Dr. Ben S. Persons. Leroy Croom was the toastmaster, and responses were made by H. L. Arnold, E. T. Arnold, T. H. Carmichael, H. C. Barnett, Livingston Henry, I. G. Prim, J. B. Warthen, and G. W. Williams.

## DOUBLE SESSION FOR B.A.R.D. AND THE A.P.H.A.

## BROOKLYN C. OF P. TO BURN MORTGAGE.

**Valuable Papers Read and Dinner Enjoyed by Members of Both Organizations at the Hotel Plaza.**

**Boston, March 12.**—The third joint meeting of the B.A.R.D. and the New England section of the American Pharmaceutical Association was held on Wednesday at the Hotel Plaza in Columbus avenue, and it proved to be the best of the series. The attendance reached 50. The B.A.R.D. for the first time held its regular meeting at the Plaza at 4 in the afternoon, with Prof. Elie H. La Pierre presiding. The most notable incident of the meeting was the election of S. A. D. Sheppard, one of the oldest members of the association and one of the best-known druggists in the country, to honorary membership in the Boston association. Three new members were also elected. James F. Finneran, chairman of the legislative committee, presented a report of progress on the various matters pending before the Legislature relating to pharmacy and its interests. The report was listened to with close attention.

At 6 o'clock dinner was served at the Hotel Plaza, and to this event about 50 members sat down. President C. Herbert Packard, of East Boston, of the local section of the American Pharmaceutical Association, presided. After dinner there were a number of important papers presented, followed by general discussion, so that the meeting did not break up until after 10.30, making a continuous session of over six hours for many of those who attended.

Prof. Charles F. Nixon, of Leominster, read an essay on "U.S.P. and N.F. Syrups." Frank F. Ernst, of Jamaica Plain, spoke on laboratory apparatus, and illustrated the talk with a variety of articles. James F. Finneran spoke on "Medicinal Wines Used in Pharmacy."

#### Banquet at Kansas City.

**KANSAS CITY, March 12.**—Two hundred and fifty members of the Kansas City Retail Druggists' Association attended the association's sixth annual banquet at the Coates House. The affair was one of the best ever given by the druggists and was greatly enjoyed. Judge W. T. Bland was toastmaster. Those who responded to toasts were: Mayor Thomas T. Crittenden, Jr., "Shall a Druggist Mix in Politics?"; Dr. Jabez Jackson, "Shall Druggists' Banquets be Wet or Dry?"; C. L. Abraham, "The Trials of the Retail Druggist," and Dr. F. G. Crandall, "The Retail Druggist From the View Point of a Salesman."

Following the toasts an impromptu literary programme was given. Master Carleton Coon made one of the hits of the evening with a song. Ernest Macquire recited some Irish stories and sang some Irish songs. Fred Farr, assisted by E. E. Ellis, did some clever whistling and band imitations.

D. V. Whitney, president of the association, and Romanta Wells, secretary, had charge of the affair.

#### Will Fight the Parcels-Post Measure.

**APPLETON, Wis., March 15.**—Appleton druggists will send petitions to Congress asking for defeat of the Parcels-Post Bill. Druggists to a man in the Outagamie County Druggists' Association are opposed to the parcels-post.

An important business meeting was held recently by the Outagamie County Druggists' Association and matters of interest to the trade were discussed, although it was voted to keep secret the results of the discussions. It is expected that several radical changes in the policy of the association will be the result of action taken at the meeting.

Members of the association were recently the guests of the Outagamie County Medical Society at the annual banquet of the latter organization held at the Ritter Hotel at Appleton.

**Kings County Ph.S. Hears Gratifying News and Discusses Pharmacy Legislation Pending in Albany.**

The final arrangements to pay off the entire debt on the Brooklyn College of Pharmacy were practically completed at a meeting of the Kings County Pharmaceutical Society held March 9. Dr. William Muir explained that there was now enough cash in the college treasury to cancel the entire debt on the society's institution, and introduced a resolution that the mortgage be paid before April 1. This resolution was unanimously adopted with a display of much enthusiasm. The sum that will clear the institution of debt is \$6700.

Dr. Muir, in commenting upon the struggle for funds, also stated some interesting facts in connection with the founding of the institution and its subsequent history. He told how six years ago when the present building was completed there was a debt on it amounting to \$45,000. He praised the trustees and faculty of the college for their work and congratulated them upon the excellent results.

Nowhere, said Dr. Muir, did he know of any institution owned and controlled entirely by retail pharmacists which equaled the Brooklyn College of Pharmacy. The institution is worth \$70,000 and is a monument such as can be looked upon with pride by all the retail pharmacists in the borough. He announced that there would be a gala affair on April 15 in the college in celebration of the freedom from debt, when the mortgage would be burned with appropriate ceremonies, and a number of speakers and guests would be present. A dinner will also be a feature.

A committee consisting of Jacob Rohfuss, president; Andrew E. Hegeman, secretary, and Oscar C. Kleine, treasurer, was appointed to carry out the financial arrangements in regard to the payment and cancellation of the mortgage.

Treasurer Kleine read his report showing the excellent financial standing of the society and the college, there being \$9220.92 in the college treasury and \$258.89 in the society's account.

Dr. Muir, as chairman of the legislative committee, announced that the new pharmacy bill would be introduced in the Legislature and explained its more important provisions. The bill was endorsed at the last meeting of the society, but a number of members who were not present at the previous meeting started a discussion on the measure. In regard to the matter of an appointive board with power vested in the Governor of the State, the sentiment was expressed by some members that it was a step in the right direction. There were, however, several others

who declared that the whole matter of pharmacy legislation was only brought up by the Governor for the purpose of creating and giving more patronage to the executive.

Others stated that they were glad to see that there was to be publicity in pharmacy matters and started to take to task the present board, claiming that the board held matters so secret that it was impossible for a druggist to ascertain if he was right or wrong. One member declared that it was wrong not to publish the analysis of all samples collected, so that the pharmacist could verify them himself and learn in this way the methods used in making the analysis.

Dr. Muir explained that the methods employed in analyzing U.S.P. products were the tests laid down in the U.S.P. and on any other products the method of analysis would be gladly given by the board's chemist at any time upon application. Dr. Muir also stated that he was in favor of the new bill, and taking into consideration the present developments in pharmacy he felt satisfied that the assuming of the responsibility by the State was to the betterment of conditions in pharmacy.

#### Minnesota Pharmacist Honored.

HERMAN W. REITZKE.

of Minneapolis, has been appointed by the Governor as a member of the Minnesota State Board of Pharmacy, succeeding C. T. Heller, of St. Paul, who becomes secretary of the board. Mr. Reitzke has been prominent in the N.A.R.E., having been member of the National legislative committee. He was president of the Minnesota State Ph.A. in 1906.

at the present time. There would be sufficient publicity when the new bill became a law, said Dr. Muir, for the district attorney in each county would handle the prosecutions and the newspapers would give the publicity. When a druggist's preparations were found lacking because of some slight carelessness on the part of a clerk or the proprietor, the people would be promptly informed and form their opinion.

John G. Wischert, chairman of the trade matters committee, stated that practically all the local territory had been covered in the propaganda campaign. There had been seven months of uninterrupted work that had brought results even surpassing those attained last year. He thought that the committee would probably continue the work until the end of the present month and then cease activity until the coming fall. Thanks were extended to Dr. Van Horn, the detail man, for his thorough and conscientious canvas of the physicians, and hopes expressed that he would consider a call when the work was to be resumed.

The following were elected to membership: Louis Gaer, Edwin J. Woelfe, Marcus A. Schochter, Maurice A. Cohn and Alfred S. Bayles. Those proposed for membership: Abraham J. Kramer, Meyer Strougin, William A. Hoburg, Jr., and Ch. Zinklinder.

Following are the names of the members on the committee of arrangements in charge of the banquet and ceremonies which are to be given upon the occasion of burning the mortgage: William Muir, Phar.D., chairman; William C. Anderson, Phar.D.; Frederic P. Tuthill, Phar.D.; Adrian Paradis, Ph.G.; Thomas J. France, Ph.G.

### FAVORS HONESTY IN N.F. NOMENCLATURE.

New York's Resolutions Endorsing Dr. Wiley are Also Approved by Washington Branch of the A.P.H.A.

WASHINGTON, March 12.—The March meeting of the City of Washington Branch of the American Pharmaceutical Association was devoted to a discussion of the National Formulary and was generally admitted to have been the most interesting and in many ways the most profitable meeting held by this branch.

Dr. Lyman F. Kebler, in discussing the nomenclature of the National Formulary pointed out the need for calling attention to the shortcomings of the National Formulary as well as the Pharmacopoeia and that only by calling attention to the shortcomings of these official standards could progress be made. He criticised the nomenclature of the National Formulary severely and asserted that what was accepted as being proper three years ago was now illegal and that names long in use, but defective, should be changed so as to bring them in harmony with the legal requirements.

Dr. Kebler quoted a number of National Formulary names to show that in every respect they were as objectionable as many of the trade names that had been ruled on as being objectionable under the rulings adopted to enforce the pure food and drug law. Among the preparations that he classed as being particularly objectionable are: Elixir of cinchona, emulsion of petroleum, compound elixir of celery seed, and essence of pepsin. He pointed out how these and other official names had hampered the enforcement of the Food and Drugs Act and that a thorough revision of the nomenclature of the National Formulary was very much to be desired.

Alexander Munster, a former druggist, now a member of the local bar, discussed the legal aspects of the nomenclature of drugs, more particularly in connection with the provisions of the Pure Food and Drugs Act and the District of Columbia pharmacy act. He also pointed out that although adulterating and misbranding imply dishonesty, yet both are frequently done by persons who are honest in purpose, but who are more or less ignorant of a correct interpretation of the law.

Samuel L. Hilton discussed the revision of the National Formulary. (His paper will be found on page 253 of this issue of the ERA.)

Dr. H. W. Wiley in discussing the several communications agreed with the readers of the papers that the nomenclature of the National Formulary was in need of careful revision, and asserted that so far as the committee on revision of the National Formulary was concerned it was clearly a case of "noblesse oblige." Nothing in the National Formulary should conflict with either the letter or the spirit of the Food and

Drugs Act. He believes it advisable to call a spade a spade and to insist that the National standards contain a "pure bred" nomenclature based on a principle and that that principle be honesty.

Dr. G. L. Magruder expressed the belief that the communications presented demonstrated the need for careful revision of the National Formulary. He commended the suggestions made by Mr. Hilton as being practical and in line with what had been done in the District of Columbia many years ago. The communications were further discussed by Messrs. Easterday, Willert and Dr. Kebler.

At the business session a communication from the Philadelphia Branch of the A.P.H.A. was presented, inviting the members of the City of Washington Branch to take part in an exhibition of pharmaceutical preparations at the meeting of the American Medical Association in Atlantic City, in June.

A communication from the New York Branch was read, including a preamble and set of resolutions endorsing Dr. Wiley and his work in connection with the enforcement of the Pure Food and Drugs Act.

On motion, the City of Washington Branch endorsed the resolutions adopted by the New York Branch and the secretary was instructed to express to the members of the New York Branch the appreciation of their fellow members of the A.P.H.A. in Washington.

The next meeting will be held in the National College of Pharmacy, April 13, and will be devoted to a discussion of the "use of the compound microscope in pharmacy."

### The Era Price List, 1909 Edition.

Work on the 1909 edition of the ERA PRICE LIST is now well under way and we have no hesitation in saying that the forthcoming book will be the best and most complete we have ever issued. This Price List is now in constant use by more wholesale and retail druggists than any general drug list published, many wholesale druggists purchasing several extra copies for their prices, stock clerks and salesmen. There are several reasons for this decided preference to the ERA PRICE LIST, the principal one being that it is the only medium which gives a list of the proprietary manufacturers, their addresses and the articles they make, this information being compiled from data furnished by the manufacturers themselves. Given the name of any proprietary article and by means of the "key number" the druggist can immediately find the name of the maker of the article. This method is original with the ERA and was adopted by it as one of the means of solving the vexatious patent medicine price list problem by giving the druggist a list which should contain some information besides that of prices.

As explained on another page, this edition will contain nearly 50,000 items, in this particular exceeding any general price list issued for the drug trade, the whole being reset in clean type and printed on special price list paper. Users of the 1908 edition of the ERA PRICE LIST are invited to send us memoranda of any omissions which may have come to their attention or corrections which should be made. As heretofore, copies of the ERA PRICE LIST will be sent free to all druggists who are ERA subscribers. Now is the time to subscribe.

### Kentucky Pure Drug Regulations Ready.

LOUISVILLE, March 14.—The commission provided by the State Pure Food Law, whose duties were to formulate rules and regulations for the guidance of druggists in conforming to the drug section of the law, have just finished their sessions at Lexington. The meetings have been held from time to time since the first of this year, the time when the law became effective. The druggists of this State have one representative on the commission, J. W. Gayle, of Frankfort. Printed copies of the regulations are to be mailed to every registered pharmacist in the State at earliest opportunity.

### Another New Association of Clerks.

BRIDGEPORT, Conn., March 15.—The Bridgeport Retail Drug Clerks' Association was formed recently at a meeting in Elks' Hall of about 45 drug clerks, and the following officers were elected: President, Thomas Fogarty; vice-president, John Harvey; secretary, Arthur Eade; treasurer, John E. Fuller Jones. A committee was appointed to obtain club rooms where the members can gather. The organization is purely for the advancement of sociability among the members and it is not to be a union organization in any sense.

**BALTIMORE RETAIL ASSOCIATION MEETS.**

**Getting Ready to Line Up the Profession Generally for Legislative Work Next Winter.**

BALTIMORE, March 12.—At the last meeting of the Baltimore Association of Retail Druggists the joint assemblage of representatives of the drug business to take place in May was discussed at considerable length. The sentiment was overwhelmingly in favor of the joint session, at which a plan for moving upon the Legislature for the enactment of such measures or amendments the need for and desirability of which has developed in the meantime, is to be formulated.

Another subject that came up for deliberation was the strengthening of the association of retailers by the accession of new members. This work is to be carried on with determination and perseverance, and a representative is to see druggists personally.

The telephone committee was authorized to act with a similar committee from the Washington association and work with the end in view of getting a larger proportion of the receipts from the pay telephones maintained in drug stores for the convenience of the public than they have heretofore been able to obtain. It is thought that the Chesapeake & Potomac Telephone Co. will not be so seriously averse to making such concessions which shall pay the druggists for the time and trouble of attending to calls and giving the instruments room.

President John B. Thomas occupied the chair and Charles L. Meyer officiated as secretary.

**ACTIVITY IN WASHINGTON.**

**Novel Invitation for Get-Together Meeting—Era Dose Book's Value.**

WASHINGTON, March 12.—The District of Columbia R.D.A. held its March meeting on the 9th at the National College of Pharmacy. A most satisfactory report was submitted by the finance committee.

The entertainment committee reported the conclusion of arrangements for a novel "get-together" meeting for druggists and physicians and their ladies. This meeting is to be in the form of an entertainment entitled: "A Trip to Yellowstone Park via the Stereopticon Route." The combined card of invitation and admission is in the form of a railway ticket with coupon. The place and date of the "trip" being Carroll Institute Hall, evening of March 15.

S. L. Hilton advised that as the Washington druggists come directly under National control, it would be a wise precaution for them to stamp the percentage of the content of alcohol on all labels of alcoholic medicines; even upon 5 and 10 cent sales. Mr. Hilton exhibited a small rubber stamp, similar to an ordinary dating stamp, but with the word "alcohol" and the percentage sign set rigidly, with movable numeral hands between them. He also exhibited labels showing the stamped impression. The speaker referred to "The Era Dose Book" as supplying all the needed information upon the alcoholic content of U.S.P. and N.F. preparations.

The D.C.R.D.A. has also decided to mail a series of novel blotters to all local physicians. A new form of blotter will be mailed every two weeks. Upon each blotter will be the names, contents, properties and uses of five or six U.S.P. or N.F. preparations.

**Heavy Fine for a Vermont Druggist.**

ST. ALBANS, Vt., March 14.—John Reagan, the druggist, recently pleaded guilty to a charge of keeping intoxicating liquor illegally, and was fined \$400 and costs, which he paid.

**BIG GET-TOGETHER MEETING AT BUFFALO.**

**Gospel of the U.S.P. and N.F. Propaganda Spread by Prof. Anderson—Profitable Discussion Follows.**

BUFFALO, N. Y., March 12.—Prominent physicians and druggists on Tuesday night held the first of a series of get-together meetings in the Buffalo Public Library building and discussed almost every phase of their relations with a consideration and earnestness that indicated marked seriousness and good intention.

The call for the meeting was issued by the presidents of the Erie County Medical Society, Buffalo Academy of Medicine, and the Erie County Pharmaceutical Association. Free and open discussion took place and each professional man present was permitted to voice his sentiments without unnecessary curbing. The shortcomings of both pharmacists and physicians in the handling of prescriptions were talked of, and it was the consensus of opinion that there should be an establishment of closer relations between the two for the benefit of the general public and the high standard of the respective professions.

R. K. Smither, a prominent Buffalo druggist, was chosen chairman of the meeting. Dr. Franklin C. Gram, of the Buffalo Health Department, was made secretary. Chairman Smither, in his introductory remarks, said that prescription writing, as it was understood a score of years ago, was rapidly becoming a lost art. The increased use of pharmaceuticals, he insisted, was the principal cause for this condition. He did not believe the practice was in the interest of the physician, was not a benefit to the patient nor of any commercial advantage to the pharmacist.

One of the chief objects of the meeting was to listen to an able and interesting address by Prof. William C. Anderson, dean of the faculty of Brooklyn College of Pharmacy and chairman of the propaganda committee of the New York State P.H.A. The propriety of popularizing the use of the preparations of the United States Pharmacopoeia and National Formulary and the restriction of the employment of patent and proprietary chemicals and pharmaceuticals formed the chief topic of Professor Anderson's speech.

"Every physician," said Professor Anderson, "should be as sure of the remedy he employs as he is of the diagnosis." He reviewed in detail some of the abuses which have become known in practice, and applied his line of argument mainly to the younger doctors, of using secret remedy compounds in their prescriptions, the ingredients and the effects of which upon the patients can only be guessed at.

Professor Anderson urged a closer study of the U.S.P. and N.F. by every person engaged in the practice of medicine. Following the delivery of the address the professional men engaged in an extended discussion which covered all the technical matters that captured the close attention of the physician and druggist as to the relations which bring them together.

The address was replied to by about ten physicians and about the same number of pharmacists. Professor Long made some strong points against the prescribing of proprietary and semi-proprietary preparations. He claimed that experiments with which he was familiar proved that dilute alcohol was as good and even better in some instances than many highly advertised and generally used antiseptic solutions on the market.

Practically all stayed until the discussion closed at 1 a. m., making a session of nearly five hours. A display of U.S.P. and N.F. preparations was exhibited by the local druggists, besides a line of similar preparations as used by the Kings County Pharmaceutical Society of Brooklyn. Expressions of

Chairman Auditing Com., N.A.R.D.

T. B. RICE.

twice mayor of Greensboro, Ga., has held public office for 17 years and has never received one penny of pay or graft. He is now alderman-at-large, chairman light and water board, member of education board, Master of Masonic lodge, Knight Templar, treasurer and deacon of Baptist Church, vice-president and member of legislative committee Georgia State P.H.A., president Appalachian Asso. of N.A.R.D., commercial manager So. Bell Tel. & Tel. Co., as well as director in National Bank and in cotton mills. Who can equal this record?

extended discussion which covered all the technical matters that captured the close attention of the physician and druggist as to the relations which bring them together.

a desire to hold another similar meeting were heard from the physicians, who were very active throughout.

Dr. Gram, of the Health Department, said: "The meeting is but one of the series that is to be held by the local associations. There is a necessity for them, in that we feel certain abuses have crept into the practice which should be eliminated, and these discussions are for the purpose of enlightening all and seeing if we cannot get the remedy we seek. Physicians and druggists all over the country are interested in a general movement toward this end."

### ENTHUSIASTIC MEETING HELD IN ROCHESTER.

**Propaganda Work Approved by Physicians After Listening to Prof. Anderson—Banquet a Success.**

ROCHESTER, N. Y., March 14.—Over 100 physicians, in addition to the pharmacists, were present at the banquet of the Rochester Pharmaceutical Association held on March 10 at the Powers Hotel. There were also seven lady physicians who were present to attend the banquet and listen to the discussion on propaganda work.

The banquet hall was beautifully decorated and an orchestra of ten pieces discoursed music during the dinner. President George L. Page welcomed the guests and Dr. W. J. Herriman, of Buffalo, acted as toastmaster. Dr. William C. Anderson, of Brooklyn, chairman of the Propaganda Committee of the State Pharmaceutical Association, was the principal speaker of the evening, and dwelt at length upon the U.S.P. and N.F. propaganda campaign, explaining the object of the movement and the benefits that would accrue by more thorough co-operation between physicians and pharmacists and the more strict adherence to the privileges and duties of each. The history of the U.S.P. and the N.F. was reviewed and special stress laid upon the fact that physicians had taken a large part in the formation of each, also the advantage resulting to physicians, pharmacists and the public in the prescribing of the official and official preparations.

There followed a general discussion in which a number of physicians expressed themselves as heartily in support of the propaganda movement and appreciative of being informed along the right lines. They admitted that a number of their profession had been misled by depending too much upon advertisements and the assertions of detail men rather than depending upon their own knowledge and ability. A general expression from all the physicians who spoke was that they wanted to get away from a number of their past practices, such as the prescribing of proprietary and semi-proprietary and the dispensing of these by members of their profession. A return to the U.S.P. and N.F. preparations, and the extemporaneous prescription was advocated by most of the physicians who spoke.

There was evidence of the most cordial relations between the members of the two professions and the harmony and enthusiasm displayed at the meeting was commented upon by many before the close of the discussion.

The druggists of Rochester not only considered the meeting as one of benefit to the propaganda cause in bringing the physician into line, but also as one of value in getting stronger support from among their own numbers. Present were a number who had not taken interest nor attended meetings in years, one pharmacist stating that this was his first get-together with fellow druggists in more than 15 years.

Among those who contributed largely to the success of the meeting were H. B. Guilford, first vice-president of the N.A.R.D., and J. E. Cooney, Ph.B., chairman of the propaganda committee of the Rochester Ph.A.

### Board Inspector Arrests Druggist Selling Cocaine.

Samuel Goodman, a druggist at 1631 Lexington avenue, Borough of Manhattan, New York City, was recently arrested by Frank Rapacz, an inspector for the Board of Pharmacy, charged with illegally selling cocaine. He has been released on \$1000 bail to await the action of the grand jury.

### Druggist Promptly Arrested for Selling Liquor.

Paw Paw, Mich., March 15.—John C. Berridge, who only recently opened a drug store here, has been arrested on two warrants. One charge is violation of the local option law and the other that he filed with the prosecutor a false affidavit of sales of liquor.

## HOT DEBATE OVER TWO PHARMACY BILLS.

**Manhattan Ph.A. Divided Regarding the Merits of the Conklin and the All-State Measures.**

Practically the entire meeting of the Manhattan Pharmaceutical Association last Monday evening was given over to the discussion of the two pharmacy measures known as the Conklin Bill, which had been amended, and the All-State Bill.

Jacob Diner, chairman of the legislative committee, precipitated the discussion by urging that the association give him definite instructions as to which bill to work for, and later made a motion that the Conklin Bill be given support by the association as it was ready, and in more complete form, besides being a fairly good measure, whereas the All-State Bill was as yet incomplete.

Mr. Diner stated that the principal features in the amended Conklin Bill were, that the Governor had the appointive power; the examinations were to be conducted by the regents, and the members of the board should all be practicing retail druggists. The amended bill also contained the essentials of the Whitney-Vainwright Pure Drugs Bill.

Dr. William Muir, representing the legislative committee of the State association, stated that the reason for the delay in completing the All-State Bill was that the Governor desired to hold still another conference with the members of the legislative committee, and urged that the whole matter be laid over, until the All-State Bill could come up for consideration.

Dr. Muir took a decisive stand for the All-State measure, which he said had the support of the State association, and urged the members to consider the fact that while both of the measures were for the regulation of pharmacy throughout the State, representation from all parts of the State was essential for fairness to all when such measures were drafted. He claimed that the Conklin measure was drawn from views expressed by several local pharmacists and was not as representative as the All-State Bill. He added that should the association take the stand for the Conklin Bill, it would disrupt the harmony and unanimity that had prevailed since the time when it was agreed to place legislative matters under the care of the State association.

In conclusion, he declared that a bill drafted by pharmacists, which had the backing of the State association and conformed to the views of the Governor was the bill for the pharmacists and should receive support from every side.

Mr. Diner replied that it was time for the association to throw off all courtesy and stand independent and not be governed by the State or any other association. He said it was a matter of having pharmacy recognized as a profession that was at stake and the Conklin Bill made this a feature by placing the examinations in the hands of the regents.

C. O. Bigelow stated that the regents could not hold a practical examination for pharmacists and that the examinations were too infrequent to decently supply the number of clerks required in the City of New York, under certain conditions.

The motion was finally withdrawn and Mr. Diner substituted the following three: first, that the Governor appoint members to the Board of Pharmacy; second, that the regents conduct the examinations; third, that all the members of the board be practicing retail druggists. The first two motions were adopted while the third was lost. The first resolution met the unanimous approval of all present as that provision was contained in both bills, but the second, it was announced by Dr. Muir, conflicted with the All-State Bill and would cause the disruption as previously stated and would eliminate practical tests from examinations in pharmacy. The second resolution, however, was passed by a majority of one vote.

### Iowa Pharmacy Commissioner Resigns.

DES MOINES, March 15.—Governor Carroll has demanded and received the resignation of the State Pharmacy Commissioner, Joseph Goss, of Atlantic. This was the outcome of an alleged habit of the commissioner to claim per diem expenses for every day in the year.

### Generous Donation to Tuberculosis Camp.

Doty & Humphrey Drug Co., Poughkeepsie, N. Y., have been thanked for contributing to the city's tuberculosis camp free of charge a generous supply of needed pharmaceutical articles.

**VOTES AGAINST REFILLING OF PRESCRIPTIONS.**

**Ownership of Same a Secondary Consideration, According to Pharmacy Debaters in Chicago Meeting.**

CHICAGO, March 12.—Northwestern University Pharmaceutical Association has been wrestling with the subject of refilling prescriptions. At the March 4 meeting the question was finally disposed of by adopting the following resolution: "Resolved. That the best interests of the pharmaceutical and medical professions and of the public will be served by pharmacists refusing to refill any prescription, or to give a copy thereof, unless authority to do so is received from the physician."

At a previous meeting the question was under discussion, but owing to rather wide diversity of opinion as to the feasibility of any association of pharmacists going on record at this time in favor of a measure so radical, whatever may be the merit of the proposition, further consideration of it was postponed. As originally proposed, the resolution read "pharmacists refusing to refill any prescription, or to give a copy thereof, unless authority is received from the physician." After considerable debate the proviso "in writing" was stricken out though the vote in favor of doing so was far from unanimous, the opposition claiming that dishonest pharmacists would want nothing better than a slipshod law that would be binding on conscientious pharmacists while giving themselves a chance to evade it.

It was decided to submit the resolution to the various branches of the Chicago Medical Society with the request that they express their opinions as to several phases of the subject under consideration. It is not improbable that the question will again be taken up when the answers of these societies are received.

Every phase of the relationship of the medical and pharmaceutical professions was considered during the debate of this resolution. It was the unanimous opinion of those who participated that a better understanding between the two professions must be reached if the highest interests of both are served; but many of those who spoke voiced the sentiment that in making the proposed change physicians ought to meet pharmacists fully half-way and not place them upon the latter the disagreeable and hurtful task (hurtful from the standpoint of business) of refusing to refill prescriptions or to give copies when this practice always has been and is universal.

In the discussion, the ownership of the prescription received very little consideration, it being the consensus of opinion that the prescription is nothing but instructions from a physician to a fellow worker in the cause of combating disease, and that the patient's alleged proprietorship of the prescription is more or less an absurdity.

It is becoming more and more apparent that the rising generation of pharmacists is determined to be professional men rather than purveyors of so-called drug merchandise only. Most of the young men who compose this association have worked in drug stores and they appreciate the difficulties to be overcome; but they say frankly that they are not educating themselves to dispense chicken sandwiches, nor have they any intention of selling booze either in violation of the law or in competition with saloon keepers. Altogether, the discussion of this subject has been enlightening and helpful to a most gratifying degree.

The retiring officers were: Edgar Green, Salt Lake City, Utah, president; Wilbur L. Kingsley, Cambridge Springs, Pa., secretary. The newly elected officers are: President, Percy W. Savage, Miles City, Mont.; secretary, James Warren Beless, Salt Lake City, Utah. The next meeting of the association will be held March 18.

**HAPPY GATHERING OF ILLINOIS TRAVELERS.**

**Stag Dinner Given at the Chicago Drug Trade Club Proves to Be a Most Enjoyable Social Event.**

CHICAGO, March 12.—Good-fellowship reined and congeniality went to its highest notch at the stag dinner given recently by the Illinois Pharmaceutical Travelers' Association in the quarters of the Chicago Drug Trade Club. All the boosters of the Quincy meeting of the I.P.T.A. and the I.P.T.A. were there boosting the big event in June. The larger part of the membership was on hand and it was notable that among those present were members from the most remote parts of the State who came a long way to join their fellows in this social meet.

The menu and programme of the dinner were issued in the shape of a stein and, as the travelers said, "made a hit." Original and patriotic songs were features of the meeting, sung by Joseph A. Goers, of Parke, Davis & Co., and A. C. Kennedy, of Robert Stevenson & Co. Another hit of the evening was a monologue sketch by Prentice McKenzie, of Parke, Davis & Co. F. N. Oxley, of Seabury & Johnson, traced the history of the organization from its founding, giving a complete account of its work and activity. His address met with much applause. The gathering afforded the members an opportunity to get together on plans for the June meeting. President Bahe expressed himself as much pleased with the preparations for the prospective entertainment of the pharmacists in so far as they have advanced at this time.

**New Constitution for C.R.D.A.**

CHICAGO, March 14.—At the next quarterly meeting of the Chicago R.D.A. on April 13 the committee on revision of the by-laws of the organization will make its report. The committee has been at work for several months. Charles H. Avery is chairman of the committee, appointed by President Yeomans. The other members of the committee are C. A. Storer and H. B. Sandkoetter.

Probably the most important change proposed will be reducing the size of the executive committee, which has been considered for a number of years to be too large for the proper treatment of matters under its consideration. The number is now 16 and will probably be reduced to seven members on the indorsement of the revisers.

Considerable consternation among Chicago druggists has been aroused by the fact that Government inspectors have been gathering samples of tolu, rock and rye, rye, rock and glycerin and similar compounds here with the idea of prosecution under the Federal statutes as compounders and rectifiers of spirituous liquors without a rectifiers' license. When the fact became known the C.R.D.A. officials got busy and intervened with the Government agents, and have secured the promise from them that the offenders up to this time will have lenient treatment in the courts provided proper warning is given to other druggists. Under the pharmacy law only extemporaneous compounding of this is allowed.

**Prof. Stroup an Adept at Adapting Musical Airs.**

PHILADELPHIA, March 15.—The singing of the students of the College of Pharmacy at the numerous fraternity and club banquets that have been held during the past few weeks has been quite the feature of these gatherings not only by reason of the volume with which they were rendered but for the sentiment expressed. The credit for the verses and their arrangement to familiar airs belongs to Professor Freeman P. Stroup whose interest in the promotion of the various class and college organizations among the students is well known and highly appreciated.

One of Quincy's Entertainers.

T. S. KENYON, member of the council of the Illinois Pharmaceutical Travelers' Association, is with Barker & Wheeler, of Peoria. He is active in perfecting plans to entertain the Illinois State Ph.A. at Quincy in June.

## DATE FOR PHARMACOEPIAL CONVENTION.

**Trustees Meet in Baltimore and Decide on First Wednesday in May, 1910—Arrangements Made for Distributing Spanish Translation—Will Join in Ebert Tribute of Chicago Veterans.**

BALTIMORE, March 13.—For the first time in the history of the Convention for the Revision of the United States Pharmacopoeia the business connected with this work was looked after by the board of trustees, which were appointed at the last meeting of the convention. The board held sessions yesterday and today at the Hotel Stafford, and disposed of various matters, the most important business attended to being the making of arrangements to distribute the Spanish translation of the Pharmacopoeia. The translation has been printed and is being bound, and copies will probably be offered for sale in the next few weeks.

The chief purpose in making the translation was to bring the pharmacists of the Spanish Americans into closer touch with the American members of the profession, and to impress them with the value of the formulas and the standards adopted in the United States. Incidentally, it is also thought that the translation will serve as a means of introducing American pharmaceutical products into the Spanish American countries, or give those already known to them a much greater demand. In this way the Pharmacopoeia is expected to become a valuable aid to the American manufacturers.

The demand for such a translation became insistent after the war with Spain, which brought the United States into close touch with Cuba, Porto Rico and other islands, and naturally led to more intimate acquaintance with all the other Spanish speaking lands. According to estimates there are in them not less than 25,000 druggists and physicians, and the calculation is that perhaps 5000 copies of the Spanish translation of the Pharmacopoeia will be disposed of.

The trustees arranged for all the details of such distribution, making provision for the sale through a regular channel, and considered the question of finances in connection with the publication and other proceedings. The board also took up the arrangements for the next convention and decided that it shall be held on the first Wednesday in May, 1910, at Washington. It was determined to hold a meeting at Chicago on May 21 next and take part in the celebration being planned by the Chicago Veteran Druggists' Association to pay tribute to the memory of Albert E. Ebert, a former president, who died two years ago.

The evening of the first day of the session was rendered notable by a dinner given to the visiting trustees by Charles E. Dohme, the president, at the Baltimore Country Club. Mr. Dohme's friends had not forgotten that he was born on March 12, 66 years ago, and this event was recalled at the banquet, so that the latter became in fact a dual celebration, every one present extending congratulations to the host and wishing him many more years of usefulness. Mr. Dohme, though not robust of late, entered fully into the spirit of the proceedings, and enjoyed it thoroughly, appreciating also the compliments showered upon him.

The feature of the second day was a dinner given in the evening by a number of prominent local pharmacists to the visiting trustees at the Hotel Keraan. An excellent menu was served, and the affair had the additional attraction that the diners, after the discussion of the viands, could enjoy their cigars and at the same time witness a variety performance being given at the Maryland Theater, which adjoins the hotel. This was done by opening communicating doors. The guests and hosts were free to pass from the hotel to the theater, and vice versa.

The members of the board present were: Charles E. Dohme, Baltimore, president; Prof. Joseph P. Remington, dean of the Philadelphia College of Pharmacy; Dr. J. H. Beal, vice-dean of the Pittsburg College of Pharmacy, of Scio, Ohio; Dr. H. M. Whipple, of the St. Louis College of Pharmacy; F. W. Meissner, of La Porte, Ind., and Dr. Murray Galt Motter, of Washington, the secretary of the board.

The subscribers to the banquet were: Louis Dohme, Charles E. Dohme, Prof. Charles Caspari, Jr., Dr. D. M. R. Culbreth, Prof. Daniel Base, Prof. Henry P. Hynson, J. W. Westcott, Dr. H. A. B. Dunning, Dr. E. F. Kelly, James E. Hancock, John B. Thomas, William M. Fouch, Aubrey T. Hill, Henry F. Baker, F. W. Dickson, F. A. C. Smith, H.

Engelhardt, Charles L. Meyer, P. I. Heusler, J. Emory Bond, John C. Muth, A. P. Sharp, W. J. Smith and W. M. McCormick.

Through the courtesy of Prof. H. P. Hynson some of the visitors were enabled to see the treasures of the Walters Art Gallery this afternoon, one of the days on which the gallery is open to the public.

The board of trustees is the administrative body of the U.S. Pharmacopoeial Convention. It was created at the last session of the parent body in 1900 to look after purely business matters, as distinguished from the actual work of revision, the innovation being in the nature of an experiment, upon the results of which the continuance of the board will depend.

## TENTATIVE DRAFT OF OPIUM REGULATIONS.

**Authorities at Washington Considering Rules for the Enforcement of the Prohibitory Law.**

A tentative draft of the regulations to carry into effect the Act prohibiting the importation of opium, its preparations and derivatives, except for medicinal purposes, was submitted to the Treasury Department at Washington by H. C. Stuart, Special Deputy Collector of the Port of New York, last Thursday.

The advisory draft contains a number of regulations drawn from the suggestions which were advanced at a meeting on March 8, between representatives of the Customs Department and the importing and wholesale drug trade.

Under the proposed regulations, importation of opium, its preparations and derivatives is allowed only for medicinal purposes and all importations are to be detained by the collector until satisfactory evidence is given that the importation is made in good faith and not for smoking purposes. If such evidence cannot be established the goods are to be seized and destroyed as in the case of smoking opium.

Upon every importation there shall be filed with the Collector a declaration from the owner or ultimate consignee that the goods are only to be used in the manufacture of medicines or medicinal purposes. However, if such a declaration cannot be produced at the time of entry a bond may be filed representing double the estimated value of the merchandise, but conditioned that the required declaration is made within three months.

All opium, morphine and codeine must first be examined by the appraisers after entry to the Appraisers' Warehouse, where all packages of each importation must go, and from whence no delivery must be made unless each package contains not less than 100 pounds of opium or 50 ounces of morphine, or 25 ounces of codeine. This release is further dependent upon the report of the appraiser as to its quality, purity and fitness for medicinal use.

Crude or unmanufactured opium, morphine and codeine that has been imported in packages other than prescribed in the regulations, may be repacked in customs custody so as to conform with the regulations, and importations consisting of less quantity than the minimum required for delivery may be entered for warehouse. No withdrawals are permitted unless the quantities aggregate the minimum quantity required for delivery and are packed in accordance with the regulations under the proper customs supervision.

The draft was under consideration by the authorities at Washington at last accounts.

## Shorter Sunday Hours—No More Premiums.

PHILADELPHIA, March 12.—The question of shorter hours for retail druggists received substantial impetus this week at a joint meeting of the members of the thirteenth and eleventh district organizations of the Philadelphia Association of Retail Druggists. W. H. Sutton, chairman of the eleventh presided. It was decided to recommend to the druggists of that section of the city that they keep their stores open from 9 a. m. to 1 p. m., and from 6.30 to 10 p. m., on Sundays. A committee was appointed to canvass the trade in the two districts and report at the next joint meeting the number who agreed to abide by this plan.

Another important decision was that to abolish the giving of rebates and premiums to patrons. There has been considerable fault found with some few druggists who were adopting these methods in an effort to attract trade. It was declared to be a short-sighted policy by which those who followed it, eventually would come out the losers.

## EXTENSION OF DRUG TRADE DISCUSSED.

### International Unification of Pharmacopoeial Requirements on Drugs Also Considered.

At the March meeting of the Drug Trade Section of the New York Board of Trade and Transportation Edwin H. Burr, chairman of the committee on essential oils, called attention to a report containing the proceedings of the Geneva Convention which met last September to consider matters relative to the establishment of an international congress for the purpose of securing uniformity in the various pharmacopoeias as to the requirements for certain drugs and essential oils. Mr. Burr stated that the report contained a great amount of information of interest and value to the drug trade and promised to secure a copy for the use of the section.

A communication received from G. O'Neill relative to the establishment of a special committee to promote the extension of American drug trade in South America was discussed and referred to the executive committee.

Thomas P. Cook, chairman of the legislative committee, announced that the members of the committee would attend the hearings on the Gluck Formula and Labeling Bill when held and called attention to the Cuvillier Bill which the committee thought needed no action on the part of the trade, as the matters involved related chiefly to foods.

### Five Bills to Regulate Weights and Measures.

Bills number 80 to 84, all relating to regulations for weights and measures, are pending in the New York State Senate at Albany. No. 80 provides for the adoption of such new weights, measures, balances and other apparatus as may be received from the United States as standard.

No. 81 makes it a misdemeanor to use any weight, measure or other apparatus that has not been sealed by the town sealer, and also the selling of less than the quantity represented of any article and merchandise. The possession of any unsealed or false weight is also a misdemeanor.

The other bills provide for the rigid inspection of weights and measures by a State superintendent, deputies and sealers; also the stating of the net weights, numerical count of contents of packages, containers, etc., in characters at least one-eighth of an inch in height.

### Oppose Tax on Soft Drinks in Tennessee.

NASHVILLE, Tenn., March 14.—The Nashville and Davidson County Retail Druggists' Association has entered a strong protest against the bill which proposes to tax soft drink stands. It is claimed by the druggists that it is as much an imposition to tax the soda fountains as it would be to tax a department or a dry goods store. They say, too, that just now the soft drink sale should be encouraged.

### New Drug Company Elects Officers.

ASHEVILLE, N. C., March 15.—The final step in the organization of the Asheville Wholesale Drug Company has been taken by electing the following officers: President, F. Stikeleather; first vice-president, N. Lipinsky; second vice-president, A. H. Elmore, of Eryson City; third vice-president, Dr. K. A. Price, of Hickory; secretary, J. Frazier Glenn; treasurer, R. H. Roth; auditor, S. Lipinsky; manager, A. W. DeLand; stock manager, R. H. Roth.

### Michigan Farmers to Rescue of Peddlers.

LANSING, Mich., March 15.—A bill introduced in the House by Representative Darwin Z. Curtiss, of Detroit, to compel drug peddlers to take out a license at a fee of \$100 a month, is being hotly opposed by the farmers. The bill is backed by the representative druggists of the State and is practically prohibitory to the selling from house to house of medicines. It is said that the bill is likely to be amended to lower the fee.

### N.W.D.A. Proceedings for 1908 Distributed.

Secretary J. E. Toms, of the N.W.D.A., last week distributed the bound volumes of the proceedings of the convention held at Atlantic City last September. The frontispiece consists of portraits of President Carter, Treasurer Strong and Secretary Toms. The book is complete in its information and is invaluable to the members of the association.

## MODEL ANNEX FOR GREAT DRUG PLANT.

### One of Many Important Enterprises Carried to Success by Parke, Davis & Co., Despite Depression.

DETROIT, March 14.—Two and one-half acres of floor space, covering a ground area of something more than half an acre, are added to Parke, Davis & Co.'s Detroit laboratories in the completion of the handsome four-story-and-basement structure shown in the accompanying picture. This is the new home of

the capsule, extract, chemical, printing, binding and paper-box departments, made necessary by the growing business of the company.

With exception of the scientific laboratory, erected half a dozen years ago, the new building is perhaps the most modern and substantial of all the structures that go to make up the firm's Detroit plant. Provision has been made for abundance of light and fresh air, and the building has all the conveniences and accessories that appertain to the model factory or laboratory.

It is significant, too, that during the recent critical period Parke, Davis & Co. were engaged in not a few other projects that called for initiative and the expenditure of large sums. They were completing a new laboratory in England. They were building a fine new home for their Australasian branch at Sydney. They were increasing their advertising and promotion work, and they were augmenting their sales forces all over the world.

### "Three-Cornered Bottle Bill" Bobs Up Again.

PHILADELPHIA, March 14.—The famous "three-cornered bottle bill," the passage of which was stayed largely through the opposition of the drug trade at at least one previous session of the Pennsylvania Legislature, is again before that body and has passed the Senate. It is calculated to prevent the possibility of persons taking the contents of the wrong bottle when seeking medicines in the dark or without careful inspection and it provides that no poison shall be sold except in triangular bottles and furthermore that such bottles shall not be used for any purpose except to contain poison. Such a law would mean the outlay of a vast amount of money by the druggists of the State in these three-cornered bottles of all sizes and thickness.

### Suit to Enjoin Perfume Manufacturers.

BALTIMORE, March 12.—J. Harry Thuman and Augustus P. West, trading as the Rosedale Manufacturing Company, are defendants in an injunction suit filed by the United Manufacturing Company, to restrain the former from using certain labels on bottles of perfume. It is alleged that the labels imitate those which the complainant has been using for years.

### Buying Club Organized in Colorado Springs.

COLORADO SPRINGS, March 12.—In order to open a retail house in Chicago, and to buy supplies direct from the manufacturer, thus saving jobbers' profits, local druggists have organized the Druggists' National Co-operative Association with a capitalization of \$50,000.

# LETTER BOX

It is "Up to" the Clerks, Not the Era.

Editor *The Pharmaceutical Era*:

Just read an article in the March 4 ERA in which you state that competent registered pharmacists may be had in the country for as low as \$10 per week. In publishing that manifestly false statement you have proven yourself no friend of the drug clerk.

The registered pharmacist who would go to the country and work for \$10 a week is a ninny, and therefore not competent. Boston, Mass.

A. D. WILSON.

[Our correspondent is in error in disputing the truth of the statement. The ERA cannot help the existence of the condition mentioned and there is no unfriendliness in stating the facts, nor was the little explosion of wrath justified. Mr. Wilson should pour out his vials on the clerks who accept the low salaries, not on the ERA.—Ed.]

Mr. Helmbold Denies Friendship for Mr. Tyner.

Editor *The Pharmaceutical Era*:

My attention was called to an article in your publication in which you stated that I was seen talking with one G. L. Tyner and was evidently quite friendly with this party.

I wish to have you correct this statement as being unqualifiedly false in every particular, as I do not know this party and have never seen him to my knowledge. It is true that I called at his office in response to a request for a quotation, but could get no satisfactory information from the party who claimed to represent him.

Your statements insinuating and reflecting on my methods of doing business I consider not only a hasty and unjust aspersion personally, but reflecting grievously on the character, probity and intelligence of the many responsible firms and principals with whom I have done business almost regularly for the past 20 years, and whose confidence and respect I will always endeavor to maintain as heretofore.

I request that you insert this letter in your publication in order that I may be placed in a proper light before your subscribers and others who are interested in extending every one a "square deal." Yours very truly,

79 Pearl Street, New York.

E. P. HELMBOLD.

Tabulation of Price Variations of Camphor.

Editor *The Pharmaceutical Era*:

As a senior here in Washington State College, School of Pharmacy, I have worked up the accompanying Price Variation of Camphor from the back files of the ERA in the College Library. No pains have been spared to secure accuracy and it shows to advantage the high price during 1906-7 following the taking over of the camphor industry in Japan by the Government and the subsequent reduction caused by the competitive introduction of the artificial product. Very truly yours,

L. P. LITTLE.

March 1, 1909.

232 Ferry Hall, Pullman, Wash.  
(Enclosure.)

## WOMEN TO AID LOUISVILLE ENTERTAINERS..

Agreeable Weather for N.A.R.D. Convention, if Precedents Count—Committees Hard at Work.

LOUISVILLE, March 14.—A retail druggist visiting in this city remarked to the ERA correspondent that Louisville would be an ideal convention city for the months of October or November, but he had an idea that September, the month in which the N.A.R.D. will hold its convention here, was very warm. While this was news to those who have lived here for many years, as the recollections of these residents is that the month is a very pleasant one, yet to be reasonably safe, application was made to the weather bureau for official information.

The bureau was established 37 years ago and the official record shows that the highest temperature ever recorded was 102° and the lowest 37°, both of these being extremes and never recorded but once in all of these years. The mean temperature has been 70°, certainly not an uncomfortable one for the time of the year.

It is impossible, of course, to predict the temperature for next September, but based on past experience people here are certain their guests will not suffer from the heat.

The members of the committee named to look after the entertainment of the W.O.N.A.R.D. have been very active in mapping out their work and have under consideration quite a number of features for the amusement and entertainment of the ladies. In a few days an auxiliary committee will be appointed composed of the wives, sisters and daughters of the local druggists who will aid the men in formulating their plans. It is more than probable that Mrs. T. P. Taylor will be made the head official of this latter committee and a more enthusiastic and competent person could not be selected.

The committee on badges is in correspondence with a number of concerns that are specialists in that line and will soon have designs submitted for examination and approval. It is the desire of this committee to select some design that will be typical of the meeting place and of sufficient value to be kept as a souvenir of the convention.

## New York Paint, Oil and Varnish Club Has Meeting.

The 115th dinner and meeting of the Paint, Oil and Varnish Club of New York was held last Thursday evening at Hotel Brevoort. There was an unusually large attendance present. The following firms were admitted to membership: Newark Varnish Works, of Newark, N. J.; Brooklyn Varnish Works, and King Paint Manufacturing Company, of Brooklyn, N. Y. Further action was also taken relative to the substitute for the Naval Stores Regulation Bill pending in the United States Senate. This substitute will be opposed as was the original bill. Regrets were expressed over the fact that C. B. Woodruff, chairman of the executive committee, was to leave for the Pacific Coast, his former home, and a toast was given Mr. Woodruff.

## Yacht Club Honors Two Baltimore Drug Men.

BALTIMORE, March 14.—H. B. Gilpin, head of Gilpin, Langdon & Co., and of the Gilpin Drug Company, had the incongruous experience recently of being re-elected commodore of the Baltimore Yacht Club, and being operated upon for some trouble on the hip. His recovery has been rapid.

Capt. Isaac E. Emerson, of the Emerson Drug Company, was elected vice-commodore. He also has been prominently identified with the organization.

## Enforcing Cleanliness in Mexican Drug Stores.

MEXICO CITY, March 7.—Carrying out its plan to enforce cleanliness in the small drug stores and prescription pharmacies of Mexico City, the Board of Health has ordered the closing of seven drug stores located in various parts of the city. They will remain closed until such time as the proprietors have cleaned the places and replaced the old drugs and preparations with fresh stock. The order was issued subsequent to visits of inspectors.

## Dr. Takamine Entertains Friends at Three Dinners.

Dr. Jokichi Takamine this week tendered a series of dinners to a number of personal friends and associates at the Nippon Club. The first was held Tuesday evening, the second occurs this evening and the third tomorrow evening.

## PATENTS, TRADE MARKS, ETC.

## PATENTS.

Granted March 9, 1909.

914.408—Wilhelm Grüttentein, Vohwinkel, near Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany, a corporation of Germany. Mercury salt of para-aminophenylarsinic acid.

914.501—Donald McEachern, Argyle, Ontario, Canada. Tooth brush.

914.518—Ernst Saam, Ludwigshafen-on-the-Rhine, Germany, assignor to the firm of Knoll & Co., Ludwigshafen-on-the-Rhine, Germany. Alpha-halogen-isovaleryl-urea and the process of making the same.

914.529—Charles S. Thomas, St. Paul, Minn., assignor of one-third to Michael Malzahn and one-third to Frederick G. Kemper, St. Paul, Minn. Non-refillable bottle.

914.766—Cortlandt H. Van Rensselaer, Philadelphia, Pa. Powder distributor and closure for bottles, cans, etc.

914.871—Harlon F. Ong, Portland, Ore. Syringe.

914.872—Leo H. Peltason, St. Louis, Mo. Carton for glassware.

914.885—Frank Schmitz and William Shanahan, Depew, N. Y. Non-refillable bottle.

914.935—Hyde J. Dunn, Oakland, Cal. Poultice case or container.

914.950—Jay R. Harris, Baton, N. Mex. Syringe.

914.960—Albert P. Lee, Buffalo, N. Y., assignor to Grover & Lee Co., Buffalo, N. Y., a corporation of New York. Jar or bottle stopper.

915.035—Nelson Muslar, Worcester, Mass., assignor to Arthur C. Higgins, Worcester, Mass. Bottle labeling machine.

## New Association Planned in Zanesville.

ZANESVILLE, O., March 15.—J. R. Johnson is president and W. R. Wells secretary of a new temporary druggists' organization here. Physicians will be invited to attend a banquet as the guests of the pharmacists at an early date.

## Moves to Michigan and Changes Name.

ALBION, Mich., March 12.—Independent Chemical Company, of Norwalk, O., will locate in the old Stoepel Engine Works in this city and change its name to the Independent Stock Tonic Company.

## TRADE MARKS.

Published March 9, 1909.

32,116—Carno Chemical Company, New York, N. Y. Class 6. A remedy for malaria, nervous diseases and general debility.

32,382—Mexican Amole Soap Company, Pavia, Ill. Class 6. Facial creams, hair tonic, remedy for dandruff, perfume and toilet waters.

33,443—Société l'Oxylythe, Paris, France. Class 6. Chemical substances for preparing oxygen.

34,065—Helen B. Yoas, Glendine, Mont. Class 6. Medicated plasters for external body application.

34,348—Harold Bruce Dresser, Liverpool, Eng. Class 6. Chlorid of magnesium.

35,024—Mary E. Clichester, Brooklyn, N. Y. Class 6. Medicated pads and plasters for the stomach and various other parts and organs in the human system.

37,841—Shoemaker & Busch, Philadelphia, Pa. Class 6. Medicated complexion and toilet powders.

38,459—Colgate & Co., Jersey City, N. J., and New York, N. Y. Class 6. Liquid and powdered perfumes and toilet waters.

38,913—Holland Medicine Company, Scranton, Pa. Class 6. A medicinal compound for kidney, liver and bladder troubles.

39,500—Shoemaker & Busch, Philadelphia, Pa. Class 6. Disinfectants and deodorizers.

39,638—Milton C. King, Philadelphia, Pa. Class 6. Salves.

40,100—Albert L. Calder Company, Inc., Providence, R. I. Class 6. Tooth powder, tooth paste and tooth soap.

## Medicine Company Owns Its Own Building.

ST. LOUIS, March 15.—The A. H. Lewis Medicine Company has bought the four-story brick building at Fourth and Spruce streets, that it has occupied as a factory since it began business.

## Drug Store at Monroe to Be Improved.

A handsome new store front will soon be put in the Clark drug store at Monroe, Wis. It will be of iron, plate glass with prism glass top, patent window ventilator and a single door in the center.

# THE DRUG MARKETS

## SEASONABLE ARTICLES IN GOOD DEMAND.

**Aggregate Volume of Business Moderately Large, But Activity in Large Quantities Absent.**

**NEW YORK, March 15.**—Nothing of new feature has developed in the market for drugs and chemicals during the past week, and while in the aggregate there has been a very fair demand, there is no apparent buying interest for larger quantities. Opium and sulphate of quinine are quiet and steady, and Norwegian cod liver oil is in good demand with an upward tendency. Balsam of fir, Canadian, is scarce and higher. Refined camphor is more active but without change in value. Sautonin is scarce with inquiries for large lots, which are not obtainable. Cascara sagrada bark is firmer with an active demand and large sales are reported. Citric acid is unchanged but in more demand. Sicilian essences, such as bergamot, lemon and orange, are without any material change in value, but a firmer and better feeling prevails in primary markets.

**QUININE SULPHATE.**—The market is quiet and the demand is limited to actual requirements. The stock held in the London market, which is always large, shows a falling off as compared with the years 1907 and 1908. The supply in that market on February 28, 1909, was 3,223,536 ounces, as compared with 3,569,532 ounces on the corresponding date in 1908, and 3,553,024 ounces in 1907. The difference this year as compared with 1907 is about 339,000 ounces less.

**OPIMUM.**—The market is firm at \$4.35 per pound for case lots, which average about 160 pounds, and the regular advance for smaller quantities. The latest advices from Smyrna report heavy frosts and snow in the Salonica district as well as in the other high plateaus, which will result in some harm to the poppy plant; but until the snow melts it will be impossible to say to what extent the damage will reach. The arrivals in Smyrna to February 19 amount to 2920 cases, as against 1352 cases for the same period last year.

**NORWEGIAN COD LIVER OIL.**—The foreign markets are higher and some of the manufacturers of prime goods have advanced their prices \$1.00 per barrel. Our market, however, remains unchanged, but there has been a more active demand during the week. Unless reports from primary markets are more favorable, there may be later on a material advance in prices. Cables received giving the reports of the fishing up to February 8 are as follows: In Lofoten, 4,000,000 fish, yielding 4580 barrels; other districts, 12,000,000 fish, yielding 12,570 barrels. For 1908 for the same date last year, in Lofoten, 4,200,000 fish, yielding 6585 barrels of oil; in other districts, 11,300,000 fish, yielding 15,500 barrels of oil.

**CHAMOMILE FLOWERS.**—Hungarian. This article seems to be very scarce and the stock in this market is very small, especially that of a good merchantable quality. We understand that new arrivals are at hand which will no doubt have a tendency to ease off the market a little.

**BUCHU LEAVES.**—The price of the short variety is decidedly firm and the general quotation for prime green has been marked up to 30c. per pound, as to quantity. At the drug auction in London held on March 11, the entire quantity offered was sold at 12d., an advance of about 4c. per pound. That market is said to be practically bare and the outlook is considered favorable to still higher spot prices.

**VANILLA BEANS.**—Greater activity is being shown in the market for this article than for some time past, especially for Bourbonnais, sales of which are reported at full outside figures.

**OIL OF GAULTHERIA.**—There has been an advance in the price of the natural leaf oil. Revised prices are now \$4.25¢ to \$4.50¢ per pound.

**GLYCERIN.**—This article again reflects weakness and manufacturers have further reduced prices to 15½¢. per pound for C.P. in drums and 16½¢. per pound in cans.

**CITRIC ACID.**—The market has been quiet but shows a tendency towards a slightly improved demand. There is undoubtedly a lack of confidence in the future market. Manufacturers quote 41c. in barrels and 41½¢. in kegs.

**MENTHOL.**—There have been arrivals from Kobe, Japan,

consisting of 20 cases, but the market has not been influenced to any noticeable extent. The demand has been quiet and the quotations of \$2.15¢ to \$2.25 per pound, according to holder, have been rather nominal.

**GRAINS OF PARADISE.**—The shortage in primary markets is unrelieved and only limited quantities of prime, sound quality are available. Single bags of about 125 pounds are being offered at 15c., with smaller quantities at the usual ratio of advance.

**ERIOR.**—The stringency in primary markets continues unabated and in consequence high prices are being secured for all lots that are obtainable. Choice Spanish is being held at 45c. in large quantities, and Russian is held at 40c. for small amounts.

**ALOES, BARBADOS.**—The few holders are entirely out of this article and there is none in this market at present. Shipments are expected to arrive, but it cannot be said at what time these will be here.

**SANTONIN.**—This article has been in active demand with inquiries for lots of 100 and 200 pounds, but small lots only are available and no quotations are being made for lots exceeding 5 pounds each.

**BALSAM PERU.**—Quotations have been slightly reduced and large quantities are now held at \$1.55¢ to \$1.65 per pound. The reduction is said to be due largely to the fact of competition with recent importations from Germany. In the market the description is not recognized as that of a balsam of the same grade or class as the direct importations from the country of production, San Salvador, but its presence in the market has, however, had an influence upon values.

**RAY RUM.**—The market is firm at \$1.55¢ to \$1.60 per gallon, as to seller, with only limited quantities available at the inside figure. The firmness is largely due to the steady diminution of spot stocks, and as the cost to replace with tax paid goods is considerably higher than the present selling market, material advances in local values are looked for.

## London Drug Market

**LONDON, March 6.**—While business in drugs and chemicals has not improved to any appreciable extent, it is no worse than it has been recently and prices on the whole are well maintained. Cocaine has been advanced 7d. per ounce, a rise which most people had expected. Cod Liver Oil is dearer in consequence of unfavorable reports as to the fishing. Camphor is firm but little business is passing; small sales of China Crude have been made at 140s. per cwt. spot, while for Japanese refined 1s. 7d. per pound is quoted for 1 ounce tablets. Essence of Lemon is firmer and business has been done at 2s. 3d. per pound spot; Essence of Bergamot is quoted at 22s. per pound and Oil of Sweet Orange 9s. Citric Acid is quiet and the position unchanged. Opium is firm and the alkaloids are in steady demand. Oil of Peppermint is quiet and prices are unchanged. Strychnine is very firm and some makers are quoting higher prices. A general advance in price is anticipated.

### Taft 'Possum Dinner for Drug Men.

**DETROIT, March 14.**—The Stogie Club, comprising the heads of the department of Frederick Stearns & Co., and their assistants, recently sat down to a typical Taft 'possum dinner, sweet potatoes and the rest of the menu, all except the bonilabaise. Those present were: D. M. Gray, T. Bennett, J. W. T. Klox, W. Ohliger, Dr. Charles W. Yarbrough, R. Homberg, C. G. Willits, T. Mears, K. K. Gimmy, R. R. Daley, B. S. Knapp and W. H. Sanderson.

### Mississippi B. of P. President Buys Fountain.

When James B. Small, Winona, Miss., president of the Board of Pharmacy of that State, indicated to manufacturers of soda fountains that he was in the market for a new iceless outfit there was naturally a very vigorous scramble after the order of so prominent a figure in the Southern pharmaceutical trade, but the Liquid man carried off the order for a 20 foot marble and Sienna apparatus.

### Canadian Drug Concern to Sell Stock in London.

The National Drug & Chemical Co., of Canada, has arranged for the issue of \$1,500,000 first preferred stock in London.

# THE PHARMACEUTICAL ERA

PUBLISHED EVERY THURSDAY

VOL. XLI.

NEW YORK, MARCH 25, 1909

No. 12

D. O. HAYNES & CO., - Publishers

90 WILLIAM STREET, NEW YORK

Telephone, 2457 John. Cable Address: "Era, New York"

Western Office:

Room 500, Dickey Building, 40 Dearborn St., Chicago  
Telephone, Central 5888

## SUBSCRIPTION RATES.

United States, Cuba, Hawaii, Porto Rico, the Philippines, and Mexico	\$2.50 a Year
To Canada, postpaid	3.00 a Year
To Foreign Countries in Postal Union	4.00 a Year
Single Copies	10 Cents.

ALL SUBSCRIPTIONS ARE PAYABLE STRICTLY IN ADVANCE

Published every Thursday at 90 William Street, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, David O. Haynes; vice-president, Ezra J. Kennedy; secretary, Edward W. Drew. The address of the officers is the office of this publication, and the title is registered in the United States Patent Office.

Entered at the New York Post-Office as Second Class Matter

## Re Photographs for "Era Album" Illustrated Section

Each subscriber to The Pharmaceutical Era is entitled to representation in this work, and is invited to send us his photograph. We do not require a subscription from each partner and clerk. If the firm or proprietor is a subscriber, the other partners and clerks may have their portraits included for \$1.50 each. To secure all of the Album sections one must be a subscriber to The Era in his own name.

In sending photographs be sure that each one is distinctly labeled with the name, address, business, profession or occupation of the person, written clearly on the back of your photograph. A good plan is to write it on a printed label and stick it on the center of the back of your photograph. Here is a good specimen:

### FOR ERA ALBUM.

Fred S. Rogers, Middletown, N. Y.

McMonagle & Rogers,

Ex-Pres. N. Y. State Phar. Assn.

When additional photographs of partners and clerks are sent, each one should have written on it the name of the subscriber who sends it, as well as the name of the person in the photograph.

### Cabinet Photographs Only

The style of photograph we require is the so-called "Cabinet" size, with the head about two inches long. If other sizes are furnished they interfere with our plans for keeping the faces uniform, also prevent us from classifying the cuts by localities.

In view of the great amount of work we are assuming, to have each of our subscribers properly represented in this Album, we feel that we are not asking too much when we request each subscriber to supply us with the size and kind of a photograph which will facilitate our work and best enable us to do him credit.

In forwarding photographs for the Album, see that they are distinctly addressed as follows:

THE PHARMACEUTICAL ERA,

For Era Album 90 WILLIAM ST., NEW YORK.

## ROCK AND RYE NOT SALABLE AS A BEVERAGE.

Druggists throughout the country will do well to take warning from the experiences of the Chicago druggists, reported in recent issues of the ERA, who have been threatened with prosecution for violation of the Federal stamp tax law for manufacturing, displaying and selling tolu, rock and rye, as well as similar compounds, including rock, rye and glycerin. It is contended that in putting up this class of goods for beverage use the druggists make themselves liable for violating the law requiring a license as compounders and rectifiers of spirituous liquors. The penalty is a fine ranging from \$1,000 to \$5,000 and imprisonment for not less than six months nor more than two years for each offense.

Under Treasury Decisions 946 and 1905 a druggist may compound a preparation of rock candy, rye whisky and glycerin on the order of a patron, or on a physician's prescription, for medicinal use, in which case he is exempt from special tax; but when he keeps the compound in stock and sells it to those desiring it as a beverage he comes under the law and is not exempt.

The action of the Internal Revenue agents in the Chicago district may be followed by other agents elsewhere in the country and this warning should prevent druggists from making themselves amenable to prosecution.

## FUTURE OF THE RETAIL DRUGGISTS.

In Dr. Nathan's recent prize paper in the ERA the view was taken by him that the only salvation in the future for retail druggists exists in the form of buying clubs. As we pointed out at the time, there are more ways than one of constructing a prosperous business and none of these ways should be omitted from the consideration of druggists who are determined to have "salvation" anyway. Mr. Coleman, in an admirable address before the students of the Pittsburg College of Pharmacy, recently presented the results of his experience in not only enlarging his business and making it more ethical professionally, but in promoting its permanent stability and future prosperity.

Comparatively few druggists have laboratories at all worthy of the name, although analytical work is a natural function of pharmacists and one for the exercise of which there is a constantly growing demand. Aside from the interesting studies which can be made of drugs and chemicals, omitting thought of the profitable trade which can be built up, there is the more serious question of how druggists are going to comply with all of the requirements of the pure drug laws if they are not equipped to make the

analyses and tests which are necessary in avoiding conflict with the statutes and penalization! Drug-gists who do not possess laboratories should read the experience and note the suggestions which are put forth in such practical shape by Mr. Coleman on page 277 of this issue of the ERA.

#### KENTUCKY SETS EXAMPLE FOR NEW YORK.

In revising the pharmacy law of New York the members of the legislative committee of the New York State Pharmaceutical Association can with profit study the system in vogue in our sister State of Kentucky, where the State Board of Pharmacy is appointed by the Governor upon the recommendation of the Kentucky State Pharmaceutical Association. There is no option at all about it, for the Governor *must* make his selections from the list submitted by the State Ph.A. In Kentucky the pharmacists also have one representative upon the board charged with enforcing the Pure Food and Drugs Law and this member also *must* be appointed upon the recommendation of the State Ph.A.

In enforcing the pharmacy law in Kentucky first offenders are never penalized, but second and subsequent offenses are treated with severity. The board maintains a high standard, the politicians have no power to punish members for political reasons and there can be no disgraceful scramble for office. The possibility of rewarding friends for political services also is eliminated and conditions are more or less ideal when compared with other States that will readily occur to the readers of the ERA.

Why not put the *must* into the New York bill and thereby forever insure the State Board of Pharmacy against the interference of meddling politicians and ward heeler? No Governor sincerely desirous of preserving the integrity of this important body could object to such a provision and most Governors would be heartily glad to have such a restriction in the law, for it would offer relief from the pressure of doubtful or undesirable candidates and serve to prevent party friction over a subject of life and death which is quite too serious to be made the football of capitol wire-pullers.

#### PAYNE BILL REALLY RAISES THE TARIFF.

Comparison of ad valorem rates in the Payne Tariff Bill and the Dingley Law discloses the fact that the schedules have not been revised downward in the fashion which most of the public had been led to believe. An official summary shows that the average rate under the Dingley Law is 44.16 per cent, while the Payne Bill averages 1.56 per cent greater. The average taxes of nine schedules have been advanced and those of five decreased, among the latter being the chemicals, oils and paint schedule, which is reduced from 28.82 to 28.48 per cent.

So far as the drug trade is concerned the general opinion seems to be that the revision is without much effect and it is doubtful if trade interests will bother very much about the Congressional action, unless some new phase develops, such as the rumored

possibility of the imposition of revenue stamp taxes, in which case a vigorous opposition will be organized. The tariff tinkers at Washington figure that under the Payne Tariff the annual revenue will be \$305,224,732 as against \$293,557,684 derived under the Dingley Law. This provides for a net increase from customs of almost \$12,000,000 and does not include the tax on legacies, etc. These figures, which are official, would seem to make unnecessary any revenue stamp taxes of the war variety, but in politics "it is not always what you see, but what you don't see," as a wise old statesman once remarked.

#### WHAT DRUGGISTS HAVE FOUGHT FOR.

One of the provisions of the Payne Tariff Bill which has escaped general notice straightens out one patent law injustice and if enacted will bring about the reform which was one of the chief features of Congressman Mann's Patent Bill for which organized druggists throughout the country fought so hard. Section 41 of the Tariff Bill makes this provision:

"That whenever a patent is issued by the United States to any citizen or subject of a foreign country it shall be subject with respect to manufacture thereunder in this country to all the limitations, conditions, and restrictions that are imposed by the country of said citizen or subject upon the manufacture in that country under patents issued therein to citizens of the United States."

This provision is in line with the policy of the maximum and minimum tariff provisions and is intended to protect Americans without at the same time doing injustice to foreigners.

President Diamond, of the New York State Ph.A., in a vigorous communication, which will be found on page 282 of this issue of the ERA, takes the Manhattan Ph.A. severely to task for its interference with the legislative work of the State association. Mr. Diamond points out that the Manhattan association was invited to attend the conference of all of the local bodies interested in drafting the all-State bill and is only able to explain the action of six of the Manhattan's members upon the theory that President Diner is the real father of the Conklin Bill. While it would be interesting to have the mystery solved, its solution can have no effect upon the situation at Albany, for the measure to be agreed upon by the Governor and the State Ph.A. will have the right of way in passage through the Legislature. As we have repeatedly pointed out, the best interests of pharmacy in the State demand that there be a harmonious acquiescence in the legislative plans of the State association.

Resolutions adopted by the Columbus R.D.A. demanding a restoration of the buying rights that the retailers relinquished on account of the tripartite agreement, which was nullified by the courts, will be read with consuming interest by druggists throughout the country. There is a ring of determination to the utterances of the Columbus retailers that will give the proclamation a force which it would not have had it been couched in less vigorous language.

Much favorable comment has been caused by the ERA's new departure in establishing the Classified Buyers' Directory, offering, as it does, an unexampled means for the buyers in the drug trade to keep in touch with the manufacturers of all kinds of goods that are in demand by retail druggists.

An advertisement in the New York *Herald* recently called for "capital to finance manufacturing of non-refillable bottle." Great is the faith of the inventors, even when they pursue the elusive fire-fly of perpetual motion.

Unlawful possession of opium and cocaine should be made

a criminal offense. When that is done the fight against these twin evils can be prosecuted to better advantage than at present. Such a law rigorously enforced would kill the peddling of these drugs and give the authorities power to lock up the fiends for reformatory purposes.

Editor-druggist Wm. B. Barnard, of the Millersburg (Ill.) *Grit*, has displayed true consistency of principle. He is an ardent advocate in his newspaper of temperance legislation and in order that he may not be accused of fighting for selfish purposes he has entirely stopped the sale of intoxicants in his drug store. Nobody can now question his sincerity.

A fool clerk and his job are soon parted.

California Board of Pharmacy deserves the hearty and earnest support of all pharmacists in the State in the war which its members are fighting against the unlawful sale of cocaine and opium.

With his 90th birthday less than six months distant, Col. Ormand F. Nims, the oldest druggist in Massachusetts, is not only in active business but on Washington's Birthday he presided at the 44th annual reunion and dinner of the famous Nims' Battery Association, at the Revere House, Boston. That he is able to appear at public functions is perhaps the best evidence of his remarkable vigor, and not a few remarked that the venerable Colonel belied his age by at least a third of a century.

In a professional way the Colonel is also remarkable. A few days ago, a Boston antiquarian in search of a fact which appeared to be obtainable only from an eye-witness of the incident, made a call upon Colonel Nims to see if he could give the much-desired information. The Colonel was found in his quaint drug store at 136 Cambridge street, Boston, engaged at that moment in the delicate task of removing a splinter from the eye of an unfortunate man, and the Colonel not only removed the splinter, but did so without the aid even of spectacles.

Despite his age, Colonel Nims continues to pursue the same routine of life that he has known for many years. He opens his store himself every morning at seven, and with the exception of the two periods at noon and evening which he takes for meals, he keeps at business until nearly eleven at night.

Colonel Nims is perhaps more widely known as a soldier than as a pharmacist, for in the Civil War he was commander of Nims' Battery, which covered itself with glory. He had only eight days' notice in which to arrange his business affairs and leave for the front at the outbreak of the war, and he did not return to Boston until the war was over. He got his military instinct at birth. All the Nimses were soldiers. One of them was killed at Bunker Hill. They have fought in every war in which the United States has been engaged. Colonel Nims was a member of the Massachusetts Battery of Light Artillery in anti-bellum days. One day the captain said to him: "Keep on drilling the company. I am going to Boston and may not be back for some time."

"I have never seen him since," remarked the gallant veteran the other day as he conversed with a representative of THE PHARMACEUTICAL ERA. "The adjutant-general came out to see us, asked me to take command, and gave me eight days to get ready for the front. I left my business with my wife, or rather with the lady who afterward became my wife. I was in the service with the battery three years and five months. Then I resigned and joined the quartermaster's department in New Orleans. The colonel sent me out to see what I could buy copper sheathing to repair the ships with. I made my report. Then he sent me out to see what I could do in getting three steam fire engines. I got a price of \$2800. The colonel directed me to buy them. I offered the concern \$2500. They jiggled and quibbled, but finally accepted and I had them

make out the bill for \$2500. When the colonel saw the bill he called me to him and told me he was going to put me in charge of building the hospitals in New Orleans, and after I had been in charge three weeks he told me I had accomplished more in that time than had been done in three months before. Then I was made harbor-master and was given full charge of all the supplies arriving in the city for the army. The levees were piled high with hay and provisions and supplies of all kinds. I was told I might hire three men to help me, but I didn't do it and I got all the stuff cleared up and stored away. Then I found myself about to be out of a job because there was nothing more to do. I asked to be made an auctioneer and in one day I sold \$55,000 worth of stuff.

"But all that is of no interest. I don't want to be written up. People will think I am trying to put myself forward, but I am not, and I am not worth writing up."

The venerable druggist had been telling these things in the interim while waiting on customers. The store is typically old-fashioned. It contains no soda fountain. It is heated by a coal stove. There are no patent medicines and few proprietary articles on the shelves or in the show cases. There is no cigar counter, while a large sign in the rear of the store says: "No smoking in this store." The shelving and woodwork is painted white, and the two sides and rear are lined with bottles of drugs and chemicals. Colonel Nims clings to the name of "apothecary."

Asked as to the absence of a soda fountain, Mr. Nims said: "No, I have no soda fountain. I won't have one. I wouldn't let one be put in here again as a gift. I had one once. In fact I had the first fancy fountain in this part of the city. That was just after the war. Before that I had a plain square fountain, but when I returned from the war I put in the new one. I paid \$775 for it, ran it for 17 years and sold it for \$50. I haven't had one since. It seems to me it is too much work for the money. When I had my fountain I used to get 10 cents a drink, but when prices got down to 5 cents I said that I wouldn't do it. If there was money in it, it would be all right. I remember one night a crowd of people kept coming in here in such numbers that I had to ask them what they meant by it. No sooner would one crowd go out but another would come in. They said they were giving me a benefit. In two hours and a half I took in \$32 and about 82½ of it was clear profit. But I wouldn't draw soda at 5 cents a glass."

"How about cigars?" he was asked.

"No cigars are sold here. I don't believe an apothecary shop is the place to sell tobacco. An apothecary shop should be clean. It is a place where ladies come and so it is no place for smoking. I used to keep them, but I threw them out long ago. Once I counted up my stock of cigars and I found I had 18,000 in the store. But that was before the war. I gave them up some years ago, gave away the last of them to a man who used to help me."

"How about liquors?"

"I don't keep them. I have never had a license. If I can't get a living at my own business, I'll give up, for I wouldn't sell rum for a thousand dollars a minute. I came from a town (Sullivan, N. H.) where no liquor was ever sold, and I won't sell it here."

"And I won't sell patent medicines. I wouldn't walk around the counter for the small profit there is in it. I make all my own preparations, so you see it is a pretty big machine to run, and it keeps me busy. I get up at 7 o'clock every morning and go to bed at 11. I am in the store all day except when I go to my meals. I have been in this store 52 years last April. There isn't a man on the street who was here when I came here. I run them all out."

Then pointing to the white-painted interior, he said with some show of pride: "You see that paint? It was put on 52 years ago and has never been renewed. When it is washed and cleaned it looks just like new." It was near 5:30 p. m. and

Col. ORMAND F. NIMS,  
of Boston, Mass.

Mr. Nims said: "In just 10 minutes my tea will be ready. I must go. You've got more than you want to say about me." And the monogamian, with his white beard and full head of white hair, with the kindest and brightest of blue eyes, bowed a good evening to the representative. Probably no man in Boston is more regular in his habits of life. People in the neighborhood say they can set their clocks by Mr. Nims' movements to and from the store. He runs the store all alone, locks it up when he goes to meals, and at the age of nearly 90 is keen in intellect, with an active mind and a strong body, and with ideas as to the ethics of pharmacy that well represents in the extreme the "New England conscience."

Doctor: "So you are worse. Did you take the medicine precisely as I instructed you to?"

Patient: "Precisely."

Doctor: "Then you can blame the druggist for your relapse. I do not know what the medicine I prescribed is made of, but the druggist probably substituted something else."

Modern time and labor saving devices have not yet reached their limit, but with many of them the test of practice versus theory is often disappointing, as some pharmacists have learned by experience. At the Annual Business Show, held in Chicago recently, an invention was exploited which would effect enormous economies in the publication of newspapers and in the printing of advertisements and in doing other work of that description which is so necessary in both the retail and the wholesale drug trade.

As applied to newspapers the inventor showed a system of making matrices for stereotypes direct from the first writing on the typewriter. With his system a matrix paper was inserted in any ordinary typewriter, the stenographer proceeded in the usual way, and when finished the result was turned over to a stereotyper, who made a plate from it without having had any type set, any make-ready on forms or any of the usual details followed in a printing office for making stereotypes.

The inventor and exhibitor claimed that they were about to cause a revolution in the printing of newspapers, for they are at work on an interchangeable typewriting machine which will make it possible to do all composing for newspapers and publications, direct on the typewriter and print from plates. They claim that this device, in connection with Edison's dictating machine, will eliminate all of the work and hands between the reporter and stereotyper, except the stenographer, for Edison proposes to perfect his device so that in the future a reporter on a big daily will tell his story to the dictating machine, and it will be turned over to the linotype for immediate set up.

This all reads very nicely, but any person familiar with the editing that has to be done in condensing or elaborating copy written by reporters on the big daily papers will at once realize the impracticability of the system in actual practice. On the metropolitan papers at the present time there is not one reporter in 200 whose copy goes to the printers in the shape in which it was originally written. Editors who revise, correct and elucidate the copy written by reporters are often equally ruthless in changing and improving what they themselves have written. It is said of Charles A. Dana, of the New York Sun, one of the famous editors of modern times, as well as one of the most polished, expressive and impressive writers in American journalism, that he never sent to the printers an article that had not been changed in some respect after it was first put on paper and often further changes were made in the type, sometimes involving practical reconstruction. In fact, it is only the lazy editor, reporter or writer who lets his thoughts sift into type without endeavoring to improve the phraseology.

Another difficulty which the inventor will have to encounter will be the inability of the majority of reporters to write either fluent newspaper English or spell correctly. Capitalization, style and trifling with plurals and singulars, the misuse of parts of speech and a disregard of written and unwritten office rules, such as make most proofreaders on newspapers prematurely aged, would result in the production of a most remarkable newspaper if all the reporters' copy should be printed as written. It is not to the discredit of the average reporter that he is not infallible in the matter of spelling, that his vocabulary is often deficient, or that his

ideas of syntax are sometimes obscure, for, outside of the one man in the 200, the less a reporter knows about technicalities the better he is as a news gatherer. It is more essential for a reporter to have a nose for news, get the news and bring it into the office than for him to do anything else. There are dozens of good writers to every good reporter and the newspapers employ the writers to tell the story that the men with news noses smell out and take to the office. At the present time there are at least three "star" reporters in New York who cannot trust themselves on spelling more than ordinary words who are paid more than \$100 a week each. But they get the news and are indispensable to their papers. One of them is rather proud of making somebody else do the spelling for him.

Pillidge: "I suppose that the next side line with us will be airship accessories."

Filterwit: "I already carry them: Bandages, splints and chloroform."

The London *Lancet* retells a good story this week—that of the patient with malignant disease of the throat who consulted a specialist. The surgeon recommended the removal of the larynx. The patient expressed a fear that the operation was very dangerous.

"Oh, no," said the surgeon, "you are sure to recover."

"But," said the patient, "I understood that the operation was very serious indeed."

"Well," said the surgeon, "my reason for saying that you are sure to recover is this: The mortality is 19 out of 20, and I've had 19 deaths already."

The reason some of the co-eds in the colleges of pharmacy are so devoted to chemistry is because they can spend so much time trying to discover affinities.

So many different titles are used by opticians who have been registered under the new Optometry Law of the State of New York that a movement has been started to obtain uniformity. The Optometrical Society has sent out notices that failure to use the title "optometrist" on cards and signs will be cause of expulsion. This action is intended to put an end to the use by registered opticians of such titles as "eye specialist," "eyesight specialist" and "optical expert," which are, used with numerous variations.

The society is also giving attention to the use of the title "doctor" assumed by some opticians who have never obtained a physician's degree. The resolution requiring the members to use "optometrist" as a title does not prohibit the addition of the "doctor's" title, and in many cases both are used by the same man. A resolution is to be acted upon at the society's next meeting making the use of "doctor" a ground for expulsion, unless the user has obtained a physician's degree.

Whenever a druggist finds that he is too slow to keep up with the procession of modern progress, he wants to "reform" things back to the conditions in which they were when he was a boy.

Professor Perret, formerly Honorary Assistant at Royal Vesuvius Observatory, has written for the April Century the trained scientist's account of "The Messina Earthquake." Readers of the issue will have also the artist's picturing of the scenes and happenings "After the Earthquake" in Robert Hichen's narrative of his observations and experiences in Naples, Palermo and Messina set down with all this author's characteristic color and sympathy.

A scissors grinder passed a drug store the other day.

"Got any knives to grind?" he asked of a smart young clerk in the door.

"No. Can you sharpen wits?" asked the smart young clerk.

"Yes, if you have got any," returned the man of blades and paused expectantly as if waiting for the job.—*Ottumwa (Ia.) Courier*.
